[1] Use of existing tank cars authorized, but new construction not authorized.

containers not over 2 quarts capacity each made of aluminum not less than 0.04 inch thick. Closures and gaskets must be of material which will not react dangerously with or be decomposed by contact with the contents.

(3) Spec. 5, 5A, or 5C (§ 78.80, § 78.81, or § 78.83 of this chapter); or 17E (§ 78.116 of this chapter) (single-trip). Metal barrels or drums which shall be of type 304 or 347 stainless steel, with openings not exceeding 2.3 inches in diameter.

(4) Spec. 17C (§ 78.115 of this chapter). Metal barrels or drums (single-trip) with openings not exceeding 2.3 inches in diameter. Authorized only for dimethylhydrazine, unsymmetrical.

(5) Spec. 42B (§ 78.107 of this chapter). Aluminum drums. Authorized only for dimethylhydrazine, unsymmetrical.

(6) Spec. 103–W, 103C–W, 105A100–W, or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars. Authorized for dimethylhydrazine, unsymmetrical only. Tank cars must be equipped with steel safety valves of approved design and 103–W tank cars must not be equipped with bottom outlets. Specs. 105A200–W, 105A300–W, 105A400–W, 105A500–W, and 105A600–W (§§ 79.100, 79.101 of this chapter) tanks must be restenciled 105A100–W and be equipped with safety valves of the type and size used on spec. 105A100–W tank cars.

(7) Spec. MC 300, MC 301,[1] MC 302, MC 303, MC 310 or MC 311 (§ 78.321, 78.323, 78.324, 78.330 or 78.331 of this chapter). Tank motor vehicles equipped with steel safety valves of approved design. Spec. MC 300, MC 301, MC 302, and MC 303 cargo tanks must not be equipped with bottom outlets. Authorized only for dimethylhydrazine, unsymmetrical.

**§ 73.146 Heaters for refrigerator cars, liquid fuel type.**

(a) Heaters of the liquid fuel type for refrigerator cars, containing flammable liquid fuel, may be shipped in carload or truckload lots provided each heater shall have been inspected to see that flame has been extinguished, that there is no leakage of fuel, and that controls are in the "off" position. Heaters shall be loaded and braced so as to prevent falling, tipping, or mechanical damage under normal conditions incident to transportation.

(b) Heaters of the liquid fuel type for refrigerator cars must have their fuel tanks completely drained if offered for transportation or transported in less-than-carload or less-than-truckload lots.

**§ 73.147 Methyl vinyl ketone, inhibited.**

(a) Methyl vinyl ketone must be inhibited and must be packed in specification containers as follows:

(1) As prescribed in § 73.119 (a) or (b).

(b) Methyl vinyl ketone, inhibited, in glass or metal inside containers having not over 4 fluid ounces each and not more than one inside container securely and efficiently cushioned in strong outside fiberboard or wooden boxes, is exempt from specification packaging, marking, and labeling requirements except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.148 Monoethylamine.**

(a) Monoethylamine must be packed in specification containers as follows:

(1) Spec. 5 or 5A (§§ 78.80 or 78.81 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter. Bung labels required as prescribed in § 73.119(1).

(2) Cylinders as prescribed for any compressed gas except acetylene.

(3) Tank cars prescribed in § 73.119(f)(3).

(4) Spec. 106A500,[1] 106A500–X, or 110A500–W (§§ 79.300, 79.301 of this chapter). Tank cars.

NOTE 1: Tanks complying with ICC–106A or ICC–110A (§ 78.275 or § 78.293 of this chapter) specifications may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(5) Spec. MC 304 (§ 78.325 of this chapter). Tank motor vehicle.

## Subpart D—Flammable Solids and Oxidizing Materials; Definition and Preparation

**§ 73.150 Flammable solid; definition.**

(a) A flammable solid, for the purpose of Parts 71–78 of this chapter, is any solid material, other than one classified as an explosive, which, under conditions incident to transportation, is liable to cause fires through friction, absorption of moisture, spontaneous chemical changes, retained heat from manufacturing or processing, or which can be ignited readily and when ignited burns so vigorously and persistently as to create a serious transportation hazard. Examples: certain metallic hydrides, metallic sodium and potassium, and certain oily fabrics, processed meals, and nitrocellulose products.

**§ 73.151 Oxidizing material; definition.**

(a) An oxidizing material for the purpose of Parts 71–78 of this chapter is a substance such as a chlorate, permanganate, peroxide, nitro carbo nitrate, or a nitrate that yields oxygen readily to stimulate the combustion of organic matter.

**§ 73.152 Packing.**

(a) Flammable solids or oxidizing materials must not be packed in the same outside container with corrosive liquids unless the corrosive liquids are in bottles, cushioned by incombustible absorbent material, in tightly closed metal containers.

NOTE 1: Oxidizing or other materials in quantity not exceeding 4 ounces, in securely closed metal cans, packed in the same compartment with other securely packed ma-

[1] Use of existing cargo tanks authorized, but new construction not authorized.

terials necessary for a complete fumigant, are acceptable for transportation.

(b) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed or in any case when necessary to prevent breakage or leakage.

### § 73.153 Exemptions for flammable solids and oxidizing materials.

(a) Flammable solids and oxidizing materials, except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter, in inside containers not over 1 pound net weight each, in outside containers not exceeding 25 pounds net weight each are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter. (See § 73.182 for exemptions for nitrates, and paragraph (b) of this section for exemptions for organic peroxides.)

(b) Liquid or solid organic peroxides, except acetyl benzoyl peroxide, solid, and benzoyl peroxide, are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, when packed in accordance with the following subparagraphs of this paragraph, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter except § 77.817, and Part 197 of this chapter.

(1) Strong outside containers having not over 1 pint or 1 pound net weight of material in any one outside package, with inside containers securely packed and cushioned with incombustible cushioning material, except that cushioning material is not required when the liquid is contained in strong, securely closed plastic containers not over 1 ounce capacity each, properly packaged to prevent breakage or leakage.

(2) Strong outside containers having not more than 24 inside fiberboard containers each containing not more than 70 chemically resistant closed plastic tubes having fluid capacity not over ⅛ ounce each and securely packed in incombustible cushioning material. No one inside fiberboard container shall have more than 1 pint of liquid.

### § 73.154 Flammable solids and oxidizing materials not specifically provided for.

(a) Flammable solids and oxidizing materials, as defined in §§ 73.150 and 73.151, other than those for which special packing requirements are prescribed, must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17C, 17E, 17H, 37A, or 37B (§§ 78.115, 78.116, 78.118, 78.131, or 78.132 of this chapter), metal drums (single-trip).

(3) Spec. 10A, 10B, or 10C (§§ 78.155, 78.156, or 78.157 of this chapter). Wooden barrels or kegs.

(4) Spec. 11A (§ 78.160 of this chapter). Wooden barrels or kegs with inside containers or with suitable lining for bulk shipments.

(5) Spec. 11B (§78.161 of this chapter). Wooden barrels or kegs with inside containers; or metal lined, spec. 2F, (§ 78.25 of this chapter) for bulk shipments.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be metal cans; sliding-lid wooden boxes; fiber cans or boxes, spec. 2G (§ 78.26 of this chapter), not over 5 pounds capacity each; or glass bottles not over 1 pound capacity each. Packages containing glass containers must not weigh over 65 pounds gross.

(7) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes lined, spec. 2F or 2M (§§ 78.25 or 78.31 of this chapter).

(8) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers.

(9) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

(10) Spec. 22A (§ 78.196 of this chapter). Plywood drums.

(11) Spec. 22B (§78.197 of this chapter). Plywood drums with inside metal drums, spec. 2F (§ 78.25 of this chapter).

(12) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(13) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

### § 73.155 Bags, nitrate of soda, empty and unwashed.

(a) Bags, nitrate of soda, empty and unwashed, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes.

(2) Spec. 10A, 10B, 10C, 11A, or 11B (§§ 78.155, 78.156, 78.157, 78.160 or 78.161 of this chapter). Wooden barrels.

(b) Bags in carload and truckload lots loaded by consignor and to be unloaded by consignee may also be shipped loose or baled, provided the car or highway vehicle is lined with paper and doors of cars are properly stripped after sealing and provision is made on highway vehicle to prevent entrance of sparks.

### § 73.156 Barium peroxide and calcium peroxide.

(a) Barium peroxide and calcium peroxide must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes with inside glass containers not over 1 pound capacity each; or with inside glass containers not over 5 pounds capacity each cushioned with incombustible cushioning material; or with inside metal containers or lining, spec. 2F (§ 78.25 of this chapter).

(2) Spec. 6A (§ 78.97 of this chapter). Metal barrels or drums. Gross weight not to exceed 880 pounds.

(3) Spec. 6B or 6C (§§ 78.98 or 78.99 of this chapter). Metal barrels or drums with not more than 1400 pounds net weight in each container.

(4) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

### § 73.157 Benzoyl peroxide, chlorobenzoyl peroxide (para), cyclohexanone peroxide, dimethylhexane dihydroperoxide, lauroyl peroxide, or succinic acid peroxide, wet.

(a) Benzoyl peroxide, chlorobenzoyl peroxide (para), cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration, dimethylhexane dihydroperoxide, lauroyl peroxide, and succinic acid peroxide, wet with at least 30 percent of water by weight, except cyclohexanone peroxide, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with inside metal containers or lining, spec. 2F (§ 78.25 of this chapter), or with inside paper bags lined with polyethylene at least 0.002 inch thick and not over 1 pound dry weight capacity each; or aluminum drums of at least 16 gauge United States standard, tightly sealed. Gross weight not over 200 pounds.

(2) Spec. 5, 5B, 6A, 6B, or 6C (§§ 78.80, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums having liners of polyethylene or other suitable material. Not more than 4 vent holes of not to exceed ⅛-inch diameter may be provided in the drum near the top periphery. Gross weight not to exceed 350 pounds. Authorized only for benzoyl peroxide, wet.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside fiber containers securely closed by taping or gluing, or inside securely closed paper bags lined with 0.002 inch thick polyethylene, not over 1 pound capacity each. Except for lauroyl peroxide, wet, each inside container must be surrounded by asbestos or fire-resistant cushioning material which will protect the contents with equal efficiency. Gross weight in spec. 12B65 boxes may be more than 65 but not more than 80 pounds provided net weight of contents does not exceed 50 pounds.

(4) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized only for cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration and dimethylhexane dihydroperoxide, which materials must be packed in a plastic inside container, securely closed, and formed of polyethylene film sheets having minimum thickness of 0.002 inch. Authorized net weight in one outside container shall not exceed 50 pounds for cyclohexanone peroxide and shall not exceed 100 pounds for dimethylhexane dihydroperoxide.

### § 73.158 Benzoyl peroxide, dry, chlorobenzoyl peroxide (para), dry, cyclohexanone peroxide, dry, dimethylhexane dihydroperoxide, dry, lauroyl peroxide, dry, or succinic acid peroxide, dry.

(a) Benzoyl peroxide, dry, chlorobenzoyl peroxide (para), dry, cyclohexanone peroxide over 50 percent concentration but not exceeding 85 percent concentration, dry, dimethylhexane dihydroperoxide, dry, lauroyl peroxide, dry, or succinic acid peroxide, dry, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes, with inside fiber containers securely closed by taping or gluing, or inside securely closed paper bags lined with 0.002 inch thick polyethylene, not over 1 pound capacity each. Except for lauroyl peroxide, dry, each inside container must be surrounded by asbestos or fire-resistant cushioning material which will protect contents with equal efficiency. Net weight in outside container must not exceed 50 pounds, except that for lauroyl peroxide, dry, net weight not over 100 pounds is authorized.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized only for dimethylhexane dihydroperoxide, dry, which must be packed in a plastic container, securely closed, and formed of polyethylene film sheets having minimum thickness of 0.002 inch, and lauroyl peroxide, dry. Authorized net weight not over 100 pounds in one outside container.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside fiber containers securely closed by taping or gluing, or inside securely closed paper bags lined with polyethylene not less than 0.002 inch thick, not over 1 pound capacity each. Except for lauroyl peroxide, dry, each inside container must be surrounded by asbestos or fire-resistant cushioning material which will protect the contents with equal efficiency. Gross weight in Spec. 12B65 boxes may be more than 65 but not more than 80 pounds provided net weight of contents does not exceed 50 pounds.

### § 73.159 Burnt cotton.

(a) "Burnt cotton" is cotton that has been on fire and from which the burnt portions have not been removed by repicking. It must not be offered for transportation until not less than 10 days have elapsed since the last evidence of fire in it. It must be marked and described on shipping orders and bills of lading as "Burnt Cotton, Yellow Label", and cars containing any quantity of it must be protected by the "Dangerous" placard.

(b) Burnt cotton must not be offered for transportation by rail express.

(c) When burnt cotton is picked and baled the separated cotton is not classed as a dangerous article and is not subject to Parts 71–78 and 197 of this chapter.

### § 73.160 Calcium chlorite and sodium chlorite.

(a) Calcium chlorite and sodium chlorite must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware not over 2¼ pounds capacity each or metal not over 5 pounds capacity each.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

### § 73.161 Calcium phosphide.

(a) Calcium phosphide must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes lined, spec. 2F (§ 78.25 of this chapter), and with hermetically sealed inside containers.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

### § 73.162 Charcoal.

(a) Charcoal as described in this paragraph is exempt from specification packaging, marking, and labeling requirements for transportation by rail freight, highway, or water except when for transportation by carrier by water, name of contents must be shown on outside container. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

(1) Charcoal, activated.

(2) Charcoal made from pine wood and processed so that it is not liable to heat dangerously or cause fires in transportation.

(3) Charcoal briquettes made from wood charcoal with starch and water, or tar, for a binder, which have been screened and cooled to a temperature below 100° F., before being offered for transportation.

(4) Charcoal screenings made from "pinon" wood.

(5) Charcoal made from walnut shells, corn cobs, peach pits, and similar material, must be cooled and held not less than five days before shipment, and shipped in bags, barrels, or boxes. The five-day holding period shall not apply to charcoal briquettes screened and cooled to a temperature below 100° F. before being offered for transportation.

(6) Charcoal, lump, made by the old kiln or pit method by which long air exposure is provided before shipment.

(7) Charcoal, wood, except charcoal screenings, when packed in boxes or barrels.

(8) Charcoal, wood, when in bags in less-than-carload or less-than-truckload shipments of not exceeding 2,000 pounds.

(9) When offered for transportation by rail express, charcoal, except charcoal briquettes, must be packed in barrels, bags, or boxes, and must bear the yellow label.

(10) Charcoal screenings or ground, crushed, granulated, or pulverized charcoal, from pit or kiln burned charcoal, provided the screenings or the material from which the ground charcoal is made has been exposed to the air for not less than 5 days prior to shipment or grinding (see paragraphs (j) and (k) of this section).

(b) Charcoal made in round retorts must be transferred to air-tight metal cans for cooling, and must be kept in these cans for 24 hours or more. The charcoal after removal from these cans should be aired by spreading on a floor to a depth not exceeding 1 foot. This air exposure must last not less than 44 hours. Not less than 72 hours should elapse from the time the air exposure of the charcoal commences before a car loaded with it is closed for shipment, or before the lump charcoal is placed in paper bags.

(1) The charcoal during this airing period must be protected from the weather, and exposed to good circulation of air. When the charcoal is aired on the floor for only 24 hours and then placed in burlap bags, it must be kept in the bags 60 hours before shipment. If the charcoal is not aired on the floor for at least 24 hours, it must be kept in the burlap bags for at least 96 hours before loading for shipment.

(c) Charcoal made in ovens in slatted cars should be kept for two periods of 24 hours each in first and secondary air-tight cooling chambers respectively. After removing the charcoal from the secondary coolers it must be exposed to good air circulation, but protected from the weather for a period of not less than 44 hours.

(1) Not less than 72 hours must elapse from the time the air exposure of the charcoal commences before a car loaded with it is closed for shipment, or before the lump charcoal is placed in paper bags.

(d) When fire occurs in charcoal during air exposure period, it should be extinguished with as little water as possible. Any charcoal wet in this way or otherwise must be dried, by again heating in the retorts or ovens, and cooled and aired in the usual way described in paragraphs (b) and (c) of this section, or the charcoal must be set aside and allowed to dry for not less than 30 days before shipment.

(e) Charcoal, lump, must be dry and free from screenings and brands.

(1) Shipments must be loaded into tight box cars, tight container cars, or into tight closed-top hopper cars, except

that lump charcoal made from soft wood may be shipped in open or stock cars.

(2) When a chute is used in loading the car, the chute must contain a properly constructed screen which must be kept clean. This screen shall be not less than ¾ inch mesh. Forks with prongs not less than 1 inch apart must be used instead of shovels to handle the charcoal. The screenings which accumulate in the doorway of the car must be removed before loading the doorway. The car should be swept before loading, and a car which has contained lime must be thoroughly cleaned before loading with charcoal. The doors of the car must be closed tightly before the car is forwarded.

(3) Lump charcoal may be shipped in bags, barrels or boxes, or bulk in cars.

(4) Lump charcoal, dry and free from screenings and brands, may be shipped in bulk in motor vehicles. Vehicle must be swept before loading and if it contained lime it must be thoroughly cleaned.

(f) Charcoal screenings consist of small pieces of charcoal varying from about one-half inch in the maximum dimension to grains of dust. These screenings are more liable to produce fires than other forms of charcoal. Charcoal screenings from wet charcoal or wet screenings or screenings which have been wet must not be offered for shipment unless they have been dried for not less than 12 hours in a retort or oven, and then subjected to not less than 10 days airing and cooling before shipment.

(1) Charcoal screenings must be stored in a dry place, in loosely piled bags, freely exposed to the air for not less than 20 days after separation from the lump before shipment.

(2) Screenings from pine-wood charcoal must be stored as above described for not less than five days before shipment.

(3) Charcoal screenings must be packed in cotton or jute bags of not greater than 4 bushels capacity.

(4) Charcoal screenings, except screenings made from "pinon" wood, must not be offered for transportation by rail express.

(g) Charcoal ground, crushed, granulated, or pulverized is prepared from either lump charcoal or screenings.

(1) Lump charcoal used for the preparation of ground, crushed, granulated, or pulverized charcoal must be stored subject to ventilation, and protected from the weather for not less than 20 days after its removal from the coolers before milling; or the ground, crushed, granulated or pulverized charcoal must be stored in bags, subject to ventilation and protected from the weather for not less than 20 days before shipment. Lump charcoal made from pine wood must be stored as above described for not less than 5 days before milling. Ground, crushed, or granulated charcoal made by the "Stafford" process must be stored subject to ventilation and protected from the weather for not less than 7 days before shipment in lieu of the 20-days' storage otherwise prescribed.

(2) Charcoal screenings used for the preparation of ground, crushed, granulated, or pulverized charcoal must be stored in a dry place in loosely piled cotton or jute bags freely exposed to air for a period of not less than 20 days after separation from the lump charcoal, and before milling; or the ground, crushed, granulated, or pulverized charcoal must be stored in bags, subject to ventilation and protected from the weather for not less than 20 days before shipment. Charcoal screenings made from pine wood charcoal must be stored as above described not less than 5 days before milling.

(3) Ground, crushed, granulated, or pulverized charcoal must be packed in tight sift-proof wooden barrels or boxes containing not more than 4 bushels each; or in fiberboard boxes; or in unlined jute bags, or in strong unlined cotton bags, containing not more than 4 bushels each; or in paper-lined jute bags, or in paper bags, containing not more than 2½ bushels each. Whenever practicable, all boxes, barrels, or bags, after filling, should be allowed to remain open and freely exposed to the air, and protected from the weather for not less than 24 hours before being closed. Ground, crushed, granulated, or pulverized charcoal made from pine-wood charcoal should be so stored for not less than 72 hours before the packages are closed.

(h) Charcoal, screenings or ground, crushed, granulated or pulverized charcoal, in bags, when loaded in cars for shipment by rail must be so loaded that the bags are laid horizontally in the car, and so piled that there will be spaces for efficient air circulation. These spaces must be not less than 4 inches wide. If the bags are not compactly filled and closed so as to avoid free space within, transverse wooden strips must be laid between the bags and extending the full width of the car; these strips should be approximately 2 feet apart vertically and longitudinally. The bags must not be piled closer than 6 inches from the top of the car, and no more than 26,000 pounds of screenings, ground, granulated, crushed, or pulverized charcoal, shall be loaded in a 36-foot, 6-inch car, 27,000 pounds in a 37-foot, 6-inch car, 28,000 pounds in a 38-foot, 6-inch car, 29,000 pounds in a 39-foot, 6-inch car, 36,000 pounds in a 40-foot, 6-inch car, and 40,000 pounds in a 50-foot, 6-inch car. A tight car must be used, and any loose material must be swept up and removed from the doorway of the car before completing the loading. On recommendation of the Bureau of Explosives, other methods of loading shown to be at least equally efficient in securing the necessary ventilation will be authorized.

(i) See § 77.838 of this chapter for loading in motor vehicles.

(j) Charcoal burned in pits or kilns must be thoroughly cooled in the sealed kilns. After the kilns are opened, the charcoal must be allowed to stand in the open kiln or elsewhere exposed to the air for not less than 24 hours before loading in a freight car. Charcoal burned in kilns may be loaded in open cars or in box cars, but after loading in box cars, the cars must be allowed to stand not less than 24 hours with doors open before shipment.

(k) Screenings, or ground, crushed, granulated, or pulverized charcoal, from pit or kiln burned charcoal, are considered as non-hazardous, provided the screenings or the material from which the ground charcoal is made has been exposed to the air for not less than 5 days prior to shipment or grinding.

(l) Reburned charcoal must be cooled and exposed to good fresh-air circulation for not less than five days after removal from the reburning furnaces and before being shipped or ground to produce ground or pulverized charcoal.

**§ 73.163 Chlorate of soda, chlorate of potash, and other chlorates.**

(a) Chlorate of soda, chlorate of potash, and other chlorates must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

NOTE 1: Specs. 37A and 37B. Metal drums for export service, marked for an authorized gross weight of 160 pounds, must be at least 24 gauge metal throughout.

(3) Spec. 21C, 22A, or 22B (§ 78.224, § 78.196 or § 78.197 of this chapter). Fiber or plywood drums with inside metal drums, spec. 2F (§ 78.25 of this chapter). Authorized net weight not over 225 pounds.

(4) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes, or spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter), wooden barrels or kegs, with tightly closed inside containers which must be of metal not over 10 pounds capacity each; or of glass not over 5 pounds each; or of fiber, spec. 2G (§ 78.26 of this chapter), not over 6 pounds capacity each.

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside metal cans not over 5 pounds capacity each, closed air tight and with not over 25 pounds of chlorate in the outside container.

(6) Chlorates wet with 10 percent or more of water are authorized for shipment in tank cars, spec. 103,[1] 103–W, 111A60–F–1, or 111A60–W–1 (§§ 79.200, 79.201 of this chapter), when equally distributed therein.

(7) Chlorate of soda, dry, is authorized for shipment in aluminum or steel tank car tanks, steel cargo tank vehicles, tight sift-proof covered hopper cars, or tight sift-proof covered hopper type motor vehicles. Tank car tanks, cargo tank vehicles, hopper cars, and hopper type motor vehicles must be thoroughly cleaned before loading.

(8) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.164 Chromic acid.**

(a) Chromic acid must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§ 78.116, 78.118, 78.131, or 78.132 of this chapter). Metal drums (single-trip). Spec. 37A metal drums constructed of 22-gauge steel are authorized for a gross weight of 490 pounds when shipped in carload or truckload lots only.

(3) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with inside glass bottles of not greater than 5 pounds capacity each, with closures securely fastened, each bottle individually packed in a tight metal container, and cushioned therein with incombustible mineral packing material; or with tightly closed metal inside containers, not over 10 pounds capacity each.

(4) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each, shall be packed in one outside container. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside glass containers which must have closing device securely fastened by positive means (not friction), not over 1-gallon capacity each. Not more than 4 metal containers shall be packed in one outside box.

**§ 73.165 Coal, ground bituminous, sea coal, coal facings.**

(a) Coal, ground bituminous, sea coal, coal facings, 90 percent of which will pass through a 100-mesh sieve, must be stored for at least six days after grinding, or if not so stored must be shipped in tight metal tank cars or in tight metal containers on container cars, or in permanently covered metal hopper cars, or in other tight metal containers, or in tight, metal-bodied, covered motor vehicles.

(b) Coal, ground bituminous, which has been dried by heating before grinding must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

**§ 73.166 Cobalt resinate, precipitated, calcium resinate, and calcium resinate fused.**

(a) Cobalt resinate, precipitated, calcium resinate, and calcium resinate fused, must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(3) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with air-tight metal inside containers.

**§ 73.167 Cotton waste, oily.**

(a) Cotton waste, oily with more than 5 percent of vegetable or animal oil must be packed as follows:

(1) In hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Such cotton waste must not be offered for transportation by carriers by rail express.

**§ 73.168 Lithium amide, powdered.**

(a) Lithium amide, powdered, must be packed as follows:

(1) As prescribed in § 73.154 (a) (1), (2), (5), (8) and (11).

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums with inside metal drums, spec. 2F (§ 78.25 of this chapter). Authorized net weight not over 225 pounds.

**§ 73.169 Fiber, burnt.**

(a) Fiber, burnt, must be packed in hermetically sealed metal-lined wooden boxes or airtight metal containers.

(b) Such fiber must not be offered for transportation by rail express.

**§ 73.170 Fibers or fabrics impregnated, saturated or coated.**

(a) Fibers or fabrics impregnated, saturated or coated with animal or vegetable oils, or organic substances, manufactured articles or processed materials which are liable to spontaneous heating or combustion in transit must be packed in hermetically sealed metal-lined wooden boxes or airtight metal containers.

(b) Such materials, substances or articles must not be offered for transportation by rail express.

**§ 73.171 Fish scrap or fish meal.**

(a) Fish scrap or fish meal containing less than 6 or more than 12 percent moisture (does not include wet acidulated fish scrap with moisture 40 to 55 percent), or which has not been sufficiently cooled after manufacture, or is liable to spontaneous heating in transit, must be packed in air-tight metal containers.

(b) Such fish scrap or fish meal must not be offered for transportation by rail express.

**§ 73.172 Hair, wet.**

(a) Hair, wet, must not be offered for transportation except in gondola cars or in open motor vehicles with metal bodies.

(b) Hair, wet, must not be offered for transportation by carriers by rail express.

**§ 73.173 Aluminum dross or magnesium dross.**

(a) Aluminum dross or magnesium dross must not be shipped when hot or when containing moisture liable to cause heating or fire during transportation.

**§ 73.174 Iron sponge, spent oxide, spent iron mass, or spent iron sponge.**

(a) Iron sponge that has not been properly oxidized during manufacture must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Iron sponge not properly oxidized must not be offered for transportation by carriers by rail express.

(c) Spent oxide, spent iron mass, or spent iron sponge must be loaded in open steel cars or open highway vehicles with steel bodies. After exposure to air for a period of not less than 10 days, these articles may be offered for transportation by carrier by water in bulk in all-steel barges having open holds.

(d) Spent oxide, spent iron sponge, or spent iron mass must not be offered for transportation by carrier by rail express.

**§ 73.175 Lacquer base, or lacquer chips, dry.**

(a) Lacquer base, or lacquer chips, dry, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside metal containers, spec. 2F (§ 78.25 of this chapter).

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, 37B, or 37C (§ 78.116, 78.118, 78.131, 78.132, or 78.135 of this chapter). Metal drums (single-trip), or spec. 37C (non-reusable container).

(4) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

**§ 73.176 Matches.**

(a) Matches, when offered for transportation, must be of a type that will not ignite spontaneously when subjected for eight consecutive hours to a temperature of 200° F., in a properly conducted laboratory test. They must not exceed 3 inches in length, nor have a stick exceeding .015 square inch in cross-section area.

(b) For the purpose of Parts 71–78 of this chapter, matches are divided into two classes, viz: (1) "strike-anywhere" and block matches and (2) "strike-on-box," book, and card matches. Strike-anywhere and block matches are those for the ignition of which a prepared surface is not required. Strike-on-box, book, and card matches are those matches intended to be ignited on a prepared surface. Book and card matches may be fastened to a cover or folder, or the prepared match strips may not be so attached or covered.

(c) Packing. Matches, strike-anywhere, must not be packed in the same outside package with any other article, except that book, card and "strike-on-box" matches may be included when packed in separate inside containers.

(1) Matches, strike-anywhere, must be placed in individual containers consisting of an outer sliding shuck or cover and an inner holding tray or box, or securely closed chipboard or fiberboard boxes. Individual containers consisting of a holding tray or box with a top that telescopes over the box may be used. Boxes of suitable "hang-up" type may also be used if approved by the Bureau of Explosives. All match boxes, covers, and trays must be made of cardboard, wood, or metal, except that paper wrappings may be used for block or card matches.

(2) Individual containers must be wrapped in paper with not more than 12 boxes or individual containers in each paper-wrapped package, except that paper wrapping is not required for boxes that have a center holding or protecting

strip of cardboard of the size and type detailed in subparagraph (3) of this paragraph placed over the matches in the manner specified or as otherwise provided herein. Paper-wrapped packages must be secured on the ends and on the lapping side with glue, or similar satisfactory adhesive, making each 12 boxes or less of matches a serviceably wrapped and well secured package. Chipboard or fiberboard boxes constructed of material not less than 0.018 inch thick, having flaps secured by adhesive or closed by specially designed flaps or tabs formed to secure tight closures, are not required to be wrapped in paper.

(3) No individual container (not including card or block matches) shall contain more than 700 strike-anywhere matches in any one container, box, or package. When more than 300 matches are packed in any individual container, box, or package, the matches must be arranged in two nearly equal portions with the heads of the two portions placed in opposite directions. All individual containers containing 350 or more matches must have placed over the matches a center holding or protecting strip made of cardboard, which can be scored or bent without fracture, except the center holding strip shall not be required when matches are packed in chipboard or fiberboard boxes detailed in subparagraph (2) of this paragraph. This protecting strip shall be not less than 1¼ inches wide and shall be flanged down at least ⅝ inch on each end to hold the matches in position when the container is nested into the shuck or cover or withdrawn therefrom.

(d) Matches, unless exempted in paragraph (g) of this section, when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, with inside containers; not over 100 pounds each.

(2) Spec. 12B or 12C (§ 78.205 or § 78.206 of this chapter). Fiberboard boxes with inside containers; not over 60 pounds each. Fill-in pieces specified by § 78.205–14 or § 78.206–14 of this chapter shall not be required.

(3) The maximum number of match boxes contained in any one case shall be as follows:

| Number of boxes | Nominal number of matches per box |
|---|---|
| ½ gross | Not over 700. |
| 1 gross | Not over 500. |
| 2 gross | Not over 400. |
| 3 gross | Not over 300. |
| 5 gross | Not over 200. |
| 12 gross | Not over 100. |
| 20 gross | Over 50. Under 100. |
| 25 gross | Not over 50. |

(e) All individual containers of strike-anywhere matches when offered for transportation by rail express must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, lined, spec. 2F (§ 78.25 of this chapter), or lined with asbestos board, lapped at all joints and all joints sealed air-tight. Gross weight not to exceed 50 pounds.

(2) Spec. 12C (§ 78.206 of this chapter). Fiberboard boxes with paper-wrapped units of strike-anywhere matches covered with aluminum foil having joints hermetically sealed. Aluminum used for covering must be of such thickness that in the event matches become ignited fire will not communicate through the wrapped unit. Gross weight not to exceed 50 pounds.

(f) Marking. Outside containers of strike-anywhere matches shall show the name of the importer, distributor, or manufacturer and the brand or trademark under which such matches are manufactured and distributed to the trade. The name shall be printed in English.

(1) In addition, and separate therefrom, all outside containers shall have plainly marked thereon the words "STRIKE-ANYWHERE MATCHES".

(g) Matches, strike-on-box, book, and card packed in outside fiberboard or wooden boxes are not subject to the regulations in Parts 71–78 and 197 of this chapter.

(1) Matches, strike-on-box, book, and card may be packed in the same outside container with nonflammable articles when packed in outside fiberboard or wooden boxes. Such matches must be compactly packed in tightly closed inside containers or securely wrapped so as to prevent accidental ignition. When so packed, they are exempt from specification packaging, marking, and labeling requirements except when for transportation by carrier by water each outside container shall be marked "BOOK MATCHES," "STRIKE-ON-BOX MATCHES," or "CARD MATCHES," as the case may be. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

### § 73.177 Motion-picture film and X-ray film.

(a) Motion-picture film and X-ray film (nitrocellulose base) (exposed) must be packed in specification containers as follows:

(1) Spec. 32A or 32B (§§ 78.146 or 78.147 of this chapter). Metal cases.

(2) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with each reel in a tightly closed metal can, or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper; gross weight not over 200 pounds.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes complying with § 78.205–22 (a) (1) of this chapter; authorized for a single tightly closed inside metal can or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper, not over 2,000 feet of film. Taped closure authorized.

(4) Spec. 12B (§ 78.205 of this chapter). One-piece fiberboard boxes complying with § 78.205–22 (a) (2) of this chapter; authorized only when each film is in a tightly closed metal film-reel can or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper containing not over 2,000 feet (approximately) of film; cans or boxes to be adequately braced in center of box by fiberboard, at least 175-pound test, extending full depth of box. Gross weight not over 65 pounds. Closing of box must be effected by coating entire contact surfaces of flaps with efficient adhesive; stitched closure not authorized. Boxes that have been filled, shipped, and opened, are not authorized for reuse.

**NOTE 1: Because of the present emergency and until further order of the Commission, containers authorized under § 73.180 (a) (2) may be reused provided original shipment consisted of unexposed motion-picture film in carload or truckload quantities and that boxes were crated and had closing flaps held in place by paper tape.**

(5) Spec. 32C (§ 78.148 of this chapter). Trunks with each film in standard metal film-reel can or strong cardboard or fiberboard box with cover held in place by adhesive tape or paper. Trunks to contain no material other than films in cans or boxes and projecting apparatus. The apparatus, as packed, must not be capable of creating an electric current.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes complying with § 78.205–27 of this chapter; authorized only for not more than two square inside metal cans containing not over 200 feet (approx.) of film each; gross weight not over 15 pounds. Taped closure authorized.

(b) Advertising matter must not be attached to outside of container. Slow burning (nonflammable) motion-picture film is exempt (§ 73.181 (a) (1)), but when packed with flammable film all requirements must be complied with as if all contents were flammable film.

### § 73.178 Motion-picture film, old and worn out (not scrap).

(a) Motion-picture film, old and worn out (not scrap), when shipped, must be no longer exhibitable (with value only for reclamation of material) and must be packed in specification containers as follows: (See §§ 73.195 and 73.196 for film scrap.)

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes lined, spec. 2F (§ 78.25 of this chapter), or 2M (§ 78.31 of this chapter); gross weight not over 450 pounds.

(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside metal cans containing not over 1,000 feet of film; the cover of each can must fit tightly; gross weight not over 450 pounds.

(3) Spec. 32A or 32B (§§ 78.146 or 78.147 of this chapter). Metal boxes.

(4) Spec. 32D (§ 78.149 of this chapter). Metal boxes. Net weight of film not over 250 pounds.

(5) Spec. 6A, 6B, 6C, or 6J; also 37A or 37B (single-trip containers) (§§ 78.97, 78.98, 78.99, 78.100, 78.131, or § 78.132 of this chapter). Metal barrels or drums.

(6) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

### § 73.179 Motion-picture film, toy.

(a) Motion-picture film, toy, of standard width (1⅜"), on metal reels, each containing 200 feet or less of film, when shipped must be inclosed in spark-proof metal cans packed in outside specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes; maximum gross weight 250 pounds. (See § 73.181 (a) (3) for toy motion-picture film pieces.)

### § 73.180 Motion-picture film, and X-ray film, unexposed.

(a) Motion-picture film, and X-ray film, unexposed (nitrocellulose base), when offered for transportation by rail express or by carrier by water must bear the yellow label prescribed in § 73.406 and must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes, provided it is in tight rolls of not over 3,000 feet; each roll must be in a tightly closed metal can with cover held in place by adhesive tape or paper, or each roll must be in a strong cardboard or fiberboard box with cover held in place by adhesive tape or paper. Gross weight not over 250 pounds.

(2) Spec. 12B (§ 78.205 of this chapter). One-piece fiberboard boxes complying with § 78.205–22 (a) (2) of this chapter; authorized only when each film is in a tightly closed metal can or in a strong cardboard or fiberboard box with cover of can or box held in place by adhesive tape or paper and containing not over 2,000 feet (approx.) of film; interior packing required, of double-wall corrugated fiberboard pads at least 275-pound test, so arranged as to prevent can or box from touching the 6 faces of the outside box. Gross weight not over 75 pounds. Boxes that have been filled, shipped and opened are not authorized for reuse.

(b) Motion-picture film and X-ray film, unexposed (nitrocellulose base), when offered for transportation by rail freight and highway are exempt from specification packaging, marking other than name of contents, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

### § 73.181 Motion-picture film; exemptions.

(a) Motion-picture film as follows is exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Motion-picture film and X-ray film, slow-burning (nonflammable) and old and wornout motion-picture film, slow-burning (nonflammable).

(2) Motion-picture film scrap and X-ray film scrap, slow-burning (nonflammable).

(3) Motion-picture film, toy pieces of, exposed, of approximately ¾ inch by 1⅜ inches in size and not to exceed 1,000 such pieces inclosed in a tightly closed metal box and packed with other articles.

(4) Motion-picture outfits, toy, consisting of one projecting apparatus and not to exceed one roll of motion-picture film 12 feet or less in length, may be accepted without further restrictions, provided the film is packed in a securely closed metal can or box, this inclosed in a wooden box and packed with the projection apparatus in an outside fiberboard, corrugated strawboard, or wooden box.

### § 73.182 Nitrates.

(a) Aluminum nitrate, ammonium nitrate, ammonium nitrate (organic coating), ammonium nitrate—carbonate mixture, ammonium nitrate—phosphate,[1] ammonium nitrate fertilizer, containing 90 percent or more ammonium nitrate with no organic coating, ammonium nitrate mixed fertilizer,[1] barium nitrate, calcium nitrate, guanidine nitrate, lead nitrate, magnesium nitrate, nitrates, n.o.s., nitrate of soda and potash, nitro carbo nitrate (see Note 1), potassium nitrate, silver nitrate, sodium nitrate, and strontium nitrate, when offered for transportation by rail freight, rail express, highway, or carriers by water shall be packed in containers as follows:

(1) Wooden or fiberboard boxes with glass, metal, or other strong inside containers; in metal or fiber drums; in kegs or barrels; or in strong metal cans. When so packed, they are exempt from specification packaging, marking other than name of contents, and labeling requirements when for transportation by rail or highway. Ammonium nitrate-carbonate mixtures, nitrocarbonitrate, and ammonium nitrate mixed fertilizers so packed are exempt from labeling requirements when for transportation by water carrier. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

NOTE 1: Nitro carbo nitrate is a mixture consisting substantially of inorganic nitrates and carbonaceous materials, in which none of the ingredients are explosive as defined in this part and which as packaged for shipment cannot be detonated by means of a No. 8 test blasting cap as described herein. (A No. 8 test blasting cap is one containing two grams of a mixture of 80 percent mercury fulminate and 20 percent potassium chlorate, or a cap of equivalent strength.)

(b) Aluminum nitrate, ammonium nitrate, ammonium nitrate (organic coating), ammonium nitrate-carbonate mixture, ammonium nitrate-phosphate,[2] ammonium nitrate fertilizer, containing 90 percent or more ammonium nitrate with no organic coating, ammonium nitrate mixed fertilizer,[1] barium nitrate, calcium nitrate, guanidine nitrate, nitrate of soda and potash, potassium nitrate, sodium nitrate, and strontium nitrate, when offered for transportation by rail freight, rail express, highway, or carriers by water, in addition to containers prescribed in paragraph (a) of this section, may be packed as follows:

(1) In bulk in tight closed freight cars. (See § 74.532 (k) of this chapter for loading requirements.)

(2) In bulk in sift proof closed or open type motor vehicles. (See § 77.838 (f) of this chapter for loading requirements.)

(3) In bulk on cargo vessels subject to the Regulations for Explosives or Other Dangerous Articles on Board Vessels prescribed by the Commandant, United States Coast Guard (46 CFR Part 146).

(4) In burlap bags not exceeding 200 pounds net weight, water-resistant, made tight against sifting, and made of not less than 7½-ounce burlap. Ammonium nitrate-carbonate mixtures, calcium nitrate, potassium nitrate, sodium nitrate, nitrate of soda and potash, or strontium nitrate when so packed are exempt from labeling requirements and § 77.823 of this chapter. For water shipments see Regulations for Explosives or Other Dangerous Articles on Board Vessels prescribed by the Commandant United States Coast Guard (46 CFR Part 146). (See §§ 74.532 and 77.838 of this chapter for loading requirements.)

(5) In multi-wall paper bags not exceeding 110 pounds net weight, of at least 4-ply construction including moisture-barrier ply, and made tight against sifting. Completed package, filled to weight with product and closed for shipment, must be capable of withstanding three 4-foot drops on face or back onto solid concrete without rupture. Ammonium nitrate-carbonate mixtures, calcium nitrate, potassium nitrate, sodium nitrate, nitrate of soda and potash, or strontium nitrate when so packed are exempt from labeling requirements and § 77.823 of this chapter. For water shipments see Regulations for Explosives or Other Dangerous Articles on Board Vessels prescribed by the Commandant United States Coast Guard (46 CFR Part 146). (See §§ 74.532 and 77.838 of this chapter for loading requirements.)

(6) Plastic bags which must be securely closed. Authorized net weight not over 81 pounds. Shipper must submit complete details of resin from which bags are made and obtain approval from the Bureau of Explosives prior to use and reference to such approval must be made on shipping paper. Authorized only for ammonium nitrate fertilizer containing 90 percent or more ammonium nitrate with no organic coating. (See §§ 74.532 and 77.838 of this chapter for loading requirements.)

(c) Nitro carbo nitrate, in addition to the containers prescribed in paragraph (a) of this section, may be packed as follows:

(1) In burlap bags not exceeding 100 pounds net weight, water-resistant, made tight against sifting, and made of not less than 7½-ounce burlap. (See §§ 74.532 and 77.838 of this chapter for loading requirements.)

(2) In multiwall paper bags not exceeding 100 pounds net weight, made of at least 4-ply construction including moisture-barrier ply, and made tight against sifting. Completed package, filled to weight with product and closed as for shipment, must be capable of

[1] Applies only to materials classed as dangerous under definition in § 78.150.

[2] Applies only to materials classed as dangerous under definition in § 73.151.

withstanding three 4-foot drops on the face or back onto solid concrete without rupture. (See §§ 74.532 and 77.838 of this chapter for loading requirements.)

**§ 73.183 Potassium nitrate mixed (fused) with sodium nitrite.**

(a) Potassium nitrate mixed (fused) with sodium nitrite must be packed in containers as follows:

(1) In containers as prescribed in § 73.182 (a).

(2) Spec. 103–W (§ 78.280 of this chapter). Tank cars specially designed, equipped and approved for this service without bottom discharge outlet and with heavier plate thicknesses than the minimum prescribed for cars built under this specification. For specification 103–W tank cars made of plates having the minimum prescribed thicknesses, internal reinforcement of the upper sheets of tank in the region of the dome and reinforcing plates attached to the bottom sheet of the tank which rests on bolsters is required, and these tanks must be equipped with baffle plates. Heater pipes must be of welded construction designed for a test pressure of 500 pounds per square inch. A 1-inch woven asbestos lining must be placed between bolster slabbing and bottom of tank to prevent heat transmission. Safety vents of the frangible disc type may be used and if used the frangible discs must be perforated with ⅛ inch hole. If safety valves are used, a vacuum relief valve must be installed on the dome. Tanks must be stenciled on both sides "Fused Potassium Nitrate and Sodium Nitrite Only".

**§ 73.184 Nitrocellulose or collodion cotton, wet, or nitrocellulose, colloided, granular, or flake, wet, or nitrostarch, wet, or nitroguanidine, wet.**

(a) Nitrocellulose or collodion cotton, wet, or nitrocellulose, colloided, granular, or flake, wet, or nitrostarch, wet, or nitroguanidine, wet, must be uniformly wet with at least 20 pounds of water to 80 pounds of dry material and must be packed in specification containers as follows:

(1) Spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter). Wooden barrels or kegs.

(2) Spec. 14, 15A, or 15B (§ 78.165, § 78.168, or § 78.169 of this chapter). Wooden boxes lined, spec. 2M (§ 78.31 of this chapter).

(3) Spec. 6A, 6B, 6C, or 6J (§ 78.97, § 78.98, § 78.99, or § 78.100 of this chapter). Metal barrels or drums not over 55 gallons capacity. Spec. 6J (§ 78.100 of this chapter) drums must have removable heads of 14 gauge metal or 16 gauge metal with one or more corrugations near the periphery and heads must have a minimum convexity of ⅜ inch; each drum must have three rolled or swedged-in hoops, one of which shall be in the body near the top curl.

(4) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) not over 5 gallons capacity. Welded side seams required.

(5) Spec. 17E or 17H (§§ 78.116 or 78.118 of this chapter). Metal drums (single-trip).

(6) Spec. 42F (§ 78.110 of this chapter). Aluminum barrels or drums.

(b) Gross weight of any container must not exceed 490 pounds.

**§ 73.185 Paper stock, wet.**

(a) Paper stock, wet must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Paper stock, wet, must not be offered for transportation by rail express.

**§ 73.186 Paper waste, wet.**

(a) Paper waste, wet, must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

NOTE 1: Because of the present emergency and until further order of the Commission, paper waste, wet, free from oil or other foreign matter liable to cause spontaneous ignition may be shipped in bales.

(b) Paper waste, wet, must not be offered for transportation by rail express.

**§ 73.187 Peroxide of sodium.**

(a) Peroxide of sodium must be packed in specification containers as follows:

(1) Spec. 11A, 11B, 15A, 15B, 15C, 16A, or 19A (§§ 78.160, 78.161, 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden barrels, kegs, or boxes, with inside containers which must be airtight metal cans.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(4) Spec. 12A or 12B (§ 78.210 or 78.205 of this chapter). Fiberboard boxes with inside air-tight metal cans not over 5 pounds capacity each.

**§ 73.188 Phosphoric anhydride.**

(a) Phosphoric anhydride must be packed in specification containers as follows:

(1) Spec. 11A, 11B, 15A, 15B, or 15C (§§ 78.160, 78.161, 78.168, 78.169, or 78.170 of this chapter). Wooden barrels, kegs, or boxes, with inside containers which must be tightly stoppered glass bottles not over 1 pound capacity each; or metal cans, not over 3 pounds capacity each, hermetically sealed (soldered) or closed with cork securely held in place by metal strap soldered in position. All inside containers must be cushioned with elastic incombustible packing material.

NOTE 1: Because of the present emergency and until further order of the Commission, metal cans not over 6 pounds capacity each are authorized.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(4) Spec. 6K (§ 78.101 of this chapter). Metal drums. Authorized only for carload or truckload shipments by rail freight or highway when loaded by the shipper and unloaded by the consignee or his duly authorized agent.

(5) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 1 pound capacity each. Not more than 12 bottles shall be packed in one outside box. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(6) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles of one-third fluid ounce capacity each. Each bottle shall be packed in a heat-sealed polyethylene or other suitable plastic bag of equal efficiency and not more than 75 such units shall be packed in a heat-sealed polyethylene or other suitable plastic bag of equal efficiency, which shall be placed in a securely closed metal can. Not more than 1 can shall be packed in one outside box.

**§ 73.189 Phosphorus, amorphous, red.**

(a) Phosphorus, amorphous, red, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with metal inside containers, with closures sealed air-tight and positively fastened.

(2) Spec. 6A or 6B; also 37A or 37B (single-trip containers) (§§ 78.97, 78.98, 78.131, or § 78.132 of this chapter), for gross weight not over 160 pounds. Metal barrels or drums.

(3) Spec. 29 (§ 78.226 of this chapter). Mailing tube having not more than 100 grams of phosphorous contained in an inside glass container, sealed under nitrogen or other inert gas, with an air tight closure. The glass container shall be packed in a metal can having air tight closure. Both the inside glass container and the metal can shall be surrounded on all sides with incombustible cushioning material.

**§ 73.190 Phosphorus, white or yellow.**

(a) Phosphorus, white or yellow, when offered for transportation by carriers by rail freight, highway, or water may only be packed in water or dry.

(b) When placed in water it must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with inside containers, which must be hermetically sealed (soldered) metal cans, inclosed in other hermetically sealed (soldered) metal cans; or hermetically sealed (soldered) metal cans, containing not over 1 pound each, inclosed in other, watertight, metal cans with screw-top closures; or hermetically sealed (soldered) metal cans, inclosed in hermetically sealed (soldered) metal box-lining, spec. 2F (§ 78.25 of this chapter).

(2) Spec. 5A, 6A, or 6B (§§ 78.81, 78.97, or 78.98 of this chapter). Metal barrels or drums, not over 30 gallons capacity each.

(3) Spec. 103,[1] 103–W, 111A60–F–1 or 111A60–W–1 (§§ 79.200, 79.201 of this chapter). Tank cars without bottom outlet for discharge of lading and with approved dome fittings, external heater systems, and with insulation at least 4 inches in thickness, except that thickness of insulation may be reduced to 2 inches over external heater coils. Bottom washout nozzle of approved design may be applied. The material must be immersed in water or be blanketed with an inert gas and be loaded at a temperature not exceeding 140 F. The water must be loaded in the dome to not more than 50 percent of the capacity of the dome. After unloading, the tank must be filled to its entire capacity with an inert gas or to its entire capacity and the dome to not more than 50 percent of its capacity with water having a temperature not exceeding 140 F and placarded with the caution placard prescribed in § 74.555 of this chapter before the car is offered for return movement.

[1] Use of existing tank cars authorized, but new construction not authorized.

NOTE 1: Because of the present emergency and until further order of the Commission, Specification ARA–III[1] tank cars, converted as follows, are authorized for use: Without bottom discharge outlet, with insulation at least 2 inches in thickness, internal heater coils, at least one safety valve or frangible disc safety vent of approved design, and dome equipped for top unloading. Cars to be loaded and unloaded as prescribed in paragraph (b) (3) of this section. Cars to be stenciled immediately above the mark ARA–III[1] with the words "FOR PHOSPHORUS ONLY".

(4) Spec. MC 310 or MC 311 (§§ 78.330 or 78.331 of this chapter), tank motor vehicles, without bottom outlet and with insulation at least 4 inches in thickness, except that 2 inches of insulation is authorized for tanks equipped with an exterior heating jacket. Interior heating coils are not authorized. The material must be immersed in water or be blanketed with an inert gas and be loaded at a temperature not exceeding 140° F. After unloading, the tank must be filled to its entire capacity with an inert gas or to its entire capacity with water having a temperature not exceeding 140° F.

(c) Phosphorus, white or yellow, when offered for transportation by rail express must be packed in water in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Spec. 15A or 15B (§§78.168 or 78.169 of this chapter). Wooden boxes with inside containers which must be hermetically sealed (soldered) metal cans, containing not over 1 pound each, inclosed in other water-tight, metal cans with screw-top closures, or with soldered closures.

(2) Samples of phosphorus, white or yellow, not to exceed 4 ounces each, placed in water in sealed metal cylinders or cans, inclosed in a wooden box, spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter), may be transported only when consigned to the laboratory of the Internal Revenue Bureau or to the Hygienic Laboratory of the Public Health Service, Washington, D. C.

(3) Spec. 29 (§ 78.226 of this chapter). Mailing tube having a watertight rigid polyethylene container in which is placed a quartz tube containing not more than 100 grams of phosphorus sealed under nitrogen or other inert gas, with the remaining space in the polyethylene container filled with water. The polyethylene container shall be cushioned within the mailing tube with incombustible cushioning material.

(d) Phosphorus, white or yellow, when dry must be cast solid and shipped in containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums not over 30 gallons capacity each.

(2) In projectiles or bombs when shipped by, for, or to the Departments of the Army, Navy, and the Air Force of the United States Government, without bursting elements.

(e) Phosphorus, white or yellow, when dry must not be offered for transportation by rail express.

**§ 73.191 Phosphorus pentachloride.**

(a) Phosphorus pentachloride must be packed in specification containers as follows:

(1) Spec. 11B, 15A, 15B, 15C, 16A, or 19A (§ 78.161, § 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter). Wooden barrels, kegs, or boxes, with inside containers which must be glass or glazed earthenware containers, not over 25 pounds capacity each, cushioned with mineral packing; when inside containers are packed in the same outside container with other articles, they must be inclosed in tightly closed metal cans. Net weight of phosphorus pentachloride not over 50 pounds in each outside container.

(2) Spec. 6A, 6B, or 6C; also 37A or 37B (single-trip containers) (§§ 78.97, 78.98, 78.99, 78.131, or § 78.132 of this chapter). "Black iron" metal barrels or drums.

(3) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs asphaltum lined.

(4) Spec. 28A (§ 78.9 of this chapter). Metal-jacketed lead carboys.

**§ 73.192 Picrate of ammonia (ammonium picrate), picric acid, trinitrobenzoic acid, and urea nitrate, wet.**

(a) Picrate of ammonia (ammonium picrate), picric acid, trinitrobenzoic acid, and urea nitrate, wet with not less than 10 percent water, in quantity not exceeding 16 ounces in one outside package, may be shipped as drugs, medicines, or chemicals, when in glass bottles securely stoppered, each bottle inclosed in a strong fiber carton properly cushioned in the outside shipping case. No restrictions other than packing prescribed by this section are required when these materials are offered for transportation.

**§ 73.193 Picric acid, trinitrobenzoic acid, or urea nitrate, wet.**

(a) Picric acid, trinitrobenzoic acid, or urea nitrate, wet with not less than 10 percent water must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden box with inside containers of tightly closed glass or earthenware, cushioned, in outside container. The net weight in an outside package must not exceed 25 pounds dry weight. (See § 73.65 (e) for shipment of wet picric acid, wet trinitrobenzoic acid and wet urea nitrate in excess of 25 pounds, and § 73.192 for exemption up to 16 ounces.)

**§ 73.194 Potassium permanganate.**

(a) Potassium permanganate must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.154.

(2) In bulk in sift-proof, self-clearing, covered hopper or bottom outlet steel cars or in sift-proof all steel flat bottom gondola cars with fixed sides and ends equipped with water-proof and dust-proof wooden or steel covers well secured in place for all openings, or in bulk in motor vehicles with steel, sift-proof, self-clearing hopper-type or dump-type bodies, with water-proof and dust-proof covers, well secured in place. Such cars, when used exclusively in this service and stencilled "FOR POTASSIUM PERMANGANATE ONLY," are not subject to the requirements of § 74.586(b) of this chapter.

**§ 73.195 Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film.**

(a) Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film, when offered for transportation by carrier by rail freight, highway, or water must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes lined, spec. 2F or 2M (§§ 78.25 or 78.31 of this chapter); gross weight not over 450 pounds each.

(2) Spec. 6A, 6B, 6C, or 6J; also 17H, 37A, or 37B (single-trip containers) (§§ 78.97, 78.98, 78.99, 78.100, 78.118, 78.131, or § 78.132 of this chapter). Metal barrels or drums.

(3) Spec. 11B (§ 78.161 of this chapter). Wooden barrels or kegs with paper bags, spec. 2J (§ 78.28 of this chapter) as inside containers of the material; gross weight not over 375 pounds.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Must be externally treated to provide protection against moisture. Authorized net weight not over 225 pounds.

(b) Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion picture film scrap, or pieces of exposed or unexposed film which show evidence of decomposition or instability or are liable to decompose or become unstable must be packed submerged in water in specification containers as follows:

(1) Spec. 6A, 6B, or 6C; or 17H (single-trip) (§ 78.97, § 78.98, § 78.99, or § 78.118 of this chapter). Metal barrels or drums.

(2) Spec. 15A, 15B, or 15C (§ 78.168, § 78.169, or § 78.170 of this chapter). Wooden boxes with tightly closed inside metal containers.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.196 Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film, shipments by rail express.**

(a) Pyroxylin plastic scrap, photographic film scrap, X-ray film scrap, motion-picture film scrap, or pieces of exposed or unexposed film, except samples for laboratory examination, must not be offered for transportation by rail express.

(b) Samples for laboratory examination when offered for transportation by rail express must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with inside metal container, hermetically sealed by soldering or with tape. Net weight not over 25 pounds; shipments must be marked "Sample of (name of article) for laboratory examination".

**§ 73.197 Pyroxylin plastics, in sheets, rolls, rods, or tubes.**

(a) Pyroxylin plastics, in sheets, rolls, rods, or tubes containing nitrocellulose is not subject to Parts 71–78 and 197 of this chapter when offered for transportation by carriers by rail freight or highway but when offered for transportation by carriers by rail express or water must be packed in specification containers as follows and must bear the yellow label:

(1) Spec. 15A, 15B, or 19A (§§ 78.168, 78.169, or 78.190 of this chapter). Wooden boxes.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Special boxes §§ 78.205–20 and 78.205–21 authorized only for pyroxylin in sheets, rods or tubes.

(3) Sheets rolled, in spec. 21C (§ 78.224 of this chapter) fiber drums, having 2 straps applied lengthwise and one or more circumferentially; straps at least ½ by 0.02 inch steel. Authorized net weight not over 225 pounds.

(4) Sheets, rolled, not over 15 pounds net weight in fiber tubes lined throughout with singleface corrugated fiberboard at least 0.2 inch thick and securely closed; tube material at least 0.115 inch thick for side walls and 0.05 inch thick for ends with strength, Mullen or Cady test, at least 245 and 220 pounds respectively; metal ends for tubes acceptable when lined with fiber discs at least 0.05 inch thick.

(b) Pyroxylin plastics in manufactured articles or articles made therefrom is not subject to Parts 71–78 and 197 of this chapter.

**§ 73.197a Smokeless powder for small arms.**

(a) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car or motor vehicle shall be classed as a flammable solid for purposes of transportation when approved for such classification by the Bureau of Explosives. Maximum quantity in any inside container must not exceed eight pounds and inside containers must be arranged and protected so as to prevent simultaneous ignition of the contents. The complete package must be a type approved by the Bureau of Explosives. Each outside shipping container shall be labeled as prescribed in § 73.402 (a) (2).

**§ 73.198 Sodium hydride.**

(a) Sodium hydride must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.206 (a) (1) and (a) (2).

(2) Spec. 17H (§ 78.118 of this chapter). Metal drums (single-trip).

(3) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) with welded side seams and hermetically sealed closure or closure made fast by positive pressure of the lid against a rubber gasket with edge of the lid crimped over the lip of the drum and a protective metal ring fastened around the crimped edge, packed in strong outside wooden boxes.

**§ 73.199 Rags, oily.**

(a) Rags, oily, with more than 5 percent of vegetable or animal oil, must be packed in hermetically sealed metal-lined wooden boxes, or air-tight metal containers.

(b) Rags, oily, as described above, must not be offered for transportation by rail express.

**§ 73.200 Rags, wet.**

(a) Rags, wet, must be packed in hermetically sealed metal-lined wooden boxes, or air-tight metal containers.

(b) Rags, wet, must not be offered for transportation by rail express.

**§ 73.201 Rubber scrap, rubber buffings, reclaimed rubber, or regenerated rubber.**

(a) Rubber scrap, if ground, powdered, or pulverized, and the rubber content of which exceeds 45 percent, as determined by subtracting the sum of the percentage of ash and the percentage of acetone extract from 100; rubber buffings from any grade of rubber, irrespective of the percentage of rubber content; and reclaimed rubber or regenerated rubber, must be packed in specification containers as follows (see paragraph (b) of this section):

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 15A (§ 78.168 of this chapter). Wooden boxes lined, spec. 2F (§ 78.25 of this chapter), or 2M (§ 78.31 of this chapter).

(3) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

(6) Spec. 22A (§ 78.196 of this chapter). Wooden drums.

(7) Tank cars tightly and securely closed.

(8) Spec. 36A, 36B, 36C, 44B, or 44E (§§ 78.230, 78.233, 78.234, 78.236, or 78.239 of this chapter). Bags.

(b) Rubber scrap, reclaimed rubber, or regenerated rubber are not subject to Parts 71–78 and 197 of this chapter if shipped in the following forms:

(1) Rubber scrap, not ground or ground with cord or fabric insertion, or ground without cord or fabric insertion the particles of which pass over a screen of not less than 5-mesh.

(2) Reclaimed rubber or regenerated rubber when in the form of dense homogeneous nonporous sheets or rolls, the sheets of thickness of 1/8 inch or greater, packed flat or in rolls, or in pelletized form if not less than ¼ inch in diameter, or ground, the particles of which pass over a screen of not less than 5-mesh, all properly cooled before shipment.

(3) Rubber scrap, reclaimed rubber, or regenerated rubber in any form when shipped in covered steel hopper cars, tank cars, or tank or hopper trucks.

**§ 73.202 Sodium and potassium, metallic liquid alloy.**

(a) Sodium and potassium, metallic liquid alloy must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes with inside metal containers of a type approved by the Bureau of Explosives cushioned with incombustible cushioning material. Each container must have been tested hydrostatically to a pressure of not less than 60 pounds per square inch. Closing devices must be protected from injury. Not more than 300 pounds of sodium or potassium liquid alloy may be shipped in one outside container.

(2) Spec. 5A (§ 78.81 of this chapter), metal barrels or drums not exceeding 400 pounds capacity each, having protruding valves protected by a 12-gauge steel dome securely attached to the head of the drum. Shipments are authorized by rail freight in carload lots only and by motor vehicle in truckload lots only.

**§ 73.203 Tetranitromethane.**

(a) Tetranitromethane must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, gross weight not exceeding 150 pounds, with inside containers which must be: glass bottles not more than 1 quart capacity each, with closures securely fastened and of a type not deteriorated by the contents, each bottle individually packed in a tight metal container and cushioned therein with absorbent incombustible material; or aluminum cans or polyethylene bottles, not more than 5 pounds capacity each, with opening not more than 1.25 inches diameter, fitted with securely fastened screw type closures and gaskets of material not deteriorated by contact with the contents, cushioned with not less than 2 inches of absorbent incombustible cushioning material between the inside containers and any part of the wooden box.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums, with inside stainless steel or aluminum drum (or drums) having no opening exceeding 2.5 inches diameter, openings to be securely closed by a screw type gasketed device, with gaskets of material not deteriorated by contact with the contents. The inside drum (or drums) must be cushioned with not less than 2 inches of absorbent incombustible cushioning material; inside drums shall be of not less than 20 gauge metal and shall be tested for leakage before packing in the outside drum.

**§ 73.204 Sodium hydrosulfite.**

(a) Sodium hydrosulfite must be packed in specification containers as follows:

(1) Spec. 11A, 11B, 15A, 15B, 15C, 16A, or 19A (§§ 78.160, 78.161, 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden barrels, kegs, or boxes with inside glass bottles of capacity not exceeding 5 pounds each, or metal containers.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 17E, 17H, or 37K (§§ 78.116, 78.118, or 78.130 of this chapter). Metal drums (single-trip).

(4) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip). These containers are not authorized for transportation by carriers by water.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums with inside metal drums. Authorized net weight not over 225 pounds.

(6) Spec. 21C (§ 78.224 of this chapter). Fiber drums constructed for a net weight of 225 pounds; authorized net weight of product not over 250 pounds; drums must have a metal foil (laminated between two sheets of kraft paper with thermoplastic adhesive) moisture and water barrier wound into the sidewall of the drum and located not more than 2 plies from the interior of drum but not to be wound as the first ply; a metal foil moisture and water barrier must also be present in the fiber or wood heading; exterior of drum sidewall must be protected with a water resistant coating; in addition to the tests prescribed by § 78.224–2 (a), (b), and (c) of this chapter, a drum having been given a 4-foot diagonal bottom chime drop must, after being emptied, withstand complete immersion of the bottom in 6 inches of water for 4 hours without leakage to the interior; drums must not be offered for transportation by carriers by water.

(7) Spec. 22B (§ 78.197 of this chapter). Plywood drums with inside metal drums.

NOTE 1: Because of the present emergency and until further order of the Commission, the use of inside metal drums will not be required but in lieu thereof the drum must be lined or otherwise treated so as to prevent the entrance of moisture in quantities sufficient to create a hazardous condition in transportation. Maximum loaded capacity 110 pounds net.

**§ 73.205 Sodium picramate, wet.**

(a) Sodium picramate must be wet with not less than 20 percent of water by weight and packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with well stoppered glass inside containers of not exceeding 1 quart capacity each, cushioned in the boxes.

(2) Spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter). Wooden barrels, or kegs.

**§ 73.206 Sodium or potassium, metallic, sodium amide, sodium potassium alloys, sodium aluminum hydride, lithium metal, lithium silicon, lithium hydride, and lithium aluminum hydride.**

(a) Sodium or potassium, metallic, sodium amide, sodium potassium alloys, sodium aluminum hydride, lithium metal, lithium silicon, lithium hydride, and lithium aluminum hydride, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes with air-tight metal inside containers which must have closing device securely fastened by positive means (not friction). Inside metal cans with closures securely fastened, positive means not required, must not exceed 1-gallon capacity each for lithium aluminum hydride and must be cushioned in outside containers with sufficient incombustible packing material.

(2) Spec. 5, 6A, 6B, or 6C (§ 78.80, § 78.97, § 78.98 or § 78.99 of this chapter). Metal barrels or drums. Not authorized for lithium aluminum hydride.

(3) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip). Authorized only for lithium metal or sodium, metallic which must be fused solid in the container.

(4) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip) not exceeding 6 gallons capacity each, with welded side seams and hermetically sealed closure or closure made fast by positive pressure of the lid against a rubber gasket with edge of the lid crimped over the lip of the drum and a protective metal ring fastened around the crimped edge, cushioned on all sides with incombustible packing material, packed in strong outside wooden boxes (see § 73.25). Not more than four inside metal drums shall be packed in one outside wooden box.

(5) Spec. 17C (§ 78.115 of this chapter), metal drums (single-trip). Not authorized for lithium aluminum hydride.

(6) Spec. 17H or 37A (§ 78.118 or § 78.131 of this chapter). Metal drums (single-trip), with air-tight metal inside containers which must have closing device securely fastened by positive means (not friction). Inside metal containers must be cushioned on all sides by incombustible packing material. Authorized for lithium metal or lithium hydride only.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 375-pound test (Mullen or Cady) solid fiberboard with inside airtight metal container which must have a closing device securely fastened by positive means (not friction). Each inside metal container must be individually nested into a double-faced corrugated partition of at least 200-pound test (Mullen or Cady) which is in turn surrounded on all sides by a peripheral double-walled corrugated liner of at least 200-pound test (Mullen or Cady). Authorized gross weight not over 90 pounds.

(8) Spec. 21C (§ 78.224 of this chapter). Fiber drums constructed for 400 pounds net weight, with the material packed not more than 5 pounds net weight each in not to exceed one-half gallon steel cans equipped with friction-top closures. Authorized for lithium ferro silicon only.

(b) Sodium or potassium, metallic, sodium amide, and lithium metal, immersed in neutral oil may also be shipped when packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes with inside metal drums, spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter) single-trip, having welded side seams, net weight not over 30 pounds, or with inside glass containers, each enclosed in a tin container.

(2) Spec. 17H (§ 78.118 of this chapter). Metal drum (single-trip). Authorized only for lithium metal in the form of cups or ingots.

(c) Sodium, metallic, may also be shipped when packed in specification containers as follows:

(1) Spec. 105A300–W (§ 78.286 of this chapter). Tank cars, having exterior heater coils fusion welded to tank shell and properly stress-relieved, the material to be in molten condition when loaded into the tank and allowed to solidify before car is offered to the carrier. Outage must be 5 percent or more for sodium at fusion temperature of 208° F.

(2) Spec. 17C, 17H, 37A, or 37B (§§ 78.115, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip) authorized for cylindrical blocks at least 2 inches in diameter and not less than 6 inches in length, or rectangular blocks not less than 6 inches in length and not less than 2 inches in any other dimension. Net weight not over 300 pounds for spec. 17C drums; not over 30 pounds for spec. 17H, 37A, or 37B drums.

(3) Spec. MC 330 (§ 78.336 of this chapter). Tank motor vehicles having a minimum design pressure of 150 pounds per square inch and having exterior coils fusion-welded to the tank shell and properly stress-relieved. Tanks must be equipped with safety valves having a set-to-discharge pressure not exceeding 150 pounds per square inch. The material must be in molten condition when loaded and solidified before being moved over a public highway. Outage must be 5 percent or more at a sodium temperature of 208° F.

(4) Stainless steel tubes having welded end caps containing not over 50 grams of metallic sodium each. Each tube must be inserted in an aluminum carrier tube. Containers must be approved by the Bureau of Explosives.

(d) Lithium metal in cartridges, when packed and described as follows is exempt from specification packaging and labeling requirements:

(1) In inside hermetically sealed metal cartridges not exceeding 18 grams net weight each, packed in strong outside containers with net weight of lithium metal not exceeding one pound; which outside containers may be overpacked in strong wooden boxes or fiber drums, provided total net weight of lithium metal in one outside container does not exceed one pound.

(e) Lithium metal in cartridges, containing more than 18 grams but not more than 120 grams of lithium, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes, not over 75 pounds gross weight, with air-tight inside copper cartridges. Cartridges having less than 0.022 inch wall thickness must be separated or securely cushioned in the boxes. Each cartridge must have a minimum thickness of 0.02 inch.

**§ 73.207 Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground.**

(a) Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes with inside containers which must be glass bottles enclosed in tightly closed metal cans, or hermetically sealed (soldered) metal cans.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside containers which must be hermetically sealed (soldered) metal cans of not over 5 pounds capacity.

(b) When fused or concentrated, but not ground (may be chipped, flaked, or broken), may be shipped in specification containers as follows:

(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes with inside bottles of not more than 5 pounds capacity each, or metal cans, with tight covers.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be metal cans of not over 5 pounds net weight each or glass bottles of not over 1 pound net weight each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross.

(3) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(4) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, 78.99 of this chapter). Metal barrels or drums.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums which must be lined or coated, or otherwise treated so as to prevent the entrance of moisture in quantities sufficient to create a hazardous condition in transportation; maximum loaded capacity 250 pounds net.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(7) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than four bottles having capacity of 5 pounds each shall be packed in one outside box. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(c) Sulfide of potassium, crystallized, is not subject to Parts 71–78 and 197 of this chapter.

(d) Sodium sulfide when shipped fused in one solid mass in a metal barrel or drum and sodium sulfide, crystallized, are not subject to Parts 71–78 and 197 of this chapter.

(e) Sodium sulfide containing 35 percent or more combined water by weight, fused or concentrated but not ground (may be chipped, flaked, or broken), when packed in steel barrels or drums or portable metal tanks that are equipped with moisture-tight closures, or in strong tight fiber drums having a moisture-barrier incorporated in the walls and equipped with moisture-tight closures, is not subject to Parts 71-78 and 197 of this chapter. Portable tanks filled to gross weight to be shipped must be capable of withstanding a drop from a height of 4 feet onto solid concrete without rupture or serious damage, and must be equipped with lifting devices capable of holding 4 times the gross weight of filled tank.

**§ 73.208 Titanium metal powder, wet or dry.**

(a) *Titanium metal powder, wet.* Titanium metal powder, wet, with not less than 20 percent water, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with inside metal cans not exceeding 1 gallon each, tightly and securely closed, and not more than 12 such inside metal cans in one outside package; or not more than 1 inside metal can of not less than 22-gauge metal and not to exceed 10 gallons capacity, tightly and securely closed.

(b) *Titanium metal powder, dry.* Titanium metal powder, dry, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with inside metal containers, tightly and securely closed by push-in covers, held in place by soldering at least four points, or in screw-cap metal cans. Inside containers must not exceed 10 pounds net each. Inside containers must be cushioned by incombustible material such as rock wool or asbestos wool. Gross weight of outside package must not exceed 75 pounds each.

(2) Spec. 17H or 37A (§ 78.118 or § 78.131 of this chapter). Metal barrels or drums (single-trip) with inside metal drum of not less than 20-gauge metal and with closure secured by positive means. The inside container shall be completely surrounded by not less than 1 inch of incombustible cushioning material.

(3) Spec. 5B (§ 78.82 of this chapter). Metal barrels or drums not over 15 gallons capacity.

**§ 73.209 Tankage, garbage, and tankage fertilizers.**

(a) Tankage, garbage, and tankage fertilizers, containing less than 8 percent moisture or having a temperature exceeding 100° F. when loaded must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Such tankage, garbage, and tankage fertilizers, must not be offered for transportation by rail express.

**§ 73.210 Tankages, rough ammoniate.**

(a) Tankages, rough ammoniate (tankages made from ammoniates such as leather scrap, horns, hoofs, hair, hair waste, felt waste), containing less than 7 percent moisture or having a temperature exceeding 100° F. when loaded, must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Tankages, rough ammoniate, must not be offered for transportation by rail express.

**§ 73.211 Textile waste, wet.**

(a) Textile waste, wet, must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Textile waste, wet, must not be offered for transportation by rail express.

**§ 73.212 Trinitrobenzene and trinitrotoluene, wet.**

(a) Trinitrobenzene and trinitrotoluene, wet with not less than 10 percent water, in quantity not exceeding 16 ounces in one outside package, may be shipped as drugs, medicines, or chemicals, when in glass bottles securely stoppered, each bottle inclosed in a strong fiber carton properly cushioned in the outside shipping case and are not subject to any other requirement of Parts 71–78 and 197 of this chapter.

**§ 73.213 Wool waste, wet.**

(a) Wool waste, wet, must be packed in hermetically sealed metal-lined wooden boxes or air-tight metal containers.

(b) Wool waste, wet, must not be offered for transportation by rail express.

**§ 73.214 Hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, chemically produced (see Note 1), finer than 20 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, chemically produced (see Note 1), finer than 20 mesh particle size.**

NOTE 1: Produced by means other than attrition or grinding.

NOTE 2: Any product containing 10 percent or more, particle size specified, shall be subject to this section.

NOTE 3: Any product containing less than 25 percent water by weight is considered dry for purposes of these regulations.

(a) Hafnium metal, wet, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size with a minimum of 25 percent water by weight (a mixture of water and a suitable anti-freeze agent may be used when freezing temperatures may be encountered during transportation) must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or 78.169 of this chapter) wooden boxes or spec. 6A, 6B, or 6C (§ 78.97, 78.98, or 78.99 of this chapter) metal drums with inside containers of glass or non-carbon polyethylene having net weight of not over 10 pounds each. Inside glass containers must be equipped with positive type clamp-on closures equipped with rubber gaskets. Inside polyethylene containers may have screw-cap closures equipped with gaskets ahead of thread and shall be of material which will not react with or be decomposed when in contact with contents. Screw-cap closures must be secured in place by suitable tape. Each glass or polyethylene container must be surrounded on all sides with not less than 1 inch of incombustible cushioning material and in an amount sufficient to completely absorb the entire liquid contents of the containers. Each inside glass or polyethylene container must be placed in a spec. 2A (§ 78.20 of this chapter) metal can closed with push-in cover held in place by soldering or crimping at at least four points. Authorized net weight of hafnium in one outside container shall not exceed 40 pounds for wooden boxes and shall not exceed 150 pounds for steel drums.

(2) Spec. 10A (§ 78.155 of this chapter). Wooden kegs containing not to exceed 75 pounds net each.

(b) Hafnium metal, dry, in an atmosphere of inert gas, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§ 78.97, 78.98, or 78.99 of this chapter) or spec. 17C, 17H, or 37A (single-trip containers) (§ 78.115, 78.118, or 78.131 of this chapter). Metal barrels or drums with inside non-carbon polyethylene bottles having positive type clamp-on closures equipped with rubber gaskets, or with screw-cap closures having not less than three continuous threads and equipped with gaskets ahead of threads, not over 5 pounds net weight capacity each. Screw-cap closures must be secured in place by suitable tape. Each bottle must be placed in a spec. 2R (§ 78.34 of this chapter) metal container having a wall thickness of one-fourth inch and be completely surrounded by cushioning material. Spec. 2R containers must be separated from one another by incombustible cushioning material. Authorized net weight of metal in one outside container not over 150 pounds.

(c) Zirconium metal, wet, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size with a minimum of 25 percent water by weight (a mixture of water and a suitable anti-freeze agent may be used when freezing temperatures may be encountered during transportation) must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or 78.169 of this chapter) wooden boxes or spec. 6A, 6B, or 6C (§ 78.97, 78.98, or 78.99 of this chapter) or 17C or 17H (single-trip containers) (§ 78.115 or 78.118 of this chapter) metal drums with inside containers of glass or non-carbon polyethylene having net weight of not over 10 pounds each. Inside glass containers must be equipped with positive type clamp-on closures equipped with rubber gaskets. Inside polyethylene containers may have screw-cap closures equipped with gaskets ahead of thread and shall be of material which will not react with or be decomposed when in contact with contents. Screw-cap closures must be secured in place by suitable tape. Each glass or polyethylene container must be surrounded on all sides with not less than 1 inch of incombustible cushioning material and in an amount sufficient to completely absorb the entire liquid contents of the containers. Each inside glass or polyethylene container must be placed in a spec. 2A (§ 78.20 of this chapter) metal can closed with push-in cover held in place by soldering or crimping at at least four points. Authorized net weight of zirconium in one outside container shall not exceed 40 pounds in wooden boxes and 150 pounds in steel drums.

(2) Spec. 10A (§ 78.155 of this chapter). Wooden kegs containing not to exceed 75 pounds net each.

(d) Zirconium metal, dry, in an atmosphere of inert gas, mechanically produced finer than 270 mesh particle size or chemically produced finer than 20 mesh particle size must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§ 78.97, 78.98, or 78.99 of this chapter) or spec. 17c, 17H, or 37A (single-trip containers) (§ 78.115, 78.118, or 78.131 of this chapter). Metal barrels or drums with inside non-carbon polyethylene bottles having positive type clamp-on closures equipped with rubber gaskets, or with screw-cap closures having not less than three continuous threads and equipped with gaskets ahead of threads, not over 5 pounds net weight capacity each. Screw-cap closures must be secured in place by suitable tape. Each bottle must be placed in a spec. 2R (§ 78.34 of this chapter) metal container having a wall thickness of one-fourth inch and be completely surrounded by cushioning material. Spec. 2R containers must be separated from one another by incombustible cushioning materials. Authorized net weight of metal in one outside container not over 150 pounds.

(e) Mechanically produced hafnium metal, coarser than 270 mesh particle size and chemically produced coarser than 20 mesh particle size in strong tight containers are not subject to Parts 71–78 and 197 of this chapter.

(f) Mechanically produced zirconium metal, coarser than 270 mesh particle size and chemically produced coarser than 20 mesh particle size in strong tight containers are not subject to Parts 71–78 and 197 of this chapter. (See § 73.220, zirconium scrap.)

**§ 73.216 Zirconium picramate, wet.**

(a) Zirconium picramate must be wet with not less than 20 percent of water by weight and packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with well stoppered glass inside containers of not exceeding 1 quart capacity each, cushioned in the boxes.

(2) Spec. 10A or 10B (§§ 78.155 or 78.156 of this chapter). Wooden barrels or kegs.

**§ 73.217 Calcium hypochlorite compounds, dry, and lithium hypochlorite compounds, dry.**

(a) Calcium hypochlorite compounds, dry, containing more than 39 percent available chlorine, and lithium hypochlorite compounds, dry, containing more than 39 percent available chlorine must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(3) Spec. 21C (§ 78.224 of this chapter). Fiber drums with inner ply a laminated sheet of paper and aluminum foil, internally coated with not less than a 0.002 inch thickness of polyethylene. Cover of drum shall be gasketed. Authorized net weight not over 400 pounds.

(b) Strong outside wooden or fiberboard packages containing inside containers of glass, metal, or plastic bottles not over 5 pounds capacity each, except that metal inside containers not over 7½ pounds capacity each are authorized for material in tablet form only, are exempt from specification packaging, marking, and labeling when offered for transportation by rail freight, rail express, or highway. When for transportation by water, strong wooden or fiberboard containers with inside metal containers not over 5 pounds capacity each, or not over 7½ pounds capacity each of material in tablet form, are exempt from specification packaging only. Shipments for

transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.218 Isopropyl percarbonate, unstabilized.**

(a) Isopropyl percarbonate, unstabilized, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter). Wooden boxes, or other equally efficient container when approved by the Bureau of Explosives, with glass, metal, or earthenware inside containers of not over 2 gallons capacity each which must be maintained at a temperature below 0° F. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

**§ 73.219 Potassium perchlorate.**

(a) Potassium perchlorate must be packed as follows:

(1) As prescribed in § 73.154 (a) (1) to (11).

**§ 73.220 Magnesium or zirconium scrap consisting of borings, clippings, shavings, sheets, turnings, or scalpings, and magnesium metallic (other than scrap), powdered, pellets, turnings, or ribbon.**

(a) Magnesium or zirconium scrap consisting of borings, shavings, or turnings, when shipped in carloads or truckloads, must be packed in closed metal barrels, wooden barrels, metal pails, or four-ply paper bags. In less-than-carload or less-than-truckload quantities it must be packed in closed metal drums, metal pails, or wooden barrels.

(1) Magnesium or zirconium scrap consisting of clippings, scalpings, or scrap sheets may be shipped in bulk in carload or truckload quantities. Cars must be tight box cars or tightly closed steel covered gondola cars and trucks or trailers must have closed or completely covered bodies.

(2) Magnesium or zirconium scrap consisting of clippings, scalpings, or scrap sheets in closed metal drums, wooden barrels, or wooden boxes is exempt from specification packaging, marking, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(b) Magnesium metallic (other than scrap), powdered, pellets, turnings, or ribbon must be packed in containers as prescribed in § 73.154.

(1) Magnesium metallic (other than scrap), pellets, turnings, or ribbon in closed metal drums, metal pails, fiber drums, wooden boxes with inside containers, fiberboard boxes with inside glass bottles not over 1 pound capacity each, with not more than 25 pounds net weight of product in each outside fiberboard box are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.221 Liquid organic peroxides, n.o.s. and liquid organic peroxide solutions, n.o.s. other than acetyl peroxide solution, acetyl benzoyl peroxide solution, cumene hydroperoxide, dicumyl peroxide, hydrogen peroxide, peracetic acid, and tertiary butylisopropyl benzene hydroperoxide.**

(a) Liquid organic peroxides, n.o.s. and liquid organic peroxide solutions, n.o.s. other than acetyl peroxide solution, acetyl benzoyl peroxide solution, cumene hydroperoxide, dicumyl peroxide, hydrogen peroxide, peracetic acid, and tertiary butylisopropyl benzene hydroperoxide must be packed in specification containers as follows:

(1) Spec. 1A or 1D (§§ 78.1 or 78.4 of this chapter). Carboys, glass, boxed, capacity not over 5 gallons for spec. 1A (§ 78.1 of this chapter), and 6.5 gallons for spec. 1D (§ 78.4 of this chapter).

(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass, earthenware, or metal, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container. Metal inside containers authorized only for materials which will not react dangerously with or be decomposed by contact with metal.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard box with inside containers which must be glass, earthenware, polyethylene bottles, or metal, not over 1 gallon each. Not more than six 1-gallon polyethylene bottles; or not more than one 1-gallon glass, earthenware, or metal inside container, which must be cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container, shall be packed in one outside fiberboard box. Metal and polyethylene inside containers authorized only for material which will not react dangerously with or be decomposed by contact with metal or polyethylene.

(4) Spec. 42B (§ 78.107 of this chapter). Aluminum drums not over 15 gallons capacity. Authorized only for peroxides which will not react dangerously with the aluminum or be decomposed by contact with it.

(5) Spec. 17C or 17E (§§ 78.115 or 78.116 of this chapter). Metal drums (single-trip) not over 15 gallons capacity. Authorized only for material which will not react dangerously with the drum metal, or be decomposed by contact with it.

(6) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container. Authorized only for material which will not react dangerously with or cause decomposition of the polyethylene.

(7) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S (§ 78.35 of this chapter) polyethylene container. Authorized only for material which will not react dangerously with or cause decomposition of the polyethylene.

(8) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5-gallons capacity, with one-piece seamless molded polyethylene liner (nonreusable container). Drums exceeding 1-gallon capacity must be constructed of at least 24-gauge metal. Authorized only for materials that will not react with polyethylene and result in container failure.

(9) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

(10) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles, not over 5-gallons capacity each, as specified by § 78.205–34 of this chapter. Not more than one bottle shall be packed in one outside box. Authorized only for material which will not react dangerously with or cause decomposition of polyethylene.

**§ 73.222 Acetyl peroxide and acetyl benzoyl peroxide, solution.**

(a) Acetyl peroxide must be shipped in solution in a non-volatile solvent and must contain not more than 25 percent by weight of the peroxide. Acetyl benzoyl peroxide must be shipped in solution in a non-volatile solvent and must contain not more than 40 percent by weight of the peroxide. They must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container, shall be packed in one outside fiberboard box. Metal and polyethylene inside containers authorized only for material which will not react dangerously with or be decomposed by contact with metal or polyethylene.

(2) Spec. 1A or 1D (§§ 78.1 or 78.4 of this chapter). Carboys, glass, boxed, capacity not over 5 gallons for spec. 1A (§ 78.1 of this chapter), and 6.5 gallons for spec. 1D (§ 78.4 of this chapter).

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container. Not more than one 1-gallon inside container shall be packed in one outside fiberboard box.

(4) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

**§ 73.223 Peracetic acid.**

(a) Peracetic acid must be shipped in solution not exceeding 40 percent strength and must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over one gallon capacity each, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat. Cushioning material must be in sufficient quantity to completely absorb the contents of the inner container.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be glass or earthenware, not over one quart capacity each, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat. Cushioning material must be in sufficient quantity to completely absorb the contents of the inner container.

(3) Spec. 1D (§ 78.4 of this chapter). Boxed glass carboy.

(4) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(5) Spec. 37M (§ 78.134 of this chapter). Cylindrical steel overpack (nonreusable container) with inside spec. 2SL (§ 78.35a of this chapter) polyethylene container not over 30 gallons capacity. Polyethylene container must have a vented closure capable of preventing leakage of liquid contents.

(b) Peracetic acid solutions not exceeding 40 percent strength packed in strong wooden or fiberboard boxes, with not more than one inside glass container not exceeding 1 pint or 1 pound capacity, cushioned with sterile absorbent cotton or other cushioning material which will not react with the contents to generate heat, and with such cushioning material in sufficient quantity to completely absorb the contents of the bottle are exempt from specification packaging, marking other than name of contents, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

**§ 73.224 Cumene hydroperoxide, dicumyl peroxide, diisopropylbenzene hydroperoxide, paramenthane hydroperoxide, and tertiary butylisopropyl benzene hydroperoxide.**

(a) Cumene hydroperoxide of strength not exceeding 96 percent in a non-volatile solvent, dicumyl peroxide of strength not exceeding 50 percent in a non-volatile solvent, diisopropylbenzene hydroperoxide of strength not exceeding 60 percent in a non-volatile solvent, paramenthane hydroperoxide of strength not exceeding 60 percent in a non-volatile solvent, and tertiary butylisopropyl benzene hydroperoxide of strength not exceeding 60 percent must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, cushioned with incombustible packing material in sufficient quantity to absorb the contents of the inner container.

(2) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip), with interiors so treated that they will be resistant to the contents.

(3) Spec. 103,[1] 103–W, 103A,[1] 103A–W, 111A60–F–1, 111A60–W–1, 111A100–F–2 or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Authorized for 90 percent or less cumene hydroperoxide in a nonvolatile solvent, paramenthane hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent and diisopropylbenzene hydroperoxide of strength not exceeding 60 percent in a nonvolatile solvent only. Specs. 103,[1] 103–W, 111A60–F–1 and 111A60–W–1 tank cars must have bottom outlets effectively sealed from the inside.

(4) Spec. MC310 and MC311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles. Authorized for paramenthane hydroperoxide of strength not exceeding 60 percent in a non-volatile solvent only.

**§ 73.225 Phosphorus sesquisulfide.**

(a) Phosphorus sesquisulfide must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with metal inside containers hermetically sealed (soldered) or water-tight metal cans with screw-top closures. Other closures if approved by the Bureau of Explosives will be permitted.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums, not over 30 gallons capacity each.

(3) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip). Gross weight not over 425 pounds.

**§ 73.226 Thorium metal, powdered.**

(a) Thorium metal, powdered, must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with inside metal containers, tightly and securely closed by push-in covers held in place by soldering at least at four points, or in screw-cap type metal cans. Inside containers must not exceed 10 pounds net each. Gross weight of outside packages must not exceed 75 pounds each.

(b) Thorium metal powder packed in tightly and securely closed metal cans, cushioned with incombustible material in strong outside wooden or fiberboard boxes, and not exceeding 4 ounces net weight in one outside shipping container, is exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.227 Urea peroxide.**

(a) Urea peroxide must be packed in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be rubber or plastic containers not exceeding 4 ounces each. Gross weight not over 65 pounds.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums completely coated on the inside with a suitable wax, synthetic coating, or metal foil suitable to the lading; or fiber drums having a metal foil (laminated between two sheets of kraft paper with thermoplastic adhesive) moisture and water barrier wound into the sidewall of the drum and located not more than 2 plies from the interior of drum but not to be wound as the first ply; a metal foil moisture and water barrier must also be present in the fiber or wood heading; exterior of drum sidewall must be protected with a water resistant coating; in addition to the tests prescribed by § 78.224–2 (a), (b), and (c) of this chapter, a drum having been given a 4-foot diagonal bottom chime drop must, after being emptied, withstand complete immersion of the bottom in 6 inches of water for 4 hours without leakage to the interior. Authorized net weight not over 225 pounds.

(3) Spec. 22A (§ 78.196 of this chapter). Plywood drums with paper bags, spec. 2J (§ 78.28 of this chapter) coated with suitable wax on the inner surface.

**§ 73.228 Zinc ammonium nitrite.**

(a) Zinc ammonium nitrite must be packed in specification containers as follows:

(1) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip). Gross weight not over 300 pounds.

**§ 73.229 Chlorate and borate mixtures or chlorate and magnesium chloride mixtures.**

(a) Chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing more than 50 percent chlorate and no other hazardous additives must be packed as follows:

(1) As prescribed in § 73.163.

(b) Chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing no other hazardous additives and containing less than 50 percent chlorate are exempt from specification packaging, marking, and labeling requirements when offered for transportation by rail freight or highway and packed as follows; shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter:

(1) Tight metal or fiber drums.

(2) Wooden boxes with tight inside metal containers.

(3) Multi-wall paper bags, net weight not over 50 pounds, moisture proof and sift proof, and having a strength capable of withstanding four 4-foot drops onto solid concrete.

(4) Strong fiberboard boxes with inside fiber containers having metal tops and bottoms, net weight not over 4 pounds each; gross weight of completed package not over 65 pounds.

(5) Strong fiberboard boxes with not more than 4 inside paper bags spec. 2D (§ 78.23 of this chapter), having net weight not over 10 pounds each.

(c) Chlorate and borate mixtures or chlorate and magnesium chloride mixtures containing 28 percent or less chlorate and no other hazardous additives, are not subject to the regulations in Parts 71–78 and 197 of this chapter.

**§ 73.230 Sodium, metallic, dispersion in organic solvent.**

(a) Sodium, metallic, dispersion in organic solvent must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes with inside containers which must be metal cans not exceeding one quart capacity, and each such can must be packed in another metal can and cushioned on all sides with at least one inch of incombustible dry nonhygroscopic material which is nonreactive with sodium at temperatures encountered during normal transportation. Both the inner and outer metal cans shall be equipped with an airtight closing device secured by positive means (not friction). Gross weight of completed package must not exceed 100 pounds.

(2) Spec. 17H (§ 78.118 of this chapter). Metal drum (single-trip) of not over 55 gallons capacity, with material contained in an inside spec. 17E (§ 78.116 of this chapter) metal drum (single-trip) of not over 30 gallons capacity. The inside drum shall be snugly packed in the outside drum by completely and evenly surrounding it with incombustible dry nonhygroscopic material which is nonreactive with sodium at temperatures encountered during normal transportation.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 375-pound test (Mullen or Cady) solid fiberboard with inside metal cans not exceeding one quart capacity. Each such can must be packed in another metal can and cushioned on all sides with at least one inch of incombustible dry nonhygroscopic material which is nonreactive with sodium at temperatures encountered in normal transportation. Both the inner and outer metal cans shall be equipped with an airtight closing device secured by positive means (not friction) and must be individually nested into a double-faced corrugated partition of at least 200-pound test (Mullen or Cady) which is in turn surrounded on all sides by a peripheral double-walled corrugated liner of at least 200-pound test (Mullen or Cady). Authorized gross weight not over 90 pounds.

**§ 73.231 Calcium, metallic, crystalline.**

(a) Calcium, metallic, crystalline must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with airtight inside metal containers not over 1 gallon capacity each.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums, gross weight not over 350 pounds.

(3) Spec. 17C or 17H (§ 78.115 or § 78.118 of this chapter). Metal drums (single-trip), gross weight not over 350 pounds.

**§ 73.232 Tank cars containing residual phosphorus.**

(a) Tank cars from which phosphorus has been unloaded and from which all residual phosphorus has not been removed by thorough cleaning must be shipped filled with water or an inert gas and must be placarded by the shipper with placards prescribed in § 74.555 of this chapter.

**§ 73.233 Nickel catalyst, finely divided, activated or spent.**

(a) Nickel catalyst, finely divided, activated or spent must be wet with not less than 40 percent by weight of water or other equally suitable liquid and must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with airtight metal inside containers which must have closing device fastened by positive means (not friction); or airtight glass inside containers of not over 1 quart capacity each, securely cushioned in asbestos wool, vermiculite, or equally efficient incombustible cushioning material.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with airtight metal inside containers which must have closing device fastened by positive means (not friction); or airtight glass inside containers of not over 1 quart capacity each, securely cushioned in asbestos wool, vermiculite, or equally efficient incombustible cushioning material.

(3) Spec. 5, 6A, 6B, or 6C (§§ 78.80, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums not over 55 gallons capacity each.

(4) Spec. 17H, 37A, or 37B (§ 78.118, § 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

**§ 73.234 Sodium nitrite and sodium nitrite mixtures.**

(a) Sodium nitrite and sodium nitrite mixtures must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.154.

(2) Spec. 44C (§ 78.237 of this chapter). Multiwall paper bags constructed of at least 5 thicknesses of heavy duty shipping sack Kraft paper, or equivalent, with a minimum total basis weight of 310 pounds including a polyethylene or other suitable pliable plastic material inner sheet having a minimum basis weight of 10 pounds. All closures must be of such design as to provide a moisture-resistant package when closed for shipment. Net weight not over 100 pounds each. Authorized for carload or truckload shipments only.

(3) Spec. 21C (§ 78.224 of this chapter). Fiber drums: Authorized net weight not over 400 pounds.

(4) Spec. 37A (§ 78.131 of this chapter). Metal drums constructed of steel having minimum thickness of 24 gauge. Bolted or lever-lock closure rings authorized provided drums withstand test prescribed by § 78.131–11 of this chapter. Authorized gross weight not over 425 pounds.

(5) Sodium nitrite is authorized for shipment in tight sift-proof covered hopper cars. Cars must be thoroughly cleaned before loading.

(6) Tank cars which must be thoroughly cleaned before loading.

**§ 73.235 Ammonium bichromate (ammonium dichromate).**

(a) Ammonium bichromate (ammonium dichromate) must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.154.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 400 pounds.

**§ 73.236 Decaborane.**

(a) Decaborane must be packed in specification containers as follows:

(1) Spec. 6A, 6B or 6C (§§ 78.97, 78.98 or § 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17C, 17E, 17H, 37A, or 37B (§§ 78.115, 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be metal cans; sliding-lid wooden boxes; fiber cans or boxes, spec. 2G (§ 78.26 of this chapter), not over 5 pounds capacity each; or glass bottles not over 1 pound capacity each. Packages containing glass containers must not weigh over 65 pounds gross.

**§ 73.237 Chlorine dioxide hydrate, frozen.**

(a) Chlorine dioxide hydrate, frozen, must be packed in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside packages of polyethylene or other suitable material. Fiberboard boxes must be reinforced and insulated and sufficient dry ice must be used to maintain the hydrate in a frozen state during transportation. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

(2) Containers and means of refrigeration providing equal efficiency, when approved by the Bureau of Explosives, are authorized for shipments by private carrier by motor vehicle.

**§ 73.238 Aircraft rocket engines (commercial) and/or aircraft rocket engine igniters (commercial).**

(a) Aircraft rocket engines (commercial) and/or their igniters may be offered for transportation by rail freight, rail express, highway or water, when of a type approved by the Bureau of Explosives and when packaged and packed as follows:

(1) Spec. 15A, 15B, 15E or 16A (§ 78.168, 78.169, 78.172 or 78.185 of this chapter). Wooden boxes. Igniters must be packaged in sealed metal containers approved by the Bureau of Explosives and packed in wooden boxes as specified above when shipped separately from the Aircraft rocket engines.

(2) Aircraft rocket engines (commercial), when approved by the Bureau of Explosives, may be packed in the same outside shipping container with their separately packaged igniters. Igniters must be packed in separate sealed metal containers in strong inside containers.

(3) Aircraft rocket engines (commercial) and/or their igniters, packed in any other manner than specified in subparagraphs (1) and (2) of this paragraph, must be in containers of a type approved by the Bureau of Explosives.

NOTE 1: For purposes of § 73.238, aircraft rocket engines (commercial) are standby aircraft propulsion engines which are for civil aircraft installation only, comprising a metal case containing a solid composite fuel other than one classified as an explosive and containing no explosive material or element.

**§ 73.239 Barium azide—50 percent or more water wet.**

(a) Barium azide—50 percent or more water wet, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass bottles not over one pound capacity each. Bottles shall have rubber stoppers wire tied for securement. If shipment is to take place at a time freezing weather is to be anticipated, a suitable antifreeze solution must be used to prevent freezing.

## Subpart E—Acids and Other Corrosive Liquids; Definition and Preparation

**§ 73.240 Acids and other corrosive liquids; definition.**

(a) Corrosive liquids for the purpose of Parts 71–78 of this chapter are those acids, alkaline caustic liquids and other corrosive liquids which, when in contact with living tissue, will cause severe damage of such tissue, by chemical action; or in case of leakage, will materially damage or destroy other freight by chemical action; or are liable to cause fire when in contact with organic matter or with certain chemicals.

EDITORIAL NOTE: Order 41, 24 F.R. 10111, Dec. 15, 1959, effective Feb. 28, 1960, amended § 73.240(a). Subsequently, Order 41A, 25 F.R. 217, Jan. 12, 1961, provided for the postponement of the effective date of the provisions of Order 41, pending further order of the Commission and provided that, in the meantime, the former provisions of § 73.240 (a) as set forth above remained in effect.

**§ 73.241 Outage.**

(a) Outage for containers of acids or other corrosive liquids for transportation by carriers by rail freight, rail express, highway, or water, must be as follows:

(1) The proper vacant space (outage) in a tank car or other shipping container depends on the coefficient of expansion of the liquid and the maximum increase of temperature to which it will be subjected in transit. Outage must be calculated to the total capacity of the container.

(2) *Outage requirements for containers other than tank cars, cargo tanks and portable tanks.* Containers must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage or distortion of containers due to the expansion of the contents from increase of temperature during transit.

(3) *Outage requirements for tank cars.* In tank cars, outage must be calculated to percentage of the total capacity of the tank, i. e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage. The outage for tank cars must be not less than 1 percent.

(4) *Outage requirements for cargo tanks or portable tanks.* No cargo tank or portable tank or compartment thereof used for the transportation of any acid or other corrosive liquid shall be completely filled. The outage for cargo tanks and portable tanks must be not less than 2 percent.

**§ 73.242 Bottles containing acid or other corrosive liquids.**

(a) Bottles containing acid or other corrosive liquids, as defined by § 73.240, must not be packed in the same outside container with any other article, except as specifically provided in paragraphs (b) and (c) of this section and § 73.25, § 73.257, § 73.258, § 73.259, § 73.260, § 73.261, or § 73.286.

(b) When bottles containing acid or other corrosive liquids are cushioned by incombustible absorbent material and securely packed in tightly closed metal containers, except hydrofluoric acid which must be packed in a container other than a metal container, they may be packed with other articles. This exception does not apply to nitric acid exceeding 40 percent concentration, perchloric acid, hydrogen peroxide exceeding 52 percent strength by weight, nitrohydrochloric acid, or nitrohydrochloric acid diluted, which must not be packed in the same outside container with any other article under any circumstances.

(c) Acid or corrosive liquid solutions in securely closed bottles, in quantity necessary for preparing photographic processing mixture and efficiently cushioned, may be packed in the same outside shipping container with required amount of packaged dry chemicals not classed as dangerous articles by these regulations, provided no dangerous reaction occurs should the contents of bottles and dry chemicals be mixed. Marking prescribed in § 73.401 (c) shall not be required.

**§ 73.243 Closing and cushioning.**

(a) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed or in any case when necessary to prevent breakage or leakage.

**§ 73.244 Exemptions for acids and other corrosive liquids.**

(a) Acids and other corrosive liquids, except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter, in inside bottles having a capacity not over 1 pound or 16 ounces by volume each inclosed in a metal can in the outside container are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(b) Other exemptions from specification packaging, marking, and labeling requirements for rail freight, rail express and highway transportation and exemptions from specification packaging, marking other than name of contents, and labeling requirements for transportation by carrier by water, are shown with the packing requirements for the article.

**§ 73.245 Acids or other corrosive liquids not specifically provided for.**

(a) Acids or other corrosive liquids, as defined in § 73.240, other than those for which special requirements are prescribed, must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Spec. 1A, 1B, 1C, or 1E (§§ 78.1, 78.2, 78.3, or 78.7 of this chapter). Glass carboys in boxes, kegs, or plywood drums.

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 1D (§ 78.4 of this chapter). Boxed glass carboys of not over 6.5 gallons nominal capacity which must be closed, and when reused must be reconditioned and tested, as provided in the specification; means shall be provided so that accumulated pressure in bottles shall not exceed 10 pounds per square inch gauge at 130° F., or shall vent at a pressure not to exceed 10 pounds per square inch gauge.

(4) Spec. 5A, 5C, or 5M (§§ 78.81, 78.83, or 78.90 of this chapter). Metal barrels or drums.

(5) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs; these containers must be lined with asphalt, paraffin, or wax impervious to the lading.

(6) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with inside containers which must be glass or earthenware, not over 2 gallons each.

(7) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass, earthenware, polyethylene or other nonfragile plastic material (bags are not authorized), not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(8) Spec. 28 (§ 78.8 of this chapter). Metal-jacketed lead carboys.

(9) Spec. 5D (§ 78.84 of this chapter). Rubber lined metal barrels or drums.

Any barrel or drum that shows evidence of damage must be tested before shipment for defects in lining in the manner prescribed in § 78.84–15 (a) of this chapter.

(10) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums.

(11) Spec. 43A (§ 78.18 of this chapter). Rubber drums.

(12) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers of polyethylene, or other nonfragile plastic material resistant to the lading, and having threaded closures or other equally efficient type closure, not over 1 gallon capacity each, suitably cushioned to prevent movement within the box. Gross weight of complete package must not exceed 65 pounds.

(13) Spec. 15P or 22C (§ 78.182 or 78.198 of this chapter). Glued plywood or wooden box, or plywood drum as prescribed by § 78.198–3(a) of this chapter, with spec. 2T (§ 78.21 of this chapter) polyethylene container.

(14) Spec. 17C, 17E, or 17F (§§ 78.115, 78.116, or 78.117 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

(15) Spec. 17H (§ 78.118 of this chapter). Metal drums (single-trip). Authorized for viscous cleaning compounds, liquid, only.

(16) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S or 2SL (§ 78.35 or 78.35a of this chapter) polyethylene container.

(17) Spec. 17H, 37A, or 37B (§§ 78.118, 78.131, or 78.132 of this chapter), metal drums (single-trip), with welded side seams, not over 5 gallons capacity each. Drums must be lined throughout with a pliable plastic material impervious to the lading. Spec. 37A and 37B metal drums must be at least 24 gauge steel.

(18) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass, polyethylene, or other non-fragile plastic bottles not over 1-gallon capacity each. Not more than 4 inside glass bottles exceeding 5 pints capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(19) Spec. 37P (§ 78.133 of this chapter). Steel drums with polyethylene liner (nonreusable container). Authorized only for materials that will not react with polyethylene and result in container failure.

(20) Spec. 16D (§ 78.187 of this chapter). Wirebound wooden overwrap, with inside spec. 2T, 2TL, 2S, or 2SL (§§ 78.21, 78.27, 78.35, or 78.35a of this chapter) polyethylene container.

(21) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

(22) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(23) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles, not over 5 gallons capacity each, as specified by § 78.205–34 of this chapter. Not more than one bottle shall be packed in one outside box.

(24) Spec. 21C (§ 78.224 of this chapter). Fiber drum with inside spec. 2S, 2SL, or 2U (§ 78.35, § 78.35a, or § 78.24 of this chapter) polyethylene container. (See § 78.224–1(a)(2) of this chapter.)

(25) Spec. 12A or 12B (§ 78.210 or 78.205 of this chapter). Fiberboard boxes with inside aluminum containers not over 5 pounds capacity each. Aluminum containers must be approved by the Bureau of Explosives.

**§ 73.246 Antimony pentafluoride.**

(a) Antimony pentafluoride must be commercially anhydrous and must be packed in specification containers as follows:

(1) Spec. 3A150, 3AA150, 3E1800, 3B240, 4B240, or 4BA240 (§§ 78.36, 78.37, 78.42, 78.38, 78.50, or 78.51 of this chapter). Cylinders closed by means of iron or steel threaded plugs.

**§ 73.247 Acetyl chloride, antimony pentachloride, benzoyl chloride, chromyl chloride, pyro sulfuryl chloride, silicon chloride, sulfur chloride (mono and di), sulfuryl chloride, thionyl chloride, tin tetrachloride (anhydrous), and titanium tetrachloride.**

(a) Acetyl chloride, antimony pentachloride, benzoyl chloride, chromyl chloride, pyro sulfuryl chloride, silicon chloride, sulfur chloride (mono and di), sulfuryl chloride, thionyl chloride, tin tetrachloride (anhydrous), and titanium tetrachloride, must, except as indicated, be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in an outside container.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs, with glass or earthenware inside containers not over 2 gallons each.

(3) Spec. 1A, 1C, 1D, or 1E (§§ 78.1, 78.3, 78.4, or 78.7 of this chapter). Glass carboys in boxes, kegs, or plywood drums (not permitted for antimony pentachloride or tin tetrachloride, anhydrous).

(4) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only (not permitted for antimony pentachloride or tin tetrachloride anhydrous).

(5) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with aluminum bottles of 99 percent pure aluminum not over 1 gallon capacity each, having aluminum screw caps with gasket resistant to contents. Authorized for chromyl chloride only.

(6) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes having inside containers of securely closed soft-lead tubes having not more than 65 fluid ounces capacity each, which tubes shall be individually packed in securely closed steel tubes, with not more than 3 such steel tubes fastened together as a unit. The inside units shall be surrounded on all sides with incombustible mineral material. Authorized for titanium tetrachloride only.

(7) Spec. 5A, 5B, or 17C (single-trip) (§ 78.81, 78.82, or 78.115 of this chapter). Metal barrels or drums with openings not exceeding 2.3 inches in diameter.

(8) Spec. 5K (§ 78.88 of this chapter). Nickel drums, authorized for acetyl chloride, benzoyl chloride, pyro sulfuryl chloride, sulfuryl chloride, and thionyl chloride only. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron.

(9) Spec. 5C (§ 78.83 of this chapter). Barrels or drums of type 304 stainless steel not over 30 gallons capacity each. Authorized for chromyl chloride only.

(10) Spec. 42D (§ 78.109 of this chapter). Aluminum drums not over 30 gallons capacity each. Authorized for chromyl chloride only.

(11) Spec. 60 (§ 78.255 of this chapter). Portable tanks.

(12) Spec. MC 310 or MC 311 (§§ 78.330 or 78.331 of this chapter). Tank motor vehicles.

(13) Spec. 103A,[1] 103A–W, 105A300–W, 111A–100–F–2, or 111A100–W–2 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter) tank cars, except that for tin tetrachloride (anhydrous) spec. 105A300–W tank cars must be used.

(14) Spec. 103A,[1] 105A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Authorized for titanium tetrachloride, anhydrous only. Tank cars shall have safety valves of approved design and not subject to rapid deterioration by the lading.

(15) Sulfur chloride packed in glass or earthenware bottles or carboys must be cushioned in the outside container by means of incombustible elastic packing material of such nature that a mixture of the liquid and the packing material will not cause fires or heating.

(16) Spec. 106A500,[1] 106A500–X, or 110A500–W (§§ 79.300, 79.301 of this chapter). Tank cars. Authorized for antimony pentachloride and titanium tetrachloride (anhydrous) only. Titanium tetrachloride (anhydrous) tanks must not be equipped with safety devices.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.248 Acid sludge, sludge acid, spent sulfuric acid, or spent mixed acid.**

(a) Acid sludge, sludge acid, spent sulfuric acid, or spent mixed acid, resulting from the use of sulfuric acid in various processes, except when containing hydrofluoric acid, which will not corrode interior of tanks cars at sufficiently rapid rate to cause leakage during transportation, must be packed in specification containers as follows:

(1) Spec. 1A, 1D, or 1E (§§ 78.1, 78.4, or 78.7 of this chapter). Carboys in boxes or plywood drums. (For spent sulfuric acid only).

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(4) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars, provided the product is sufficiently liquid to be unloaded through the dome or manway.

(5) Spec. 103,[1] 103–W, 111A60–F–1, or 111A60–W–1 (§§ 79.200, 79.201 of this chapter). Tank cars, provided the product is too viscous to be unloaded through the dome or manway.

(6) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

(7) Spec. 60 (§ 78.255 of this chapter). Portable tanks.

**§ 73.249 Alkaline corrosive liquids, n.o.s., alkaline caustic liquids, n.o.s., alkaline corrosive battery fluids, and sodium aluminate, liquid.**

(a) Alkaline corrosive liquids, n.o.s., alkaline caustic liquids, n.o.s., alkaline corrosive battery fluids, and sodium aluminate, liquid, when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein as follows:

(1) In containers prescribed in § 73.245.

(2) Spec. 15A, 15B. 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers, not over 2 gallons each, or with metal inside containers, not over 5 gallons each.

(3) Spec. 5 or 5A (§§ 78.80 or 78.81 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(4) Spec. 17H (§ 78.118 of this chapter). Metal drums (single-trip). Authorized only for liquid boiler compounds or liquid water treatment compounds.

(5) Spec. 103[1], 103–W, 103A[1], 103A–W, 103B[1], 103B–W, 104[1], 104–W, 105A100[1], 105A100–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, 111A100–W–2, 111A100–W–3, 111A100–W–4, or 111A100–W–5 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars.

(6) Spec. MC 310 or MC 311 (§ 78.330 or § 78.331 of this chapter), tank motor vehicles.

(7) Spec. 60 (§ 78.255 of this chapter), portable tanks.

(8) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with glass inside containers of not over 16 ounces capacity each.

(9) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers of polyethylene having capacity not over 1 gallon each.

(10) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with not more than one glass inside container not over 1 gallon capacity containing sodium hydroxide solution not over 25 percent strength and packed in a strong fiberboard box. Dry chemicals for photographic development process not classed as dangerous articles, contained in suitable inside packages, may be packed in the same outside box. The marking requirements of § 73.401 (c) shall not apply.

(11) Spec. 29 (§ 78.226 of this chapter). Mailing tubes, with not more than one inside polyethylene bottle not over 1-quart capacity each.

(b) Alkaline corrosive liquids, n.o.s., alkaline caustic liquids, n.o.s., alkaline corrosive battery fluids, and sodium aluminate, liquid, when offered for transportation by rail express, must be packed in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) In containers as prescribed in paragraphs (a) (8), (9), (10), and (11) of this section and § 73.245 (a)(12).

(2) Spec. 5 or 5A (§§ 78.80 or 78.81 of this chapter). Metal barrels or drums, capacity not exceeding 10 gallons, with openings not exceeding 2.3 inches in diameter.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each, or with metal cans not over 5 gallons each.

(c) Inside containers of not more than 8-fluid ounces capacity each, resistant to lading, packed in strong outside containers, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.250 Automobiles or other self-propelled vehicles, engines or other mechanical apparatus.**

(a) Automobiles and other self-propelled vehicles equipped with electric storage batteries, wet, or with electric storage batteries, wet, removed from vehicles; and electric storage batteries, wet when included in carload or truckload shipments of automobile parts or assembled material in accordance with subparagraphs (a) (1), (2), and (3) are exempt from specification packaging, marking, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter. (See also § 73.257(b).)

(1) When batteries are removed from automobiles and loaded into car or motor vehicle therewith, the batteries must be so loaded, blocked, and braced in car as to prevent movement therein during transit, and the load must be so arranged that loose articles cannot come into contact with the batteries.

(2) When wet batteries or batteries shipped dry in the same container with electrolyte (acid) are shipped with automobile parts or assembly material, the batteries must be boxed or crated and so loaded, blocked, and braced in the car or motor vehicle as to prevent movement therein during transit, and the load must be so arranged that loose articles cannot come in contact with the batteries.

(3) When batteries are installed in the vehicle, they must be completely protected so that short circuits will be prevented and so secured that leakage of acid will not occur under conditions normal to transportation.

(b) Engines or mechanical apparatus of such size or weight as to require securement to skids to facilitate handling may have electric storage batteries, wet, necessary for the operation thereof, either securely fastened in the holder provided on the equipment and protected, including battery terminals, in such manner as to prevent damage thereto or short circuits, or completely boxed in containers of sound lumber and with filling holes upright, securely fastened to the skids upon which the engine or mechanical apparatus is mounted to prevent accidental tipping or looseness in transportation. Electric storage batteries, wet, as described herein are exempt from specification packaging.

**§ 73.251 Boron trichloride.**

(a) Boron trichloride must be packed in specification containers as follows:

(1) Cylinders as prescribed for any compressed gas, except acetylene.

(2) Spec. 105A300–W, 106A500,[1] or 106A500–X (§§ 79.100, 79.101, 79.300, 79.301 of this chapter). Tank cars.

**§ 73.252 Bromine.**

(a) Bromine must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with glass inside containers not over 1

quart each; or with stone or earthenware jugs not over 1 gallon each.

(2) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums not over 10 gallons each.

(3) Spec. 105A300–W (§ 78.286 of this chapter). Tank cars. The tank must be nickel clad at least 20 percent or must be lined with lead at least 3/16" thick; openings in tank heads to facilitate application of lead lining are authorized and must be closed in an approved manner; all closures and appurtenances which are in contact with the lading must be lead lined or must be made of metal not subject to rapid deterioration by contact with the lading; all interior welds in nickel clad tanks must be protected by pure nickel butt straps to eliminate iron contamination. Except as otherwise provided herein the water weight capacity of the tank must not be more than 20,400 pounds, and the maximum quantity of liquid bromine loaded into the tank must not be more than 60,000 pounds or 300 percent of the water weight capacity of the tank, whichever quantity is the lesser. In no case shall the quantity loaded be less than 98 percent of the quantity the tank is authorized to carry. When tanks are equipped with manway cover plates, safety valves, venting, loading and unloading valves in accordance with spec. ICC–105A300–W and tank jackets are stenciled ICC–105A300–W, but in all other respects are constructed and maintained in full compliance with spec. ICC–105A500–W (§ 78.288 of this chapter), the water weight capacity of the tank must not be more than 37,400 pounds, and the maximum quantity of liquid bromine loaded into the tank must not be more than 110,000 pounds or 300 percent of the water weight capacity of the tank, whichever quantity is the lesser.

(4) Spec. MC 310 (§ 78.330 of this chapter). Tank motor vehicles. The tank must have a steel shell thickness of 3/8" minimum and must be lined with lead of at least 3/8" thickness. The water weight capacity of the tank must not be more than 5100 pounds and the maximum quantity of liquid bromine loaded into the tank must not be more than 15,000 pounds or 300 percent of the water weight capacity of the tank, whichever quantity is the lesser. In no case shall the quantity loaded be less than 98 percent of the quantity the tank is authorized to carry.

(b) Outage (vacant space above liquid) for inside containers must be not less than 15 percent of capacity of container.

(c) For other authorized containers an outage of not less than 10 percent is required.

(d) Inside containers must be closed by glass, earthenware, or stone stoppers ground to fit and securely fastened; or bottles may have necks with molded screw threads which must be closed by threaded-type caps with lead or other efficient bromine-resistant gaskets and cushioned by elastic material to insure tight closure. Sealed glass ampoules are also authorized.

(e) Bottles or jugs must be securely cushioned on all sides with incombustible packing material, such as whiting, mineral wood, infusorial earth (kieselguhr), sifted ashes, powdered china clay, or similar material, at least 1 inch thick, which will not produce heat when mixed with bromine. The use of hay, sawdust, excelsior, or other organic material, either treated or untreated, as a cushioning or packing material, is prohibited.

(f) Not more than 15 quarts of bromine in bottles, nor more than 12 quarts in jugs, may be packed in one box.

(g) Bromine which has been dried in accordance with good commercial practice may also be packed in specification containers as follows:

(1) Spec. 5K or 5M (§§ 78.88 or 78.90 of this chapter). Nickel or monel drums of not over 10 gallons capacity each and containing not more than 225 pounds net weight of bromine. Drums must be of metal at least 14 gauge United States standard throughout and must have chime reinforcement adequate for their protection. All openings must be in one head and closing parts (plug, cap, flange, etc.) must be of the same metal as the drum. One opening not over 2.3 inch diameter and one opening not over 3/4 inch standard pipe size are permitted. Each drum must be completely emptied and dried before reuse and must be equipped with gaskets of a material approved by the Bureau of Explosives.

### § 73.253 Chloracetyl chloride.

(a) Chloracetyl chloride must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with inside glass containers not over 5 pints capacity each, cushioned with incombustible material.

(2) Spec. 28 (§ 78.8 of this chapter). Metal-jacketed lead carboys.

(3) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums.

(4) Spec. 1A, 1C, or 1D (§§ 78.1, 78.3, or 78.4 of this chapter). Carboys in boxes or kegs. Use of these containers will be permitted because of the present emergency and until further order of the Commission.

(5) Spec. 5K (§ 78.88 of this chapter). Nickel drums.

(6) Specs. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles having tanks fabricated from Type 316 stainless steel.

(7) Spec. 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Tanks must have a nickel cladding of 1/16 inch minimum thickness. Nickel cladding in tanks must have a minimum nickel content of at least 99 percent pure nickel.

(8) Spec. 103A–N–W (§ 78.299 of this chapter). Tank cars. Tank must be of solid nickel at least 99 percent pure and all cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent.

### § 73.254 Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide.

(a) Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide must be packed in specification containers as follows:

(1) Spec. 5A or 5C (§§ 78.81 or 78.83 of this chapter). Metal barrels or drums.

(2) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes, with inside containers which must be glass or earthenware, not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(3) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels, with inside glass or earthenware containers not over 2 gallons each.

(4) Spec. 103A,[1] 103A–W, 103C–W, 103E–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

(5) Specs. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

### § 73.255 Dimethyl sulfate.

(a) Dimethyl sulfate must be packed in specification containers as follows:

(1) Spec. 5A or 5C (§§ 78.81 or 78.83 of this chapter). Metal barrels or drums not over 55 gallons each. Spec. 5C metal barrels or drums must be constructed of Type 304 stainless steel.

(2) Spec. 5 (§ 78.80 of this chapter). Metal barrels or drums not over 15 gallons each, with openings not exceeding 2.3 inches in diameter, inclosed in strong crates made of lumber at least 5/8 inch thick.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter). Wooden boxes with each box containing a single glass inside container not over 1 quart capacity, closed by ground glass stopper or other equally efficient closure securely fastened in place, and cushioned with incombustible absorbent material in hermetically sealed (soldered) metal can, the can then being cushioned with incombustible cushioning material in the outside container.

(4) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

(5) Spec. MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with each box containing not more than six inside glass containers not over 1-quart capacity each, closed by plastic screw-cap resistant to the lading, and each completely surrounded by incombustible absorbent cushioning material and enclosed in a metal can having rolled, seamed-on heads of a key-opening type; or in not more than six inside glass containers not over 1-quart capacity each, closed by ground glass stopper, by plastic screw-cap resistant to the lading, or by other equally efficient closure securely fastened in place, and cushioned with incombustible absorbent material in hermetically sealed (soldered) metal can, the can then being cushioned with incombustible cushioning material in the outside container.

[1] Use of existing tank cars authorized, but new construction not authorized.

### § 73.256 Compounds, cleaning, liquid.

(a) Compounds, cleaning, liquid, containing not more than 60 percent hydrofluoric acid, must be packed in specification containers as follows:

(1) As prescribed in § 73.264 (a) (1) and (2).

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers of natural rubber, ceresine, lead, or other material of equal strength and not subject to destruction by the lading.

(3) Spec. 22B (§ 78.197 of this chapter). Plywood drums equipped with molded liner of type and material approved by the Bureau of Explosives.

(4) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drum with inside spec. 2U (§ 78.24 of this chapter) polyethylene container. (See § 78.224–1(a) (2) of this chapter.)

### § 73.257 Electrolyte (acid) or corrosive battery fluid.

(a) Electrolyte (acid) must not be over 47 percent strength (39° Baumé). Electrolyte or corrosive battery fluid must be packed in specification containers as follows:

(1) As prescribed in § 73.272 except that unlined tank cars and metal barrels or drums must not be used.

(2) Spec. 43A (§ 78.18 of this chapter). Rubber drums.

(3) When the material is alkaline it may also be shipped when packed in containers as prescribed in § 73.249.

(4) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles, except that unlined tanks must not be used.

(5) Spec. 60 (§ 78.255 of this chapter). Portable tanks, except that unlined tanks must not be used.

(6) Spec. 12B or 12C (§ 78.205 or § 78.206 of this chapter). Fiberboard boxes with inside containers of polyethylene or other electrolyte acid resistant nonfragile materials having secure closures capable of withstanding conditions incident to transportation without leakage and unless containers are rigid or semi-rigid in nature they must be contained in other strong inside containers; minimum thickness of polyethylene or other materials shall be not less than 0.003 inch for any film sheet for multi-wall containers or not less than 0.006 inch for single-wall containers; not more than 12 such inside containers shall be packed in one outside box and the marking prescribed in § 73.401(c) shall not be required. Inside containers shall be packed to prevent movement within the box (see §§ 78.205–34 and 78.206–19 of this chapter). Dry storage batteries or battery charger device may be packed in the same outside box when adequately separated from other inside containers (see § 78.205–33 of this chapter); gross weight of completed package shall not exceed 65 pounds, except when acid is packed in individual inside containers the gross weight shall be not over 75 pounds. Complete package, closed as for shipment, with inside containers filled with liquid of same specific gravity as commodity to be shipped, must be capable of withstanding at least 2 drops from a height of 4 feet onto solid concrete without leakage from or rupture of inside containers.

(7) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers of polyethylene, or other electrolyte acid resistant plastic, not over 1 gallon each.

(8) Spec. 1EX (§ 78.6 of this chapter). Carboys in plywood drums (single-trip).

(9) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard or 325-pound test (Mullen or Cady) double-faced corrugated fiberboard, with not more than 12 inside glass bottles, having acid-proof closures, of not over 32 ounces capacity each. Inside glass bottles must be separated and cushioned by suitable corrugated fiberboard partitions. The box must be equipped with top and bottom pads. (See § 78.205–32 of this chapter.)

(10) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes having not more than 1 inside glass bottle, with acid-proof closure, not over 1 gallon capacity. Box shall be constructed of at least 350-pound test (Mullen or Cady) double-faced corrugated fiberboard of full depth telescope type. Cushioning and closure of box (pressure sensitive tape may be used) must be such that a representative box, with inside glass bottle filled with water, shall be capable of withstanding two drops from a height of 4 feet onto solid concrete without breakage of inner bottle or failure of the closure.

(11) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 1 gallon capacity each. Not more than 4 inside containers exceeding 5 pints capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(12) Spec. 37P (§ 78.133 of this chapter). Steel drums with polyethylene liner (nonreusable container).

(13) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S (§ 78.35 of this chapter) polyethylene container.

(14) Spec. 12B (§ 78.205 of this chapter). Corrugated fiberboard boxes with plastic bags as defined in § 78.205–37 of this chapter. Marking prescribed in § 73.401(c) shall not be required.

(b) Shipments of electrolyte (acid) or corrosive battery fluid with vehicles offered for transportation by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government are exempt from Parts 71–78 and 197 of this chapter when packed as follows:

(1) In one inside glass bottle of not over 1 gallon capacity, tightly and securely closed, packed in a strong outside container and cushioned therein on all sides with incombustible absorbent material in sufficient quantity to completely absorb liquid contents in event of breakage. Outside container must be so blocked, braced or stayed within or on the vehicle that it cannot change position during transit.

(c) Electrolyte acid or corrosive battery fluid contained in polyethylene containers not over 2 quarts capacity each and packed not more than 3 containers in spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter) wooden boxes or packed as prescribed in § 73.257 (a) (5) and bearing white acid label or corrosive liquid label may be securely attached to self-propelled vehicles or mobile agricultural machinery or securely braced on car floors.

(d) Strong, tightly closed metal drums not over 15 gallons capacity each, having not to exceed 25 eight-ounce polyethylene, or other suitable plastic bottles, securely cushioned therein. Shipments authorized only by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government. The drum containing the electrolyte acid or corrosive battery fluid may be securely attached to another steel drum containing a dry, charged storage battery or batteries.

### § 73.258 Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries.

(a) Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries, except as provided in § 73.257 (a)(6), must be packed in specification containers as follows:

(1) Spec. 15D or 16B (§§ 78.171 or 78.186 of this chapter). Wooden boxes with inside containers of glass bottles not over 1 gallon each nor over 2 gallons total in each outside container. Inside containers must be well cushioned and separated from batteries by a strong solid wooden partition.

(2) Electrolyte, acid, or alkaline corrosive battery fluid included with storage batteries and filling kits may be packed in strong plywood or wooden boxes when shipments are made by, for, or to the Departments of the Army, Navy, or Air Force of the United States Government in outside containers of their specifications provided the electrolyte, acid, or alkaline corrosive battery fluid is packed in polyethylene bottles not over 32-ounce capacity each and not more than 24 bottles securely separated from storage batteries and kits may be shipped in one outside package.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than 12 inside containers of polyethylene or other material resistant to the lading, not over 64-ounce capacity each. Polyethylene containers that are not rigid or semi-rigid in nature must be contained in other strong inside containers; minimum thickness of polyethylene or other plastic material shall be not less than 0.003 inch for any film sheet for multi-wall containers or not less than 0.006 inch for single-wall containers. Inside containers must be adequately separated from the storage battery.

Authorized gross weight not over 65 pounds. (See § 78.205–33 of this chapter).

**§ 73.259 Electrolyte, acid, or alkaline corrosive battery fluid, packed with battery charger, radio current supply device, or electronic equipment and actuating devices.**

(a) Electrolyte, acid, or alkaline corrosive battery fluid packed with battery charger, radio current supply device or parts thereof, or electronic equipment and actuating devices, with only one device or outfit in each package, in the amount necessary for operation of the device or equipment, provided the containers of electrolyte, acid, or alkaline corrosive battery fluid, are adequately cushioned to prevent breakage, leakage, or damage to other articles packed therewith, must be packed in specification containers or as otherwise authorized herein, as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter). Wooden boxes, provided the liquid is in bottles securely closed and cushioned as prescribed in paragraph (a) of this section, and separated from charger supply device, and parts, or electronic equipment by a strong solid wooden partition.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, when the liquid is in a strong bottle not exceeding 16 fluid ounces, which must be securely closed and cushioned as prescribed in paragraph (a) of this section. Not more than 12 such packages may be packed under the provisions of § 73.25.

(3) Electrolyte, acid, or alkaline corrosive battery fluid, in separate inside acid or alkaline fluid resistant containers not over 5 gallons capacity each included with electronic equipment and actuating devices, are authorized in strong, tightly closed steel drums.

**§ 73.260 Electric storage batteries, wet.**

(a) Electric storage batteries, containing electrolyte acid or alkaline corrosive battery fluid, must be completely protected so that short circuits will be prevented; they must not be packed with other articles except as provided in §§ 73.250 and 73.258, portable searchlights properly cushioned, battery parts, or hydrometers, securely packed in a separate container. The batteries either with or without other articles must be packed in specification containers as follows:

(1) Spec. 15D or 16B (§§ 78.171 or 78.186 of this chapter). Wooden or wirebound wooden boxes except as provided in paragraphs (b) and (c) of this section.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard box as authorized by §§ 78.205–25(a), 78.205–28(a), and 78.205–35(a) of this chapter.

(3) Electric storage batteries with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type, protected against short circuits and firmly secured to skids or pallets capable of withstanding the shocks normally incident to transportation, are exempt from specification packaging requirements for transportation by rail freight, highway, or water. The height of the completed unit must not exceed 1½ times the width of the skid or pallet. The unit must weigh not less than 300 pounds gross and must not fail under a superimposed weight equal to two times the weight of the unit or a superimposed weight of 4,000 pounds if the weight of the unit exceeds 2,000 pounds. Battery terminals must not be relied upon to support any part of the superimposed weight.

(4) Electric storage batteries weighing 500 pounds or more, with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type, consisting of carriers' equipment may be shipped by rail freight when mounted on suitable skids and protected against short circuits. Such shipments must not be offered in interchange.

(b) Electric storage batteries with case of asphaltum composition, impregnated rubber, steel case type, synthetic resin (plastic), or wooden battery box type: packing authorized as follows:

(1) One to three batteries not over 25 pounds each in outside box, gross weight not over 75 pounds; specification container not required.

(2) Not more than four batteries not over 15 pounds each may be packed in strong outside fiberboard or wooden boxes, when securely cushioned and packed to prevent short circuits; specification container not required. Authorized gross weight 65 pounds.

(3) Not more than five batteries not over 10 pounds each may be packed in strong outside fiberboard or wooden boxes, when securely cushioned and packed to prevent short circuits; specification container not required. Authorized gross weight 65 pounds.

(c) Single batteries not exceeding 75 pounds each, in addition to requirements of paragraphs (a) and (b) of this section, may be shipped in 5-sided slip covers or in completely closed fiberboard boxes, of solid or double-faced corrugated fiberboard complying with the following: (See par. (a) (1) of this section for more than one battery in an outside container.)

(1) Slip cover or fiberboard box must fit snugly and provide inside top clearance of at least ½ inch above battery terminals and filler caps with reinforcement in place. Assembled for shipment, the bottom edges of the slip cover may extend to the base of the battery but must not expose more than 1 inch thereof.

(2) Top of slip cover or fiberboard box design must comply with the following:

(i) Top of slip cover or fiberboard box must have interior reinforcement (insert or saddle) of fiberboard, wood, or other material of equal strength and rigidity so formed that any superimposed weight will bear only and directly downward on the top edges of the battery case or intercell connectors (straps), or plastic battery terminal covers designed to transmit any superimposed weight directly to the top inner wall of the battery case, or fiberboard boxes with chip board and chip board jute lined tubes which shall fit directly over the terminal posts and rest directly on battery cell covers.

(ii) Or be protected by a scored one piece cover-liner of 200-pound test (Mullen or Cady) double-faced corrugated fiberboard extending from the base of the battery on one side, across the top of the battery and to the base of the battery on the opposite side.

(iii) Or a five-sided slip cover having top of only one thickness of fiberboard, with lengthwise inner flaps roll folded to form a reinforcement of such height as to provide clearance required by subparagraph (1) of this paragraph which shall rest on the side edges of the battery. Outer end flaps to overlap approximately one inch and shall be butt folded and tucked into a center slot cut in the inner flaps. The requirements of subdivisions (i) and (iv) of this subparagraph do not apply.

(iv) When top of slip cover or fiberboard box consists of only one thickness of material, reinforcement must have a plane surface of same interior dimensions and thickness. Reinforcement must be of such height as to provide minimum clearance required above and must be constructed to remain securely in place or be fastened to slip cover or fiberboard box.

(3) All fiberboard must be at least 200 pound test (Mullen) and completed package (battery and slip cover or fiberboard box) must be capable of withstanding top-to-bottom compression test of at least 500 pounds without damage to battery terminals, battery cell covers, and filler caps.

(d) Electric storage batteries, containing electrolyte or corrosive battery fluid, of the nonspillable type, protected against short circuits and completely and securely boxed are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(e) Shipments of electric storage batteries containing electrolyte or battery fluid, loaded or braced to prevent damage in transit and short circuits, are exempt from Parts 71–78 and 197 of this chapter: *Provided, however,* That storage batteries (either wet or dry) constitute the only commodity being transported in the railroad car or motor vehicle body.

(f) Electric storage batteries containing electrolyte or corrosive battery fluid, other than those of the nonspillable type, when shipped in less-than-carload and less-than-truckload lots, must be marked and labeled as required by §§ 73.401 (a), (c), and 73.402 (a) (3).

(g) Electric storage batteries, containing electrolyte or corrosive battery fluid in a coil from which it is injected into the battery cells by a gas generator and initiator assembled with the battery, and which are nonspillable and leakproof, are exempt from Parts 71–78 and 197 of this chapter when approved by the Bureau of Explosives.

**§ 73.261 Fire-extinguisher charges.**

(a) Fire-extinguisher charges consisting of sulfuric acid in glass inside containers securely closed may be packed with bicarbonate of soda in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass inside containers not over 5 pints each, cushioned.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums with a single inside container consisting of a glass bottle not over 64 fluid ounces capacity filled with not over six pounds by weight of sulfuric acid (approximately 50 fluid ounces by volume). Bottle must be suspended in center of outside container by means of adequate supports and surrounded by bicarbonate of soda in sufficient quantity to fill drum and neutralize contents in the event of breakage.

(b) Fire-extinguisher charges as described in subparagraphs (1) to (3) of this paragraph are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Fire-extinguisher charges consisting of sulfuric acid in strong 8-fluid ounce or smaller bottles, securely closed and packed with bicarbonate of soda completely surrounding the bottles of acid in outside fiberboard or wooden boxes. Closure must consist of a metal cap lined with an acid-resistant washer or a composition stopper of material that will not be attacked by the acid.

(2) Fire-extinguisher charges, consisting of chlorosulfonic acid in a hermetically sealed bottle not exceeding 2 ounces capacity, securely packed in a metal container inclosed in another metal container, the inner metal container being cushioned in the outer metal container with asbestos fabric and the completed package embedded in potassium carbonate in outside fiberboard or wooden boxes.

(3) Fire-extinguisher charges, consisting of sulfuric acid in 10-ounce or smaller bottles, securely closed, packed in a tight fiber carton. Closure must consist of a metal cap lined with an acid-resistant washer or a composition stopper of material that will not be attacked by the acid. The bottle and carton packed in either potassium carbonate or potassium carbonate and alkali packed in a cylindrical tin can, with slip cover, secured by tape in outside fiberboard or wooden boxes.

**§ 73.262 Hydrobromic acid.**

(a) Hydrobromic acid not over 49 percent strength must be packed in specification containers as follows:

(1) Spec. 1A, 1C, 1D, or 1E (§§ 78.1, 78.3, 78.4, or 78.7 of this chapter). Carboy in box, keg, or plywood drum.

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers, not over 2 gallons each.

(4) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(5) Spec. 43A (§ 78.18 of this chapter). Rubber drums. Any such container showing evidence of damage must be tested to 20 pounds hydrostatic pressure, without leakage, before using.

(6) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars.

(7) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(8) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5 gallons capacity, with polyethylene liner (nonreusable container). Drums exceeding 1 gallon capacity must be constructed of at least 24 gauge metal.

(9) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(10) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S (§ 78.35 of this chapter) polyethylene container.

(11) Spec. MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles, rubber-lined.

(b) Hydrobromic acid greater than 49 percent strength but not over 63 percent strength must be packed in specification containers as follows:

(1) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(a) of this chapter, with spec. 2T (§ 78.21 of this chapter) polyethylene container.

(2) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S (§ 78.35 of this chapter) polyethylene container.

(3) Spec. 15A (§ 78.168 of this chapter. Wooden box having only one polyethylene bottle, with screw-cap closure, not over one-gallon capacity.

(4) Spec. MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles, rubber-lined.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.263 Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures, hydrochloric (muriatic) acid solution, inhibited, sodium chlorite solution, and cleaning compounds, liquid, containing hydrochloric (muriatic) acid.**

(a) Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures, hydrochloric (muriatic) acid solution, inhibited, sodium chlorite solution not exceeding 40 percent sodium chlorite, and cleaning compounds, liquid, containing hydrochloric (muriatic) acid must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass, earthenware, polyethylene or other nonfragile plastic material resistant to the lading (bags are not authorized), not over 1 gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in each outside container.

(2) Spec. 5D (§ 78.84 of this chapter). Rubber-lined metal barrels or drums. Any such container that shows evidence of damage must be tested, before shipment, for defect in lining in the manner prescribed in spec. 5D.

(3) Spec. 43A (§ 78.18 of this chapter). Rubber drums.

(4) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers not over 2 gallons each.

(5) Spec. 1A, 1C, or 1K (§ 78.1, 78.3, or 78.14 of this chapter). Carboys in boxes or kegs.

(6) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(7) Spec. 1D, 1E, or 1EX (single-trip) (§§ 78.4, 78.7, or 78.6 of this chapter). Glass carboys in boxes or plywood drums, of not over 6.5 gallons nominal capacity. Means shall be provided so that accumulated total pressure in bottle shall not exceed 10 p. s. i. gauge at 130° F. or shall vent at a pressure not to exceed 10 p. s. i. gauge.

(8) Spec. 10A (§ 78.155 of this chapter). Rubber-lined wooden barrels or kegs.

(9) Spec. 103B,[1] 103B–W or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars. Authorized for acid not over 38 percent strength by weight. Except for hydrochloric (muriatic) acid of 22° Baume strength, and other fuming acids, safety vent of approved design equipped with frangible disc having ⅛ inch breather hole in the center thereof or a safety vent of approved design equipped with carbon discs permitting continuous venting may be used.

**Note 1: Because of the present emergency and until further order of the Commission,**

hydrochloric acid may be offered for transportation by carriers by water in conformity with Regulations for Explosives or Other Dangerous Articles on Board Vessels, 46 CFR 146.23-13, issued by the Commandant of the Coast Guard.

(10) Specs. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles lined with rubber or equally acid-resistant material of equivalent strength and durability. Unlined spec. MC 311 tank motor vehicles made from type 304L stainless steel authorized for sodium chlorite solution not exceeding 40 percent sodium chlorite only.

(11) Spec. 60 (§ 78.255 of this chapter). Portable tanks, rubber-lined.

(12) Spec. 103C–W (§ 78.283 of this chapter). Tank cars having tanks of type 304L stainless steel. Authorized for sodium chlorite solution not exceeding 40 percent sodium chlorite only.

(13) Spec. 1H, 15P, or 22C (§§ 78.13, 78.182, or 78.198 of this chapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T or spec. 2TL (§§ 78.21 or 78.27 of this chapter) polyethylene container.

(14) Spec. 17H, 37A, or 37B (§§ 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip) not over 5 gallons capacity each. Authorized only for hydrochloric (muriatic) acid solution, inhibited, containing not to exceed 15 percent hydrochloric (muriatic) acid. Drums must be lined throughout with a pliable plastic material impervious to the solution. Specs. 37A and 37B metal drums must be at least 24 gauge steel.

(15) Spec. 12A or 12B (§ 78.210 or § 78.205 of this chapter). Fiberboard boxes with inside containers of polyethylene, or other nonfragile plastic material resistant to the lading (bags are not authorized), not over 1 gallon capacity each, suitably cushioned to prevent movement within the box. Gross weight of completed package must not exceed 65 pounds.

(16) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(17) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S, 2SL, 2T or 2TL (§ 78.35, 78.35a, 78.21 or 78.27 of this chapter) polyethylene container.

(18) Spec. 37P (§ 78.133 of this chapter). Steel drums constructed of at least 24-gauge metal for drums exceeding 1 gallon capacity, with polyethylene liner (nonreusable container).

(19) Spec. 16D (§ 78.187 of this chapter). Wirebound wooden overwrap, with inside spec. 2T, 2TL, 2S, or 2SL (§§ 78.21, 78.27, 78.35, or 78.35a of this chapter) polyethylene container.

(20) [Reserved]

(21) Spec. 12C (§ 78.206 of this chapter). Fiberboard boxes with inside 5-gallon nominal capacity polyethylene bottles having minimum wall thickness of 0.015 inch and constructed with screw-type closures. Authorized gross weight not over 65 pounds. (See § 78.206–19 of this chapter.)

(22) Spec. 21C (§ 78.244 of this chapter). Fiber drum with inside spec. 2T, 2S, 2SL, or 2U (§ 78.21, § 78.35, § 78.35a, or § 78.24 of this chapter) polyethylene container. (See § 78.224–1(a)(2) of this chapter.)

(23) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

(24) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(25) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(b), with inside spec. 2TL (§ 78.27 of this chapter) polyethylene container not over 5 gallon nominal capacity.

(26) Spec. 33A (§ 78.150 of this chapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(b) Hydrochloric acid of not over 20 percent strength (13.25° Baumé) and other corrosive liquids containing not over 20 percent hydrochloric acid in addition to containers prescribed in paragraph (a) of this section may be shipped in specification containers as follows:

(1) Spec. 10A (§ 78.155 of this chapter). Asphaltum-lined wooden barrels or kegs.

(2) Inside containers of not more than 8-fluid ounces capacity each, resistant to lading, packed in strong outside containers, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(c) When hydrochloric acid contains oils or solvents it must not be shipped in containers or tank cars lined with rubber.

(d) Hydrochloric acid mixtures of not over 28 percent strength, or cleaning compounds, liquid, containing not over 28 percent hydrochloric (muriatic) acid, in addition to the provisions of paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard or 325-pound test (Mullen or Cady) double-faced corrugated fiberboard, with not more than 12 inside glass bottles, having acid-proof closures, of not over 32 ounces capacity each. Inside glass bottles must be separated and cushioned by suitable corrugated fiberboard partitions. The box must be equipped with top and bottom pads. (See § 78.205–32 of this chapter.)

(2) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 1 gallon capacity each. Not more than 4 inside containers exceeding 5 pints capacity each shall be in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

§ 73.264 Hydrofluoric acid.

(a) Hydrofluoric acid must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers of natural rubber, ceresine, lead, or other hydrofluoric acid resistant material. These containers are authorized only for strengths of acid for which they are adequate, but in no case may the strength of acid exceed 70 percent.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers of natural rubber, lead, polyethylene, or other hydrofluoric acid resistant plastic not over one-pound capacity each. These containers are authorized only for strengths of acid for which they are adequate, but in no case shall the strength of acid exceed 70 percent.

(3) Spec. 16D (§ 78.187 of this chapter). Wirebound wooden overwrap, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container. Authorized for hydrofluoric acid not over 70 percent strength.

(4) Spec. 12A or 12B (§ 78.210 or § 78.205 of this chapter). Fiberboard boxes with not more than 4 inside polyethylene bottles, having minimum 0.030 inch thickness of any part, not over 1-gallon nominal capacity each. Bottle closures must be made secure by sealing with pressure-sensitive plastic tape or other equally efficient means. Authorized for acid not over 70 percent strength. Shipper must have established that spec. 12A completed package meets test requirements prescribed by § 78.210–10 of this chapter. Authorized gross weight for spec. 12B fiberboard boxes not over 65 pounds; spec. 12A not over 80 pounds.

(5) [Reserved]

(6) [Reserved]

(7) Spec. 5A (§ 78.81 of this chapter). Unlined metal barrels or drums which have been subjected to adequate passivation or neutralization process (see Note 1). Authorized only for acid of not less than 60 percent and not more than 80 percent strength and all containers must be filled to not over 80 percent of capacity at 68° F. If containers are washed out with water, they must be repassivated before reshipment. (See Notes 1, 2, 3, 4 and 5.)

Note 1: Each metal container, before being put into service must be passivated by an efficient method.

Note 2: Containers not exceeding 55 gallons capacity each are authorized for carload, truckload, less-than-carload, and less-than-truckload shipment. Containers exceeding 55 gallons capacity each are authorized for carload or truckload shipments only but they must be loaded by consignor and unloaded by consignee.

Note 3: For less-than-carload or less-than-truckload shipments, containers must be of metal at least as heavy as 14 gauge United States standard for not over 20 gallons capacity each or 12 gauge for not over 55 gallons capacity each. Each container must be subjected to at least one of the following tests before shipment: By interior pressure of at least 15 pounds per square inch before filling or by holding for inspection for at least 24 hours after filling. In either case, each container must be vented prior to shipment.

Note 4: Because of the present emergency and until further order of the Commission, containers of not over 55-gallons capacity each, of 14-gauge metal, are authorized, provided test requirements of Note 3 are maintained and provided containers are retired from service after showing a 15 percent loss of tare weight.

Note 5: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined steel containers, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(8) Spec. 103A,[1] 103A–W, 105A100,[1] 105A100–W, 111A100–F–2, 111A100–W–2, 111A100–W–4, or ARA–IV[1] (§§ 79.100, 79.101, 79.200, 79.201, of this chapter). Unlined metal tanks which have been subjected to adequate passivity or neutralization process. (See Note 1 to subparagraph (7) of this paragraph.) Authorized only for acid of 60 to 80 percent strength. If tanks are washed out with water they must be resubjected to passivity before reshipment.

Note 1: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined metal tank cars, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(9) Spec. 43A (§ 78.18 of this chapter). Rubber drums. Authorized only for acid not over 65 percent strength. Any such container showing evidence of damage must be tested to 20 pounds hydrostatic pressure, without leakage, before using.

(10) Spec. 5D (§ 78.84 of this chapter). Limed metal barrels or drums. Authorized only for acid not over 62 percent strength. Any barrel or drum that shows evidence of damage must be tested before shipment for defects in lining in the manner prescribed in § 78.84–15 (a) of this chapter. Lining materials must meet the test prescribed in Notes 1, 2, and 3 below.

Note 1: Performance test. Test panels of linings for drums in hydrofluoric acid service must be subjected to a test in 62 percent hydrofluoric acid for a period of not less than 90 days. At the end of such period there must be no signs of deterioration of such lining material from chemical attack as evidenced by changes in its physical characteristics, and no signs of permeation of hydrofluoric acid through the sample as evidenced by blistering from the metal insert.

[1] Use of existing tank cars authorized, but new construction not authorized.

Note 2: Method of test. The test panel should be at least 2 inches by 6 inches with a steel insert completely covered by lining material. Test panels should be immersed in 62 percent hydrofluoric acid so that 50 percent of the panel is in contact with liquid and 50 percent in contact with vapor. Temperature of test to be maintained at 130° F. for the entire 90 days.

Note 3: Drums may be lined with material at least as thick as the sample material tested.

(11) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars, rubber-lined tanks. Authorized only for acid not over 40 percent strength.

(12) [Reserved]

(13) [Reserved]

(14) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

Note 1: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined tank motor vehicles, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(15) [Reserved]

(16) Spec. 15P or 22C (§§ 78.182 or 78.198 of this chapter). Glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container. Authorized for acid not over 70 percent strength.

(17) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S, 2SL or 2T (§ 78.35, 78.35a, or 78.21 of this chapter) polyethylene container. Authorized for acid not over 70 percent strength.

(18) Spec. 37M (nonreusable container) (§ 78.134 of this chapter). Cylindrical steel overpack with inside spec. 2T (§ 78.21 of this chapter) polyethylene container. Spec. 37M overpack of over 15 gallons capacity must be constructed of at least 20-gauge steel. Authorized for acid not over 70 percent strength.

(b) Hydrofluoric acid, anhydrous (hydrogen fluoride) must be shipped in specification containers as follows:

(1) Spec. 3,[2] 3A, 3AA, 3B, 3C, 3E, 4, 4A, 25,[2] or 38,[1] also spec. 4B, 4BA, or 4C if not brazed (§§ 78.36, 78.37, 78.38, 78.40, 78.42, 78.48, 78.49, also 78.50, 78.51, or 78.52 of this chapter). Cylinders. Filling density must not exceed 85 percent of the pounds water weight capacity of the cylinder.

(2) Spec. 105A300–W, 112A400–W or ARA–V[1] (§§ 79.100, 79.101 of this chapter). Tank cars equipped with special valves and appurtenances approved for this particular service. Filling density must not exceed 90 percent of the pounds water weight capacity of the tank.

(3) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

(4) Spec. 51 (§ 78.245 of this chapter). Portable tanks.

(5) Because of the present emergency and until further order of the Commission, samples of anhydrous hydrofluoric acid for laboratory examination are authorized for transportation by rail freight, rail express, or highway, when packed in aluminum cylinders, net capacity not exceeding 100 c. c., tested hydrostatically to 500 pounds per square inch and retested quinquennially, and shipped in strong wooden boxes. The cylinders must be cushioned so as to give proper protection to their valves. Filling density must not exceed 80 percent of the water-weight capacity of the cylinder.

(6) Spec. 106A500[1] or 106A500–X (§§ 79.300 and 79.301 of this chapter). Tank cars. Tanks shall not be equipped with safety devices of any type and valves shall be protected by metal caps. Tanks shall be filled to a density not exceeding 85 percent of the water weight capacity of the tank.

Note 1: Tanks complying with ICC–106A (§§ 79.300 and 79.301 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(c) Containers must not be entirely filled. Unless otherwise provided in this part, sufficient outage (vacant space) must be allowed so that the liquid portion will not completely fill the container at 130° F. in order to prevent leakage or distortion of containers due to the expansion of the contents from increase in temperature during transit.

§ 73.265 Hydrofluosilicic acid.

(a) Hydrofluosilicic acid must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers of natural rubber, ceresine, or other material of equal efficiency resistant to hydrofluosilicic acid.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter) Wooden barrels or kegs with inside containers of natural rubber or ceresine.

(3) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs lined with asphaltum or other material of equal efficiency resistant to hydrofluosilicic acid.

(4) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(b) Hydrofluosilicic acid of not exceeding 40 percent strength may also be shipped when packed in specification containers as follows:

(1) Spec. 5D (§ 78.84 of this chapter). Rubber-lined metal barrels or drums. Any barrel or drum that shows evidence of damage must be tested before shipment for defect in lining in the manner prescribed in spec. 5D.

(2) Spec. 43A (§ 78.18 of this chapter). Rubber drums. Any drum showing evidence of damage must be tested to 20

[2] Use of existing cylinders authorized, but new construction not authorized.

pounds hydrostatic pressure, without leakage, before using.

(3) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars, rubber-lined tanks.

(4) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles, lined with rubber.

(c) Hydrofluosilicic acid containing no free hydrofluoric acid or other ingredient that will attack glass, may also be shipped when packed in specification containers as follows:

(1) Spec. 1A, 1C, 1D, or 1E (§§ 78.1, 78.3, 78.4, or 78.7 of this chapter). Carboys in boxes, in kegs, or plywood drums, for which the use of rubber stoppers and gaskets is also authorized.

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass containers, not over 1 gallon each, with rubber or ground-in glass stoppers properly secured.

(4) The vacant space in containers of these acids must be sufficient so that when raised to a uniform temperature of 130° F. the vapor pressure shall not exceed 6 pounds per square inch.

(d) Hydrofluosilicic acid of not exceeding 32 percent strength may also be shipped when packed in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers of polyethylene, or other nonfragile plastic material resistant to the lading, not over 1 quart capacity each, suitably cushioned to prevent movement within the box. Gross weight of complete package must not exceed 65 pounds.

(2) Spec. 15P or 22C (§§ 78.182 or 78.198 of this chapter). Glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(3) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S or 2SL (§ 78.35 or 78.35a of this chapter) polyethylene container. Spec. 37M overpack shall be constructed of at least 20-gauge steel and shall not exceed 16 gallons capacity each.

(4) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5-gallons capacity, with polyethylene liner (nonreusable container).

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drum with inside spec. 2S, 2SL, or 2U (§ 78.35, § 78.35a, or § 78.24 of this chapter) polyethylene container. (See § 78.224–1(a)(2) of this chapter.)

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.266 Hydrogen peroxide solution in water.**

(a) Hydrogen peroxide solution in water containing over 52 percent hydrogen peroxide by weight must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes with inside containers consisting of glass bottles not over 1 quart capacity each; bottles must have vented closure and must be packed in a metal container vented at bottom packed in another metal container vented at top; cushioning material shall be used between glass bottle and inner container and between inner and outer metal containers; cushioning material shall be vermiculite or equivalent in an amount at least 10 times the volume of the solution shipped and shall be wet with at least 10 percent water by volume to which has been added a stabilizing agent.

(2) Spec. 42D (§ 78.109 of this chapter). Aluminum drums with vented closure in top head; not over 30 gallons capacity; side openings not permitted. Closure must be sealed to prevent removal in transit and top head plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE". For shipments other than carload or truckload lots loaded by consignor and unloaded by consignee drums must be of design and venting arrangement approved by the Bureau of Explosives.

(b) Hydrogen peroxide solution in water containing not over 52 percent hydrogen peroxide by weight must be packed in specification containers as prescribed in paragraph (a) of this section or as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers of not more than 1 gallon capacity each. Inside containers must be well cushioned. All material used for cushioning must be incombustible mineral matter, such as whiting, mineral wool, infusorial earth, asbestos, or sifted ashes. Cushioning of inside containers in outside wooden boxes by means of elastic packing, such as wooden strips or large corks fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys in spec. 1A (§ 78.1 of this chapter).

(2) Spec. 34B (§ 78.12 of this chapter). Aluminum carboys.

(3) Spec. 42D (§ 78.109 of this chapter). Aluminum drums with vented closure in top head; not over 55 gallons capacity. Closure must be sealed to prevent removal in transit and top head plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE". Aluminum drums of not over 30 gallons capacity already in service for the transportation of this material, manufactured prior to April 24, 1934, and of at least equal strength and efficiency as drums of like capacity authorized under spec. 42D, may be continued in use until further order of the Commission.

(4) Spec. 42E (§ 78.136 of this chapter). Aluminum drums (single-trip).

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles having vented screw-cap closures not over 16 ounces capacity each. Each bottle must be completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.004 inch. Enclosed bottles must be separated from each other by use of fiberboard partitions or other suitable cushioning material and not more than 12 bottles shall be packaged in one box.

(6) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S or 2SL (§ 78.35 or 78.35a of this chapter) polyethylene container. The closures must be located in one head and must be vented to prevent accumulation of internal pressure and head plainly marked "KEEP THIS END UP" or "KEEP PLUG UP TO PREVENT SPILLAGE."

(c) Hydrogen peroxide solution in water containing over 8 percent hydrogen peroxide by weight and not exceeding 37 percent must be packed in specification containers as prescribed in paragraphs (a) or (b) of this section or as follows:

(1) Spec. 1A (§ 78.1 of this chapter). Glass carboys. The cushioning must be incombustible mineral material, elastic wooden-strip packing, or large elastic cushions such as corks fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited. The carboy stoppers must be vented so as to prevent accumulation of internal pressure; use of cork gasket impregnated with paraffin is authorized.

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 1D or 1E (§ 78.4, or § 78.7 of this chapter). Glass carboys in boxes or plywood drums of not over 6.5 gallons nominal capacity. Means shall be provided so that accumulated pressure in bottle shall not exceed 10 pounds p. s. i. gauge at 130° F., or shall vent at a pressure not to exceed 10 pounds p. s. i. gauge. The cushioning must be incombustible mineral material, elastic wood-strip packing, or large elastic cushions such as corks fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited.

(4) Spec. 15A, 15B, 15C, 16A, or 19A (§ 78.168, § 78.169, § 78.170, § 78.185, or § 78.190 of this chapter). Wooden boxes with inside containers of polyethylene, or other plastic material resistant to the lading, not over 1 pint capacity or 16 ounces by weight each. Inside containers must be securely cushioned with incombustible mineral matter, such as whiting, mineral wool, infusorial earth, asbestos, or sifted ashes.

(5) Spec. 1H, 15P, or 22C (§§ 78.13, 78.182 or 78.198 of this chapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(6) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside aluminum bottles constructed of at least 99 percent pure aluminum of not over 5 pounds or 5 pints capacity each. Each bottle shall be individually partitioned and surrounded by incombustible mineral packing material in the outside shipping container. Bottle closure shall be by means of a threaded aluminum cap, fitted with polyethylene gasket or other equally efficient closing device. A venting device which will not leak liquid under conditions normally incident to transportation is permitted.

(7) [Reserved]

(8) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles not over 1 gallon capacity each with vented closures; such bottles over 32 ounces capacity each must be completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.003 inch. Alkaline solutions containing sodium hydroxide or other alkaline materials packed in glass or polyethylene bottles not over 1 gallon capacity each and with hydrogen peroxide solution contained in polyethylene bottles not over 1 gallon capacity each, when shipped as a wood bleach preparation, may be packed together in inside chipboard or corrugated fiberboard boxes or separated by corrugated fiberboard partitions; not more than six inside chipboard or corrugated fiberboard boxes having inside bottles not over 32 ounces each, or more than 4 one gallon bottles separated by corrugated fiberboard partitions may be packed in one outside box; completed package with mixed contents must be capable of withstanding a drop from a height of four feet onto solid concrete without failure of any inside container.

(9) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass or polyethylene bottles, not over 1-gallon capacity each. Each bottle closure must be vented and each bottle completely contained in a securely closed polyethylene bag or tube constructed of material having minimum film thickness of 0.003 inch. Shipper must have established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(10) Spec. 16D (§ 78.187 of this chapter). Wirebound wooden overwrap, with inside spec. 2T or 2TL (§§ 78.21 or 78.27 of this chapter) polyethylene container.

(d) Hydrogen peroxide solution in water containing over 8 percent hydrogen peroxide by weight and not exceeding 10 percent must be packed in specification containers as prescribed in paragraphs (a), (b), or (c) of this section or as follows:

(1) Spec. 10A (§ 78.155 of this chapter). Wooden barrels, paraffined-lined.

(e) Hydrogen peroxide solution in water not exceeding 52 percent hydrogen peroxide by weight, when shipped in tank cars, tank motor vehicles, or portable tanks in carload or truckload quantities only, is not subject to any other requirement of Parts 71–78 and 197 of this chapter.

(f) Hydrogen peroxide solution in water exceeding 52 percent hydrogen peroxide by weight may also be packed in specification containers as follows:

(1) Spec. 103A–AL–W (§ 78.292 of this chapter). Tank cars. Venting arrangement must be approved by the Bureau of Explosives.

(2) Spec. MC 310–$H_2O_2$ (§ 78.330 of this chapter). Tank motor vehicles. Tanks shall be welded construction of aluminum meeting the requirements of § 78.330–2(a) of this chapter having a minimum wall thickness of one-half inch, and must be built to a design working pressure of not less than 40 psig and shall be designed so that internal surfaces may be effectively cleaned and passivated; all openings to be located on top of tank; all valves and safety devices shall be provided with overturn protection and dust covers; metal identification plate required by § 78.330–17(a) of this chapter shall be marked "ICC MC 310–$H_2O_2$" and in addition the vehicle shall be clearly marked in letters not less than one inch high "FOR HYDROGEN PEROXIDE ONLY"; designs for venting and pressure relief devices must be approved by the Bureau of Explosives.

**§ 73.267 Mixed acid (nitric and sulfuric acid) (nitrating acid).**

(a) Mixed acid (nitric and sulfuric acid) (nitrating acid), when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass bottles not over 7 pounds capacity each, individually inclosed in tightly closed metal cans and cushioned therein with incombustible mineral material.

(2) Spec. 5C (§ 78.83 of this chapter). Metal barrels or drums of Type 304 ELC or 347 stainless steel only. (See paragraph (b) of this section.)

(3) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. (See paragraph (b) of this section.)

(4) Spec. 1A or 1C (§§ 78.1 or 78.3 of this chapter). Carboys in boxes or kegs. Authorized only for mixed nitric and sulfuric acid containing not over 17 percent nitric acid and containing at least 33 percent water. Straight-sided carboys must be used; cushioning must be incombustible mineral material, elastic wooden-strip packing, or large elastic cushions, such as cork, fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited.

(5) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(6) Spec. 1D, or 1E (§ 78.4, or § 78.7 of this chapter). Glass carboys in boxes or plywood drums of not over 6.5 gallons nominal capacity; authorized only for mixed nitric and sulfuric acid, containing not over 17 percent nitric acid and containing at least 33 percent water; means shall be provided so that accumulated pressure in bottle shall not exceed 10 pounds per square inch gauge at 130° F., or vent at pressure not to exceed 10 pounds per square inch gauge. Cushioning must be incombustible mineral material, elastic wooden strip packing, or large elastic cushions such as cork, fastened securely in position. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited.

(7) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles. (See paragraph (b) of this section.)

(8) Spec. 60 (§ 78.255 of this chapter). Portable tanks. (See paragraph (b) of this section.)

(9) Spec. 5A (§ 78.81 of this chapter). Carbon steel barrels or drums. Authorized only for mixed acids containing less than 80 percent nitric acid. (See paragraph (b) of this section.)

(b) Mixtures of sulfuric acid and nitric acid (nitrating acid), shipped in tank cars, cargo tanks, tank trucks, or metal barrels or drums, shall contain not less than 10 percent sulfuric acid. These mixtures may contain:

(1) Up to 10 percent water with not less than 10 percent sulfuric acid.

(2) Up to 15 percent water with not less than 15 percent sulfuric acid.

(3) Up to 20 percent water with not less than 20 percent sulfuric acid.

(4) Up to 38 percent water with not less than 62 percent sulfuric acid.

(c) Mixed acid (nitric and sulfuric acid) (nitrating acid), when offered for transportation by rail express must be packed in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass bottles with glass stoppers ground to fit, and these stoppers must be held in place by plaster of Paris covered by strong cloth securely tied. Glass bottles having necks with molded screw threads, must be closed by threaded-type acid-resistant plastic caps. Caps must be equipped with an elastic composition cushion and with glass, porcelain or similar liner which must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the liquid.

(2) Or glass bottles having necks with molded screw threads must be closed by threaded-type acid-resistant caps. Caps must be lined with a resilient liner which

[1] Use of existing tank cars authorized, but new construction not authorized.

must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(3) Each bottle must be placed in a tightly closed metal container and well cushioned therein on all sides with incombustible mineral packing material, such as whiting, mineral wool, infusorial earth (kieselguhr), asbestos, sifted ashes, or powdered china clay, etc. The metal container must be packed in the outside container, and well cushioned by incombustible mineral packing material as herein described.

(4) Not more than 3½ pounds (1¼ quarts) of mixed acid may be shipped in one outside package.

**§ 73.268 Nitric acid.**

(a) Nitric acid exceeding 40 percent concentration in any quantity must not be packed with any other article.

(b) Nitric acid in any concentration which does not contain significant quantities of sulfuric acid or hydrochloric acid as impurities, when offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Spec. 103C–W (§ 78.283 of this chapter). Tank cars.

(2) The use of spec. 103C–AL special aluminum alloy tank cars is authorized for the transportation of 95 percent or greater nitric acid as provided in special orders of November 14, 1939, June 7, 1940, and August 19, 1941.

(3) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

(4) Spec. 5C (§ 78.83 of this chapter). Metal barrels or drums. Authorized for concentrations of nitric acid as limited by § 78.83–3 (c) of this chapter. Containers weighing less than 85 percent of their original marked weight are not authorized. Spec. 5C drums already in service for transportation of this material, manufactured prior to October 1, 1949, may be continued in service within the above limitations until further order of the Commission.

(5) Containers as specified in paragraphs (c), (d), (e), and (f), and within percentage limitations of this section.

(c) Nitric acid of 80 percent or greater concentration which does not contain significant quantities of sulfuric acid or hydrochloric acid as impurities, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b), (d), and (e) of this section, may be packed in specification containers as follows:

(1) Spec. 42B or 5X (§§ 78.107, or 78.91 of this chapter); also 42,[1] if made and marked prior to October 1, 1930. Aluminum drums, or aluminum-lined steel drums.

(2) Spec. 103A–AL–W (§ 78.292 of this chapter). Tank car.

(d) Nitric acid of 90 percent or greater concentration, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b) and (c) of this section, may be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, 19A, 11A, or 11B (§§ 78.168, 78.169, 78.170, 78.185, 78.190, 78.160, or 78.161 of this chapter). Wooden boxes, barrels and kegs with inside containers which must be glass bottles not over 5 pints capacity each, individually inclosed in tightly closed metal cans and cushioned therein with sufficient incombustible mineral material. (See paragraphs (g) and (h) of this section.)

(e) Nitric acid of concentration of less than 90 percent, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b), (c), and (f) of this section, may be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, 19A, 11A, or 11B (§§ 78.168, 78.169, 78.170, 78.185, 78.190, 78.160, or 78.161 of this chapter). Wooden boxes, barrels and kegs with inside containers which must be glass bottles not over 5 pints capacity each. (See paragraphs (g) and (h) of this section.)

(f) Nitric acid of concentration of 72 percent or less, when offered for transportation by carriers by rail freight, highway, or water, in addition to and within limitations of paragraphs (b) and (e) of this section, may be packed in specification containers as follows:

(1) Spec. 1A, 1C, or 1K (§ 78.1, 78.3, or 78.14 of this chapter). Straight sided carboys in boxes or kegs.

(2) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 1D, or 1E (§ 78.4, or § 78.7 of this chapter). Glass carboys in boxes or plywood drums of not over 6.5 gallons nominal capacity. Means shall be provided so that accumulated pressure in bottle shall not exceed 10 pounds per square inch gauge at 130° F., or shall vent at a pressure not to exceed 10 pounds per square inch gauge.

(4) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. Other materials may be used if approved by the Bureau of Explosives. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

(5) Spec. 60 (§ 78.255 of this chapter). Portable tanks, glass-lined.

(6) Spec. 33A (§ 78.150 of this chapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5–pint bottles may be packed in one outside container.

(g) Closures for bottles. Glass stoppers ground to fit and held in place by plaster of Paris covered by a strong cloth securely tied; or:

(1) Threaded-type acid-resistant caps with gasket or lining impervious to the acid and sufficiently resilient, or cushioned, to give an acidproof closure; at least 1 complete continuous thread is required to be engaged when bottle is closed for shipment.

(h) Cushioning inside containers. Inside containers must be well cushioned. Except as provided in subparagraph (1) of this paragraph, all material for cushioning must be incombustible mineral material such as whiting, mineral wool, infusorial earth, asbestos, sifted ashes, etc. The use of hay, excelsior, ground cork, or similar material, whether treated or untreated, is prohibited. Where the cushioning material is very fine or powdery, separate partitions for the individual inside containers shall be provided to prevent the bottles from shifting and coming in contact with each other, and the box must be tight to prevent sifting of cushioning material.

(1) Cushioning of inside containers in outside specification wooden boxes by means of elastic packings, such as wooden strips, large corks, or pads formed of an expanded polystyrene resin that is resistant to the action of nitric acid, fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys.

(i) Nitric acid of any concentration, when offered for transportation by rail express, must be packed in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water).

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass bottles with glass stoppers ground to fit, and these stoppers must be held in place by plaster of Paris covered by strong cloth securely tied. Glass bottles having necks with molded screw threads, must be closed by threaded type acid-resistant plastic caps. Caps must be equipped with an elastic composition cushion and with glass porcelain or similar liner which must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(2) Or glass bottles having necks with molded screw threads must be closed by thread-type acid-resistant caps. Caps must be lined with a resilient liner which must be impervious to the acid. Such caps, when secured in place by at least one complete continuous thread, must be capable of preventing any leakage of the acid.

(3) Each bottle must be placed in a tightly closed metal container, and well cushioned therein on all sides with incombustible mineral packing material, such as whiting, mineral wool, infusorial earth (kieselguhr), asbestos, sifted ashes, or powdered china clay, etc. The metal container must be packed in outside containers, and well cushioned by incombustible mineral packing material as described in this section.

[1] Use of existing drums authorized, but new construction not authorized.

(4) Not more than 5 pints of nitric acid shall be shipped in one outside package.

(j) Nitric acid of not over 50 percent concentration, when offered for transportation by rail express, may in addition to the provisions of paragraph (i) of this section be packed in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Spec. 15A, 15B, 15C, 16A, 19A, or 12B (§ 78.168, § 78.169, § 78.170, § 78.185, § 78.190, or § 78.205 of this chapter). Wooden or fiberboard boxes with not over 12 inside glass ampoules having capacity not over 4 fluid ounces each. Each glass ampoule must be well cushioned with incombustible mineral packing material, such as vermiculite or other equally efficient material, and be packed in a cylindrical cardboard tube having wall thickness of at least ⅛ inch, with the inside coated with wax, and be equipped with metal bottom and with metal screw-cap top. The inside packages must be separated by efficient means.

**§ 73.269 Perchloric acid.**

(a) Perchloric acid in excess of 72 percent must not be shipped. When not exceeding 72 percent strength must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or § 78.190 of this chapter). Wooden boxes with glass inside containers consisting of glass bottles not over 5 pints capacity each, cushioned with incombustible mineral material in amount sufficient to absorb the acid.

(2) Spec. 1A, 1C, 1D, 1E, or 1K (§ 78.1, 78.3, 78.4, 78.7, or 78.14 of this chapter). Glass carboys in boxes, kegs or plywood drums.

(3) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(4) Spec. 33A (§ 78.150 of this chapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5–pint bottles may be packed in one outside container.

(b) Cushioning for carboys must be incombustible mineral material, elastic wooden strips, natural cork blocks or rubber blocks. Other materials may be used if approved by the Bureau of Explosives. The use of hay, excelsior, loose ground cork, or similar materials, whether treated or untreated, is prohibited.

(c) Perchloric acid in any quantity must not be packed with any other article.

(d) Closures for bottles. Required as follows:

(1) Glass stoppers ground to fit and held in place by plaster of Paris covered by a strong cloth securely tied.

(2) Threaded-type acid-resistant caps with a gasket or lining impervious to the acid and sufficiently resilient, or cushioned, to give an acid-proof closure; at least one complete continuous thread is required to be engaged when bottle is closed for shipment.

(e) Inside containers must be well cushioned. All material for cushioning must be incombustible mineral material, such as whiting, mineral wool, infusorial earth (kieselguhr), asbestos, sifted ashes, or powdered china clay, etc. The use of hay, excelsior, ground cork, or similar material, either treated or untreated, is prohibited. Where the cushioning material is very fine or powdery, separate partitions for the individual inside containers should be provided to prevent the bottles from shifting and coming in contact with each other, and the box must be tight to prevent sifting of cushioning material.

(1) Cushioning of inside containers in outside wooden boxes by means of elastic packings, such as wooden strips, large corks, or pads formed of an expanded polystyrene resin that is resistant to the action of perchloric acid, fastened securely in position, is authorized if the completed package will pass the swing test prescribed for boxed carboys.

**§ 73.270 Phosphorus tribromide.**

(a) Phosphorus tribromide must be packed in specification containers as follows:

(1) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers not over 2 gallons each; the glass or earthenware containers must be cushioned in the outside containers by means of incombustible elastic packing material of such nature that a mixture of the liquid and the packing material will not cause fires or heating.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in an outside container.

(4) Spec. 28 (§ 78.8 of this chapter). Metal-jacketed lead carboys.

(5) Spec. 60 (§ 78.255 of this chapter). Portable tanks when tanks are lead-lined.

(6) Spec. 103A–N–W (§ 78.299 of this chapter). Tank cars. Tank must be of solid nickel at least 99 percent pure and all cast metal parts of the tank in contact with the lading have a minimum nickel content of approximately 96.7 percent.

(7) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles when tanks are lead-lined or nickel-lined. If nickel-lined, the lining shall comprise at least 1/32 inch of uncontaminated nickel at all points including rivets, welds and other joints, and edges of tank plates.

(8) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Spec. 103A,[1] tanks must be lead-lined steel or made of steel at least 10 percent nickel clad. Spec. 103A–W, 111A100–F–2, or 111A100–W–2 tanks must be lead-lined steel or made of steel with a minimum thickness of nickel cladding 1/16 inch. Nickel cladding in tanks must have a minimum nickel content of at least 99 percent pure nickel.

(9) Spec. 103E–W (§ 78.298 of this chapter). Tank cars made from Type 316 stainless steel. Authorized for phosphorus trichloride and thiophosphoryl chloride only.

(10) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Authorized for phosphorus trichloride only.

(11) Spec. 5A or 5C (§§ 78.81 or 78.83 of this chapter). Metal barrels or drums. Authorized for phosphorus trichloride and thiophosphoryl chloride.

(12) Spec. MC 310 or MC 311 (§§ 78.330 or 78.331 of this chapter). Tank motor vehicles when tanks are clad with 20 percent Type 316 stainless steel. Authorized for phosphorus oxychloride only.

(13) Spec. MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles made from types 304, 316, or 347 stainless steels. Authorized for phosphorus trichloride only.

(14) Spec. MC 311 (§ 78.331 of this chapter). Tank motor vehicle. Tank must be of solid nickel at least 99 percent pure and all cast metal parts of the tank in contact with the lading have a minimum nickel content of approximately 96.7 percent. Authorized for phosphorus oxychloride and phosphorus trichloride only.

**§ 73.271 Phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride.**

(a) Phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride must be packed in specification containers as follows:

(1) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums.

(2) Spec. 5K (§ 78.88 of this chapter). Nickel drums.

(3) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers not over 2 gallons each; the glass or earthenware containers must be

[1] Use of existing tank cars authorized, but new construction not authorized.

(16) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip) with no opening exceeding 2.3 inches in diameter. When drums are not constructed of stainless steel they must be lined with a material impervious to the lading. Authorized for phosphorus trichloride only.

(17) Spec. 5M (§ 78.90 of this chapter). Monel drums not over 10 gallons capacity each.

**§ 73.272 Sulfuric acid.**

(a) Sulfuric acid (oleum, oil of vitriol, etc.) must be packed in specification containers as follows:

(b) Sulfuric acid solutions of not over 25 percent concentrations, in inside containers of not more than 8 ounces capacity each, resistant to the lading, packed in strong outside containers and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in event of breakage, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(c) Sulfuric acid of any concentration:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers, not over one gallon capacity each, except that such containers up to three gallons capacity may be used when only one such container is packed in each outside wooden box.

(2) Spec. 31 (§ 78.15 of this chapter). Jugs in tubs.

(3) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers not over 2 gallons capacity each.

(4) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(5) Spec. 22A or 22B (§§ 78.196 or 78.197 of this chapter). Wooden drums, glued plywood, with not more than 1 inside container of glass or earthenware not over 1-gallon capacity.

(6) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(d) For sulfuric acid of concentrations not less than 100 percent and not more than 115 percent (approximate):

(1) Spec. 5C (§ 78.83 of this chapter). Metal barrels or drums of Type 304, 316, or 347 stainless steel or other types of stainless steel of equivalent corrosion resistance and physical properties.

(e) For sulfuric acid of concentrations not to exceed 100.5 percent:

(1) Spec. 1A, 1C, or 1K (§ 78.1, 78.3, or 78.14 of this chapter). Carboys in boxes or kegs.

(2) Spec. 1D or 1E (§ 78.4 or § 78.7 of this chapter). Glass carboys in boxes or plywood drums, of not over 6.5 gallons nominal capacity.

(3) Spec. 33A (§ 78.150 of this chapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 5 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(f) For sulfuric acid of concentrations not to exceed 95 percent (approximately 1.835 specific gravity) (66° Baumé):

(1) Spec. 5H (§ 78.87 of this chapter). Metal barrels or drums.

(2) Spec. 1H, 15P, or 22C (§ 78.13, 78.182, or 78.198 of this chapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2 (a) of this chapter, with inside spec. 2T or 2TL (§ 78.21 or 78.27 of this chapter) polyethylene container.

(3) Spec. 6D or 37M (nonreusable container) (§ 78.102 or 78.134 of this chapter). Cylindrical steel overpacks with inside spec. 2S, 2SL or 2T (§ 78.35, 78.35a, or 78.21 of this chapter) polyethylene container. Overpack of 55 gallon capacity when used for sulfuric acid of 93 percent or greater concentration shall be constructed of at least 16-gauge steel throughout.

(4) Spec. 16D (§ 78.187 of this chapter). Wirebound wooden overwrap, with inside spec. 2T, 2TL, 2S, or 2SL (§ 78.21, 78.27, 78.35, or 78.35a of this chapter), polyethylene container.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drum with inside spec. 2T or 2U (§ 78.21 or 78.24 of this chapter) polyethylene containers not over 15 gallons capacity each. (See § 78.224–1(a) (2) of this chapter.)

(6) [Reserved]

(7) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(8) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

(9) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene containers or other containers of plastic compatible with the chemical, not over 1-gallon capacity each. Inside containers must be cushioned to prevent movement in the outside box. Not more than four 1-gallon inside containers shall be packed in one outside container. Authorized gross weight not over 75 pounds.

(g) For sulfuric acid of concentrations 77.5 percent (approximately 1.7019 specific gravity) (59.8° Baume) or greater concentrations with or without an inhibitor, provided such acid has a corrosive effect on steel measured at 100° F. no greater than 66° Baume commercial sulfuric acid:

(1) Spec. 5A or 5C (§ 78.81 or § 78.83 of this chapter). Metal barrels or drums. Spec. 5C metal barrels or drums must be of types 304, 316, or 347 stainless steel and are authorized only for sulfuric acid of 93 percent or greater strength.

NOTE 1: Tapered steel plugs, without gaskets, for standard spec. 5A flanges are authorized. Threaded length must not be less than 1½ inches. Major diameter of plug not to exceed 2 11/32 inches and minor diameter not less than 2 7/32 inches.

(2) Spec. 17F (§ 78.117 of this chapter). Metal barrels or drums (single-trip only). Drums equipped with vented closures of an experimental type approved by the Bureau of Explosives are also authorized for export shipments.

(h) For sulfuric acid of concentrations 65.25 percent (approximately 1.559 specific gravity) (52° Baume) or greater concentrations, provided the corrosive effect on steel measured at 100° F. is not greater than that of 52° Baume commercial sulfuric acid:

(1) Spec. 60 (§ 78.255 of this chapter). Portable tank.

(2) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

(3) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Tank cars used for sulfuric acid, mixed acid (nitric and sulfuric) (nitrating acid), and other fuming acids, may be equipped with safety vents incorporating lead discs having a ⅛ inch breather hole in the center thereof. The ⅛ inch breather hole in lead discs of safety vents on oleum tank cars is not permitted.

(i) For sulfuric acid of concentrations not to exceed 51 percent (approximately 1.408 specific gravity (42° Baumé), unless otherwise provided:

(1) Spec. 5D (§ 78.84 of this chapter). Rubber-lined metal drums.

(2) Spec. 60 (§ 78.255 of this chapter). Portable tanks (rubber-lined).

(3) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles (rubber-lined).

(4) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars.

(j) Gaskets must be in a plastic condition when applied to carboys in boxes, barrels or kegs containing water-white sulfuric acid (electrolyte grade) of concentrations 77.5 percent (approximately 1.7019 specific gravity) (59.8° Baume).

(k) Soft rubber gaskets are authorized on carboys in boxes, barrels or kegs containing sulfuric acid of not over 51 percent concentrations (approximately 1.408 specific gravity) (42° Baume).

[1] Use of existing tank cars authorized, but new construction not authorized.

(l) Because of the present emergency and until further order of the Commission, sulfuric acid may be offered in transportation by carriers by water in conformity with Regulations for Explosives or Other Dangerous Articles on Board Vessels, 46 CFR 146.23–10, issued by the Commandant of the Coast Guard.

**§ 73.273 Sulfur trioxide, stabilized.**

(a) Sulfur trioxide, stabilized, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each.

(2) Spec. 5A or 5C (§§ 78.81 or 78.83 of this chapter). Metal barrels or drums, not over 55 gallons capacity each.

(3) Spec. 17F (§78.117 of this chapter). Metal drums (single-trip).

(4) Spec. 103A,[1] 103A–W, 105A300–W, 111A100–F–2, or 111A100–W–2 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars. Authorized only for stabilized sulfur trioxide. Tank cars shall have safety valves of approved design and not subject to rapid deterioration by the lading. Cars equipped with interior hearter coils not permitted.

(5) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles. Authorized only for stabilized sulfur trioxide. Tanks must be equipped with spring-relief safety valves. Tanks equipped with interior heater coils not permitted.

**§ 73.274 Fluosulfonic acid.**

(a) Fluosulfonic acid must be packed in containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container, as prescribed in Notes 1 and 2 to this section.

NOTE 1: Bottles manufactured of Pyrex glass or glass of equal acid resistance, authorized only for material containing an excess of sulfur trioxide, with Pyrex glass stoppers, or glass stoppers of equal acid resistance, ground to fit and held in place by plaster of Paris covered by strong cloth securely tied; each bottle must be placed in a metal container, well cushioned therein with incombustible absorbent materials such as mineral wool, infusorial earth (kieselguhr), asbestos, etc.

NOTE 2: Or steel containers, 14 gauge steel throughout, welded heads and side seams, equipped with ¾ inch welded flange and plug. Threads for plug must be 8 or less per inch. Each drum must be tested for leakage with 15 pounds hydrostatic pressure.

(2) Spec. 5A or 17F (single-trip) (§ 78.81 or 78.117 of this chapter). Metal barrels or drums not over 55 gallons capacity each.

(3) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.275 Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, anhydrous, hexafluorophosphoric acid, and mixtures thereof.**

(a) Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, anhydrous, hexafluorophosphoric acid, and mixtures thereof must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or § 78.190 of this chapter) wooden boxes, spec. 12B (§ 78.205 of this chapter) fiberboard boxes, or spec. 21C (§ 78.224 of this chapter) fiber drums with inside containers which must be polyethylene, or other nonfragile plastic bottles resistant to the lading, not over 2 gallons capacity each, closed by means of threaded acid-resistant caps; caps must have at least one complete continuous thread and be additionally sealed to the bottle to prevent turning of cap after bottle is closed for shipment.

(2) Spec. 42B, 42C, or 42D (§ 78.107, 78.108, or 78.109 of this chapter). Aluminum drums not over 55 gallons capacity.

(3) Spec. 22C (§ 78.198 of this chapter). Plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(4) Spec. 60 (§ 78.255 of this chapter). Portable tanks. Authorized for inhibited acids enumerated in this paragraph only.

(b) Inside containers must be packed so they cannot change position in the outside container while in transit and inert absorbent cushioning material must be used where necessary.

**§ 73.276 Anhydrous hydrazine and hydrazine solution.**

(a) Anhydrous hydrazine and hydrazine solution containing 50 percent or less of water must be packed in specification containers as follows:

(1) Spec. 1D (§ 78.4 of this chapter). Boxed glass carboys.

(2) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with inside containers which must consist of glass bottles not exceeding 1-gallon capacity each, cushioned by means of vermiculite within tin cans which shall be tightly closed.

(3) Spec. 5, 5A, 5C, or 17E (single-trip) (§§ 78.80, 78.81, 78.83, or 78.116 of this chapter). Metal barrels or drums which shall be of type 304 or 347 stainless steel, with openings not exceeding 2.3 inches in diameter.

(4) Spec. 103C–W or 111A100–W–6 (§§ 79.200, 79.201 of this chapter). Tank cars having tanks of type 304L or 347 stainless steel with molybdenum content not exceeding one-half of one percent. Spec. 111A100–W–6 tanks must not be equipped with bottom outlets. Vapor space in tanks must be filled with nitrogen gas at atmospheric pressure.

(5) Spec. 103A–AL–W (§ 78.292 of this chapter). Tank cars. Vapor space in tank must be filled with nitrogen gas at atmospheric pressure. Authorized for anhydrous hydrazine only.

(6) MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles having tanks of type 304L or 347 stainless steel with molybdenum content not exceeding one-half of one percent. Vapor space in tank must be filled with nitrogen gas at atmospheric pressure.

**§ 73.277 Hypochlorite solutions.**

(a) Hypochlorite solutions containing more than 7 percent available chlorine by weight must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C or 12B. (§§ 78.168, 78.169, 78.170 or 78.205 of this chapter). Wooden or fiberboard boxes with glass, earthenware, or polyethylene inside containers of not more than 1 gallon capacity each. Packages must not weigh over 65 pounds gross nor contain more than 4 glass or earthenware inside containers if their capacity is greater than 5 pints each, or more than six such inside polyethylene containers.

(2) Spec. 1A, 1C, 1D, or 1E (§§ 78.1, 78.3, 78.4 or 78.7 of this chapter). Glass carboys in boxes, kegs, or plywood drums.

(3) Spec. 1H, 15P, or 22C (§§ 78.13, 78.182, or 78.198 of this chapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container. Spec. 15P glued plywood or wooden box may contain spec. 2S (§ 78.35 of this chapter) polyethylene drum. Authorized for not over 16 percent sodium hypochlorite solution only.

(4) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S or 2SL (§ 78.35 or 78.35a of this chapter) polyethylene container. Authorized for not over 16 percent sodium hypochlorite solution only.

(5) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures.

(b) Closures for inside containers and carboys must be vented and must be of a material resistant to the lading and capable of preventing leakage of liquid contents.

(c) [Reserved]

(d) Glass or earthenware containers of not more than 4-fluid ounces capacity each, packed in strong outside containers, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Polyethylene pouches not over 2½ ounces capacity each, heat sealed, and formed of polyethylene, or other suitable

plastic, not less than .0035 inch in thickness to which shall be laminated a .0015 inch, 25-pound basis weight white sulphate paper, when securely packed not more than 144 pouches in a strong fiberboard box (absorbent cushioning material not required), are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(e) Shipments by tank motor vehicle are not subject to any other requirement of Parts 71–78 and 197 of this chapter.

**§ 73.278 Nitrohydrochloric acid.**

(a) Nitrohydrochloric acid, which is a mixture of nitric acid not over 1.42 specific gravity and hydrochloric acid not over 1.19 specific gravity in the approximate proportions of one part nitric acid and three parts hydrochloric acid, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass inside containers of not over 5 pints capacity each, individually inclosed in tightly closed metal cans and cushioned therein with sufficient incombustible mineral material.

(b) Nitrohydrochloric acid diluted, is a solution of nitrohydrochloric acid as described in paragraph (a) of this section, which has been diluted to not less than five times the volume of water and must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass inside containers of not over 5 pints capacity each, individually inclosed in tightly closed metal cans and cushioned therein with sufficient incombustible mineral material.

(2) Spec. 1A, 1D, or 1E (§§ 78.1, 78.4, or 78.7 of this chapter). Glass carboys in boxes or plywood drums, not over 5 gallons nominal capacity for spec. 1A and not over 6.5 gallons nominal capacity for spec. 1D and 1E.

**§ 73.279 Anisoyl chloride.**

(a) Anisoyl chloride must be packed in specification containers as follows:

(1) Spec. 5C (§ 78.83 of this chapter). Metal barrels or drums.

(2) Spec. 5 (§ 78.80 of this chapter). Metal barrels or drums of stainless steel only, with flanges for closures welded in place and having no opening exceeding 2.3 inches in diameter.

(b) Inside containers of not more than 8-fluid ounces capacity each, resistant to lading, packed in strong outside containers, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

**§ 73.280 Allyl trichlorosilane, amyl trichlorosilane, butyl trichlorosilane, cyclohexenyl trichlorosilane, cyclohexyl trichlorosilane, diethyl dichlorosilane, diphenyl dichlorosilane, dodecyl trichlorosilane, ethyl phenyl dichlorosilane, hexadecyl trichlorosilane, hexyl trichlorosilane, nonyl trichlorosilane, octadecyl trichlorosilane, octyl trichlorosilane, phenyl trichlorosilane, and propyl trichlorosilane.**

(a) Allyl trichlorosilane, amyl trichlorosilane, butyl trichlorosilane, cyclohexenyl trichlorosilane, cyclohexyl trichlorosilane, diethyl dichlorosilane, diphenyl dichlorosilane, dodecyl trichlorosilane, ethyl phenyl dichlorosilane, hexadecyl trichlorosilane, hexyl trichlorosilane, nonyl trichlorosilane, octadecyl trichlorosilane, octyl trichlorosilane, phenyl trichlorosilane, and propyl trichlorosilane must be packed in specification containers as follows:

(1) Spec. 15A or 16B (§§ 78.168 or 78.186 of this chapter). Wooden boxes with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(2) Spec. 17H or 37A (§ 78.118 or § 78.131 of this chapter). Metal drums (single-trip), with glass inside containers not over 1 gallon capacity each securely closed and cushioned with incombustible absorbent material.

(3) Spec. 5A (§ 78.81 of this chapter). Metal drums not over 55 gallons capacity.

(4) Spec. 5F (§ 78.85 of this chapter). Metal drums not over 11 gallons capacity.

(5) Spec. 5, 5B, 5C, and 17E single-trip (§§ 78.80, 78.82, 78.83 and 78.116 of this chapter). Metal drums. These containers not authorized for shipments by rail express.

(6) Specification cylinders as prescribed for any compressed gas, except acetylene.

(7) Spec. 103–W, 103A,[1] 103A–W, 105A100,[1] 105A100–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, 111A100–W–2, or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars.

(8) Spec. MC310 or MC311 (§ 78.330 or § 78.331 of this chapter). Tank motor vehicles of steel or stainless steel construction.

**§ 73.281 Benzyl bromide (bromotoluene, alpha).**

(a) Benzyl bromide (bromotoluene, alpha) must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes, with inside containers which must be glass bottles, not over 5 pints capacity each, closed by means of screw caps which are resistant to action of the contents; bottles must be packed in metal cans having slip-on or friction closure; cans must be cushioned in outside boxes with incombustible material.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.282 Isopropyl percarbonate, stabilized.**

(a) Isopropyl percarbonate, stabilized, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or § 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers of not over 2 gallons capacity each which must be maintained at a temperature below 75° F. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

**§ 73.283 Bromine trifluoride.**

(a) Bromine trifluoride must be packed in specification containers as follows:

(1) Spec. 3A150, 3AA150, 3E1800, 3B240 or 4B240 (§§ 78.36, 78.37, 78.42, 78.38, or 78.50 of this chapter). Cylinders.

**§ 73.284 Bromine pentafluoride.**

(a) Bromine pentafluoride, when offered for transportation by carriers by rail freight, highway, or water, must be packed in specification containers as follows:

(1) Spec. 3A150, 3AA150, 3E1800, or 4B240 (§§ 78.36, 78.37, 78.42, or 78.50 of this chapter). Cylinders not over 120 pounds water capacity (nominal), filled to not over 210 percent of water capacity. Cylinders must be plugged and fitted with valve protection caps. Spec. 3E1800 cylinders must be packed in strong outside wooden boxes and contain not more than one pound of bromine pentafluoride.

(b) Bromine pentafluoride, when offered for transportation by rail express must be packed in specification containers as follows:

(1) Spec. 3A150, 3AA150, 3E1800, or 4B240 (§§ 78.36, 78.37, 78.42, or 78.50 of this chapter). Cylinders containing not more than one pound of bromine pentafluoride. Cylinders must be plugged and fitted with valve protection caps and must be packed in strong outside wooden boxes.

**§ 73.285 Chlorine trifluoride.**

(a) Chlorine trifluoride must be packed in specification containers as follows:

(1) Spec. 3A150, 3AA150, 3E1800, 3B240, 4B240, or 4BA240 (§§ 78.36, 78.37, 78.42, 78.38, 78.50, or 78.51 of this chapter), cylinders.

(2) Not more than 10 pounds of chlorine trifluoride may, in addition to the provisions of subparagraph (1) of this paragraph, be packed in cylinders equal to or of greater efficiency than those prescribed in subparagraph (1) of this paragraph when approved by the Bureau of Explosives.

(3) Spec. 106A500,[1] 106A500–X or 110A500–W (§§ 79.300, 79.301 of this chapter). Tank cars equipped with solid steel plugs in lieu of fusible plug safety devices and valve protection caps.

**§ 73.286 Chemical kits.**

(a) Chemical kits, except as otherwise provided in Parts 71–78 of this chapter, must be packed, marked and labeled as prescribed by this part for the specific acids or corrosive liquids contained therein.

(b) Chemical kits containing acids in inside containers not exceeding 6 fluid ounces capacity each and complying with all of the following requirements, are exempt from specification packaging, marking other than name of contents, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

(1) The kit must not contain any of the items named in § 73.244 (c).

(2) The kit must be a strong wooden or metal container, or must be packed in a strong wooden or metal container.

(3) The acids or corrosive liquids must be cushioned with sufficient absorbent cushioning material to completely absorb the contents of the individual containers, and must be protected from injury by other materials in the kit.

(4) The contents of the kit must be of such nature and/or so packed that there will be no possibility of the mixture of contents causing dangerous evolution of heat or gas.

(c) Chemical kits containing acids or corrosive liquids and other chemicals not classed as dangerous articles used for photographic processing, except as otherwise provided for in Parts 71–78 of this chapter, must be packed in specification containers as follows:

(1) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 32 ounces capacity each, securely cushioned and separated from other inside containers. The contents of the kit must be of such nature and so packed that there will be no possibility of the mixture of contents causing dangerous evolution of heat or gas. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

**§ 73.287 Chromic acid solution.**

(a) Chromic acid solution must be packed in specification containers as follows:

(1) In containers prescribed in § 73.245.

(2) Spec. 17H (§ 78.118 of this chapter). Metal drums (single-trip), not over 5 gallons capacity.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with one inside glass container of capacity not over 4 fluid ounces, packed in a wax-lined cylindrical fiber carton with metal ends; bottle must have ground glass stopper securely held in position by a piece of cloth tied with wire and dipped in paraffin; space between bottle and the inner surface of the fiber cylinder must be filled with closely packed asbestos in sufficient quantity to completely absorb contents of bottle in the event of breakage. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(4) Spec. 29 (§ 78.226 of this chapter). Mailing tubes, with polyethylene bottles not over 1 quart capacity each.

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene containers having minimum wall thickness of 0.015 inch and so designed as to maintain their configuration when standing empty and open (see § 78.205–34 of this chapter). Not more than one inside container shall be packed in one outside box.

**§ 73.288 Allyl chloroformate, benzyl chloroformate, ethyl chloroformate, and methyl chloroformate.**

(a) Allyl chloroformate, benzyl chloroformate, ethyl chloroformate, and methyl chloroformate must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with glass inside containers not over 1 pint each, cushioned with incombustible mineral material.

(2) Spec. 1A (§ 78.1 of this chapter). Boxed carboys. Glass bottles having nominal capacity of 3 gallons also authorized when packed and tested in accordance with requirements of spec. 1A (§ 78.1 of this chapter); necks must be protected during shipment.

(b) Allyl chloroformate may, in addition, be packed in specification 5H (§ 78.87 of this chapter) lead-lined metal drums not over 55 gallons capacity.

(c) Spec. 16D (§ 78.187 of this chapter). Wooden wirebound overwrap having one inside spec. 2SL (§ 78.35a of this chapter) polyethylene container not over 55 gallons capacity. Authorized for ethyl chloroformate or methyl chloroformate only.

**§ 73.289 Formic acid and formic acid solutions.**

(a) Formic acid and formic acid solutions must be packed in specification containers as follows:

(1) In containers prescribed in § 73.245, except spec. 5A, 17C, 17E or 17F (§§78.81, 78.115, 78.116 or 78.117 of this chapter). Metal barrels or drums.

(2) Spec. 103C–W or 103E–W (§ 78.283 or § 78.298 of this chapter). Tank cars. Spec. 103E–W tanks must be of Type 316 stainless steel and must be stenciled "FOR FORMIC ACID ONLY."

(3) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs, lined with latex rubber.

(4) Spec. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter). Tank motor vehicles.

(5) Spec. 5C (§ 78.83 of this chapter). Metal barrels or drums.

(6) Spec. 5 (§ 78.80 of this chapter). Metal barrels or drums of stainless steel only, with flanges for closures welded in place and having no opening exceeding 2.3 inches in diameter.

(7) Spec. 17H (§ 78.118 of this chapter). Metal drums (single-trip) equipped with bag type liners of material and construction approved by the Bureau of Explosives. Each drum must have two diametrically opposite vent holes ¼ inch diameter in the side wall at each end in close proximity to the top curl and bottom chime. Interior of welded side seam must be covered or otherwise treated to provide a non-abrasive surface.

(8) Spec. 60 (§ 78.255 of this chapter). Portable tanks, marked "FOR FORMIC ACID ONLY".

(9) Spec. 1EX (§ 78.6 of this chapter). Carboys in plywood drums.

(10) Spec. 1H (§ 78.13 of this chapter). Metal crate with inside polyethylene carboy.

**§ 73.290 Mixtures of hydrofluoric and sulfuric acid.**

(a) Mixtures of hydrofluoric acid and sulfuric acid, containing not more than 80 percent by weight and not less than 70 percent by weight of hydrofluoric acid and sulfuric acid combined, with the hydrofluoric acid content not less than 25 percent by weight in any case, must be packed in specification containers as follows:

(1) Spec. 5A (§ 78.81 of this chapter). Unlined metal barrels or drums which have been subjected to an adequate passivation or neutralization process (see Note 1). Containers must be filled to not over 80 percent of capacity at 68° F. If containers are washed out with water, they must be repassivated before shipment.

NOTE 1: Each metal container, before being put into this service, must be passivated by the following or an equally efficient method: By filling drum to 90 percent of capacity with hydrofluoric acid of 58 percent strength and allowing drum to stand 48 hours at a temperature of 80° F., and then 7 hours at 140° F., the internal pressure maintained at atmospheric pressure by means of a ventilated bung.

(2) Containers not exceeding 55 gallons capacity each are authorized for carload, truckload, less-than-carload, and less-than-truckload shipment. Containers exceeding 55 gallons capacity each are authorized for carload or truckload shipments only but they must be loaded by consignor and unloaded by consignee.

(3) For less-than-carload or less-than-truckload shipments, containers must be of metal at least as heavy as 14 gauge United States standard for not over 20 gallons capacity each or 12 gauge for not over 55 gallons capacity each. Each container must be subjected to at least one of the following tests before shipment: By interior pressure of at least 15 pounds per square inch before filling or by holding for inspection for at least 24 hours after filling. In either case, each container must be vented prior to shipment.

**§ 73.291 Flame retardant compound liquid.**

(a) Flame retardant compound, liquid, must be packed in specification containers as follows:

(1) Spec. 1A, 1B, or 1C (§§ 78.1, 78.2, or 78.3 of this chapter). Carboys in boxes or kegs which must be closed, and when reused must be reconditioned and tested, as provided in the specification.

(2) Spec. 1D, or 1E (§ 78.4, or § 78.7 of this chapter). Glass carboys in boxes or plywood drums of not over 6.5 gallons nominal capacity. Means shall be provided so that accumulated pressure in bottle shall not exceed 10 pounds per square inch gauge at 130° F., or shall vent at a pressure not to exceed 10 pounds per square inch gauge.

(3) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous terri-

tories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(4) Spec. 10A (§ 78.155 of this chapter). Wooden barrels or kegs, lined with asphalt or rubber.

(5) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with inside containers which must be glass or earthenware, not over 2 gallons each.

(6) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside containers which must be glass or earthenware, not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(7) Spec. 28 (§78.8 of this chapter). Metal-jacketed lead carboys.

(8) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars.

### § 73.292 Hexamethylene diamine solution.

(a) Hexamethylene diamine solution must be packed in specification containers as follows:

(1) In containers prescribed in § 73.249.

(2) Spec. MC 300, MC 301,[2] MC 302, MC 303, MC 304, MC 305, MC 310, or MC 311 (§ 78.321, 78.323, 78.324, 78.325, 78.326, 78.330, or 78.331 of this chapter). Tank motor vehicles.

### § 73.293 Iodine monochloride.

(a) Iodine monochloride must be packed in specification containers as follows:

(1) Spec. 15A or 15B (§ 78.168 or § 78.169 of this chapter). Wooden boxes with inside containers not over 1 quart capacity each; or with stone or earthenware jugs not over 1 gallon capacity each.

(b) Outage (vacant space above liquid) for inside containers must be not less than 15 percent.

(c) Inside containers must be securely closed by hermetical sealing or by glass or stone stoppers ground to fit and securely fastened or by screw caps fitted with gaskets of suitable material resistant to the contents.

(d) Inside containers must be securely cushioned on all sides with incombustible cushioning material which will not produce heat when in contact with iodine monochloride.

### § 73.294 Monochloroacetic acid, liquid.

(a) Monochloroacetic acid, liquid, must be packed in specification containers as follows:

(1) In containers prescribed in § 73.245 (a) (1), (2), (3), (6), or (7).

(2) Spec. 103A–N–W, 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars. Spec. 103A–W, 111A100–F–2, or 111A100–W–2 tank cars must be nickel clad at least 20 percent.

(3) Spec. MC 310 or MC 311 (§ 78.330 or 78.331 of this chapter). Tank motor vehicles. Tanks to be fabricated from 99 percent pure nickel plates, Type 304 or 316 stainless steel, or be suitably lined.

(b) Monochloroacetic acid, anhydrous, when shipped as a liquid must be shipped in spec. 103A–W (§§ 79.200 and 79.201 of this chapter) tank cars with suitable corrosion resistant coatings or linings.

### § 73.295 Benzyl chloride.

(a) Benzyl chloride must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185 or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each, except that inside containers up to 3 gallons each are authorized when only one is packed in an outside container.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs, with glass or earthenware inside containers not over 2 gallons each.

(3) Spec. 1A, 1C, 1D or 1E (§§ 78.1, 78.3, 78.4 or 78.7 of this chapter). Glass carboys in boxes, kegs or plywood drums.

(4) Spec. 1X (§ 78.5 of this chapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(5) Spec. 5A or 17C (single-trip) (§§ 78.81 or 78.115 of this chapter). Metal barrels or drums with openings not exceeding 2.3 inches in diameter. Authorized for stabilized benzyl chloride only.

(6) Spec. 5K (§ 78.88 of this chapter). Nickel drums. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron.

(7) Spec. 5H (§ 78.87 of this chapter). Metal barrels or drums, lead-lined.

(8) Spec. 60 (§ 78.255 of this chapter). Portable tanks. Benzyl chloride must be stabilized when loaded in unlined tanks.

(9) Spec. MC 310 or MC 311 (§§ 78.330 or 78.331 of this chapter). Tank motor vehicles. Authorized for stabilized benzyl chloride only.

(10) Spec. MC 310 or MC 311 (§§ 78.330 or 78.331 of this chapter). Tank motor vehicles fabricated from 99 percent pure nickel plates. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of 96.7 percent. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such

(11) Spec. 103A,[1] 103A–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars which may be 10 percent nickel clad. Authorized for stabilized benzyl chloride only.

(12) Spec. 103A–N–W (§ 78.299 of this chapter). Tank cars. When shipped in unstabilized condition, the lading must be anhydrous and must be free from impurities such as iron. All cast metal parts of the tank in contact with the lading must have a minimum nickel content of approximately 96.7 percent.

### § 73.296 Di iso octyl acid phosphate.

(a) Di iso octyl acid phosphate must be packed in specification containers as follows:

(1) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

(2) Spec. MC 310 or MC 311 (§ 78.330 or § 78.331 of this chapter). Tank motor vehicles.

(3) Spec. 103A–W, 103C–W, 103E–W, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

### § 73.297 Titanium sulfate solution containing not more than 45% sulfuric acid.

(a) Titanium sulfate solution containing not more than 45% sulfuric acid must be packed in specification containers as follows:

(1) Spec. MC 310 or MC 311 (§ 78.330 or § 78.331 of this chapter). Tank motor vehicles, rubber-lined.

(2) Spec. 103B,[1] 103B–W, or 111A100–W–5 (§§ 79.200, 79.201 of this chapter). Tank cars.

(3) Spec. 15A, 15B, 15C, 16A or 19A (§§ 78.168, 78.169, 78.170, 78.185 or § 78.190 of this chapter). Wooden boxes with inside glass or earthenware containers, not over 1 gallon capacity each.

### § 73.298 Memtetrahydro phthalic anhydride.

(a) Memtetrahydro phthalic anhydride must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A or 19A (§§ 78.168, 78.169, 78.170, 78.185 or § 78.190 of this chapter). Wooden boxes with inside glass containers not over 1-gallon capacity each.

(2) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 1-gallon capacity each. Not more than 4 inside glass bottles exceeding 5 pints capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(3) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

(4) Spec. 37P (§ 78.133 of this chapter). Steel drums with polyethylene liner (nonreusable container). Authorized only for materials that will not react with polyethylene and result in container failure.

### § 73.299 Etching acid liquid, n.o.s.

(a) Etching acid liquid shall be a mixture of nitric acid, hydrofluoric acid, having nitric acid in concentrations of not more than 60 percent by weight, hydrofluoric acid in concentrations of not less than 4 percent by weight and water not less than 24 percent by weight, and may contain acetic acid. These mixtures must be packed in specification containers as follows:

(1) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside polyethylene bottles having minimum wall thickness of .050 inch and screw-cap closures. Net weight in inside containers shall not be over 10 pounds each and net weight in outside containers shall not be more than 40 pounds.

(2) Spec. 37M (§ 78.134 of this chapter). Cylindrical steel overpack with inside spec. 2S or 2SL (§ 78.35 or 78.35a of this chapter) polyethylene container not over 30 gallons capacity.

(b) All outside shipping containers must be plainly marked "NONREUSABLE CONTAINER." All components of the package must not be reused.

### § 73.299a Tris-(1-aziridinyl) phosphine oxide.

(a) Tris-(1-aziridinyl) phosphine oxide must be packed in specification containers as follows:

(1) In containers as prescribed in § 73.245, not over 5 gallons capacity each.

## Subpart F—Compressed Gases; Definition and Preparation

### § 73.300 Definitions.

For the purpose of Parts 71–78 of this chapter, the following terminology is defined:

(a) *Compressed gas.* The term "compressed gas" shall designate any material or mixture having in the container an absolute pressure exceeding 40 psi at 70° F. or, regardless of the pressure at 70° F., having an absolute pressure exceeding 104 psi at 130° F.; or any liquid flammable material having a vapor pressure exceeding 40 psi absolute at 100° F. as determined by the Reid method covered by the American Society for Testing Materials Method of Test for Vapor Pressure of Petroleum Products. (D–323)

(b) *Flammable compressed gas.* Any compressed gas as defined in paragraph (a) of this section shall be classified as "flammable compressed gas" if any one of the following occurs:

(1) Either a mixture of 13 percent or less (by volume) with air forms a flammable mixture or the flammable range with air is wider than 12 percent regardless of the lower limit. These limits shall be determined at atmospheric temperature and pressure. The method of sampling and test procedure shall be acceptable to the Bureau of Explosives.

(2) Using the Bureau of Explosives' Flame Projection Apparatus (see Note 1), the flame projects more than 18 inches beyond the ignition source with valve opened fully, or, the flame flashes back and burns at the valve with any degree of valve opening.

(3) Using the Bureau of Explosives' Open Drum Apparatus (see Note 1), there is any significant propagation of flame away from the ignition source.

(4) Using the Bureau of Explosives' Closed Drum Apparatus (see Note 1), there is any explosion of the vapor-air mixture in the drum.

NOTE 1: A description of the Bureau of Explosives' Flame Projection Apparatus, Open Drum Apparatus, Closed Drum Apparatus, and method of tests may be procured from the Bureau of Explosives, 63 Vesey Street, New York 7, N.Y.

(c) *Non-liquefied compressed gas.* A "non-liquefied compressed gas" is a gas, other than gas in solution, which under the charged pressure is entirely gaseous at a temperature of 70° F.

(d) *Liquefied compressed gas.* A "liquefied compressed gas" is a gas which, under the charged pressure, is partially liquid at a temperature of 70° F.

(e) *Compressed gas in solution.* A "compressed gas in solution" is a nonliquefied compressed gas which is dissolved in a solvent.

(f) *Flammable range.* The term "flammable range" shall designate the difference between the minimum and maximum volume percentages of the material in air that forms a flammable compressed gas.

(g) *Filling density.* The term "filling density" shall designate the percent ratio of the weight of gas in a container to the weight of water that the container will hold at 60° F. (One pound of water equals 27.737 cubic inches at 60° F.) For example, for a liquified petroleum gas of 0.504/0.510 specific gravity, a 100-pound cylinder holds 238.1 pounds of water and the filling density is 42 percent; therefore the amount of gas permitted is 0.42×238.1 or 100 pounds.

(h) *Service pressure.* The term "service pressure" shall designate the authorized pressure marking on the container. For example, for cylinders marked "ICC–3A1800", the service pressure is 1800 psig (pounds per square inch gauge).

### § 73.301 General requirements for shipment of compressed gases in cylinders.[1]

(a) *Gases capable of combining chemically.* No container shall contain gases or materials that are capable of combining chemically so as to endanger its serviceability.

(b) *Ownership of container.* A container charged with a compressed gas must not be shipped unless it was charged by or with the consent of the owner of the container.

(c) *Retest of container.* A container for which prescribed periodic retest has become due must not be charged and shipped until such retest has been properly made.

(d) *Manifolding containers in transportation.* No means of interconnecting such as manifolding of individual containers may be employed for the transportation of compressed gases, except as hereinafter authorized. Containers so manifolded shall be supported and held together as a unit by structurally adequate means. Safety relief devices on manifolded horizontal containers charged with flammable compressed gas shall be arranged to discharge upward and unobstructed to the open air in such a manner as to prevent any impingement of escaping gas upon the containers.

(1) Manifolding is authorized for containers of the following gases: Argon, air, helium, nitrogen, oxygen, carbon dioxide, nitrous oxide, provided that each such container is individually equipped with approved safety relief devices as required by § 73.34(d) or § 73.315(l).

(2) Manifolding is authorized for containers of the following gases: Boron trifluoride, ethylene (nonliquefied), hydrogen, hydrocarbon gases (nonliquefied), methane, provided individual containers are equipped with approved safety relief devices as required by § 73.34(d) or § 73.315(l), and further provided that each container is equipped with individual shutoff valve, or valves, which shall be tightly closed while in transit. Manifold branch lines to these individual shutoff valves shall be sufficiently flexible to prevent injury to the valves which otherwise might result from the use of rigid branch lines. A temperature measuring device may be inserted in one container of a manifolded installation in place of the shutoff valve.

(3) Manifolding is authorized for containers of the following gases: Ethane, ethylene, propylene, liquefied petroleum gases, liquefied hydrocarbon gases, provided individual containers are equipped with approved safety relief devices as required by § 73.34(d) or § 73.315(l), and further provided that each container is equipped with individual shutoff valve, or valves, which shall be tightly closed while in transit, and that each such container must be separately charged and means shall be provided to insure that no interchange of container contents can occur during transportation. Manifold branch lines to individual shutoff valves shall be sufficiently flexible to prevent injury to the valves which otherwise might result from the use of rigid branch lines.

(4) Manifolding is authorized for containers of acetylene, provided that each container is individually equipped with approved safety relief devices as required by § 73.34(d), and further provided that each container is equipped with an individual shutoff valve, or valves, which shall be tightly closed while in transit. Manifold branch lines to these individual shutoff valves shall be sufficiently flexible to prevent injury to the valves which otherwise might result from the use of rigid branch lines. All manifold containers shall be transported in a vertical position. For the checking of tare weights or for replacement of solvent the container shall be removed from the manifold. This requirement is not intended to prohibit the charging of the acetylene cylinders while manifolded.

(e) *Container pressure.* The pressure in the container at 70° F. must not exceed the service pressure for which the container is marked or designated, except as provided in § 73.302(c).

NOTE 1: In certain cases with liquefied gases the pressure at 70° F. must be lower than the marked service pressure to avoid having a greater pressure at a temperature of 130° F. than is permitted.

(1) For authorized containers not marked with a service pressure, the service pressure is designated as follows:

[1] Use of existing tank cars authorized, but new construction not authorized.

[2] Use of existing cargo tanks authorized, but new construction not authorized.

[1] Requirements covering cylinders are also applicable to spherical pressure vessels.

| Specification marking | Service pressure—psig |
|---|---|
| ICC-8 | 1,800 |
| 8E | 1,800 |
| 4 | 300 |
| 8 | 250 |
| 9 | 200 |
| 25 | 300 |
| 26 | 480 |
| 38 | 250 |
| 40 | 200 |
| 41 | 240 |

(2) For containers made prior to the effective date of specifications, the service pressure is designated as the same as for the same type of container made in accordance with current specifications.

(f) *Container pressure at 130° F.* The pressure in the container at 130° F. shall not exceed 5/4 times the service pressure, except:

(1) Containers charged with acetylene, liquefied nitrous oxide and liquefied carbon dioxide.

(2) When a cylinder is charged in accordance with § 73.302(c), the pressure in the cylinder at 130° F. must not exceed 5/4 times the filling pressure authorized therein.

(g) *Container valve protection.* Containers charged with flammable, corrosive, or noxious gases, must have their valves protected by one of the following methods.

(1) By equipping the containers with securely attached metal caps of sufficient strength to protect the valves from injury during transit.

(2) By boxing or crating the containers so as to give proper protection to the valves.

(3) By so constructing the containers that the valve is recessed into the container or otherwise protected so that it will not be subjected to a blow when the container is dropped on a flat surface.

(4) By loading the containers compactly in an upright position and securely bracing in cars or motor vehicles, when loaded by the consignor and to be unloaded by the consignee.

(5) By equipping with valves strong enough to avoid injury during transit for containers containing non-liquefied gas under pressure not exceeding 300 psi at 70° F.

(h) *Compressed gas containers.* Compressed gases must be in metal containers built in accordance with the ICC specifications, as shown below, in effect at the time of manufacture, and marked as required by the specification and the regulation for retesting if applicable;

CONTAINERS

| | | | |
|---|---|---|---|
| ICC-2P | ICC-3E | ICC-4C | ICC-8AL |
| 3I | 3HT | 4D | 9. |
| 3A | 4 | 4DA | 25 [1]. |
| 3A480X | 4A | 4DS | 26 [1]. |
| 3AA | 4AA | 4E | 33 [1]. |
| 3B | 4B | 4L | 38 [1]. |
| 3BN | 4B240FLW | 5 | 40. |
| 3C | 4B240X | 5F | 41. |
| 3D | 4BA | 7 [1] | |
| | 4B240ET | 8 | |

[1] Use of existing cylinders authorized, but new construction not authorized.

(i) *Foreign containers in domestic use.* Except as authorized by § 73.9, a charged container of foreign manufacture must not be offered for transportation in domestic traffic unless it has been made in accordance with the applicable ICC specification and unless the tests required by such specification were made in this country and proper report rendered.

(j) *Charging of foreign containers for export.* Containers of foreign manufacture, received from foreign countries for charging with compressed gas, may be charged and shipped for export only.

(1) Provided that they are retested in accordance with § 73.34(e). This retest may be omitted only if the container can be definitely identified as having been retested under this provision within the prescribed retest period, and

(2) Provided further that the maximum filling density and service pressure for each container shall be in accordance with all packing requirements of this part for the compressed gas involved.

(3) Records showing the results of the tests made on all foreign containers must be preserved for inspection until the next scheduled retest date.

(4) Bill of lading or other shipping paper shall, when possible, identify the containers and shall carry the following certification: "These containers have been retested and refilled in accordance with the ICC requirements for export."

### § 73.302 Charging of cylinders with non-liquefied compressed gases.

(a) *Detailed requirements.* Nonliquefied compressed gases (except gas in solution or poisonous gas) for which charging requirements are not definitely prescribed in § 73.304(a)(2) must be shipped, subject to § 73.301, and § 73.305 in specification containers as follows:

(1) Spec. 3,[1] 3A, 3AA, 3B, 3C, 3D, 3E, 4, 4A, 4B, 4BA, 4C, 7,[1] 25,[1] 26,[1] 33,[1] or 38[1] (§ 78.36, § 78.37, § 78.38, § 78.40, § 78.41, § 78.42, § 78.48, § 78.49, § 78.50, § 78.51, or § 78.52 of this chapter). (See §§ 73.34 and 73.301(e).)

NOTE 1: Authorized cylinders containing oxygen which is continuously fed to tanks containing live fish may be shipped irrespective of the provisions of § 73.24.

(2) Spec. 3HT (§ 78.44 of this chapter) cylinders are authorized for nonflammable gases, for use in aircraft only, for a maximum service life of 12 years, and must be equipped with safety relief devices as required by § 73.34(d). Only a frangible disc safety relief device, without fusible metal backing, shall be used with spec. ICC-3HT cylinders and the rated bursting pressure of the disc shall not exceed 90 percent of the minimum required test pressure of the cylinder with which the device is used. Cylinders must be shipped in strong outside containers.

(b) *Filling limits.* (See § 73.301(e).)

(c) *Special filling limits for spec. 3A and 3AA cylinders.* Specs. 3A and 3AA (§§ 78.36 and 78.37 of this chapter) cylinders may be charged with compressed gases, other than liquefied, dissolved, poisonous, or flammable gases to a pressure 10 percent in excess of their marked service pressure, provided:

(1) That such cylinders are equipped with frangible disc safety relief devices (without fusible metal backing) having a bursting pressure not exceeding the minimum prescribed test pressure.

(2) That the elastic expansion shall have been determined at the time of the last test or retest by the water jacket method.

(3) That either the average wall stress or the maximum wall stress shall not exceed the wall stress limitation shown in the following table (see Notes 1 and 2):

| Type of steel | Average wall stress limitation | Maximum wall stress limitation |
|---|---|---|
| Plain carbon steels over 0.35 carbon and medium manganese steels | 53,000 | 58,000 |
| Steels of analysis and heat-treatment specified in spec. 3AA | 67,000 | 73,000 |
| Plain carbon steels less than 0.35 carbon made prior to 1920 | 45,000 | 48,000 |

NOTE 1: The average wall stress shall be computed from the elastic expansion data using the following formula:

$$S=\frac{1.7EE}{KV}-0.4P$$

where—

$S$=wall stress, pounds per square inch;
$EE$=elastic expansion (total less permanent) in cubic centimeters;
$K$=factor x $10^{-7}$ experimentally determined for the particular type of cylinder being tested;
$V$=internal volume in cubic centimeter (1 cubic inch=16.387 cubic centimeters);
$P$=test pressure, pounds per square inch.

Formula derived from formula of Note 2 and the following:

$$EE=PKV\times\frac{D^2}{D^2-d^2}$$

NOTE 2: The maximum wall stress shall be computed from the formula:

$$S=P\frac{(1.3D^2+0.4d^2)}{D^2-d^2}$$

where—

$S$=wall stress, pounds per square inch;
$P$=test pressure, pounds per square inch;
$D$=outside diameter, inches;
$d=D-2t$, where $t$=minimum wall thickness determined by a suitable method.

(4) That an external and internal visual examination made at the time of test or retest shows the cylinder to be free from excessive corrosion, pitting, or dangerous defects.

(5) That a plus sign (+) be added following the test date marking on the cylinder to indicate compliance with subparagraphs (2), (3), and (4) of this paragraph.

(d) *Fluorine.* Fluorine must be shipped in Specification 3A1000, 3AA1000, or 3BN400 (§ 78.36, § 78.37 or § 78.39 of this chapter) cylinders without safety relief device and equipped with valve protection cap. Such containers must not be charged to over 400 psig at 70° F. and must not contain over 6 pounds of gas.

(e) *Verification of container pressure.* (1) Each day, the pressure in a container representative of that day's compression must be checked by the charging plant after the container has cooled to a settled temperature and a record of this test kept for at least 30 days.

[1] Use of existing cylinders authorized, but new construction not authorized.

(1) Spec. 3,[1] 3A, 3AA, 3B, 3BN, 3D, 3E, 4, 4A, 4B, 4BA, 4B-ET, 9, 25,[1] 26,[1] 38,[1] 40 or 41 (§§ 78.36, 78.37, 78.38, 78.39, 78.41, 78.42, 78.48, 78.49, 78.50, 78.51, 78.55, 78.63, 78.66, 78.67 of this chapter), except that specs. 9, 40, and 41 containers must not be charged and shipped with mixtures containing aluminum triethyl, aluminum trimethyl, carbon bisulphide (disulphide), ethyl chloride, ethylene oxide, nickel carbonyl, spirits of nitroglycerin, zinc ethyl or poisonous materials, class A, B or C, as defined by these regulations, unless specifically prescribed in this part. (See §§ 73.34 and 73.301(e).)

(2) The following restrictions must be complied with for the gases named:

| Kind of gas | Maximum permitted filling density (see Note 1) | Containers marked as shown in this column or of the same type with higher service pressure must be used except as provided in §73.34 (a), (b), §73.301 (j) (see notes following table). |
|---|---|---|
| | *Percent* | |
| Anhydrous ammonia | 54 | ICC-4; ICC-3A480; ICC-3AA480; ICC-3A480X; ICC-4A480; ICC-3; ICC-4AA480; ICC-3E1800. |
| Argon, pressurized liquid | 115 | ICC-4L200. |
| Carbon dioxide, liquefied (see Notes 3, 4, and 7). | 68 | ICC-3A1800; ICC-3AA1800; ICC-3; ICC-3E1800; ICC-3HT2000. |

NOTE 1: The "filling density" is hereby defined as the percent ratio of the weight of gas in a container to the weight of water that the container will hold at 60° F. (1 lb. of water=27.737 cubic inches at 60° F.).

NOTE 2: Cylinders purchased after Oct. 1, 1944, for the transportation of chlorine must contain no aperture other than that provided in the neck of the cylinder for attachment of a valve equipped with an approved safety relief device. Cylinders purchased after Nov. 1, 1935, and charged with chlorine must not contain over 150 pounds of gas.

NOTE 3: The charge in carbon dioxide cylinders must not exceed 68 percent by weight of the water capacity of the cylinder. Cylinders rated for 75 pounds or for 100 pounds carbon dioxide capacity are the only cylinders authorized for shipment of more than 50 pounds of carbon dioxide except that cylinders of sizes not over 9¼ inches outside

### § 73.303 Charging of cylinders with compressed gas in solution (acetylene).

(a) *Cylinder, filler and solvent requirements.* (Refer to applicable parts of Specs. ICC-8 and ICC-8AL.) Acetylene gas must be shipped in cylinders, spec. 8 or 8AL (§ 78.59 or § 78.60 of this chapter). The cylinders shall consist of metal shells filled with a porous material that has been tested with satisfactory results by the Bureau of Explosives, and this material must be charged with a suitable solvent.

(1) The specific gravity of acetone solvent in acetylene cylinders must be 0.796 or over at 15.5° C. (59.9° F.).

(2) The amount of solvent added in the refilling operation must not cause the tare weight of the cylinder to exceed its marked tare weight. The tare weight includes the weight of the cylinder shell, porous filling, valve, safety relief devices and solvent, but without removable cap.

(b) *Filling limits.* The pressure in cylinders containing acetylene gas must not exceed 250 psi at 70° F., and in case the cylinders are marked for a lower allowable charging pressure, at 70° F., then that pressure must not be exceeded.

(c) *Data requirements on filler and gas* must not be shipped unless they were *solvent.* Cylinders containing acetylene charged by or with the consent of the owner, and by a person, firm, or company having possession of complete information as to the nature of the porous filling, the kind and quantity of solvent in the cylinders, and the meaning of such markings on the cylinders as are prescribed by the Commission's regulations and specifications applying to containers for the transportation of acetylene gas.

(d) *Verification of container pressure.* (1) Each day, the pressure in a container representative of that day's compression must be checked by the charging plant after the container has cooled to a settled temperature and a record of this test kept for at least 30 days.

### § 73.304 Charging of cylinders with liquefied compressed gas.

(a) *Detailed charging requirements.* Liquefied gases shall be charged in accordance with the specific provisions of subparagraph (2) of this paragraph or paragraph (e) of this section. Where charging requirements are not specifically prescribed, liquefied gases, except gas in solution or poisonous gas, must be shipped, subject to the applicable paragraphs under General Requirements for Shipment (see § 73.301), the charging requirements of this section for liquefied compressed gas, or the charging requirements for mixtures (see § 73.305), in containers manufactured under specifications, as follows:

[1] Use of existing cylinders authorized, but new construction not authorized.

ter), 4B240FLW, 4E, 4, 9, 25,[1] 26,[1] 38,[1] or 41 (§ 78.36, § 78.37, § 78.38, § 78.42, § 78.49, § 78.50, § 78.51, § 78.54 or § 78.68 of this chapter). Cylinders authorized under § 73.34(a) and § 73.301(j) may be used.

NOTE 1: Cylinders marked as complying with ICC spec. 4B240FLW bearing manufacturer's symbol WCO and serial numbers 47A–1 to 47A–59200, inclusive, varying from the specification requirements as to physical properties of steel, are authorized for the transportation of liquefied petroleum gases.

(ii) Additional containers may be used within the limits of quantity and pressure as follows:

| Type of container | Maximum capacity | | Maximum charging pressure-psig |
|---|---|---|---|
| | Cubic Inches | Gallons | |
| ICC–2P (see Note 1) | 31.83 | | 45 psig at 70° F. and 105 psig at 130° F. (see Note 2). |
| ICC–2P (see Note 1) | 31.83 | | 28 psig and 70° F. and 64 psig at 130° F. |
| ICC–3C and ICC–4C | 3,881 | 16 + 5% tolerance. | 145 psig at 130° F. |
| ICC–7 made prior to Oct. 1, 1930 | 3,881 | 16 + 5% tolerance. | 70 psig at 70° F. and 145 psig at 130° F. |
| ICC–7–180 made prior to Oct. 1, 1930, and retested as per § 73.34(e) to 300 psig. | | | 187 psig at 130° F. |
| ICC–8 (steel) made prior to Oct. 1, 1930 of 16 inch inside diameter by 51 inches (approx.) charged with mixtures of carbon dioxide containing at least 6 percent by weight of other gas or liquid, as specified in § 73.301(j) of this chapter. | 11 | | 23 psig at 70° F. and 70 psig at 130° F. |
| ICC–8F drums | 11 | | 28 psig at 70° F. and 85 psig at 130° F. |

NOTE 1: Containers must be packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each completed container filled for shipment must be tested and marked with the date of test. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

[1] Use of existing cylinders authorized, but new construction not authorized.

NOTE 2: Containers must be equipped with safety relief devices which will prevent rupture of the containers and dangerous projection of the closing devices when the containers are exposed to the action of fire.

(4) *Verification of content.* Containers with a water capacity of 200 pounds or more and for use with a liquefied petroleum gas with a specific gravity at 60° F. or 0.504 or greater may have their contents determined by using a fixed length dip tube gauging device. The length of the dip tube shall be such that when a liquefied petroleum gas with a specific volume of 0.03051 cu. ft./lb. at a temperature of 40° F. is charged into the container it just reaches the bottom of the tube. The weight of this liquid shall not exceed 42 percent of the water capacity of the container which must be stamped thereon. The length of the dip tube, expressed in inches carried out to one decimal place and prefixed with the letters "DT" shall be stamped on the container and on the exterior of removable type dip tube; for the purpose of this requirement the marked length shall be expressed as the distance measured along the axis of a straight tube from the top of the boss through which the tube is inserted to the proper level of the liquid in the container. The length of each dip tube shall be checked when installed by weighing each container after filling except when installed in groups of substantially identical containers in which case one of each 25 containers shall be weighed. The quantity of liquefied gas in each container must be checked by means of the dip tube after disconnecting from the charging line. The outlet from the dip tube shall be not larger than a No. 54 drill size orifice. A container representative of each day's filling at each charging plant shall have its contents checked by weighing after disconnecting from the charging line.

(e) *Refrigerant gases.* Refrigerant gases which are nonpoisonous and nonflammable under this part, must be shipped in cylinders as prescribed in paragraph (a)(1) or (2) of this section, or as follows:

(1) Spec. 2P (§ 78.33 of this chapter). Inside metal containers equipped with safety devices of a type approved by the Bureau of Explosives and packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Pressure in the container must not exceed 85 psi absolute at 70° F. Each completed metal container filled for shipment must be heated until content reaches a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

(f) *Engine starting fluid.* Engine starting fluid containing compressed gas or gases which are flammable under this part must be shipped in cylinders as prescribed in paragraph (a)(1) of this section, or as follows:

(1) Inside nonrefillable metal containers of capacity not exceeding 32 cubic inches. Containers must be packaged in spec. 12B (§ 78.205 of this chapter) fiberboard boxes equipped with top and bottom pads which will provide three complete thicknesses of fiberboard on tops and bottoms of boxes, or spec. 15A, 15B, or 15C (§ 78.168, § 78.169, or § 78.170 of this chapter) wooden boxes. Pressure in the container must not exceed 140 psi, absolute, at 130° F. However, if the pressure exceeds 140 psi, absolute at 130° F., a spec. 2P (§ 78.33 of this chapter) container must be used. In any event, the metal container must be capable of withstanding without bursting a pressure of one and one-half times the pressure of the content at 130° F. The liquid content of the material and gas must not completely fill the container at 130° F. Each completed container filled for shipment must have been heated until content reaches a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked, "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

### § 73.305 Charging of cylinders with a mixture of compressed gas and other material.

(a) *Detailed requirements.* A mixture of a compressed gas and any other material must be shipped as a compressed gas if the mixture is a compressed gas as designated in § 73.300(a) and when not in violation of § 73.301(a).

(b) *Filling limits.* (See § 73.301(e).) For mixtures, the liquid portion of the liquefied compressed gas at 130° F. plus any additional liquid or solid must not completely fill the container.

(c) *Nonpoisonous and nonflammable mixtures.* Mixtures containing compressed gas or gases including insecticides, which mixtures are nonpoisonous and nonflammable under this part must be shipped in cylinders as prescribed in § 73.304(a) or as follows:

(1) Spec. 2P (§ 78.33 of this chapter). Inside metal containers equipped with safety relief devices of a type approved by the Bureau of Explosives and packed in strong wooden or fiber boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Pressure in the container must not exceed 85 psi absolute at 70° F. Each completed metal container filled for shipment must be heated until content reaches a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect. Each outside shipping container must be plainly marked "INSIDE CONTAINERS COMPLY WITH PRESCRIBED SPECIFICATIONS."

(d) *Poisonous mixtures.* Mixtures containing any poisonous article, class A or class C, in such proportion that the mixture would be classed as poisonous under § 73.326(a) or § 73.381(a) must be shipped in containers as authorized for such poisonous articles.

### § 73.306 Exemptions from compliance with regulations for shipping compressed gas.

(a) *General exemptions.* Compressed gases, except poisonous gases as defined by § 73.326(a) and except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter, when in accordance with one of the following subparagraphs are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) When in containers of not more than 4 fluid ounces water capacity (7.22 cubic inches or less).

(2) When in metal containers filled with non-dangerous material to not over 90 percent capacity at 70° F. then charged with non-flammable, non-liquefied gas; each container must be tested to three times the gas pressure at 70° F., and, when refilled and reshipped, must be retested at this pressure before each shipment, provided one of the following conditions is met:

(i) Container is not over 1 quart capacity charged to not over 170 psig at 70° F.

(ii) Container is not over 30 gallons capacity charged to not over 75 psig pressure at 70° F.

(3) When in inside nonrefillable metal containers charged with a solution of materials and compressed gas or gases which is non-poisonous, provided all of the following conditions are met:

(i) Capacity must not exceed 32 cubic inches.

(ii) Pressure in container must not exceed 75 psi absolute at 70° F; however, if the pressure exceeds 55 psi absolute at 70° F., a specification 2P (§ 78.33 of this chapter) container must be used.

(iii) Liquid content of the material and gas must not completely fill the container at 130° F.

(iv) If the content is flammable as provided in § 73.300(b) (2), (3) and (4), the flash point, as determined by Bureau of Explosives method, must be not less than 20° F.

(v) Each completed container filled for shipment must be heated until content reaches a minimum temperature of 130° F. without evidence of leakage, distortion or other defect.

(4) When in inside nonrefillable metal containers charged with a solution of non-poisonous and non-flammable materials and non-liquefied compressed gas, provided all the following conditions are met:

(i) Capacity not to exceed 31.83 cubic inches (17.6 fluid ounces).

(ii) Pressure in container not to exceed 140 psi absolute at 130° F.

(iii) The metal container must be capable of withstanding without bursting a pressure of two times the pressure of the container at 70° F. or one and one-half times the pressure of the container at 130° F., whichever is greater.

(b) *Exemptions for foodstuffs, soap, cosmetics, beverages, biologicals, electronic tubes and audible fire alarm systems.* Compressed gases, except poisonous gases as defined by § 73.326(a) and except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter, when in accordance with one of the following subparagraphs are, unless otherwise provided, exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

(1) Carbonated beverages.

(2) Foodstuffs or soaps in metal cans with soluble or emulsified compressed gas, provided the pressure in the container does not exceed 115 psi absolute at 70° F., or 150 psi absolute at 130° F. The metal container must be capable of withstanding without bursting a pressure of two times the pressure of contents at 70° F., or one and one-half times the pressure of the contents at 130° F., whichever is greater.

(3) Cream in metal containers with soluble or emulsified compressed gas. Containers shall be of such design that they will hold pressure without permanent deformation up to 375 psig and shall be equipped with a device designed so as to release pressure without bursting of the container or dangerous projection of its parts at higher pressures. This exemption applies to shipments offered for transportation by refrigerated motor vehicles only.

(4) Inside nonrefillable metal containers charged with a solution containing biological products or a medical preparation which will be deteriorated by heat and compressed gas or gases, which is nonpoisonous and nonflammable, and of capacity not to exceed 31.83 cubic inches (17.6 fluid ounces). Pressure in the container not to exceed 55 pounds psi absolute at 70° F., and the liquid content of the product and gas must not completely fill the container at 130° F. One completed container out of each lot of 500 or less, filled for shipment, must have been heated, until content reached a minimum temperature of 130° F., without evidence of leakage, distortion, or other defect.

(5) Electronic tubes of not more than 30 cubic-inch volume charged with gas to a pressure of not more than 35 psig.

(6) Inside metal containers of a capacity not to exceed 35 cubic inches, charged with nonflammable, nonpoisonous liquefied compressed gas to be used in conjunction with audible fire alarm systems. Pressure in the container must

| Minimum specific gravity of the liquid material at 60° F. | Maximum filling density in percent of the water-weight capacity of the container | Minimum specific gravity of the liquid material at 60° F. | Maximum filling density in percent of the water-weight capacity of the container |
|---|---|---|---|
| 0.271–0.289 | 26 | 0.504–0.510 | 42 |
| 0.290–0.306 | 27 | 0.511–0.519 | 43 |

| 0.473–0.480 | 38 | 0.601–0.608 | 54 |
| 0.481–0.488 | 39 | 0.609–0.617 | 55 |
| 0.489–0.495 | 40 | 0.618–0.626 | 56 |
| 0.496–0.503 | 41 | 0.627–0.634 | 57 |

(2) Subject to § 73.301(f), any filling density percentage prescribed in this section is authorized to be increased by 2 for liquefied petroleum gas in spec. 2S or 3 cylinders or in spec. 3AA marked for 1,800 psig, or higher, service pressure.

(3) Liquefied petroleum gas must be shipped in specification containers as follows:

(i) Spec. 3,[1] 3A, 3AA, 3B, 3E, 4A, 4B, 4BA, 4B240ET, 4B240X,[1] (see Appendix A–1 to subpart C of Part 78 of this chap-

[1] Use of existing cylinders authorized, but new construction not authorized.

(b) *Filling limits.* (See § 73.301(f).)

(1) For a liquefied compressed gas the liquid portion of the content at 130° F. must not completely fill the container.

NOTE 1: Maximum filling densities are permitted by paragraph (a)(2) of this section for certain liquefied compressed gases, having critical temperatures below 130° F. that result in the container being liquid full below the critical temperature, but because of compressibility of the liquids, the maximum pressure requirements of § 73.301(f) are met up to and including 130° F.

NOTE 2: Cylinders containing vinyl fluoride, inhibited, may be liquid full at 130° F. provided the pressure at the critical temperature does not exceed one and one-fourth times the service pressure.

(2) The pressure in ICC–4L (§ 78.57 of this chapter) cylinders must be limited by a pressure controlling valve so sized and set as to limit the pressure to one and one-fourth times the marked service pressure. The liquid portion of the gas must not completely fill the cylinder. For ICC–4L cylinders insulated by a vacuum the pressure control valve must be set at least 15 psi lower than one and one-fourth times the marked service pressure. The other paragraphs of this section do not apply to ICC–4L cylinders.

(c) *Verification of content in cylinder.*

(1) Liquefied gases must be charged by weight, by volume measurement of liquid, or when lower in pressure than required for liquefaction a pressure-temperature chart may be used in charging to insure that the service pressure at 70° F. times 5/4 will not be exceeded at 130° F.

(2) Except as noted in paragraph (d)(4) of this section, the amount of liquefied gas charged into a container must be determined by weight, or if charged at a pressure lower than the liquefaction

not exceed 85 psi absolute at 70° F. The completely assembled containers must be capable of withstanding without bursting a pressure of 1000 psi. The liquid portion of the gas must not completely fill the container at 130° F.

(c) *Fire extinguishers and component parts thereof.* Fire extinguishers and component parts thereof containing compressed gas for the purpose of expelling fire extinguishing contents, which must be nonliquefied gas when in containers exceeding 30 cubic inches capacity, when shipped under the following conditions are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter:

(1) Must be shipped as inside containers.

(2) The container under stored pressure shall have an internal volume not exceeding 1,100 cubic inches.

(3) The pressure in the container shall not exceed 200 psi at 70° F.

(4) The contents shall be nonflammable as covered in §§ 73.115 and 73.150; nonpoisonous as covered in § 73.325(a), class A, B, or C; and not corrosive as defined in § 73.240.

(5) Except as provided in subparagraph (6) of this paragraph, each container must be tested before shipment to at least three times the pressure in the container at 70° F. when charged and not less than 120 pounds per square inch, and before refilling and reshipping must be retested at this pressure before each shipment. The container shall show no leakage or damage when subjected to this pressure.

(6) When spec. 2P (§ 78.33 of this chapter) inside metal containers are used for pressures not exceeding 85 psi absolute, at 70° F. or 115 psi absolute, at 130° F. the test requirements of subparagraph (5) of this paragraph do not apply, but each container must be capable of having the contents heated to 130° F. without evidence of leakage or permanent distortion.

(d) *Truck bodies or trailers on flat cars; automobiles, motorcycles, tractors, or other self-propelled vehicles.* (1) Truck bodies or trailers with automatic heating or refrigerating equipment of the gas burning type may be shipped with fuel tanks filled and equipment operating or inoperative, when used for the transportation of other freight and loaded on flat cars as part of a joint rail-highway movement, provided the equipment and fuel supply are of a type approved by the Bureau of Explosives. The heating or refrigerating units are exempt from specification packaging, marking, and labeling requirements in this service and shall be considered as carriers equipment but not as shipments.

(2) Automobiles, motorcycles, tractors, or other self-propelled vehicles, equipped with liquefied petroleum gas or other fuel tanks, provided such tanks are securely closed, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter. When offered for transportation by carriers by rail freight or highway, drainage of fuel tanks is not required. When offered for transportation by rail express, fuel tanks must have been emptied and securely closed.

(e) *Refrigerating machines and hydraulic accumulators.* (1) Refrigerating machines or components thereof which are factory-made, factory-tested and intended to be shipped only once to the point of installation, containing not over 1,000 pounds of Group 1 refrigerant as classified in American Standard Safety Code for Mechanical Refrigeration (ASA–B9.1–1958) (or 50 pounds of refrigerant other than Group 1) in each pressure vessel and containing an aggregate of not more than 2,000 pounds of Group 1 refrigerant (or 100 pounds of refrigerant other than Group 1) when containing more than two charged vessels, when shipped under the following conditions are exempt from specification packaging, marking and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter:

(i) Each pressure vessel shall be equipped with a safety relief device meeting the requirements of the American Standard Safety Code for Mechanical Refrigeration (ASA–B9.1–1958). In a refrigerating machine containing more than one pressure vessel, each pressure vessel shall be equipped with individual shut-off valve or valves which shall be closed while in transportation. Such pressure vessels shall be manufactured, tested and inspected in accordance with American Standard B9.1–1958 and when over 6 inches internal diameter, in accordance with Section VIII of the American Society of Mechanical Engineers Boiler and Pressure Vessel Code (1959 edition including all addendas through the Winter 1961 Addenda issued December 29, 1961). All parts subject to refrigerant pressure during shipment must be tested in accordance with American Standard B9.1–1958.

(ii) The liquid portion of the refrigerant, if any, must not completely fill any pressure vessel at 130° F.

(iii) The amount of refrigerant, if liquefied, must not exceed the filling densities prescribed in § 73.304.

(2) *Hydraulic accumulators.* Hydraulic accumulators and component parts thereof containing nonliquefied, nonflammable gas for the purpose of operation when shipped under the following conditions are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter:

(i) Must be shipped as inside containers.

(ii) The container under stored pressure shall have an internal volume not exceeding 1,100 cubic inches.

(iii) The pressure in the container shall not exceed 200 pounds psi at 70° F.

(iv) The contents shall be nonflammable as covered in § 73.115.

(v) Each container must be tested before shipment to at least three times the pressure in the container at 70° F. when charged and not less than 120 psi, and before refilling and reshipping must be retested at this pressure before each shipment. The container shall show no leakage or damage when subjected to this pressure.

### § 73.314 Requirements for compressed gases in tank cars.

(a) *Definitions.* For definitions of compressed gases, see § 73.300.

(b) *General requirements.*

(1) Tank cars containing compressed gases must not be shipped unless they were loaded by or with the consent of the owner thereof.

(2) Tank cars must not contain gases capable of combining chemically and must not be loaded with any gas which combines chemically with the gas previously loaded therein, until all residue has been removed and interior of tank thoroughly cleaned.

(3) For cars of the ICC–106A and 110A class, the tanks must be placed in position and attached to car structure by the shipper.

(4) Wherever the word "approved" is used in this part of the regulations, it means approval by the Association of American Railroads Committee on Tank Cars as prescribed in § 79.3 of this chapter.

(c) *Authorized gases, filling densities, tank cars.* Compressed gases transported in tank cars must be shipped as provided in paragraphs (b) to (g) of this section, § 73.432, and the following table:

| Kind of gas | Maximum permitted filling density, Note 1 | Required tank car, see §73.31(2) and (3) |
|---|---|---|
| | *Percent* | |
| Anhydrous ammonia | 50 | ICC–106A500–X, Note 7. |

| | 68 | ICC–106A500–X, Note 7. |

[1] Use of existing tank cars authorized, but new construction not authorized.

NOTE 1: The filling density for liquefied gases is hereby defined as the percent ratio of the weight of gas in the tank to the weight of water that the tank will hold. For determining the water capacity of the tank in pounds per gallon (231 cubic inches) of water at 60° F. in air shall be 8.32828 pounds.

NOTE 2: Each tank must be equipped with one or more safety relief devices of approved type and discharge area; the combined discharge area of the devices must be sufficient to prevent building up of pressure in tank in excess of ¾ of the test pressure of the tank. The devices must be set to function at a pressure not to exceed 480 psi on 105A500–W tanks and at a pressure not to exceed 360 psi on 105A500–W tanks and at a pressure not to exceed 400 psi on 105A300–W tanks. Each liquefied petroleum gas (pressure not exceeding 200 psi at 105° F.) tank must have its final discharge piped to the outside of the protective housing.

NOTE 3: Tanks complying with ICC–106A or 110A specifications, used for the transportation of compressed gases as listed in § 77.840(c) (1) (paragraph (c) of this section as it is transported in or on motor vehicles and in the manner authorized in § 77.840(c) (1), are exempt from the requirements of § 77.824 relative to shifting loads when in transit is necessary.

NOTE 4: For tank cars other than ICC–106A class used for the transportation of liquefied flammable gases, interior pipes of loading and unloading valves must be equipped with excess-flow valves of approved design.

NOTE 5: The liquid portion of the gas at 0° F. must not completely fill the tank.

NOTE 6: Tank must be insulated with an approved material of a thickness so that the thermal conductance is not more than 0.3 B.t.u. per hour per square foot per degree F. differential in temperature per hour; this reduction is to permit an anchorage which must not exceed 7 inches from top of center sills to bottom of tank. Tank must be equipped with one safety relief valve of approved design set to open at a pressure not exceeding ¾ of the test pressure of the tank and one frangible disc of approved design set to function at a pressure less than the test pressure of the tank. The discharge capacity of each safety relief device must be sufficient to prevent building up of pressure in tank in excess of ¾ of the test pressure of the tank. The devices must be set to function at a pressure not to exceed 360 psi on 105A500–W tanks and at a pressure not to exceed 400 psi on 105A300–W tanks. Each liquefied petroleum gas (pressure not exceeding 200 psi at 105° F.) tank must have its final discharge piped to the outside of the protective housing.

NOTE 7: Tanks complying with ICC–106A or 110A specifications, used for the transportation of compressed gases as listed in § 77.840(c) (1) (paragraph (c) of this section as it is transported in or on motor vehicles and in the manner authorized in § 77.840(c) (1), are exempt from the requirements of § 77.824 relative to shifting loads when in transit is necessary.

NOTE 8: Tanks shall not be equipped with safety relief devices in contact with content of tank must be of a metal or other material suitably treated if necessary, which will not cause formation of any acetylides.

NOTE 9: All parts of valves and safety relief devices in contact with content of tank must be of a metal or other material sufficiently treated if necessary, which will not cause formation of any acetylides.

NOTE 10: Tank must be equipped with a manhole cover, subject to rapid deterioration by the lading; all appurtenances such as manhole cover, venting, loading and unloading valves and safety relief devices, and all connection pipes, must be made of metal not subject to rapid deterioration by the lading; cork must be used as an insulating material.

NOTE 11: Tanks for nitrosyl chloride shall be nickel-clad and safety relief devices shall be of the fusible plug type and shall function at a temperature of not exceeding 175° F. and be vapor tight at 130° F.

NOTE 12: Not more than 10,000 pounds of chlorine loading into a single-unit tank car must not exceed 60,000 pounds except that not more than 10,000 pounds of chlorine loading into a single-unit tank car must not exceed 90,000 pounds when the tank is fitted with 4 inches of cork board and constructed, maintained, and retested in full compliance with ICC Specification 105A600–W. Cars

may be registered and jackets stenciled either 105A300–W or 105A500–W and equipped with the safety relief valve required by the specification to which registered.

NOTE 13: This gas may be transported in authorized tank car tanks stenciled "DISPERSANT GAS" or "REFRIGERANT GAS."

NOTE 14: Container shall not be equipped with safety relief devices of any description.

NOTE 15: A filling density of 56.8 percent may be used during the months of November through March, inclusive. When this filling density is used, tank cars must be loaded and shipped directly to consumers for unloading. Storage in transit is not permitted.

NOTE 16: Openings in tank heads to facilitate application of nickel lining are authorized and must be closed in an approved manner.

NOTE 17: Tank must be insulated with an approved material of a thickness so that the thermal conductance is not more than 0.03 B.t.u. per square foot per degree F. differential in temperature per hour; except that the insulation thickness directly over center sills may be reduced to give thermal conductance not exceeding 0.04 B.t.u. per square foot per degree F. differential in temperature per hour; this reduction is to permit an anchorage which must not exceed 7 inches from top of center sills to bottom of tank. In addition to the safety relief valve required by § 78.289–13 of this chapter, the tank must be equipped with one frangible disc of approved design set to function at a pressure less than 600 pounds per square inch but not less than 450 pounds per square inch. The discharge capacity of each of these safety relief devices must be sufficient to prevent building up of pressure in tank in excess of 495 pounds per square inch. Each safety relief device must have its discharge piped to the outside of the protective housing. The temperature of the vinyl fluoride, inhibited when the car is offered in transportation shall not exceed zero degrees F. and the pressure shall not exceed 105 psi. The shipper shall notify the Bureau of Explosives whenever a car is not received by the consignee within 30 days from the date of shipment.

NOTE 18: See paragraph (f) of this section.

NOTE 19: See paragraph (f)(2) of this section.

NOTE 20: See paragraph (d)(1) of this section.

NOTE 21: See paragraph (d)(2) of this section.

NOTE 22: See paragraph (d) of this section.

(d) *Filling limits*—(1) *Non-liquefied and liquefied gas.* The gas pressure at 105° F. in any insulated tank car tank of the ICC–105A and 109A–W class or spec. ICC–111A100–W–4; at 115° F. in any uninsulated tank car tank of the ICC–112A–W and 114A–W class; or at 130° F. in any uninsulated tank car tank of the ICC–106A and 110A–W class must not exceed three-fourths times the prescribed retest pressure of the tank. The gas pressure at 130° F. in any uninsulated tank car tank of the ICC–107A series must not exceed seven-tenths of the marked test pressure of the tank.

NOTE 1: ICC–107A tanks may be charged with helium to a pressure 10% in excess of the marked maximum gas pressure at 130° F. of each tank.

(2) *Liquefied gas.* In addition to the requirements of paragraph (d)(1) of this section, the liquid portion of the gas at 105° F. must not completely fill an insulated tank, nor at 130° F. must not completely fill an uninsulated tank with the exception that the liquid portion of the gas at 115° F. must not completely fill an uninsulated tank car tank of the ICC–112A–W and 114A–W classes.

(e) *Verification of content.* The amount of liquefied gas loaded into each tank may be determined either, first, by weight, and this weight must be checked after disconnecting the loading line, by the use of proper scales, or second, the weight of liquefied petroleum gas, dimethylamine, monomethylamine, and trimethylamine may be calculated using the outage tables supplied by the tank car owners and the specific gravities as determined at the plant, and this computation must be checked by determination of specific gravity of product after loading. Carriers may verify calculated weights by use of proper scales.

(f) *Special requirements for liquefied petroleum gas and butadiene tank cars*—(1) *Single unit tank cars.* Maximum filling density in single unit tank cars shall be as shown in the following table:

Maximum permitted filling density

| Specific gravity at 60° F. | Insulated cars | | Uninsulated cars | |
|---|---|---|---|---|
| | April through October | November through March (see Note 1) | April through October | November through March (see Note 1) |

NOTE 1: When these filling densities are used, tank cars must be shipped directly to consumers for unloading. Storage in transit is not permitted.

(2) *ICC–106A class tank cars.* Maximum filling density in ICC–106A class tank cars shall be as shown in § 73.304 (d)(1).

(g) *Foreign tank cars in domestic use.* Except as authorized by § 73.8 tank cars made in foreign countries, except Canada, must not be used in domestic traffic until they have been tested in this country and proper reports rendered as required by the specifications that apply.

square foot per degree F. differential in temperature per hour. The temperature of vinyl fluoride, inhibited, when cargo tanks are offered in transportation shall not exceed zero degrees F. and the pressure shall not exceed 105 pounds per square inch and the minimum filling density shall not be less than 60%. The shipper shall notify the Bureau of Explosives whenever a shipment is not received by the consignee within 5 days from the date of shipment. Shipments are authorized for transportation by private or contract carrier by motor vehicle only.

NOTE 12: No aluminum, copper, silver, zinc, or alloy of any of these metals shall be used in the cargo tank construction where it can come into contact with the lading.

NOTE 13: All parts of valves and safety devices in contact with contents of tank must be of a metal or other material suitably treated if necessary, which will not cause formation of any acetylides.

(b) **Maximum permitted filling densities for cargo and portable tank containers for transportation of butadiene, inhibited, and liquefied petroleum gas are as follows:**

| Maximum specific gravity of the liquid material at 60° F. | Maximum permitted filling density in percent of the water-weight capacity of the tanks | | Maximum permitted filling density by volume |
|---|---|---|---|
| | 1200 gallons or less | Over 1200 gallons | |
| | *Percent* | *Percent* | |
| 0.473–0.480 | 38 | 41 | See Note 1. |
| 0.481–0.488 | 39 | 42 | |
| 0.489–0.495 | 40 | 43 | |
| 0.496–0.503 | 41 | 44 | |
| 0.504–0.510 | 42 | 45 | |
| 0.511–0.519 | 43 | 46 | |
| 0.520–0.528 | 44 | 47 | |
| 0.529–0.536 | 45 | 48 | |
| 0.537–0.544 | 46 | 49 | |
| 0.545–0.552 | 47 | 50 | |

| 0.585–0.592 | 52 | 55 | |
| 0.593–0.600 | 53 | 56 | |
| 0.601–0.608 | 54 | 57 | |
| 0.609–0.617 | 55 | 58 | |
| 0.618–0.626 | 56 | 59 | |
| 0.627 and over | 57 | 60 | |

NOTE 1: Same filling density as permitted by weight, except when using fixed length dip tube or other fixed maximum liquid level indicators (paragraph (f) of this section), in which case the maximum permitted filling density shall not exceed 97 percent of the maximum permitted filling density by weight contained in the table.

(c) **The loading of liquefied gases into cargo tanks and portable tank containers shall be determined by weight or by suitable liquid level gauging device. In either case the liquid portion of the gas shall not fill the tank at 105° F. if the tank be lagged, nor at 115° F. if the tank be unlagged, except that this requirement shall be waived for the shipment of carbon dioxide and nitrous oxide in tanks (which are required to be equipped with suitable pressure controlling devices) which may be charged to a level corresponding to 95 percent of the volumetric capacity of the tank.**

**§ 73.315 Compressed gases in cargo tanks and portable tank containers.**

(a) Cargo tanks and portable tank containers must not contain gases capable of combining chemically.

(1) Compressed gases must not be shipped in cargo tanks or portable tank containers except as provided in this section and §§ 73.32 and 73.33, and in the following table (for marking requirements see §§ 73.401 (a) (1) and 77.823 (d) of this chapter):

| Kind of gas | Maximum permitted filling density | | Specification container required | | Minimum design pressure (psig) |
|---|---|---|---|---|---|
| | Percent by weight (see Note 1) | Percent by volume (see par. (f) of this section) | Type (see Note 2) | | |
| Anhydrous ammonia | 55 | 82; see Note 5. | ICC–51, MC–330 | | 265. |
| Anhydrous dimethylamine | 59 | See Note 7. | ICC–51, MC–330 | | 150. |
| Anhydrous monomethylamine | 60 | See Note 7. | ICC–51, MC–330 | | 150. |
| Anhydrous trimethylamine | 57 | See Note 7. | ICC–51, MC–330 | | 150. |
| Aqua ammonia solution containing anhydrous ammonia | See par. (e) of this section. | See Note 7. | MC 330; see Note 12. | | 100; see subpar. (c)(1) of this section. |
| Butadiene, inhibited | See par. (b) of this section. | See par. (b) of this section. | ICC–51, MC 330 | | 100. |
| Carbon dioxide, liquefied | 95 | See Note 7. | ICC–51, MC–330 | | 200; see Note 3. |
| Chlorine | See par. (e) of this section. | See Note 7. | MC–330 | | 225; see Notes 4 and 8. |
| Dichlorodifluoromethane (see Note 9). | 119 | See Note 7. | ICC–51, MC–330 | | 150. |
| Dichlorodifluoromethane and difluoroethane mixture (constant boiling mixture) (see Note 9). | See par. (e) of this section. | See Note 7. | MC 330 | | 200. |
| Dichlorodifluoromethane-dichlorotetrafluoroethane mixture (see Note 9). | 119 | See Note 7. | ICC–51, MC–330 | | 150. |
| Dichlorodifluoromethane-monofluorotrichloromethane mixture (see Note 9). | See par. (e) of this section. | See Note 7. | ICC–51, MC–330 | | 150. |
| Difluoroethane | 79 | See Note 7. | MC–330 | | 150 |
| Hexafluoropropylene | 119 | See Note 7. | MC–330 | | 200 |
| Liquefied petroleum gas | See par. (b) of this section. | See par. (b) of this section. | See subpar. (c) (1) of this section. | | |
| Methyl chloride | 84 | 88.5 | ICC–51, MC–330 | | 150. |
| Methyl chloride (optional portable tank), 2,000 pounds water capacity, maximum. | 84 | See Note 6 | ICC–51 | | 225. |
| Methyl mercaptan | 80 | 90 | ICC–51, MC–330 | | 100. |
| Monochlorodifluoromethane (see Note 9). | 105 | See Note 7 | ICC–51, MC–330 | | 250. |
| Nitrous oxide | See par. (e) of this section. | 90 | ICC–51, MC–330 | | 200; see Note 3. |
| Sulfur dioxide (tanks not over 1,200 gallons water capacity). | 125 | 87.5 | ICC–51, MC–330 | | 150; see Note 4. |
| Sulfur dioxide (tanks over 1,200 gallons water capacity). | 125 | 87.5 | ICC–51, MC–330 | | 125; see Note 4. |
| Sulfur dioxide (optional portable tank 1,000 to 2,000 pounds water capacity). | 125 | See Note 6 | ICC–51 | | 225. |
| Vinyl chloride | 84 (see Note 13) | See Note 7 | MC–330 | | 150. |
| Vinyl fluoride, inhibited | 60 | See Note 7 | MC 330 | | 250; see Note 11. |

NOTE 1: **Maximum filling density** for liquefied gases is hereby defined as the percent ratio of the weight of gas in the tank to the weight of water that the tank will hold. For determining the water capacity of the tank in pounds, the weight of a gallon (231 cubic inches) of water at 60° F. in air shall be 8.32828 pounds.

NOTE 2: See §§ 73.32 and 73.33 for authority to use containers made prior to May 15, 1950.

NOTE 3: If cargo tanks and portable tank containers for carbon dioxide and nitrous oxide are designed to comply with the requirements for "Low Temperature Operation of the A.S.M.E. Boiler and Pressure Vessel Code, Section VIII, Unfired Pressure Vessels," the design pressure may be reduced to 100 psig or the controlled pressure, whichever is greater.

NOTE 4: A corrosion factor shall be applied in the design of tanks for sulfur dioxide and chlorine. (See § 78.336–3 (a) of this chapter.)

NOTE 5: Unlagged cargo tanks and portable tank containers for liquid anhydrous ammonia may be filled to 87.5 percent by volume provided the temperature of the anhydrous ammonia being loaded into such tanks is determined to be not lower than 30° F. or

(1) The vapor pressure (psig) at 115° F. must not exceed the design pressure of the cargo tank or portable tank container.

(d) If the loading of cargo tanks and portable tank containers with liquefied gases is to be determined by weight, the gross weight shall be checked after the filling line is disconnected in each instance. The gross weight shall be calculated from the tank capacity and tare weight set forth on the metal plate required by the specification, and the maximum filling density permitted for the material being loaded into the tank as set forth in the table, paragraph (a) (1) of this section.

(e) If the loading of cargo tanks and portable tank containers with liquefied gases is to be determined by adjustable liquid level device, each tank and each compartment thereof shall have a thermometer well, so that the internal liquid temperature can easily be determined, and the amount of liquid in the tank shall be corrected to a 60° F. basis. Liquid levels shall not exceed a level corresponding to the maximum filling density permitted for the material being loaded into the tank as set forth in the table in paragraph (a) (1) of this section.

(f) When the loading of cargo tanks and portable tank containers with liquefied gases is determined only by fixed length dip tube or other fixed maximum liquid level indicator, the device shall be arranged to function at a level not to exceed the maximum permitted volume prescribed by the table, paragraph (a) (1) of this section. Loading shall be stopped when the device functions.

(g) Containers, the liquid level of which has been determined by means of a fixed length dip tube gauging device, shall not be acceptable for stowage as cargo on vessels in commerce subject to the jurisdiction of the United States Coast Guard. Nothing contained in this section shall be so construed as to prohibit the transportation on car floats or car ferries of motor vehicles laden with containers nor cargo tanks the liquid level of either of which has been determined by means of fixed length dip tube devices.

(h) Each cargo tank and portable tank container, except tanks filled by weight, shall be equipped with one or more of the following gauging devices which indicate accurately the maximum permitted liquid level: (Additional gauging devices may be installed but may not be used as primary controls for filling of cargo tanks and portable tank containers. Gauge glasses shall not be permitted to be installed on any cargo tank or portable tank container).

| Kind of gas | Permitted gauging device |
|---|---|
| Anhydrous ammonia | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Anhydrous dimethylamine | None. |
| Anhydrous monomethylamine | None. |
| Anhydrous trimethylamine | None. |
| Aqua ammonia solution containing anhydrous ammonia. | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Butadiene, inhibited | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Carbon dioxide, liquefied | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Chlorine | None. |
| Dichlorodifluoromethane | None. |
| Dichlorodifluoromethane and difluoroethane mixture (constant boiling mixture). | None. |
| Dichlorodifluoromethane-dichlorotetrafluoroethane mixture. | None. |
| Dichlorodifluoromethane-monofluorotrichloromethane mixture. | None. |
| Difluoroethane | None. |
| Hexafluoropropylene | None. |
| Liquefied petroleum gases | Rotary tube; adjustable slip tube; fixed length dip tube. Fixed length dip tube. |
| Methyl chloride | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Methyl mercaptan | None. |
| Monochlorodifluoromethane | Rotary tube; adjustable slip tube; fixed length dip tube. |
| Nitrous oxide | Fixed length dip tube. |
| Sulfur dioxide | None. |
| Vinyl chloride | None. |
| Vinyl fluoride, inhibited | |

(1) The design pressure of the liquid level gauging devices shall be at least equal to the design pressure of the tank.

(2) All liquid level gauging devices, except on tanks provided with fixed maximum level indicators, shall be legibly and permanently marked in increments of not more than 20 Fahrenheit degrees to indicate the maximum levels to which the tank may be filled with liquid at temperatures above 20° F. except that gauging devices on tanks for carbon dioxide and nitrous oxide may be marked in increments of not more than 25 psig. In the event that it is impracticable to put these markings on the gauging device, this information shall be marked on a suitable plate affixed to the tank in a location adjacent to the gauging device.

(3) Liquid level gauging devices which are so constructed that the outward flow of tank contents exceeds that passed by a No. 54 drill size opening, shall be equipped with excess-flow valves. Exception: Not required on gauging devices when used on tanks in carbon dioxide service.

(4) A fixed-length dip tube gauging device, when used, shall consist of a dip pipe of small diameter equipped with a valve at the outer end, and extending into the tank to a specified fixed length. On horizontally mounted cylindrical tanks the fixed length to which the tube extends into the tank shall be such that the device will function to indicate when the liquid at a point equidistant from the heads of the tank in a vertical plane containing the longitudinal axis of the tank, reaches the maximum level permitted by this section except that on tanks for liquefied petroleum gases the device should be set to function when the liquid reaches the maximum level at 40° F. when charged in accordance with the authorized filling density. On spherical tanks and on vertically mounted cylindrical tanks the fixed length to which the tube extends into the tank shall be such that the device will function to indicate when the liquid at a point on the vertical axis of the tank in its normal position reaches the maximum level permitted by this section except that on tanks for liquefied petroleum gases the device should be set to function when the liquid reaches the maximum level at 40° F. when charged in accordance with the authorized filling density.

(i) Each tank shall be provided with one or more safety devices which, unless otherwise specified, shall be safety relief valves of the spring-loaded type and they shall be arranged to discharge upward and unobstructed to the outside of the protective housing in such a manner as to prevent any impingement of escaping gas upon the tank, except that for chlorine tanks, protective housing shall be as required in § 78.336–10 of this chapter, and safety valve as required in subparagraph (11) of this paragraph.

(1) Safety relief valves on any tank shall be set to start-to-discharge at a pressure not in excess of 110 percent of the design pressure of the tank and shall have a total relieving capacity sufficient to prevent a maximum pressure in the tank of more than 120 percent of the design pressure, using the heat input as determined by Fetterly's formula.[1] The required relieving capacity of safety relief valves for lagged tanks shall be based upon the heat input to a bare tank, unless insulation is covered by a sheet metal jacket of not less than 16-gauge nominal thickness.

(2) The start-to-discharge pressure of safety relief valves shall be not less than the values given in the following table:

| Kind of gas | Minimum start-to-discharge pressure (psig) |
|---|---|
| Anhydrous ammonia | 265. |
| Anhydrous dimethylamine | 150. |
| Anhydrous monomethylamine | 150. |
| Anhydrous trimethylamine | 150. |
| Aqua ammonia solution containing anhydrous ammonia. | 100 |
| Butadiene, inhibited | 90. |
| Carbon dioxide, liquefied | Not specified. |
| Chlorine | 225. |
| Difluoroethane | 150. |
| Dichlorodifluoromethane | 150. |
| Dichlorodifluoromethane and difluoroethane mixture (constant boiling mixture). | 250 |
| Dichlorodifluoromethane-dichlorotetrafluoroethane mixture. | 150. |
| Dichlorodifluoromethane-monofluorotrichloromethane mixture. | 150. |
| Hexafluoropropylene | 250 |
| Liquefied petroleum gases | 90 percent of the design pressure of tank. |
| Methyl chloride | 150. |
| Methyl mercaptan | 100. |
| Monochlorodifluoromethane | 250. |
| Nitrous oxide | Not specified. |
| Sulfur dioxide: | |
| Up to 1,200 gallons water capacity tank. | 120. |
| Over 1,200 gallons water capacity tank. | 110. |
| Vinyl chloride | 150. |
| Vinyl fluoride, inhibited | 250 |

(3) Each safety relief valve shall be plainly and permanently marked with the pressure in psig at which it is set to discharge, with the actual rate of discharge of the device in cubic feet per minute of the gas at 60° F. and atmospheric pressure, and with the manufacturer's name and catalog number. The rated discharge capacity of the device shall be determined at a pressure of 120

[1] Copies of Fetterly's formula may be obtained from the Bureau of Explosives.

percent of the design pressure of the tank.

(4) Connections to safety relief valves shall be of sufficient size to provide the required rate of discharge through the safety relief valves.

(5) Safety relief valves shall be arranged so that the possibility of tampering will be minimized; and if the pressure setting or adjustment is external the safety relief valves shall be provided with suitable means for sealing the adjustment.

(6) No shut-off valves shall be installed between the safety relief valves and the tank except, in cases where two or more safety relief valves are installed on the same tank, a shut-off valve may be used where the arrangement of the shut-off valve or valves is such as always to afford full required capacity flow through at least one safety relief valve.

(7) Safety relief valves shall have direct communication with the vapor space of the tank.

(8) Any portion of liquid piping or hose which at any time may be closed at each end must be provided with a safety relief valve to prevent excessive hydrostatic pressure. This safety relief valve must not have an intervening shut-off valve installed.

(9) Additional restrictions as specified in Notes 1, 2, and 3 of this subparagraph apply to safety relief devices on tanks for carbon dioxide or nitrous oxide.

NOTE 1: The maximum operating pressure in the tank may be regulated by the use of one or more pressure controlling devices, which devices shall not be in lieu of the safety relief valve required in paragraph (1) of this section.

NOTE 2: All safety devices shall be so installed and located that the cooling effect of the contents will not prevent the effective operation of the device.

NOTE 3: In addition to safety relief valves required by paragraph (1) of this section each tank for carbon dioxide may be equipped with one or more frangible disc devices of suitable design set to function at a pressure not exceeding two times the design pressure of the tank.

(10) Subject to conditions of subparagraph (a) (1) of this section for sulfur dioxide optional portable tank 1,000–2,000 pounds water capacity—225 psig, one or more fusible plugs approved by the Bureau of Explosives may be used in lieu of safety relief valves of the spring-loaded type. The fusible plug or plugs shall have total relieving capacity as determined by the use of Fetterly's formula sufficient to prevent a pressure rise in the tank of more than 120 percent of the design pressure. If the tank is over 30 inches long, both ends must have the total specified safety discharge area.

(11) Safety relief valve on chlorine tank motor vehicles shall conform with the standard of The Chlorine Institute, Inc. Dwg. D–13105E, dated April 30, 1958.

(j) Storage containers for liquefied petroleum gas for permanent installation on consumer premises may be shipped by private motor carrier only under the following conditions:

(1) The containers shall comply with the construction requirements of one of the following pressure vessel codes and shall be marked to indicate compliance as specified in the code:

The 1959 Edition of the Unfired Pressure Vessel Code of the A.S.M.E.
The 1956 Edition of the Unfired Pressure Vessel Code of the A.S.M.E.
The 1952 Edition of the Unfired Pressure Vessel Code of the A.S.M.E., no revisions.
The 1950 Edition of the Unfired Pressure Vessel Code of the A.S.M.E., no revisions.
The 1949 Edition of the Unfired Pressure Vessel Code of the A.S.M.E.
The 1951 Edition of the joint Unfired Pressure Vessel Code of the A.P.I. and A.S.M.E., no revisions.
The 1943 Edition of the joint Unfired Pressure Vessel Code of the A.P.I. and A.S.M.E.

(2) Each container shall be equipped with safety devices in compliance with the requirements for safety devices on containers as specified in National Fire Protection Association Pamphlet No. 58, "Standard for the Storage and Handling of Liquefied Petroleum Gases," 1959 edition.

(3) The containers shall be so braced or otherwise secured on the vehicle as to prevent relative motion while in transit. Valves or other fittings shall be adequately protected against injury during transportation. (See § 77.834 (g) of this chapter.)

(4) Except as provided in subparagraph (j) (5) of this paragraph, containers shall not be shipped when charged with liquefied petroleum gas to more than 5 percent of their water capacity.

(5) Storage containers of less than 1042 pounds water capacity (125 gallons) may be shipped when charged with liquefied petroleum gas in compliance with I. C. C. filling density.

(k) For manifolding of cargo tank containers see § 73.301 (f).

### § 73.316 Liquefied hydrogen.

(a) Liquefied hydrogen (minimum 95 percent parahydrogen) must be charged into specification containers as follows:

(1) Spec. 113A60–W–2 (§ 78.279 of this chapter). Tank cars. Each tank car shall have a pressure controlling valve set at a pressure not exceeding 17 psig. The maximum permitted filling density is 6.6 percent.

## Subpart G—Poisonous Articles; Definition and Preparation

### § 73.325 Classes of poisonous articles.

(a) Poisonous articles for the purpose of Parts 71–78 of this chapter are divided into four classes according to degree of hazard in transportation.

(1) Extremely dangerous poison—class A.

(2) Less dangerous poison—class B.

(3) Tear gases or irritating substances—class C.

(4) Radioactive materials—class D.

### § 73.326 Extremely dangerous poisons, class A, poison gas label; definition.

(a) For the purpose of Parts 71–78 of this chapter extremely dangerous poisons, class A, are poisonous gases or liquids of such nature that a very small amount of the gas, or vapor of the liquid, mixed with air is dangerous to life. This class includes the following:

(1) Bromacetone.

(2) Cyanogen.

(3) Cyanogen chloride containing less than 0.9 percent water.

(4) Diphosgene.

(5) Ethyldichlorarsine.

(6) Hydrocyanic acid (see Note 1 of this paragraph).

(7) Lewisite.

(8) Methyldichlorarsine.

(9) Mustard gas.

(10) Nitrogen peroxide (tetroxide).

(11) Phenylcarbylamine chloride.

(12) Phosgene (diphosgene).

(13) Nitrogen tetroxide-nitric oxide mixtures containing up to 33.2 percent weight nitric oxide.

NOTE 1: Diluted solutions of hydrocyanic acid of not exceeding 5 percent strength are classed as poisonous articles, class B (see § 73.343).

(b) Poisonous gases or liquids, class A, as defined in paragraph (a) of this section, except as provided in § 73.331 must not be offered for transportation by rail express.

### § 73.327 Packing.

(a) Cylinders used must comply with the provisions of §§ 73.34 and 73.301(g).

(b) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(c) No class A poisons in cargo tanks. No "extremely dangerous poison, class A," may be loaded into or transported in any cargo tank.

(d) It shall not be permissible to transport class A poison if there be any interconnecting means of any character between the containers.

### § 73.328 Poisonous gases and liquids not specifically provided for.

(a) Poisonous gases and liquids, as defined in § 73.326, other than those for which special requirements are prescribed, must be packed in specification containers as follows:

(1) Spec. 33[1] or 3D (§ 78.41 of this chapter). Metal cylinders of not over 125 pounds water capacity (nominal). Gaskets if used between the protection cap and neck of cylinder must be renewed for each shipment even though they may appear to be in good condition. Cylinders not fitted with valve protection extension ring must be packed in wooden boxes complying as to construction, marking, and labeling, with the requirements of § 73.25.

### § 73.329 Bromacetone; chlorpicrin and methyl chloride mixtures; chlorpicrin and nonflammable, nonliquefied compressed gas mixtures.

(a) Bromacetone, when offered for transportation by carriers by rail freight, highway, or water, must be packed in specification containers as follows:

(1) As prescribed in § 73.328.

(2) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 18.170, or 78.185 of this chapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, spec. 2C (§ 78.22 of this chapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over

[1] Use of existing cylinders authorized, but new construction not authorized.

95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

(b) *Chlorpicrin and methyl chloride mixtures.* Chlorpicrin and methyl chloride mixtures, in addition to containers prescribed in § 73.328, when offered for transportation by carriers by rail freight, highway, or water, may be shipped in specification containers as follows:

(1) Spec. 3A, 3AA, 3B, 3C, 3E, 4A, 4B, 4BA, or 4C (§§ 78.36, 78.37, 78.38, 78.40, 78.42, 78.49, 78.50, 78.51, or 78.52 of this chapter) not over 250 pounds water capacity (nominal). Valves or other closing devices must be protected, to prevent injury in transit, by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders having a wall thickness of less than 0.10 inch must be packed in boxes or crates (see § 73.25).

(c) *Chlorpicrin and nonflammable, nonliquefied compressed gas mixtures.* Chlorpicrin and nonflammable, nonliquefied compressed gas mixtures, in addition to containers prescribed in § 73.328, when offered for transportation by carriers by rail freight, highway, or water, must be shipped in specification containers as follows:

(1) Spec. 3A, 3AA, 3B, 3C, 3E, 4A, 4B, 4BA, or 4C (§§ 78.36, 78.37, 78.38, 78.40, 78.42, 78.49, 78.50, 78.51, or § 78.52 of this chapter) not over 250 pounds water capacity (nominal). Valves or other closing devices must be protected, to prevent injury in transit, by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders having a wall thickness of less than 0.10 inch must be packed in boxes or crates (see § 73.25).

### § 73.330 Chemical ammunition.

(a) Projectiles, shells, bombs, and grenades containing poisonous gases or liquids, class A, § 73.326, but not equipped or packed with ignition elements, bursting charges, detonating fuzes, or explosive components, may only be shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government. Shipments must be packed and marked as required by their regulations, and packages must be labeled with the "Poison Gas" label and marked "NON-EXPLOSIVE" and with the name of the contents. (See §§ 73.53 (r) and 73.59 for explosive chemical ammunition.)

(b) Chemical ammunition containing poisonous liquids or gases, class A, must not be offered for transportation by rail express.

### § 73.331 Gas identification sets.

(a) Gas identification sets containing poisonous liquids and gases, class A, and poisonous articles, class C, and chlorine when offered for transportation by carriers by rail freight, rail express, highway, or water must be packed in spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, under the following conditions:

(1) Gas identification sets containing poisonous liquids and gases, class A, and poisonous articles, class C, may be shipped in amounts not exceeding 5 cubic centimeters, if a liquid, or 5 grams, if a solid, when mixed with or absorbed in activated charcoal or silica gel, or other absorbent medium, and packed in strong glass bottles of not less than 4 fluid ounces capacity. The poisonous gases, class A, and chlorine may be shipped if the gas itself is absorbed in activated charcoal or silica gel, or other absorbent medium, this material to be filled into 4 ounce bottles as above; each bottle as herein specified must be surrounded with appropriate absorbent cushioning material, and inclosed in a hermetically sealed metal can; each can must be surrounded on all sides by at least 1 inch of dry, fine sawdust or wood pulp; the cans must be packed in an outside wooden box, spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter); the bottles must be closed with ground-in glass stoppers securely fastened; the cushioning material around the bottle must be at least 1 inch thick; the cans must be made from metal of thickness not less than 30 gauge, United States standard; and there must be not more than a total of 100 grams or cubic centimeters, or a combination of both, in each outside wooden box.

(b) Gas identification sets containing poisonous liquids or gases, class A and class C, when offered for transportation by carriers by rail freight, rail express, highway, or water must be packed for shipment as follows:

(1) The liquids or liquefied gases in hermetically sealed glass tubes containing not to exceed 40 cubic centimeters each; each tube securely cushioned and packed in an individual mailing tube with screw-thread metal cover; not more than 12 of such mailing tubes, cushioned with corrugated fiberboard, packed in a closed fiberboard container; and not to exceed 4 such fiberboard containers, containing an aggregate of not to exceed 48 glass tubes, cushioned and packed in an outside steel cylinder of not less than 0.145-inch wall thickness, which is closed by a plate, bolted to a flange, welded to cylinder wall. Suitable gasket shall be placed between flange and head plate, and closure shall be such as to prevent leakage of any gas.

(c) Gas identification training sets containing poisonous liquids, class A, and poisonous articles, class C, when offered for transportation by carriers by rail freight, rail express, highway, or water must be packed for shipment as follows:

(1) The poisonous liquid, class A, and poisonous article, class C, in amounts not exceeding 5 cubic centimeters, if a liquid, or 20 grams, if a solid, when mixed with or absorbed in activated charcoal, silica gel, crepe rubber, or other absorbent medium, must be packed in strong glass bottles of not less than 2 fluid ounces capacity, equipped with a polyethylene liner; each bottle as herein specified must have a metal screw cap closure, equipped with a built-in compression type spring and an insert in the opening of the bottle to match so that when tightened an airtight seal is obtained. Twelve bottles, containing articles as described in this paragraph and not exceeding 100 cubic centimeters or grams, or a combination of both, shall be placed in a modified styrene plastic carrying case, in three rows of four bottles each and fitted with a fiberboard cell or separator. The void space around the individual bottles, and around all interior sides of the carrying case, shall be filled with dry, fine sawdust or vermiculite. A sheet of sponge rubber shall be fitted to the inside of the top and bottom of the carrying case to provide additional cushioning and insure a snug fit of the bottles when the top is secured. The carrying case shall be fitted into a snug fitting fiberboard box, domestic type. The case shall then be packed in a nailed wooden box, spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter), which shall be fitted with a waterproof case liner.

### § 73.332 Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid liquefied.

(a) Hydrocyanic acid, liquid (prussic acid) and hydrocyanic acid liquefied, must be packed in specification containers as follows:

(1) As prescribed in § 73.328.

(2) Spec. 3A480, 3AA480, or 3A480X (§§ 78.36, 78.37, or 78.43 of this chapter). Metal cylinders of not over 278 pounds water capacity (nominal); valve protection cap must be used and be at least 5/16 inch thick, gas-tight, with 3/16 inch faced seat for gasket and with United States standard form thread; the cap must be capable of preventing injury or distortion of the valve when it is subjected to an impact caused by allowing cylinder, prepared as for shipment, to fall from an upright position with side of cap striking a solid steel object projecting not more than 6 inches above floor level.

(b) Cylinders must be charged with not more than 0.6 pound of liquid for 1-pound water capacity of cylinder. Each filled cylinder must be tested for leakage before shipment and must show absolutely no leakage; this test must consist in passing over the closure of the cylinder, without the protection cap attached, a piece of Guignard's sodium picrate paper to detect any escape of hydrocyanic acid from the cylinder. Other equally efficient test methods may also be used in lieu of the picrate paper.

(c) Liquid hydrocyanic acid completely absorbed in inert material may also be shipped in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes with inside containers consisting of metal cans, spec. 2N (§ 78.32 of this chapter), not over 14 pounds water capacity each. The liquid contents of each can must not exceed 0.33 pound of liquid for 1-pound water capacity of the can. Each can containing 4 ounces or more of liquid must be fitted with fiber caps not less than 0.08 inch thick flanged about 1 inch and fitting snugly over each end of the can. Each can must be tested for leakage after being filled and again after being maintained at ordinary room temperature for a period of at least three weeks. Each can must have its outer surface protected against rust by the use of enamel or lacquer, or each can must be completely wrapped in waterproof paper.

(2) The box lining must consist of not more than two pieces of waterproof paper, one piece completely surrounding the contents and running lengthwise of the box, and the other piece completely surrounding the contents and running crosswise of the box. In each instance, the wrapping must overlap at least 4 inches.

(3) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, constructed in accordance with requirements for a gross weight of 65 pounds but having a gross weight of not over 70 pounds, with inside containers consisting of metal cans, spec. 2N (§ 78.32 of this chapter). The liquid contents of each can must not exceed 0.33 pound of liquid for 1-pound water capacity of the can and the total weight of liquid in each can must not exceed 41 ounces. Each can must be tested for leakage after being filled and again after being maintained at ordinary room temperature for a period of at least three weeks. Each can must have its outer surface protected against rust by the use of enamel or lacquer. Not more than twelve cans shall be packed in the outside fiberboard box and each can shall be separated from the other by 200-pound minimum test fiberboard partitions. Each box shall be provided with 200-pound minimum test fiberboard liner and top and bottom pads of the same material. In addition to the required closure of the boxes, two metal straps measuring ½ inch by .015 inch must be applied around the girth of each box.

(d) Spec. 105A500–W or 105A600–W (§§ 78.288 or 78.289 of this chapter). Tank cars. Tank must be restenciled 105A300–W and be equipped with safety valves of the type and size used on spec. 105A300–W (§ 78.286 of this chapter) tank car. Tank car tank must be equipped with approved dome fittings and safety devices, and with cork insulation at least 4 inches in thickness. Tank must be stenciled on both sides in letters not less than 2 inches high "HYDROCYANIC ACID ONLY." Written procedure covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices shall be filed with and approved by the Bureau of Explosives before any tank car is offered for transportation of hydrocyanic acid. The maximum permitted filling density is 63 percent of the water capacity of the tank.

### § 73.333 Phosgene or diphosgene.

(a) Phosgene or diphosgene must be packed in specification containers as follows:

(1) As prescribed in § 73.328; filling density (see § 73.308, Note 12) must not exceed 125 percent and a cylinder must not contain more than 150 pounds of phosgene.

(2) Spec. 106A500,[1] or 106A500–X (§§ 79.300, 79.301 of this chapter). Tank cars. Each container must be equipped with valve protection caps, gastight, which must be approved by the Bureau of Explosives; containers must not be equipped with safety devices of any type; containers must be filled so that they will not be liquid full at 130° F. Authorized only for phosgene.

NOTE 1: Tanks complying with ICC–106A (§ 78.275 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(b) Each filled cylinder must be tested for leakage before shipment and must show absolutely no leakage; this test must consist in immersing the cylinder and valve, without the protection cap attached, in a bath of water at a temperature of approximately 150° F. for at least thirty minutes, during which time frequent examinations must be made to note any escape of gas. The valve of the cylinder must not be loosened after this test and before shipment.

### § 73.334 Hexaethyl tetraphosphate, parathion, tetraethyl dithio pyrophosphate, tetraethyl pyrophosphate, or other class B poison organic phosphate mixtures, n.o.s., mixed with compressed gas.

(a) Hexaethyl tetraphosphate, parathion, tetraethyl dithio pyrophosphate, tetraethyl pyrophosphate, or other class B poison organic phosphate mixtures, n.o.s., mixed with compressed gas, containing not more than 10 percent by weight of hexaethyl tetraphosphate, parathion, tetraethyl dithio pyrophosphate, tetraethyl pyrophosphate, or other class B poison organic phosphate mixtures, n.o.s. must be packed in specification containers as follows:

(1) Spec. 3A300, 3AA300, 3B300, 4A300, 4B240, or 4BA240 (§§ 78.36, 78.37, 78.38, 78.49, 78.50, or 78.51, of this chapter). Metal cylinders, charged with not more than 5 pounds of the mixture and to a maximum filling density of 80 percent of the water capacity. Cylinders must not be equipped with eduction tubes or fusible plugs. Valves must be of a type acceptable to the Bureau of Explosives.

(b) Cylinders must be packed in strong wooden boxes with valves or other closing devices protected from injury, with not more than twelve cylinders in one outside wooden box. A single-trip outside fiberboard box may be used when not more than four such cylinders are to be shipped in one outside container. Valves must be adequately protected. Box and valve protection must be of strength sufficient to protect all parts of inside containers and valves from deformation or breakage resulting from a drop of at least six feet onto a concrete floor, impacting at the weakest point.

### § 73.335 Police grenades.

(a) Police grenades containing poisonous gases or liquids, class A, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Metal-strapped wooden boxes. Each grenade must be individually inclosed in a corrugated fiberboard carton, spec. 2C (§ 78.22 of this chapter), and when so packed must be able to withstand without leakage a drop of 5 feet on concrete. Grenades must consist of copper shell containing securely closed glass bottles or tubes containing not over 50 cubic centimeters of poisonous material. Each outside container may contain not over 24 grenades and weigh not over 75 pounds gross.

(b) Pending approval by the Commission of regulations classifying the numerous devices within the general descriptions of this section, and providing appropriate restrictions to be observed in the transportation thereof, no shipment of packages containing articles under this section shall be made until samples thereof have been examined by the Bureau of Explosives or by other competent testing laboratory in the presence of representative of the Bureau of Explosives, and the shipment is shown to possess such resistance to shocks of transportation and protection against leakage of contents as are afforded by standard types of packages described in Part 78 of this chapter, and the packages are labeled or marked to show compliance with this part.

### § 73.336 Nitrogen dioxide, liquid, nitrogen peroxide, liquid, and nitrogen tetroxide, liquid.

(a) Nitrogen dioxide, liquid, nitrogen peroxide, liquid, and nitrogen tetroxide, liquid must be packed in specification containers as follows:

(1) As prescribed in § 73.328.

(2) Spec. 3A480 or 3AA480 (§ 78.36 or § 78.37 of this chapter) or 25.[1] Metal cylinders with valve removed; valve opening to be closed by means of a solid metal plug with tapered thread properly luted to prevent leakage; valve protection cap must be used and be at least 5/16 inch thick, gastight, with 3/16 inch faced seat for gasket and with United States standard form thread. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(3) Spec. 106A500,[2] or 106A500–X (§§ 79.300, 79.301 of this chapter). Tank cars. Each container must be equipped with valve protection caps, gastight, which must be approved by the Bureau of Explosives; containers must not be equipped with safety devices of any type; containers must be filled so that they will not be liquid full at 130° F.

NOTE 1: Tanks complying with ICC–106A (§ 78.275 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(4) Spec. 105A500–W (§§ 79.100, 79.101 of this chapter). Tank cars. Authorized for nitrogen tetroxide only. Tanks must be lagged with not less than

[1] Use of existing tank cars authorized, but new construction not authorized.

[2] Use of existing cylinders authorized, but new construction not authorized.

a four-inch thickness of cork. All valves and fittings shall be protected by a securely attached cover made of metal not subject to deterioration by the lading, and all valve openings, except the safety valve, shall be fitted with screw plugs or caps to prevent leakage in the event of valve failure. Safety valve must be equipped with an approved stainless steel or platinum frangible disc. Tank must be stenciled on both sides in letters not less than 2 inches high "NITROGEN TETROXIDE ONLY." Written procedure covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices shall be filed with and approved by the Bureau of Explosives before any tank car is offered for transportation of nitrogen tetroxide.

**§ 73.337 Nitric oxide.**

(a) Nitric oxide must be packed in specification containers as follows:

(1) Spec. 3A, 3AA, or 3E1800 (§ 78.36, § 78.37, or § 78.42 of this chapter) cylinders designed and marked for a service pressure of 1800 pounds per square inch, or higher, charged to a pressure of not more than 750 pounds per square inch at 70° F. Cylinders must be equipped with a valve of stainless steel and valve seat of material which will not be deteriorated by contact with nitric oxide or nitrogen dioxide. Containers or valves must not be equipped with safety devices of any type. Valve outlets must be sealed by a solid threaded cap or plug and an inert gasketing material.

(2) Spec. 3E1800 (§ 78.42 of this chapter) cylinders must be packed in strong wooden boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each outside shipping container must be plainly marked "inside containers comply with prescribed specifications".

(3) Spec. 3A and 3AA (§§ 78.36 and 78.37 of this chapter) cylinders must have their valves protected by metal caps securely attached to the cylinders and of sufficient strength to protect the valves from injury during transit, or by packing in strong wooden boxes of such design as to protect valves from injury or accidental functioning under conditions incident to transportation. Each outside shipping container must be plainly marked "inside containers comply with prescribed specifications".

**§ 73.338 Nitrogen tetroxide-nitric oxide mixtures containing up to 33.2 percent weight nitric oxide.**

(a) Nitrogen tetroxide-nitric oxide mixtures containing up to 33.2 percent weight nitric oxide must be packed in specification containers as follows:

(1) As prescribed in § 73.328.

(2) Spec. 3A480 or 3AA480 (§ 78.36 or § 78.37 of this chapter). Metal cylinders with valve removed; valve opening to be closed by means of a solid metal plug with tapered thread properly luted to prevent leakage; valve protection cap must be used and be at least 3/16 inch thick, gastight, with 3/16 inch faced seat for gasket and with United States standard form thread.

(3) Spec. 106A500,[1] or 106A500–X (§§ 79.300, 79.301 of this chapter). Tank cars. Each container must be equipped with valve protection caps, gas-tight, which must be approved by the Bureau of Explosives; containers must not be equipped with safety devices of any type; containers must be filled so that they will not be liquid full at 130° F.

NOTE 1: Tanks complying with ICC–106A (§ 78.275 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(4) Spec. 105A500–W (§§ 79.100, 79.101 of this chapter). Tank cars. Tanks must be lagged with not less than a four-inch thickness of cork. All valves and fittings shall be protected by a securely attached cover made of metal not subject to deterioration by the lading and all valve openings, except the safety valve, shall be fitted with screw plugs or caps to prevent leakage in the event of valve failure. Safety valve must be equipped with an approved stainless steel or platinum frangible disc. Tank must be stenciled on both sides in letters not less than 2 inches high "NITROGEN TETROXIDE-NITRIC OXIDE MIXTURES ONLY." Written procedures covering details of tank car appurtenances, dome fittings and safety devices, and marking, loading, handling, inspection, and testing practices shall be filed with and approved by the Bureau of Explosives before any tank car is offered for transportation of nitrogen tetroxide-nitric oxide mixtures.

**§ 73.343 Less dangerous poisons, class B, liquid or solid, poison label; definition.**

(a) For the purposes of Parts 71–78 of this chapter and except as otherwise provided in this part class B poisons are substances, liquids or solids (including pastes and semi-solids), other than classes A, C, or D poisons, which are known to be so toxic to man as to afford a hazard to health during transportation, or which, in the absence of adequate data on human toxicity, are presumed to be toxic to man because they fall within any one of the following categories when tested on laboratory animals:

(1) *Oral toxicity.* Those which produce death within 48 hours in half or more than half of a group of 10 or more white laboratory rats weighing 200 to 300 grams at a single dose of 50 milligrams or less per kilogram of body weight, when administered orally.

(2) *Toxicity on inhalation.* Those which produce death within 48 hours in half or more than half of a group of 10 or more white laboratory rats weighing 200 to 300 grams, when inhaled continuously for a period of one hour or less at a concentration of 2 milligrams or less per liter of vapor, mist, or dust, provided such concentration is likely to be encountered by man when the chemical product is used in any reasonable foreseeable manner.

[1] Use of existing tank cars authorized, but new construction not authorized.

(3) *Toxicity by skin absorption.* Those which produce death within 48 hours in half or more than half of a group of 10 or more rabbits tested at a dosage of 200 milligrams or less per kilogram body weight, when administered by continuous contact with the bare skin for 24 hours or less.

(b) The foregoing categories shall not apply if the physical characteristics or the probable hazards to humans as shown by experience indicate that the substances will not cause serious sickness or death. Neither the display of danger or warning labels pertaining to use nor the toxicity tests set forth above shall prejudice or prohibit the exemption of any substances from the provisions of Parts 71–78 of this chapter.

**§ 73.344 Packing for class B poisons, liquid.**

(a) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(b) *Outage.* Outage for containers of liquid poison for transportation by carriers by rail freight, rail express, highway, or water must be as follows:

(1) Containers must not be entirely filled. Sufficient interior space must be left vacant to prevent leakage or distortion of containers due to the expansion of the contents from increase of temperature during transit.

(2) The proper vacant space (outage) in a tank car or other shipping container depends on the coefficient of expansion of the liquid and the maximum increase of temperature to which it will be subjected in transit. Outage must be calculated to the total capacity of the container.

(3) Liquid poison must not be loaded into domes of tank cars.

(4) In tank cars, outage must be calculated to percentage of the total capacity of the tank, i. e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage.

(5) The outage for tank cars must not be less than 1 percent.

(6) No cargo tank or compartment thereof used for the transportation of any liquid poison shall be completely filled; sufficient space shall be left vacant in every case to prevent leakage from or distortion of any such cargo tank by expansion of the contents due to rise in temperature in transit, and such free space (outage) shall be sufficient in every case so that such cargo tank shall not become entirely filled with the liquid at 130° F.

**§ 73.345 Exemptions for poisonous liquids, class B.**

(a) Poisonous liquids, class B, as defined in § 73.343, except those for which no exemptions are provided as indicated by the "No exemption" statement in § 72.5 of this chapter, or as provided for in § 73.359(c), in tightly closed inside containers, securely cushioned when necessary to prevent breakage and

packed as follows, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) In glass or earthenware containers not over 1 quart capacity each, or in metal containers or polyethylene bottles not over 1 gallon capacity each, packed in strong outside wooden boxes or barrels.

(2) In glass or earthenware containers not over 1 pint capacity each, or in metal or polyethylene containers not over 1 quart capacity each, packed in strong outside fiberboard boxes.

**§ 73.346 Poisonous liquids not specifically provided for.**

(a) Poisonous liquids as defined in § 73.343, other than those for which special requirements are prescribed, must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Spec. 5, 5A, 5B, or 5C (§§ 78.80, 78.81, 78.82, or 78.83 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C or 17E (§§ 78.115 or 78.116 of this chapter). Metal drums (single-trip containers), with openings not exceeding 2.3 inches in diameter.

(3) Spec. 37B (§ 78.132 of this chapter). Metal drums (single-trip containers), welded side seams, openings not over 2.3 inches in diameter, capacity not over 10 gallons.

(4) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip containers), with welded side seams, not over 5 gallons; authorized for pastes only.

(5) Spec. 10A, 10B, or 10C (§§ 78.155, 78.156, or 78.157 of this chapter). Wooden barrels or kegs.

(6) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers, not over 1 gallon capacity each, or with metal inside containers not over 2 gallons capacity each.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with glass or earthenware inside containers not over 1 quart capacity each, or with metal inside containers not over 1 gallon capacity each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross.

(8) Spec. 12D (§ 78.207 of this chapter). Fiberboard boxes with inside container which must be glass or earthenware not over one gallon each; authorized for not more than 75 pounds gross weight; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each. Use of this container will be permitted because of the present emergency and until further order of the Commission.

(9) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon capacity each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container; or with metal inside containers, not over 10 gallons capacity each.

(10) Spec. 103,[1] 103–W, 103A,[1] 103AL–W, 103A–W, 104,[1] 104–W, 105A100,[2] 105A100–W, 111A60AL–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, 111A100–W–2, 111A100–W–3, 111A100–W–4, or ARA–IV–A[1] (§§ 79.100, 79.101, 79.200, 79.201 of this chapter). Tank cars.

(11) Cylinders as prescribed for any compressed gas, except acetylene, are also authorized.

(12) Spec. MC 300, MC 301,[2] MC 302, MC 303, MC 304, MC 305, MC 310, or MC 311 (§ 78.321, 78.323, 78.324, 78.325, 78.326, 78.330 or 78.331 of this chapter). Tank motor vehicles.

(13) Spec. 1A, 1D, or 1E (§§ 78.1, 78.4, or 78.7 of this chapter). Glass carboys in wooden boxes or plywood drums.

(14) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(15) Spec. 21C (§ 78.224 of this chapter). Fiber drums, with inside glass containers not over one gallon capacity each.

(16) Spec. 42B, 42C, or 42D (§§ 78.107, 78.108, or 78.109 of this chapter). Aluminum drums.

(17) Spec. 42E (§ 78.136 of this chapter). Aluminum drums (single-trip).

(18) Spec. 15P or 22C (§ 78.182 or § 78.198 of this chapter). Glued plywood or wooden box, or plywood drum as prescribed by § 78.198–2(a) of this chapter, with inside spec. 2T (§ 78.21 of this chapter) polyethylene container.

(19) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5 gallons capacity, with polyethylene liner (nonreusable container). Drums exceeding 1 gallon capacity must be constructed of at least 24-gauge metal. Hole in steel drum body must be suitably plugged. Authorized only for materials that will not react with polyethylene and result in container failure.

(20) Spec. 6D (§ 78.102 of this chapter). Cylindrical steel overpack with inside spec. 2S (§ 78.35 of this chapter) polyethylene container. Authorized only for materials that will not react with polyethylene and result in container failure.

(21) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with not more than one inside glass bottle not over 1-gallon capacity. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(22) Spec. 29 (§ 78.226 of this chapter). Mailing tubes, with polyethylene bottles not over 2 quarts capacity each.

[1] Use of existing tank cars authorized, but new construction not authorized.

[2] Use of existing cargo tanks authorized, but new construction not authorized.

(23) Spec. 42G (§ 78.111 of this chapter). Aluminum drums.

(24) Spec. 12P (§ 78.211 of this chapter). Fiberboard boxes with inside spec. 2U (§ 78.24 of this chapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections, that could cause failures.

(25) Spec. 16A (§ 78.185 of this chapter). Wirebound wooden box (see § 78.185–22 of this chapter) with inside specification 2U (§ 78.24 of this chapter) polyethylene container. The polyethylene container shall be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads.

(26) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside polyethylene bottles having a minimum wall thickness of 0.015 inch and provided with screw-cap closures, not over one gallon capacity each. Each bottle shall be enclosed in a box constructed of at least 200-pound test (Mullen or Cady) corrugated fiberboard and not more than four such boxes shall be packed in one outside specification shipping container.

**§ 73.347 Aniline oil.**

(a) Aniline oil must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with metal inside containers not over 10 gallons capacity each, or glass bottles not over 1 pound capacity each. Not more than 25 of these botles shall be packed in any outside container.

NOTE 1: Because of the present emergency and until further order of the Commission, glass bottles not over 5 pints capacity each and not more than six of these bottles packed in one outside container are authorized.

(2) Spec. 103,[1] 103–W, 103A,[1] 103A–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

(3) Spec. MC 300, MC 301,[2] MC 302, MC 303, or MC 305 (§ 78.321, 78.323, 78.324 or 78.326 of this chapter). Tank motor vehicles.

(4) Spec. 5, 5A, or 5B (§§ 78.80, 78.81, or 78.82 of this chapter). Metal barrels or drums. Net weight in 110 gallon drums must not exceed 915 pounds.

(5) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip).

(6) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip) not over 5 gallons capacity each.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with metal inside containers not over 1 gallon capacity each; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each.

(8) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles or metal containers not over 1 gallon capacity each. Not more than four inside containers having capacity of 1 gallon each, shall be packed in one outside container. Shipper must have

established that completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(b) Openings in metal barrels or drums must not exceed 2.3 inches in diameter.

(1) Gaskets not less than one-eighth inch thick must be used at bung and filling holes. Gaskets must be made of hard fiber impregnated with glycerin, metal-covered cork, impregnated asbestos sheets, or metal-covered asbestos.

(c) Filled drums must be so placed that bungs will be subjected to hydrostatic head of oil contained therein for a period of not less than 12 hours.

(1) The exterior of filled drums must be carefully examined for evidence of aniline oil, any traces of which must be removed by washing off with water or, preferably, weak acetic acid. The space between rolling hoops immediately around the bung should be painted to aid in the detection of leaks at this point.

(d) All returnable drums must bear the following notice, "PREVENT DAMAGE TO FOODSTUFFS OR OTHER FREIGHT. DRAIN THIS DRUM THOROUGHLY. TIGHTEN BUNGS, WITH GASKET, SECURELY IN PLACE BEFORE RETURNING. USE NEW GASKETS WHEN NECESSARY. ANILINE OIL STAINS ON THE OUTSIDE OF DRUMS SHOULD BE WASHED OFF WITH WATER OR, PREFERABLY, WEAK ACETIC ACID", shellacked to head of drum near the consignee's name and address.

**§ 73.348 Arsenic acid.**

(a) Arsenic acid must be packed in specification containers as follows:

(1) As prescribed in § 73.346.

(2) Spec. 1A, 1C, or 1D (§§ 78.1, 78.3, or 78.4 of this chapter). Glass carboys in boxes or kegs which must be closed, and when reused must be reconditioned and tested, as provided in the specification.

(3) Spec. 12A or 12B (§ 78.210 or 78.205 of this chapter). Fiberboard boxes with inside high-density polyethylene bottles having minimum wall thickness of 0.015 inch with screw-cap closures, not over 1 gallon capacity each. Spec. 12A fiberboard boxes shall have not more than four inside polyethylene bottles which shall be packed to provide a snug fit. Spec. 12B fiberboard boxes shall contain not more than one inside polyethylene bottle and not more than four such boxes shall be overpacked in a strong outside fiberboard box under provisions of § 73.25.

**§ 73.349 Carbolic acid (phenol) liquid.**

(a) Carbolic acid (phenol) liquid (liquid tar acid containing over 50 percent benzo-phenol), must be packed in specification containers as follows:

(1) As prescribed in § 73.346.

(2) Specification 1A, 1C, or 1D (§§ 78.1, 78.3, or 78.4 of this chapter). Glass carboys in boxes or kegs, which must be closed, and when reused must be reconditioned and tested, as provided in the specification.

(3) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5-pints capacity each. Not more than 6 inside glass bottles of 5-pints capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

**§ 73.350 Chemical ammunition.**

(a) Chemical ammunition consisting of projectiles, shells, bombs, grenades and other containers filled with gases, liquids, or chemicals, class B, poison, without ignition elements, bursting charges, detonating fuzes, or other explosive components, must be packed for shipment in strong outside wooden or metal boxes. Boxes must be marked with name of contents and labeled as prescribed by this part for gases, liquids, or chemicals contained therein.

(b) Chemical ammunition, when shipped as such, must not be equipped or packed with explosive or ignition elements. (See §§ 73.53 (r) and 73.59 for explosive chemical ammunition.)

**§ 73.351 Hydrocyanic acid solutions.**

(a) Hydrocyanic acid solutions must be in glass bottles not over 1 pound capacity each for solutions of not over 5 percent strength and not over 5 pints capacity each for solutions of not over 2 percent strength and must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs.

**§ 73.352 Liquid sodium or potassium cyanide.**

(a) Liquid sodium or potassium cyanide must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§ 78.80, 78.81, or 78.82 of this chapter). Metal barrels or drums without galvanizing inside, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17E or 37B (§ 78.116 or § 78.132 of this chapter). Metal drums (single-trip), with welded side seams, with openings not exceeding 2.3 inches in diameter.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside glass or earthenware containers not over 1 gallon capacity each, or inside metal containers not over 10 gallons capacity each, and without galvanizing.

(4) Spec. 103,[1] 103–W, 103A,[1] 103A–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

(5) Spec. MC 300, MC 301,[2] MC 302, MC 303 or MC 305 (§ 78.321, 78.323, 78.324, or 78.326 of this chapter). Tank motor vehicles.

[1] Use of existing tank cars authorized, but new construction not authorized.

[2] Use of existing cargo tanks authorized, but new construction not authorized.

**§ 73.353 Methyl bromide, liquid (bromomethane), mixtures of methyl bromide and ethylene dibromide, liquid, mixtures of methyl bromide and chlorpicrin, liquid, or methyl bromide and nonflammable, nonliquefied compressed gas mixtures, liquid.**

(a) Methyl bromide, liquid (bromomethane), mixtures of methyl bromide and ethylene dibromide, liquid, mixtures of methyl bromide and chlorpicrin, liquid, or methyl bromide and nonflammable, nonliquefied compressed gas mixtures, liquid, must be packed in specification containers as follows:

(1) Spec. 5A (§ 78.81 of this chapter). Metal drums not exceeding 30 gallons capacity or metal drums of bilge type not exceeding 33 gallons capacity and with openings not exceeding 2.3 inches in diameter. Use of these containers will be permitted because of the present emergency and until further order of the Commission.

(2) Spec. 15A, 15B, 15C, 16A, 19A, or 12B (§§ 78.168, 78.169, 78.170, 78.185, 78.190, or 78.205 of this chapter). Wooden, wire-bound wooden, or fiberboard boxes, with inside metal cans containing not over 1 pound each; outage required so can shall not become liquid-full at 130° F. Cans must be of tinplate or lined with suitable material and must have concave or pressure ends. Cans must be able to withstand an interior pressure of 130 pounds per square inch gauge without evidence of leakage or permanent distortion.

(3) Spec. 3A225, 3AA225, 3B225, 3E1800, 4A225, 4B225, or 4BA225 (§ 78.36, § 78.37, § 78.38, § 78.42, § 78.49, § 78.50, or § 78.51 of this chapter). Metal cylinders. Valves or other closing devices must be protected to prevent injury in transit by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders having a wall thickness of less than 0.08 inch must be packed in boxes or crates (see § 73.25).

(4) Spec. 4D300 or 4DA500 (§ 78.53 or § 78.58 of this chapter). Metal spheres, for use in aircraft only, must be equipped with approved safety devices and must be packed in strong boxes or crates (see § 73.25).

(5) Spec. 105A100,[1] 105A100–W, 106A500,[1] 106A500–X or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201, 79.300, 79.301 of this chapter). Tank cars.

NOTE 1: Tanks complying with ICC–106A (§ 78.275 or 78.276 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(b) Outage must be sufficient to prevent tank car from becoming entirely filled with liquid at the following temperature: Spec. 105A100,[1] 105A100–W, or 111A100–W–4 (§§ 79.100, 79.101, 79.200, 79.201 of this chapter) at 105 F; spec. 106A500,[1] or 106A500–X (§§ 79.300, 79.301 of this chapter) at 130 F.

(c) Outage must be sufficient to prevent cylinders or spheres from becoming entirely filled with liquid at 130° F. and when the vacant space (outage) is charged with nitrogen, carbon dioxide, or air the pressure in the cylinder or sphere at 130° F. must not exceed 5/4 the marked service pressure of the cylinder or sphere.

(d) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip) not over 5¼ gallons marked capacity each and having no opening exceeding 2.3 inches in diameter. Authorized only for mixtures containing not over 40 percent by weight of methyl bromide.

(e) Spec. MC 330 (§ 78.336 of this chapter). Tank motor vehicles having a design pressure not less than 250 pounds per square inch equipped with an approved spring-relief safety valve. Outage must be sufficient to prevent tank from becoming entirely filled with liquid at 130° F. Authorized for methyl bromide-ethylene dibromide mixture only.

**§ 73.354 Motor fuel antiknock compound or tetraethyl lead.**

(a) Motor fuel antiknock compound (a mixture of one or more organic lead compounds such as tetraethyl lead, triethylmethyl lead, diethyldimethyl lead, ethyltrimethyl lead, and tetramethyl lead, with one or more halogen compounds such as ethylene dibromide and ethylene dichloride, hydrocarbon solvents or other equally efficient stabilizers) or tetraethyl lead must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes with inside glass or earthenware containers of not over 1 pint capacity each, or metal cans, inclosed in hermetically sealed (soldered) metal cans, spec. 2A (§ 78.20 of this chapter).

(2) Spec. 5 or 5A (§§ 78.80 or 78.81 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(3) Cylinders as prescribed for any compressed gas, except acetylene.

(4) Spec. 105A300–W (§ 78.286 of this chapter). Tank car. Stenciled on both sides of the tank "FOR MOTOR FUEL ANTIKNOCK COMPOUND ONLY." Tank car not authorized for tetraethyl lead. Openings in tank heads to facilitate application of nickel lining are authorized and must be closed in an approved manner.

(5) Spec. MC 330 (§ 78.336 of this chapter) (see Note 1). Tank motor vehicles. Authorized for motor fuel antiknock compound only.

NOTE 1: Spec. MC 300, MC 301,[1] MC 302 or MC 303 (§ 78.321, 78.323, or 78.324 of this chapter) tank motor vehicles in motor fuel antiknock compound service prior to October 1, 1955 may be continued in service.

(6) Spec. 51 (§ 78.245 of this chapter). Portable tanks having a minimum design pressure of 100 pounds per square inch. Authorized for motor fuel antiknock compound only.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 375-pound test (Mullen or Cady) solid fiberboard with inside metal cans enclosed in hermetically sealed (soldered) metal cans, not over 5 pounds capacity each. Each inside metal container must be enclosed in a taped, double-faced corrugated liner constructed of at least 200-pound test (Mullen or Cady) fiberboard and fitted with die-cut end caps constructed of at least 200-pound test (Mullen or Cady) double-walled corrugated fiberboard. Authorized gross weight not over 90 pounds.

(b) Outage must be sufficient to prevent any container from becoming entirely filled with liquid at 130° F.

[1] Use of existing cargo tanks authorized, but new construction not authorized.

**§ 73.355 Phenyldichlorarsine.**

(a) Phenyldichlorarsine must be packed in specification containers as follows:

(1) Spec. 5A (§ 78.81 of this chapter). Metal barrels or drums, made of not less than 12 gauge steel, and limited to 30 gallons capacity, with openings not exceeding 2.3 inches in diameter. Each metal barrel or drum must be tested, before each filling to 20 pounds hydrostatic test.

**§ 73.356 Thiophosgene.**

(a) Thiophosgene must be packed in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside containers which must be tightly closed glass bottles not exceeding 1 pint capacity each, securely packed in absorbent incombustible cushioning material. Cushioning material must be capable of absorbing entire contents of the container.

(2) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with inside containers which must be tightly closed glass bottles not exceeding 1 quart capacity each, securely packed in absorbent incombustible cushioning material. Cushioning material must be capable of absorbing entire contents of container.

**§ 73.357 Chlorpicrin and chlorpicrin mixtures containing no compressed gas or poisonous liquid, class A.**

(a) *Chlorpicrin.* Chlorpicrin, when offered for transportation by carriers by rail freight, highway, or water, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, spec. 2C (§ 78.22 of this chapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

(2) Spec. 12B (§ 78.205 of this chapter). One-piece corrugated fiberboard boxes at least 200-pound test with inside glass bottles or tubes in hermetically sealed metal cans in individual unsealed one-piece corrugated fiberboard boxes, spec. 12B at least 200-pound test. Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 12 pounds.

(3) Spec. 12B (§ 78.205 of this chapter). One-piece corrugated fiberboard boxes at least 200-pound test with not more than one inside glass bottle or tube in a hermetically sealed metal can. Bottles must contain not over 1 pound of liquid, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard.

(b) *Chlorpicrin and mixtures of chlorpicrin containing no compressed gas or poisonous liquid, class A.* Chlorpicrin and mixtures of chlorpicrin containing no compressed gas or poisonous liquid, class A, in addition to containers prescribed in paragraph (a) of this section, when offered for transportation by carriers by rail freight, highway, or water, may be shipped in specification containers as follows:

(1) Spec. 3A, 3AA, 3B, 3C, 3D, 3E, 4A, 4B, 4BA, or 4C (§ 78.36, 78.37, 78.38, 78.40, 78.41, 78 42, 78.49, 78.50, 78.51, or 78.52 of this chapter). Metal cylinders of not over 275 pounds water capacity (nominal). Valves or other closing devices must be protected, to prevent injury in transit, by screw-on metal caps or by packing the cylinders in strong boxes or crates. Cylinders closed by means of solid plugs may have the plugs protected by metal collars. Cylinders having a wall thickness of less than 0.08 inch must be packed in boxes or crates (see § 73.25).

NOTE 1: Because of the present emergency and until further order of the Commission, cylinders not exceeding 458 pounds water capacity are authorized for mixtures containing not over 15 percent by volume of chlorpicrin.

(2) Spec. 5A (§ 78.81 of this chapter). Metal drums of not exceeding 33 gallons capacity with welded seams.

NOTE 1: Because of the present emergency and until further order of the Commission, drums not exceeding 55 gallons capacity with welded seams are authorized for mixtures containing not over 15 percent by volume of chlorpicrin.

(3) Spec. 17C or 17E (§§ 78.115 and 78.116 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter. Capacity not to exceed 30 gallons. Authorized only for chlorpicrin mixtures containing not to exceed 15 percent chlorpicrin by weight or 15 percent by volume chlorpicrin, 85 percent by volume dichloropropene technical, and only authorized for such mixtures not classed as flammable under these regulations.

(4) Spec. 106A500[1] or 106A500–X (§§ 79.300, 79.301 of this chapter). Tank cars. Tanks shall not be equipped with safety devices of any type and valves shall be protected by metal caps. Outage

[1] Use of existing tank cars authorized, but new construction not authorized.

shall be sufficient to prevent tanks from becoming liquid full at 130 F.

NOTE 1: Tanks complying with ICC–106A (§§ 79.300 and 79.301 of this chapter) specification may be transported in or on motor vehicles and in the manner authorized in § 77.840(c) of this chapter, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(5) Spec. 105A300–W, 105A400–W, or 105A500–W (§ 78.286, 78.287, or 78.288 of this chapter). Tank cars.

(c) Chlorpicrin and mixtures of chlorpicrin containing no compressed gas or poisonous liquid, class A, when offered for transportation by rail express must be packed in specification containers as follows (also authorized for transportation by carriers by rail freight, highway, or water):

(1) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, spec. 2C (§ 78.22 of this chapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

(2) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, metal strapped, with chlorpicrin absorbed in an efficient absorbing material packed in hermetically sealed metal cans not exceeding 1 quart capacity each.

(3) Spec. 12B (§ 78.205 of this chapter). One-piece corrugated fiberboard boxes at least 200-pound test with inside glass bottles or tubes in hermetically sealed metal cans in individual unsealed one-piece corrugated fiberboard boxes, Spec. 12B at least 200-pound test. Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 12 pounds.

(4) Spec. 12B (§ 78.205 of this chapter). One-piece corrugated fiberboard boxes at least 200-pound test with not more than one inside glass bottle or tube in a hermetically sealed metal can. Bottles must contain not over 1 pound of liquid, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard.

### § 73.358 Hexaethyl tetraphosphate, methyl parathion, organic phosphate compound, n.o.s., parathion, tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid.

(a) Hexaethyl tetraphosphate, methyl parathion, organic phosphate compound, n.o.s., parathion, tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§ 78.80, 78.81, or 78.82 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C or 17E (§§ 78.115 or 78.116 of this chapter), metal drums (single-trip), with openings not exceeding 2.3 inches in diameter. Spec. 17E drums authorized for not over 5 gallons capacity each.

(3) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with metal inside containers of not over 5 gallons capacity each.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each, securely cushioned in liquid-tight metal cans.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums, with inside glass containers not over 1 gallon capacity each.

(6) Spec. 37A (§ 78.131 of this chapter). Metal drums (single-trip), with inside glass containers not over 1 gallon capacity each.

(7) Cylinders as prescribed for any compressed gas, except acetylene, are also authorized.

(8) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(9) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than one inside container of polyethylene, or other nonfragile plastic material, and closed by a screw cap of similar material, not over 16 ounces, surrounded by absorbent cushioning and packed in a one gallon securely closed metal can which shall be surrounded with absorbent cushioning material within the outside fiberboard box.

(10) Spec. 42B (§ 78.107 of this chapter). Aluminum drums.

### § 73.359 Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures, liquid.

(a) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing not more than 50 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§ 78.80, 78.81, or 78.82 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C (§ 78.115 of this chapter). Metal drums (single-trip), with openings not exceeding 2.3 inches in diameter.

(3) Spec. 17E or 37B (§ 78.116 or §78.132 of this chapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter. Capacity not to exceed 10 gallons for spec. 17E drums. Spec. 37B drums must be constructed of at least 24-gauge metal with welded side seams, of capacity not over 5½ gallons, and must be tested as prescribed by § 78.116–12 and 78.116–13 of this chapter. Authorized only for mixtures not classed as flammable under these regulations.

(4) Spec. 15A, 15B, 15C, or 15E (§§ 78.168, 78.169, 78.170, or 78.172 of this chapter). Wooden boxes, with metal inside containers not over 10 gallons capacity each.

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each, securely cushioned in liquid-tight metal cans.

(6) Spec. 21C (§ 78.224 of this chapter). Fiber drums, with inside glass containers not over one gallon capacity each.

(7) Spec. 37A (§ 78.131 of this chapter). Metal drums (single-trip), with inside glass containers not over 1 gallon capacity each.

(8) Spec. 12B (§78.205 of this chapter). Fiberboard boxes as authorized by § 78.205–19 (a) of this chapter.

(9) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(10) Spec. 42B (§ 78.107 of this chapter). Aluminum drums.

(11) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside high-density polyethylene bottles not over 1-gallon capacity each. Polyethylene bottles must have a minimum wall thickness of 0.015 inch and be equipped with screw-cap closures additionally taped for securement. Each polyethylene bottle shall be packed in an inside fiberboard box. Not more than four inside fiberboard boxes with inside polyethylene bottles shall be packed in one outside shipping container. Polyethylene used in construction of inside polyethylene bottles must be of a type compatible with the lading and shall prevent permeation of contents to a degree that would cause a hazardous condition in transportation and handling.

(12) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside securely closed metal containers not over 1-gallon capacity each. Fiberboard boxes shall be constructed of not less than 500-pound test (Mullen or Cady) double-wall corrugated fiberboard. Not more than six 1-gallon metal containers shall be packed in one outside container. Authorized gross weight not over 65 pounds.

(13) Spec. 105A300–W (§§ 79.100 and 79.101 of this chapter). Tank cars. Authorized for organic phosphate compound mixtures, n.o.s., only.

(b) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing more than 50 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, must be packed in specification containers as follows:

(1) Spec. 5, 5A, or 5B (§§ 78.80, 78.81, or 78.82 of this chapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(2) Spec. 17C, 17E, or 37B (§ 78.115, § 78.116, or § 78.132 of this chapter). Metal drums (single-trip) with openings not exceeding 2.7 inches in diameter. Spec. 17E drums authorized for not over 5 gallons capacity each. Spec. 37B drums must be constructed of at least 24-gauge metal with welded side seam, of not over 5½ gallons capacity, and must be tested as prescribed by §§ 78.116–12 and 78.116–13 of this chapter.

(3) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes, with metal inside containers not over 5 gallons capacity each.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes, with inside glass bottles not over 1 gallon capacity each, securely cushioned in liquid-tight metal cans.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums, with inside glass containers not over one gallon capacity each.

(6) Spec. 37A (§ 78.131 of this chapter). Metal drums (single-trip), with inside glass containers not over 1 gallon capacity each.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than one inside glass container of not over 1 gallon capacity, securely cushioned. Completed package, with glass container filled with water, when closed for shipment, must be capable of withstanding six four-foot drops onto solid concrete in the order bottom, four sides, and top without breakage.

(8) Spec. 42B (§ 78.107 of this chapter). Aluminum drums.

(9) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with not more than six inside high-density polyethylene bottles having screw-cap closures, not over 1-quart capacity each. Fiberboard boxes must have full-height corrugated fiberboard liner, top and bottom pads, and bottles must be separated by corrugated fiberboard partitions. Plastic used in construction of bottles must be of a type compatible with the lading.

(c) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures (solutions, emulsions, or emulsifiable liquids) containing not more than 25 percent hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate by weight, in inside metal containers not over 8-fluid ounces capacity each, packed in strong outside containers together with sufficient absorbent material to completely absorb the liquid in the event of leakage, are exempt from specification packaging, marking, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

### § 73.360 Perchloro-methyl-mercaptan.

(a) Perchloro-methyl-mercaptan in any quantity must not be packed with any other article. When offered for transportation by carriers by rail freight, highway, or water must be packed in specification containers as follows:

(1) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs, with inside containers which must be glass bottles not over 2 quarts capacity each, individually enclosed in tightly closed metal cans and cushioned therein with incombustible material. Net weight not over 100 pounds in one outside container.

(2) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes, with inside containers which must be glass bottles not over 2 quarts capacity each, individually enclosed in tightly closed metal cans and cushioned therein with incombustible material. Net weight not over 100 pounds in one outside container.

(3) Spec. 5H (§ 78.87 of this chapter). Lead-lined metal barrels or drums not over 33 gallons each.

(4) Spec. 5K or 5M (§ 78.88 or § 78.90 of this chapter). Nickel or monel barrels or drums.

### § 73.361 Aldrin mixtures, liquid, with more than 60 percent aldrin.

(a) Aldrin mixtures, liquid, with more than 60 percent aldrin must be shipped in specification containers as follows:

(1) As prescribed in § 73.346.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or § 78.99 of this chapter). Metal barrels or drums. Authorized only for viscous mixtures or those which may become partially solid.

(3) Spec. 17C or 17H (§ 78.115 or § 78.118 of this chapter). Metal drums (single-trip). Drums with opening exceeding 2.3 inches in diameter authorized only for viscous mixtures or those which may become partially solid.

(b) Aldrin mixtures, liquid, containing 60 percent or less aldrin and no other material classed as dangerous under these regulations are not subject to Parts 71–78 of this chapter.

### § 73.362 4-Chloro-o-toluidine hydrochloride.

(a) 4-Chloro-o-toluidine hydrochloride must be shipped in specification containers as follows:

(1) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with glass polyethylene, or equally efficient inside containers not over 1 quart capacity each, securely packed in a tightly closed metal container.

(2) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with glass, polyethylene, or equally efficient inside containers not over 1 quart capacity each. Glass containers must be securely packed in tightly closed metal containers.

(3) Spec. 17C or 17H (§§ 78.115 or 78.118 of this chapter). Metal drums (single-trip).

(4) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

### § 73.362a Dinitrophenol solutions.

(a) Dinitrophenol solutions must be packed in specification containers as follows:

(1) In containers prescribed in § 73.346.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard box with glass, earthenware, or metal inside containers not over 1 gallon capacity each; not to contain more than 4 inside glass or earthenware containers if their capacity is greater than 5 pints each.

### § 73.363 Packing for class B poisons, solid.

(a) Closing and cushioning. All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(b) Testing inside containers. All inside containers, except those made of glass, must be able to pass a test by dropping, after filling, from a height of 4 feet to solid concrete without rupture or sifting of contents, except that for bags with contents weighing 25 pounds, a drop test of 2 feet is required.

### § 73.364 Exemptions for poisonous solids, class B.

(a) Poisonous solids, class B, except beryllium metal powder; carbolic acid (phenol) other than as specified in § 73.369(b); cyanides, other than as specified in § 73.370 (b) and (d); cyanogen bromide, hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures, other than as specified in § 73.377(f); in tightly closed inside containers, securely cushioned when necessary to prevent breakage and packed as follows, are exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) In inside glass, earthenware, or composition bottles or jars, or metal containers, or lock-corner sliding-lid wooden boxes, of not over 5 pounds capacity each; or chipboard, pasteboard, or fiber cartons, cans, boxes, or tightly closed strong plastic bags or bottles compatible with product of not over 1 pound capacity each, packed in outside wooden or fiberboard boxes, or wooden barrels or

kegs. Net weight of contents of outside container not over 100 pounds.

(2) In inside chipboard, pasteboard, or fiber cartons, cans, or boxes, of not over 5 pounds capacity each, packed in outside fiberboard or wooden boxes. Not more than 6 of these cartons shall be packed in any outside container.

**§ 73.365 Poisonous solids not specifically provided for.**

(a) Poisonous solids, as defined in § 73.343, other than those for which special requirements are prescribed, must be packed in specification containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Spec. 5, 5A, 5B, 6A, 6B, or 6C (§§ 78.80, 78.81, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17E, 17H, 37A, or 37B (§§ 78.116, 78.118, 78.131, or § 78.132 of this chapter). Metal drums (single-trip). Gross weight not over 375 pounds, except for material fused solid in the drum a gross weight of 880 pounds and not over 550 pounds gross weight for waste material containing arsenic trioxide is authorized in drums constructed of at least 18 gauge steel regardless of gross weight marking embossed in the container.

(3) [Reserved]

(4) Spec. 10A, 10B, or 10C (§§ 78.155, 78.156, or 78.157 of this chapter). Wooden barrels or kegs lined with creped-paper bag, spec. 2J (§ 78.28 of this chapter). Liner may be omitted if material is not pulverized or liable to sift.

NOTE 1: Because of the present emergency and until further order of the Commission, wooden whiskey barrels, with char removed and properly recoopered, which comply with all the provisions of spec. 10B, are also authorized. Marking is required on the head of each container, by the reconditioner, by hot branding iron, as follows:

ICC–10B.

Name or symbol (letters) of reconditioner; this must be registered with the Bureau of Explosives and located just above, below, or following the mark ICC–10B.

Size of markings (minimum): ¾-inch high.

(5) Spec. 11A (§ 78.160 of this chapter). Wooden barrels or kegs, tongued and grooved, net weight of contents not over 115 pounds each.

(6) Spec. 12B or 12C (§§ 78.205 or 78.206 of this chapter). Fiberboard boxes, with inside containers which must be metal cans not over 25 pounds capacity each; glass bottles not over 1 gallon capacity each; fiber cans or boxes, spec. 2G (§ 78.26 of this chapter); sliding-top wooden boxes, lined to prevent sifting, not over 25 pounds capacity each; or paper bags, spec. 2D (§ 78.23 of this chapter). Packages containing glass or earthenware containers must not weigh over 65 pounds gross nor contain more than 4 inside containers of over 5 pints capacity each. Outside containers must be not over 5,000 cubic inches capacity nor contain over 50 pounds net weight each, except as provided in § 78.205–23 of this chapter.

TEST: The completed package prepared as for shipping must be capable of standing a drop of 4 feet to solid concrete without breakage of the container or any sifting of contents.

(7) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with securely closed inside fiberboard or chipboard boxes not over 6 pounds net weight each. Interior containers must be at least .028 inch thick for those not over 2½ pounds net weight each and at least .034 inch thick for others. Outside packages must contain not over 36 pounds net weight of material each.

TEST: The individual interior containers as well as the completed package prepared as for shipping must be capable of standing a drop of 4 feet to solid concrete without breakage of the container or any sifting of contents.

(8) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, with inside containers which must be securely closed paper bags, placed within a waterproof duplex bag, spec. 2J (§ 78.23 of this chapter). Net weight of material in one outside box, not over 100 pounds.

(9) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes, with inside containers which must be metal cans not over 25 pounds capacity each; glass or earthenware containers not over 1 gallon capacity each; except that inside containers of not over 5 gallons each and containing not over 25 pounds net weight are authorized when only one inside container is packed in each outside container. Fiber cans or boxes, spec. 2G (§ 78.26 of this chapter), or sliding-top wooden boxes, lined to prevent sifting, not over 25 pounds capacity each. Net weight of material in outside container, not over 100 pounds each.

(10) Spec. 18B (§78.193 of this chapter). Wooden kits lined as prescribed by spec. 2K (§ 78.29 of this chapter). Net weight not over 30 pounds each.

(11) [Reserved]

(12) Spec. 22A (§ 78.196 of this chapter). Plywood drums. Net weight not over 115 pounds each.

(13) Spec. 103,[1] 103–W, 103A,[1] 103A–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, or 111A100–W–2 (§§ 79.200, 79.201 of this chapter). Tank cars.

(14) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

(15) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(16) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass bottles not over 5 pounds capacity each. Not more than 4 inside glass bottles of 5 pounds capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

[1] Use of existing tank cars authorized, but new construction not authorized.

**§ 73.366 Arsenic (arsenic trioxide) or arsenic acid (solid).**

(a) Arsenic (arsenic trioxide) or arsenic acid (solid) must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

(2) Spec. 10A, 10B, or 10C (§§ 78.155, 78.156, or 78.157 of this chapter). Wooden barrels or kegs with tongued-and-grooved staves; a 4½-inch metal bung in the head is permitted; lining not required.

(3) In addition to specification containers prescribed in this section, arsenic (arsenic trioxide) or arsenic acid (solid) may be shipped when packed in portable, collapsible, rubber containers, not over 70 cubic feet capacity, of a type approved by the Bureau of Explosives. Authorized for carload or truckload shipments only.

(b) Import shipments of arsenic (arsenic trioxide) may also be shipped when packed as follows:

(1) Inclosed in strong waterproofed cloth containers, securely sewn and closed so as to provide a sift-proof package, and then packed in strong, tight, metal-strapped wooden boxes constructed of material not less than three-fourths inch thick throughout.

(2) In strong and tight metal drums inclosed in a strong outside wooden barrel.

**§ 73.367 Arsenical compounds n.o.s., arsenate of lead, calcium arsenate, Paris green, and arsenical mixtures.**

(a) Arsenical compounds n.o.s., arsenate of lead, calcium arsenate, Paris green, and arsenical mixtures must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

NOTE 1: Because of the present emergency and until further order of the Commission, wooden hoops as specified in § 78.160–6 of this chapter may be used in lieu of steel hoops required by specification 10B (§ 78.156 of this chapter).

(2) Spec. 36A or 36B (§§ 78.230 or 78.233 of this chapter). Triplex bags. Authorized only for arsenical insecticides and fungicides containing 10.0 percent or less of arsenic trioxide.

(3) Spec. 44B (§ 78.236 of this chapter). Multiwall paper bags with inside paper bags, spec. 2D (§ 78.23 of this chapter). Net weight not over 50 pounds each.

(4) Spec. 44C, (§ 78.237 of this chapter). Multiwall paper bags. For carload and truckload shipments only. Net weight not over 50 pounds each.

(5) Spec. 44D (§ 78.238 of this chapter). Multiwall paper bags. For less-than-carload and less-than-truckload shipments. Where extensible kraft is used the minimum total basis weight shall be 260 pounds. Net weight not over 50 pounds each.

(6) Spec. 44E (§ 78.239 of this chapter). Multiwall paper bags constructed with minimum total basis weight of 160 pounds. For carload or truckload shipments only; loaded by the consignor and unloaded by the consignee or his duly authorized agent. Net weight not over 50 pounds each. Where extensible kraft is used the minimum total basis weight for 40 pound net weight bags shall be 190 pounds and for 20 pound net weight bags it shall be 150 pounds. Multiwall bags so constructed are authorized for less-than-carload and less-than-truckload shipments as well as carload and truckload shipments.

(b) Arsenical compounds n. o. s. containing not more than 6 percent arsenic of which not more than 0.5 percent is water soluble must be packed in specification containers as follows:

(1) As prescribed in paragraph (a) (1), (2), or (3) of this section.

(2) Spec. 44B (§ 78.236 of this chapter). Paper bags with two added inside thicknesses of No. 1 Kraft paper, one sheet having a Mullen test of 50 and the other sheet having a Mullen test of 40. Net weight not over 50 pounds each.

**§ 73.368 Arsenical dust, arsenical flue dust, and other poisonous noncombustible by-product dusts; also arsenic trioxide, calcium arsenate, and sodium arsenate.**

(a) Arsenical dust, arsenical flue dust, and other poisonous noncombustible by-product dusts from metal recovery operations not subject to dangerous spontaneous heating, and arsenic trioxide, calcium arsenate, or sodium arsenate, when delivery is made to plants with private sidings, only, may, in addition to containers prescribed in § 73.367, be shipped in sift-proof, self-clearing, hopper or bottom outlet steel cars or in sift-proof all steel flat bottom gondola cars with fixed sides and ends equipped with water-proof and dust-proof wooden or steel covers well secured in place for all openings, or in sift-proof box cars of all steel construction only when said cars are assigned exclusively to this service. See § 74.566(b) of this chapter for cleaning cars. Such cars, when used exclusively in this service, are not subject to the requirements of § 74.566(b) of this chapter.

(b) Arsenical dust and arsenic trioxide may be shipped in bulk in motor vehicles with steel, sift-proof, self-clearing hopper-type or dump-type bodies, with waterproof and dust-proof covers, well secured in place.

**§ 73.369 Carbolic acid (phenol), not liquid.**

(a) Carbolic acid (phenol), not liquid, must be packed in specification containers as follows:

(1) Spec. 5, 5A, 5B, 5C, 6A, 6B, or 6C (§§ 78.80, 78.81, 78.82, 78.83, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with securely closed inside drums of metal not thinner than No. 26 gauge, the space between drum and barrel or keg being filled with sawdust or rice hulls.

(3) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels or kegs with glass or earthenware inside containers, not over 1 gallon capacity each, or with metal inside containers not over 2 gallons capacity each.

(4) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with inside containers which must be metal cans not over 25 pounds capacity each.

(5) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes with glass or earthenware inside containers not over 1 quart capacity each, or with metal inside containers not over 1 gallon capacity each. Packages containing glass or earthenware containers must not weigh over 65 pounds gross; packages containing metal cans not over 84 pounds gross as provided in § 78.205–23 of this chapter, 65 pounds for others.

(6) Spec. 12D (§ 78.207 of this chapter). Fiberboard boxes with inside containers which must be: Glass or earthenware not over 1 gallon or 5 pounds capacity each; authorized for not more than 75 pounds gross weight; not to contain more than 4 such inside containers if their capacity is greater than 5 pints each.

(7) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon or 5 pounds capacity each, except that inside containers up to 3 gallons or 15 pounds capacity each are authorized when only 1 is packed in each outside container; or with metal inside containers not over 10 gallons capacity each.

(8) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with metal inside containers, spec. 2F (§ 78.25 of this chapter), not over 250 pounds total capacity each.

(9) Spec. 17E or 17H (§ 78.116 or § 78.118 of this chapter). Metal drums (single-trip).

(10) [Reserved]

(11) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter). Metal drums (single-trip).

(12) Spec. 42B or 42C (§§ 78.107 or 78.108 of this chapter). Aluminum drums.

(13) Spec. 103,[1] 103–W, 103AL–W, 103A,[1] 103A–W, 103A–AL–W, 111A60AL–W, 111A60–F–1, 111A60–W–1, 111A100–F–2, 111A100–W–2 or 111A100–W–3 (§§ 79.200, 79.201 of this chapter). Tank cars.

(14) Spec. MC 300, MC 301,[2] MC 302, MC 303, MC 305, MC 310 or MC 311 (§ 78.321, 78.323, 78.324, 78.326, 78.330 or 78.331 of this chapter). Tank motor vehicles.

(15) Spec. 12A (§ 78.210 of this chapter). Fiberboard boxes with inside glass, polyethylene, or other nonfragile plastic bottles not over 5 pounds capacity each. Not more than 4 inside glass bottles of 5 pounds capacity each shall be packed in one outside container. Shipper must have established that the completed package meets test requirements prescribed by § 78.210–10 of this chapter.

(b) Carbolic acid (phenol), not liquid, in tightly closed inside containers, securely cushioned when necessary to prevent breakage and packed as follows, is exempt from specification packaging, marking, and labeling requirements, except that marking name of contents on outside container is required for shipments via carrier by water. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) In inside glass, earthenware, polyethylene or other nonfragile plastic bottles or jars not over 1 pound capacity each, or metal containers not over 5 pounds capacity each, packed in outside wooden boxes, barrels or kegs, or fiberboard boxes. Net weight of contents in fiberboard boxes shall not exceed 65 pounds; and not more than 100 pounds in wooden boxes, barrels or kegs.

[1] Use of existing tank cars authorized, but new construction not authorized.

[2] Use of existing cargo tanks authorized, but new construction not authorized.

**§ 73.370 Cyanides, or cyanide mixtures, except cyanide of calcium and mixtures thereof.**

(a) Cyanides, or cyanide mixtures (see paragraph (b) of this section for exemptions), except cyanide of calcium and mixtures thereof (see paragraph (c) of this section for packing requirements and paragraph (d) of this section for exemptions) if containing the cyanogen equivalent of 10 percent or more of potassium cyanide, must be packed in specification containers as follows:

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with metal inside containers, spec. 2F (§ 78.25 of this chapter), not over 25 pounds capacity each; or hermetically sealed (soldered) metal lining, spec. 2F, or in glass bottles not over 5 pounds capacity each.

(2) Spec. 11A or 11B (§§ 78.160 or 78.161 of this chapter). Wooden barrels with metal inside containers, spec. 2F (§ 78.25 of this chapter) not over 25 pounds capacity each; or hermetically sealed (soldered), metal lining, spec. 2F.

(3) Spec. 12B or 12C (§§ 78.205 or 78.206 of this chapter). Fiberboard boxes with metal inside containers, spec. 2F (§ 78.25 of this chapter) not over 25 pounds capacity each.

(4) Spec. 5, 5A, 5B, 6A, 6B, or 6C (§§ 78.80, 78.81, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(5) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter), metal drums (single-trip containers).

(6) Bulk in watertight metal cars or in watertight container car metal containers.

(7) [Reserved]

(8) Spec. 45B (§ 78.240 of this chapter). Bags, cloth, and paper, lined. Authorized only for sodium cyanides of globular or pellet form, diameter not less than ¾ inch. Net weight not over 100 pounds.

(9) Bulk in watertight metal-bodied covered motor vehicles.

(10) [Reserved]

(11) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

(12) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and bottom pad of at least 200-

pound test fiberboard. Boxes constructed of at least 350-pound fiberboard having top and bottom pads shall not require perimeter liner. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.004 inch. Not more than 25 pounds net weight of product may be packed in one outside box.

(13) Bulk in strong, water-tight, metal portable containers of not over 70 cubic feet capacity each, approved by the Bureau of Explosives.

(b) *Cyanides, except cyanide of calcium and mixtures thereof; exemptions.* Cyanides, except cyanide of calcium and mixtures thereof (see paragraph (d) of this section), when packed and described as follows are exempt from specification packaging and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Cyanides, or cyanide mixtures, in tightly closed glass, earthenware, or metal inside containers, not over 1 pound each, securely cushioned and packed in outside wooden or fiberboard boxes, or in wooden barrels. Net weight of cyanides or cyanide mixture in any outside container, not over 25 pounds.

(2) Cyanide mixtures in tightly closed glass, earthenware, or metal inside containers, securely cushioned and packed in outside wooden or fiberboard boxes, or in wooden barrels. Net weight of cyanide mixtures in any outside container, not over 5 pounds.

(3) Cyanides of copper, zinc, lead and silver.

(c) *Cyanide of calcium and mixtures thereof.* Cyanide of calcium and mixtures thereof must be packed in specification containers as follows:

(1) As prescribed in paragraph (a) (2), (3), (4), (6), (9), (10) or (11) of this section.

(2) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Wooden boxes with metal inside containers, spec. 2F, not over 25 pounds capacity each; or hermetically sealed (soldered) metal lining, spec. 2F (§ 78.25 of this chapter).

(3) Spec. 37A or 37B (§ 78.131 or § 78.132 of this chapter), metal drums (single-trip containers); welded side seams required for Spec. 37B drums and all seams and closures must be watertight and hermetically sealed.

(d) *Cyanide of calcium and mixtures thereof; exemptions.* Cyanide of calcium and mixtures thereof when packed and described as follows are exempt from specification packaging and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Cyanide of calcium and mixtures thereof in tightly closed metal inside containers having not over 1 pound net weight each, or metal cans having not over 5 pounds net weight each. Not more than 25–1 pound containers or more than 1–5-pound container securely cushioned may be packed in the outside container which must be wooden or fiberboard boxes, or wooden barrels.

**§ 73.371 Dinitrobenzol.**

(a) Dinitrobenzol must be packed in specification containers as follows:

(1) As prescribed in § 73.346 or § 73.365.

(2) Spec. 11A (§ 78.160 of this chapter). Wooden barrels, gross weight 300 pounds; must be shipped in carload or truckload shipments only and must not be offered for transportation by carriers by rail express or water.

**§ 73.372 Mercury bichloride (mercuric chloride).**

(a) Mercury bichloride (mercuric chloride) must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

(2) Spec. 15A (§ 78.168 of this chapter). Wooden boxes with inside containers consisting of strong paper bags in tightly closed inside wooden boxes.

**§ 73.373 Ortho-nitroaniline and paranitraniline.**

(a) Ortho-nitroaniline and paranitraniline must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

(2) Spec. 11A (§ 78.160 of this chapter). Wooden barrels, gross weight 385 pounds; must be shipped in carload or truckload shipments only, and must not be offered for transportation by carriers by rail express or water.

(3) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 400 pounds.

(4) In addition to specification containers prescribed in this section, paranitraniline may be shipped in bulk in strong, water-tight, metal-bodied covered hopper motor vehicles.

**§ 73.374 Nitrochlorbenzene, meta or para.**

(a) Nitrochlorbenzene, meta or para, must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

(2) Spec. 21C (§ 78.224 of this chapter). Fiber drums, authorized only for nitrochlorbenzene, para, flaked. Authorized net weight not over 400 pounds.

(3) Spec. 17E (§ 78.116 of this chapter). Metal drums (single-trip).

**§ 73.375 Sodium azide.**

(a) Sodium azide must be packed in specification containers as follows:

(1) Spec. 15A (§ 78.168 of this chapter). Wooden boxes, with inside containers which must be securely closed paper bags, placed within a waterproof duplex bag, spec. 2J (§ 78.28 of this chapter). Net weight of material in one outside box, not over 100 pounds.

NOTE 1: Because of the present emergency and until further order of the Commission, uncreped bags may be used.

**§ 73.376 Aldrin mixtures, dry, with more than 65 percent aldrin.**

(a) Aldrin mixtures, dry, with more than 65 percent aldrin, must be packed in specification containers as follows:

(1) As prescribed in § 73.365.

(b) Dry mixtures containing 65 percent or less aldrin, or aldrin, cast solid, and containing no other material classed as dangerous under these regulations are not subject to Parts 71–78 of this chapter.

**§ 73.377 Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures, dry.**

(a) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures in which the liquid is absorbed in concentrations greater than 2 percent but not exceeding 27 percent in an inert dry material so as to form a dry mixture, must be packed in specification containers as follows:

(1) Spec. 12B or 12C (§ 78.205 or 78.206 of this chapter), fiberboard boxes, with inside containers which must be metal or fiber cans not over 12 pounds capacity each, or paper bags, spec. 2D, not over 12 pounds capacity each. Fiberboard boxes manufactured and marked for a gross weight of 65 pounds may have a gross weight of 70 pounds provided net weight of contents does not exceed 62 pounds. Inside containers and the completed package must be capable of withstanding the tests prescribed in paragraphs (c), (d), and (e) of this section.

(2) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter), wooden boxes, with inside containers which must be metal or fiber cans not over 12 pounds capacity each, or paper bags, spec. 2D (§ 78.23 of this chapter), not over 12 pounds capacity each. Inside containers must be capable of withstanding the tests prescribed in paragraphs (c) and (d) of this section.

(3) Spec. 5, 5B, 6A or 6C (§§ 78.80, 78.82, 78.97, or 78.99 of this chapter), metal barrels or drums.

(4) Spec. 17C, 17H or 37A (§§ 78.115, 78.118, or 78.131 of this chapter), metal drums (single-trip). Spec. 37A metal drums authorized for not over 100 pounds net weight.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized net weight not over 225 pounds.

(b) Hexaethyl tetraphosphate mixtures, methyl parathion mixtures, organic phosphate compound mixtures, n.o.s., parathion mixtures, tetraethyl dithio pyrophosphate mixtures, and tetraethyl pyrophosphate mixtures in which the liquid is absorbed in concentrations greater than 27 percent in an inert dry mixture, must be packed in specification containers as follows:

(1) Spec. 12B or 12C (§§ 78.205 or 78.206 of this chapter), fiberboard boxes, with inside containers which must be metal cans not over 12 pounds capacity each. Inside containers and the completed package must be capable of withstanding the tests prescribed in paragraphs (c) and (e) of this section.

(2) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter), wooden boxes, with inside containers which must be metal cans not over 12 pounds capacity each. Inside containers must be capable of withstanding the tests prescribed in paragraph (c) of this section.

(3) Spec. 5, 5B, 6A, or 6C (§§ 78.80, 78.82, 78.97, or 78.99 of this chapter), metal barrels or drums.

(4) Spec. 17C, 17H, or 37A (§§ 78.115, 78.118, or 78.131 of this chapter), metal drums (single-trip). Spec. 37A metal drums authorized for not over 100 pounds net weight.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized only for mixtures in which the liquid is absorbed in concentration not greater than 50 percent. Authorized net weight not over 225 pounds.

(c) Inside metal or fiber cans when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be on side of can and the other diagonally on the top rim or chime.

(d) Inside paper bags when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be made on bottom of bag and the other on either large face.

(e) Completed packages when closed as for shipment must be capable of withstanding two four-foot drops onto solid concrete without breakage of the container or any sifting of the contents. One drop must be made on bottom of package and the other drop on the smallest adjacent side area.

(f) Dry mixtures containing not more than 2 percent by weight of hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate and in which the liquid is absorbed in an inert material, are exempt from specification packaging, marking, and labeling requirements. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(g) Dry mixtures containing more than 2 percent but not exceeding 15 percent by weight of hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Spec. 44B (§ 78.236 of this chapter). Multi-wall paper bags with inside paper bags, spec. 2D (§ 78.23 of this chapter), not over 5 pounds capacity each. Net weight of material in outside container not over 30 pounds each.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes constructed of at least 275-pound test double-faced fiberboard and provided with a perimeter liner and top and bottom pad of at least 275-pound test fiberboard. Product must be contained within a tightly closed polyethylene or other equally efficient plastic bag constructed of material having minimum thickness of 0.003 inch. Not more than 50 pounds net weight of product may be packed in one outside box.

(h) Dry mixtures containing more than 2 percent but not exceeding 5 percent by weight of hexaethyl tetraphosphate, methyl parathion, organic phosphate compound mixtures, n.o.s., parathion, tetraethyl dithio pyrophosphate, or tetraethyl pyrophosphate, and in which the liquid is absorbed in an inert material, in addition to containers prescribed in paragraphs (a), (b), and (g) of this section, may be packed in specification containers as follows:

(1) Spec. 44D (§ 78.238 of this chapter). Multiwall paper bags not over 50 pounds net weight each. Where extensible kraft is used the minimum total basis weight shall be 260 pounds.

**§ 73.378 Beryllium metal powder.**

(a) Beryllium metal powder must be packed in specification containers as follows:

(1) Spec. 5, 5A, 5B, 6A, 6B or 6C (§§ 78.80, 78.81, 78.82, 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(2) Spec. 17H, 37A, or 37B (§ 78.118, § 78.131, or § 78.132 of this chapter). Metal drums (single-trip).

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 78.168, 78.169, 78.170, 78.185, or 78.190 of this chapter). Wooden boxes with inside metal cans not over 25 pounds capacity each.

(4) Spec. 12B or 12C (§ 78.205 or § 78.206 of this chapter). Fiberboard boxes with inside metal cans not over 25 pounds capacity each.

(5) Spec. 21C (§ 78.224 of this chapter). Fiber drums, with inside glass or metal containers of not over 25 pounds capacity each. Authorized net weight not over 225 pounds.

(6) Spec. 37P (§ 78.133 of this chapter). Steel drums, not over 5-gallons capacity, with polyethylene liner (nonreusable container). Drums exceeding 1-gallon capacity must be constructed of at least 24-gauge metal.

**§ 73.379 Cyanogen bromide.**

(a) Cyanogen bromide must be packed in tightly closed glass, earthenware, or metal inside containers not over 1-pound capacity each, securely cushioned and packed in outside wooden boxes. Net weight not over 25 pounds in one outside container.

**§ 73.381 Tear gas or irritating substances, class C, Tear Gas Label; definition.**

(a) For the purpose of Parts 71–78 of this chapter tear gases are liquid or solid substances which upon contact with fire or when exposed to air give off dangerous or intensely irritating fumes, such as brombenzylcyanide, chloracetophenone, diphenylaminechlorarsine, and diphenylchlorarsine, but not including any poisonous article, class A.

(b) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed, or in any case when necessary to prevent breakage or leakage.

(c) It shall not be permissible to transport class C poisons if there be any interconnecting means of any character between the containers.

**§ 73.382 Tear gas or irritating substances, class C, not specifically provided for.**

(a) Tear gas or irritating substances, class C, as defined in § 73.381(a) for which special packing is not prescribed, must be packed in specification containers as follows:

(1) Spec. 5, 5A, 5B or 5C (§ 78.80, 78.81, 78.82 or 78.83 of this chapter) metal barrels or drums; or spec. 17C (single-trip) (§ 78.115 of this chapter) metal drums not over 5 gallons capacity each.

(2) Spec. 6A, 6B, or 6C (§§ 78.97, 78.98, or 78.99 of this chapter). Metal barrels or drums.

(3) Spec. 15A or 15B (§§ 78.168 or 78.169 of this chapter). Wooden boxes with inside metal containers of not over 1 liquid gallon (10 pounds) capacity each. Not over 8 liquid gallons (80 pounds) of material may be packed in any outside container.

(4) Cylinders as prescribed for any compressed gas, except acetylene, are also authorized for use. These cylinders must be qualified, maintained, and filled in accordance with §§ 73.34 and 73.301 (g), if used for material with pressure exceeding 25 pounds per square inch at 70° F., they must also be retested as required by § 73.34.

(b) No class C poisons in cargo tanks. No "tear gases or irritating substances, class C" may be loaded into or transported in any cargo tank.

**§ 73.383 Chemical ammunition.**

(a) Chemical ammunition consisting of projectiles, shells, bombs, and other containers, except grenades, filled with gases, liquids, or chemicals class C without ignition elements, bursting charges, detonating fuzes, or other explosive components, must be packed for shipment in strong outside wooden or metal boxes. Boxes must be marked with name of contents and labeled as prescribed by this part for the gases, liquids, or chemicals contained therein.

(b) Chemical ammunition, when shipped as such, must not be equipped or packed with explosive or ignition elements (see §§ 73.53 (r) and 73.59 for explosive chemical ammunition).

**§ 73.384 Monochloracetone, stabilized.**

(a) Monochloracetone, stabilized, must be packed in specification containers as follows:

(1) Spec. 5, 5A or 17C (single-trip) (§ 78.80, 78.81 or 78.115 of this chapter). Metal barrels or drums.

(2) Spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter). Wooden boxes with inside glass bottles or tubes in hermetically sealed metal cans in corrugated fiberboard cartons, spec. 2C (§ 78.22 of this chapter). Bottles must contain not over 1 pound of liquid each, must be filled to not over 95 percent capacity, must be tightly and securely closed, and must be

cushioned in cans with at least ½ inch of absorbent material. Cans must be made of metal at least 32 gauge United States standard. Total amount of liquid in outside box must not exceed 24 pounds.

**§ 73.385 Tear gas grenades, tear gas candles, or similar devices.**

(a) Tear gas grenades, tear gas candles, or similar devices containing lachrymatory (tear producing) substances, for civil or military use must be packed in specification containers as follows (see § 73.101 (d) and (e) for packing tear gas cartridges):

(1) Spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter). Metal-strapped wooden boxes. Functioning elements not assembled in grenades or devices must be in a separate compartment of these boxes, or in inside or separate outside boxes, spec. 15A, 15B, or 15C, and must be so packed and cushioned that they may not come in contact with each other or with the walls of boxes during transportation. Not more than 24 grenades and 24 functioning devices shall be packed in one outside container and the gross weight of the package must not exceed 75 pounds.

(2) Spec. 37A (§ 78.131 of this chapter). Metal drum (single-trip). Functioning elements must be packed in separate compartment. Not more than 24 grenades and 24 functioning devices shall be packed in one outside container and the gross weight of the container must not exceed 75 pounds.

(b) These articles must not be assembled with or packed in the same compartment with mechanically or manually operated firing, igniting, bursting, or other functioning elements, unless of a type or design approved by the Bureau of Explosives.

(c) Pending approval by the Commission of regulations classifying the numerous devices within the general descriptions of this section, and providing appropriate restrictions to be observed in the transportation thereof, no shipment of packages containing articles under this section shall be made until samples thereof have been examined by the Bureau of Explosives or by other competent testing laboratory in the presence of representative of the Bureau of Explosives, and the shipment is shown to possess such resistance to shocks of transportation and protection against leakage of contents as are afforded by standard types of packages described in Part 78 of this chapter, and the packages are labeled or marked to show compliance with this part.

NOTE 1: Grenades or other similar devices may be shipped completely assembled when shipments are made by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government, provided the functioning element is so packed that it cannot accidentally function. The outside containers must be metal-strapped wooden boxes, spec. 15A, 15B, or 15C (§§ 78.168, 78.169, or 78.170 of this chapter).

**§ 73.391 Radioactive materials class D Poison; definition.**

(a) For the purpose of Parts 71–78 of this chapter, radioactive material is any material or combination of materials that spontaneously emits ionizing radiation. For the purpose of Parts 71–78 of this chapter, radioactive materials are divided into three groups according to the type of rays emitted at any time during transportation, as follows:

(1) *Group I.* Radioactive materials that emit gamma rays only or both gamma and electrically charged corpuscular rays.

(2) *Group II.* Radioactive materials that emit neutrons and either or both the types of radiation characteristic of Group I materials.

(3) *Group III.* Radioactive Materials that emit electrically charged corpuscular rays only, i. e., alpha or beta, etc., or any other that is so shielded that the gamma radiation at the surface of the package does not exceed 10 milliroentgens for 24 hours at any time during transportation.

(b) Not more than 2,000 millicuries of radium, polonium, or other members of the radium family of elements, and not more than 2,700 millicuries (disintegration rate of 100,000 million ($10^{11}$) atoms per second) of any other radioactive substance may be packed in one outside container for shipment by rail freight, rail express, or highway, except by special arrangements and under conditions approved by the Bureau of Explosives or except as specifically provided in subparagraph (c) of this section.

NOTE 1. For purposes of Parts 71–78 of this chapter 1 millicurie is that amount of any radioactive material which disintegrates at the rate of 37 million atoms per second. One thousand millicuries is equal to one curie.

(c) Not more than 300 curies of solid cesium 137, cobalt 60, gold 198, or iridium 192 may be packed in one outside container for shipment by rail freight, rail express, or highway, except by special arrangements and under conditions approved by the Bureau of Explosives.

**§ 73.392 Exemptions for radioactive materials.**

(a) Radioactive materials are exempt from prescribed packaging, marking, and labeling requirements provided they fulfill all of the conditions in subparagraphs (1), (2), and (3) of this paragraph. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817 and Part 197 of this chapter.

(1) The package must be such that there can be no leakage of radioactive material under conditions normally incident to transportation.

(2) The package must contain not more than 0.1 millicuries of radium, or polonium, or that amount of strontium 89, strontium 90, or barium 140 which disintegrates at a rate of more than 5 million atoms per second; or that amount of any other radioactive substance which disintegrates at a rate of more than 50 million atoms per second.

(3) The package must be such that no significant alpha, beta, or neutron radiation is emitted from the exterior of the package and the gamma radiation at any surface of the package must be less than 10 milliroentgens for 24 hours.

(b) Manufactured articles other than liquids, such as instrument or clock dials or electronic tubes and appartus, of which radioactive materials are a component part, luminous compounds, and thoria nickel in mill shapes, including tubes, plates, sheets and bars, when securely packed in strong outside containers are exempt from specification packaging, marking, and labeling requirements provided the gamma radiation at any surface of the package is less than 10 milliroentgens in 24 hours. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(1) Switchboard or similar apparatus containing electronic tubes, of which radioactive materials are a component part, are exempt from specification packaging, marking, and labeling requirements when shipped in carload or truckload lots or when transported by private motor carrier provided the gamma radiation at any readily accessible surface of the units when prepared for shipment does not exceed 50 milliroentgens in 24 hours. Shipments for transportation by highway carriers are exempt also from Part 77 of this chapter, except § 77.817, and Part 197 of this chapter.

(c) Radioactive materials such as ores, residues, salts of natural uranium and thorium, etc., of low activity packed in strong tight containers are exempt from specification packaging and labeling requirements for shipments in carload lots by rail freight only, provided the gamma radiation or equivalent will not exceed 10 milliroentgens per hour at a distance of 12 feet from any surface of the car and that the gamma radiation or equivalent will not exceed 10 milliroentgens per hour at a distance of 5 feet from either end surface of the car. There must be no loose radioactive material in the car and the shipment must be braced so as to prevent leakage or shift of lading under conditions normally incident to transportation. The car must be placarded by the shipper as provided in §§ 74.541(b) and 74.553 of this chapter. Except when handling is supervised by the Atomic Energy Commission, shipments must be loaded by consignor or his duly authorized agent and unloaded by consignee or his duly authorized agent.

(d) Detonating fuzes with radioactive components as described in § 73.53 (g) (2) are exempt from labeling requirements.

(e) Magnesium-thorium alloys containing not more than 4 percent nominal thorium 232, in formed shapes, must be in bundles, boxes, barrels or crates and as such are exempt from specification packaging but must be labeled as described in § 73.414(d). Other exemptions from loading, storage, and placarding are described in Parts 74, 75, and 77 of this chapter.

(f) Uranium, normal or depleted, in solid form (not borings, chips, or pieces) must be packed in strong, tight, wooden or plywood boxes and as such are exempt from specification packaging and marking except for conformance with § 73.393 (c) and (d). Boxes weighing more than 500 pounds must be mounted on skids. Boxes must be labeled as described in § 73.414(d). Other exemptions from loading, storage, and placarding are described in Parts 74, 75, and 77 of this chapter.

**§ 73.393 Packing and shielding.**

(a) Radioactive materials that present special hazards due to their tendency to remain fixed in the human body for long periods of time (i. e., radium, plutonium, and radioactive strontium, etc.) must, in addition to the packing hereinafter prescribed, be packed in inside metal containers specification 2R (§ 78.34 of this chapter), or other container approved by the Bureau of Explosives.

(b) All radioactive materials must be so packed and shielded that the degree of fogging of undeveloped film under conditions normally incident to transportation (24 hours at 15 feet from the package) will not exceed that produced by 11.5 milliroentgens of penetrating gamma rays of radium filtered by ½ inch of lead.

(c) The design and preparation of the package must be such that there will be no significant radioactive surface contamination of any part of the container.

(d) The smallest dimension of any outside shipping container for radioactive materials must be not less than 4 inches.

(e) All outside shipping containers must be of such design that the gamma radiation will not exceed 200 milliroentgens per hour or equivalent at any point of readily accessible surface. Containers must be equipped with handles and protective devices when necessary in order to satisfy this requirement.

(f) The outside shipping container for any radioactive material, unless specifically exempt by § 73.392 or unless approved by the Bureau of Explosives, shall be as follows:

(1) Spec. 15A, 15B, 19A, or 19B (§§ 78.168, 78.169, 78.190 or 78.191 of this chapter). Wooden boxes. Authorized for not more than 2,700 millicuries.

(2) Spec. 12B (§ 78.205 of this chapter). Fiberboard boxes. Authorized for not more than 2,700 millicuries.

(3) Spec. 21C (§ 78.224 of this chapter). Fiber drums. Authorized for not more than 2,700 millicuries. Authorized net weight not over 225 pounds.

(4) Spec. 6A, 6B, or 6C; 17C or 17H (single-trip) (§ 78.97, § 78.98, § 78.99, § 78.115, or § 78.118 of this chapter). Metal barrels or drums. Authorized for not more than 2,700 millicuries.

(5) Spec. 55 (§ 78.250 of this chapter), metal-encased, lead or uranium metal-shielded containers. Authorized for not more than 300 curies (see § 73.391). Containers must be equipped with a seal.

(g) Radioactive materials Group I, liquid, solid, or gaseous, must be packed in suitable inside containers completely surrounded by a shield of lead or other suitable material of such thickness that at any time during transportation the gamma radiation at one meter (39.3 inches) from any point on the radioactive source will not exceed 10 milliroentgens per hour. The shield must be so designed that it will not open or break under conditions incident to transportation. The minimum shielding must be sufficient to prevent the escape of any primary corpuscular radiation to the exterior of the outside shipping container.

(h) Radioactive materials Group II, liquid, solid, or gaseous, must be packed in suitable inside containers completely shielded so that at any time during transportation the radiation measured at right angles to any point on the long axis of the shipping container will not exceed the limits specified in subparagraphs (1) to (4) of this paragraph. The shielding must be designed so as to maintain its efficiency under conditions normally incident to transportation and must provide personnel protection against fast or slow neutrons and all other ionizing radiation originating in the radioactive materials or any part of the aggregate constituting the complete package.

(1) Gamma radiation of 10 mrhm.

(2) Electrically charged corpuscular radiation which is the physical equivalent (see note 1 of this paragraph) of 10 mrhm. of gamma radiation.

(3) Neutron radiation which is the physical equivalent (see Note 1 of this paragraph) of 2 mrhm. of gamma radiation.

(4) If more than one of the types of radiation named in subparagraphs (1), (2), and/or (3) of this paragraph is present the radiation of each type must be reduced by shielding so that the total does not exceed the equivalent of subparagraphs (1), (2), or (3) of this paragraph.

NOTE 1: For purposes of Parts 71–78 of this chapter the "physical equivalent" of a roentgen is that amount of radiation that would be absorbed in tissue to the extent of approximately 100 ergs per gram (mrhm. is an abreviation for milliroentgens per hour at 1 meter (39.3 inches)).

(i) Liquid radioactive materials Groups I, II or III must, in addition, be packed in tight glass, earthenware, or other suitable inside containers. The inside containers must be surrounded on all sides by an absorbent material sufficient to absorb the entire liquid contents and of such nature that its efficiency will not be impaired by chemical reaction with the contents. Where use of shielding is necessary to reduce radiation to limits prescribed by this section, the absorbent cushioning material must be placed within the shield. If the container is packed in a metal container specification 2R (§ 78.34 of this chapter) or other container approved by the Bureau of Explosives, the absorbent cushioning is not required.

(j) Radioactive materials Group III, liquid, solid or gaseous, must be packed in suitable inside containers completely wrapped and/or shielded with such material as will prevent the escape of primary corpuscular radiation to the exterior of the shipping container, and secondary radiation at the surface of the container must not exceed 10 milliroentgens per 24 hours, at any time during transportation.

(k) In determining compliance with requirements of paragraphs (e), (g), (h), and (j) of this section, measurements of radiation must be made with a Landsverk Electrometer Model L–75 or equally efficient standardized meter.

**§ 73.394 Radioactive materials labels.**

(a) Each outside container of radioactive material Group I or II, unless exempt by § 73.392, must be labeled with a properly executed label as described in § 73.414(a).

(b) Each outside container of radioactive material Group III must unless exempt by § 73.392, be labeled with a properly executed label as described in § 73.414 (b).

(c) Each bundle, box, barrel, or crate of magnesium-thorium alloys in formed shapes or uranium, normal or depleted, in solid metal form must be labeled with a label as described in § 73.414(d) unless exempt by § 73.392 (a) and (b).

**§ 73.395 Cleaning cars and vehicles.**

(a) Any box car or motor vehicle which, after use for the transportation of radioactive materials in carload or truckload lots, is contaminated with such materials to the extent that a survey of the interior surface shows that the beta-gamma radiation is greater than 10 milliroentgens physical equivalent in 24 hours or that the average alpha contamination is greater than 500 disintegrations per minute per 100 square centimeters shall be thoroughly cleaned in such a manner that a resurvey of the interior surface shows the contamination to be below these levels. A certificate to that effect must be furnished to the local agent of the carrier or to the driver of the motor vehicle. Cars and motor vehicles which are used solely for the transportation of radioactive materials are exempt from the provisions of this section.

**§ 73.396 Radioactive materials, handling.**

(a) When radioactive materials are loaded into railroad cars or motor vehicles by the shipper, the shipper shall observe all applicable requirements of Parts 74, 75, or 77 of this chapter, as the case may be.

## Subpart H—Marking and Labeling Explosives and Other Dangerous Articles

NOTE. The markings prescribed for containers should be as near together as possible.

**§ 73.400 Explosives.**

(a) Each package containing explosives must be marked with its proper shipping name as shown in § 72.5 of this chapter and such other marking as prescribed for the explosive in the shipment. Abbreviations must not be used. (See Note 1).

NOTE 1: In descriptions of ammunition, such as ammunition for cannon without projectiles, etc., the words with or without may be abbreviated as W or W/O, i. e., Ammunition for cannon W/O projectiles.

NOTE 2: Explosives in containers bearing markings prescribed by regulations in effect at the time of packaging may be shipped by the Departments of the Army, Navy or Air Force of the United States Government, in carload and truckload quantities only, without containers being remarked to comply

with regulations in effect at the time of shipment. The bill of lading or other shipping paper must describe the material by its proper shipping name as shown in § 72.5 of this chapter.

(b) Packages containing explosives must show on top the marking "THIS SIDE UP" when required by § 73.60 (e) (1) and §§ 73.63 (f) and 73.65 (i).

(c) Each package of explosives must show the name and address of the consignee except in carloads and truckloads or less-than-truckloads when handled by a motor vehicle not requiring transfer from one motor carrier to another. When offered for transportation by carrier by water each package must show the name or mark of the consignor and/or consignee.

(d) Each package of chemical ammunition, explosive, containing poisonous gases, solids or liquids, class A, class B or class C must also have securely attached to it labels prescribed by § 73.409 (a) (1), (a) (2), or (a) (3).

(1) Carload or truckload shipments of chemical ammunition, explosive, containing poisonous gases, solids or liquids, class A, class B, or class C offered for transportation by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government are exempt from labeling requirements when shipments are loaded or unloaded by the shipper or his duly authorized agent and such shipments are accompanied by qualified personnel supplied with equipment to repair leaks or other container failure which will permit escape of contents.

(e) Each shipment of samples of explosives when offered for transportation by carriers by rail express or water must bear the label prescribed by § 73.411 and each shipment of special fireworks in addition to the marking prescribed by § 73.91 (i) when offered for transportation by carriers by rail express or water must bear the label prescribed by § 73.410.

(f) Each shipment of explosive power devices class B, igniters, jet thrust (jato), class B explosives, jet thrust units (jato), class B explosives, propellant explosives, class B, or starter cartridges, jet engine, class B explosives, when offered for transportation by carriers by rail express, must bear the label prescribed by § 73.412.

(g) Each package of explosives must be marked with the I. C. C. specification number as prescribed by the specification, if an I. C. C. specification container is required.

### § 73.401 Dangerous articles.

(a) Packages containing flammable liquids, flammable solids, oxidizing materials, corrosive liquids, compressed gases, and poisons, as defined in this part must be marked, unless exempted, with the proper shipping name as shown in the commodity list (see § 72.5 of this chapter). For tank cars this marking must appear either on the placards or commodity cards.

(1) Every portable tank used for the transportation of any dangerous article shall be conspicuously and legibly marked on a background of sharply contrasting color with a sign or lettering on the tank with words as appropriate "CORROSIVE LIQUID", "COMPRESSED GAS", or "FLAMMABLE COMPRESSED GAS" and with the proper shipping name as shown in the commodity list (see § 72.5 of this chapter); the height of all required lettering shall be at least 2 inches or 1/10 the diameter of the tank, whichever is the greater; every portable tank container shall be marked with the owner's name; in addition to the markings hereinbefore required, there may be marked on any portable tank container the trademark appropriate to the commodity being transported therein: *Provided, however*, That no such marking shall be of such size and character as to render inconspicuous the required markings. No markings either required or permitted under the terms of this subparagraph shall be in lieu of any other marking or markings required by the Commission.

(b) Each package of dangerous articles must show the name and address of the consignee except in carloads and truckloads or less-than-truckloads when handled by a motor vehicle not requiring transfer from one motor carrier to another.

(c) Packages containing flammable liquids in inside containers of 1 quart capacity or larger, or corrosive liquids, acids, alkaline caustic liquids, liquid oxidizing materials and poisonous liquids in inside containers regardless of capacity, unless specifically exempted or otherwise provided in this part, must be packed with filling holes up, and except for carboys not completely boxed, the outside container must be plainly marked "This Side Up" or "This End Up" on the cover or top to indicate the position of the inside containers. This requirement does not apply to materials in inside metal cans of the nonrefillable type with spun-in head and base and having no replaceable cap or other closing device.

(d) Each package must show the specification marking as required if a specification container is prescribed.

(e) Additional shipping information not inconsistent with Parts 71–78 of this chapter may be shown on a container if so desired but no such label or marking shall be of a design, or form, or size, as may be confused with the marking required by Parts 71–78 of this chapter.

### § 73.402 Labeling dangerous articles.

(a) Each package containing any dangerous article as defined by Parts 71–78 of this chapter must be conspicuously labeled by the shipper as follows, except as otherwise provided:

(1) "Red label" as described in § 73.405 on containers of flammable liquids, except when exempted from the regulations by § 73.118. If flammable liquid is also a class A poison or a radioactive material poison D, the "poison gas" label or "radioactive materials" label must also be applied to the package.

(2) "Yellow label" as described in § 73.406 on containers of flammable solids and oxidizing materials, except when exempted from the regulations by §§ 73.153 and 73.182. If flammable solid or oxidizing material is also a class A poison or a radioactive material poison D, the "poison gas" label or "radioactive materials" label must also be applied to the package.

(3) "White label" as described in § 73.407 (a) (1), (2) and (3) on containers of acids, alkaline caustic liquids or corrosive liquids, except when exempted from regulations by § 73.244. If the acid, alkaline caustic liquid or corrosive liquid is also a class A poison or a radioactive material poison D, the "poison gas" label or "radioactive materials" label must also be applied to the package.

(4) "Red label" as described in § 73.408 (a) (1) on containers of flammable compressed gases, except when exempted from the regulations by § 73.302. If the flammable compressed gas is also a class A poison or a radioactive material poison D, the "poison gas" label or "radioactive materials" label must also be applied to the package.

(5) "Green label" as described in § 73.408 (a) (2) on containers of nonflammable compressed gases, except when exempted from the regulations by § 73.302. If the nonflammable compressed gas is also a class A poison or a radioactive material poison D, the "poison gas" label or "radioactive materials" label must also be applied to the package.

(6) "Poison gas" label as described in § 73.409 (a) (1) on containers of class A poisons.

(7) "Poison" label as described in § 73.409 (a) (2) on containers of class B poison liquids or solids, except when exempted from the regulations by § 73.345 and § 73.364. If the class B poison liquid or solid is also a radioactive material poison D, the "radioactive materials" label must also be applied to the package.

(8) "Radioactive Materials" label as described in § 73.414 (a) on containers of class D poisons, Groups I and II, except when exempted by § 73.392.

(9) "Radioactive Materials" label as described in § 73.414 (b) on containers of class D poisons, Group III, except when exempted by § 73.392.

(10) "Radioactive materials" label as described in § 73.414(d) on bundles, boxes, barrels or crates of magnesium-thorium alloys as provided for by § 73.392(e).

(11) "Tear gas" label as described in § 73.409(a)(3) on containers of poisons, class C.

(12) "Bung label" as described in § 73.119(i) on metal barrels or drums containing flammable liquids with vapor pressure exceeding 16 pounds per square inch absolute.

(13) "Empty label" as described in § 73.413 must be applied to containers which have been emptied and on which the old label has not been removed, obliterated, or destroyed. It must be so placed on the container as to completely cover the old label.

(14) Labels authorized for shipments of explosives and other dangerous articles by air, as shown in §§ 73.405(b), 73.406(b), 73.407(b), 73.408(b), 73.409 (b), 73.410(b), 73.411(b), 73.412(b), and 73.414(c), may be used in lieu of labels otherwise prescribed for surface transportation to or from airport.

(b) Labels when applied to packages offered for transportation by rail express, rail baggage, or other forms of transportation for which a certified shipping order, bill of lading, or other shipping paper is not required, must show shipper's name in printing, stamping, or writing underneath the certificate printed thereon.

(1) Labels authorized for shipments of explosives and other dangerous articles by air are shown in §§ 73.405(b), 73.406(b), 73.407(b), 73.408(b), 73.409 (b), 73.410(b), 73.411(b), 73.412(b), and 73.414(c). Shipments so labeled must be tendered with a signed certificate, in duplicate, reading as follows (one signed copy shall accompany each shipment and the other signed copy shall be retained by the original carrier):

This is to certify that the contents of this package are properly described by name and are packed and marked and are in proper condition for transportation according to regulations prescribed by the Interstate Commerce Commission and the Administrator of the Federal Aviation Agency. (For shipments on passenger-carrying aircraft the following must be added to certificate: This shipment is within the limitations prescribed for passenger-carrying aircraft.)

(c) Labels and marking name of contents are not required on carload or truckload quantities of dangerous articles, except class A, class C, or class D poisons, by rail freight, rail express, or highway, when such shipments are unloaded by the consignee or his duly authorized agent from the car or motor vehicle in which originally loaded.

(1) Carload or truckload shipments of class A, class B, class C, or Class D poisons offered for transportation by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government are exempt from labeling requirements when shipments are loaded or unloaded by the shipper or his duly authorized agent and such shipments are accompanied by qualified personnel supplied with equipment to repair leaks or other container failure which will permit escape of contents.

(d) Except on class A, class C, or class D poisons, labels are not required on less-than-truckload shipments by motor vehicle by public highway when the articles are readily identifiable by reason of type of container or when the container is plainly marked to indicate its contents and;

(1) When the shipment is transported from origin to destination without transfer between vehicles and;

(2) When the shipper or its employees are in direct control or perform the loading, transporting and unloading.

(e) When it is known that subsequent shipments of these packages may be made by consignees in less-than-carload or less-than-truckload quantities, or in carload or truckload quantities to a point where they may be handled by other than the original consignee, the original shipper should attach labels to the packages as would be required for less-than-carload or less-than-truckload shipments.

### § 73.403 Labels for mixed packing.

(a) Use red label only when red and other labels are prescribed except when poison gas label or radioactive materials label are prescribed then both the red label and the poison gas label or red label and radioactive materials label must be used.

(b) Use white acid (alkaline caustic liquid or corrosive liquid) label only when white acid (alkaline caustic liquid or corrosive liquid) and yellow or poison labels are prescribed or poison labels (class B) are prescribed, except when poison gas label or radioactive materials label are prescribed then both the white acid label and the poison gas label or white acid and radioactive materials label must be used.

(c) Use yellow label only when yellow and poison labels are prescribed except when poison gas label or radioactive materials label are prescribed then both the yellow label and the poison gas label or the yellow label and the radioactive materials label must be used.

### § 73.404 Labels.

(a) Shippers must furnish and attach the labels prescribed for their packages. Labels should be applied to that part of the package bearing consignee's name and address.

(b) Labels must not be applied to packages containing articles which are not subject to Parts 71–78 of this chapter or are exempted therefrom.

(c) Shippers must not use labels which by their size, shape, and color, may readily be confused with the standard caution labels prescribed in this part.

(d) Labels must conform to standards as to size, printing, and color, and samples will be furnished, on request, by the Bureau of Explosives.

(e) A combination diamond-shaped label-tag of proper size and color, bearing on one side the shipping information and on the reverse side the wording prescribed in this part, will be permitted.

(f) As certification of compliance with regulations is also required by other Government agencies, and to avoid multiplicity of certifications, there may be added to the certificate on labels "and the Commandant of the Coast Guard," or "and the Administrator of the Federal Aviation Agency," or "and the Post Office Department," as is necessary.

(g) The carriers's name and stationery form number, or the shipper's name and address, may be printed on the labels, in type not larger than 10 point, if placed within the black-line border and in the upper or lower corner of the diamond.

(h) Labels remaining on hand and which were authorized by regulations in effect on December 31, 1950, may be used until present stocks are exhausted.

### § 73.405 Flammable liquids label.

(a) Labels for flammable liquids must be of diamond shape, bright red in color, and with each side 4 inches long. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

RED LABEL FOR FLAMMABLE LIQUIDS

(Reduced size)

(Black printing on red)

(b) Red label for flammable liquids for shipment by air.

Red and black with (black printing on red)

### § 73.406 Flammable solids and oxidizing materials label.

(a) Labels for flammable solids and oxidizing materials must be of diamond shape, bright yellow in color, and with each side 4 inches long. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

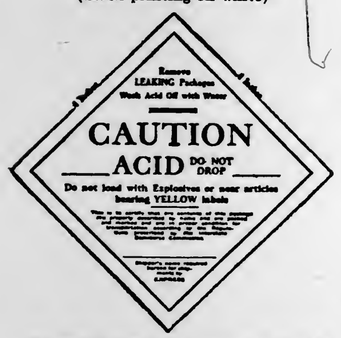
YELLOW LABEL FOR FLAMMABLE SOLIDS AND OXIDIZING MATERIALS

(Reduced size)

(Black printing on yellow)

(b) **Yellow label for flammable solids and oxidizing materials for shipment by air.**

Yellow and black with (black printing on yellow)



**§ 73.407 Acids, corrosive liquids, and alkaline caustic liquids label.**

(a) Labels for corrosive liquids, acids and alkaline caustic liquids must be of diamond shape, white in color, and with each side 4 inches long. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

(1) White label for acids:

(Reduced size)

(Black printing on white)

(2) White label for corrosive liquids.

(Reduced size)

(Black printing on white)

(3) White label for alkaline caustic liquids.

(Reduced size)

(Black printing on white)

(b) Labels for shipments of acids, corrosive liquids, and alkaline caustic liquids by air must be as shown in the following:

(1) White label for acids for shipment by air.

(White and black with black printing on white)

(2) White label for corrosive liquids for shipment by air.

(White and black with black printing on white)

(3) White label for alkaline caustic liquids for shipment by air.

(White and black with black printing on white)

**§ 73.408 Compressed gas labels.**

(a) Labels for compressed gases must be of diamond shape, bright red in color for flammable gases and bright green for nonflammable gases, and with each side 4 inches long. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

(1) Red label for flammable gases.

(Reduced size)

(Black printing on red)

(2) Green label for nonflammable gases.

(Reduced size)

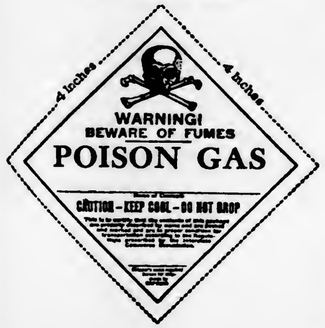
(Black printing on green)

(b) Red label for flammable gases for shipment by air.

Red and black with (black printing on red)

(1) Green label for nonflammable gases for shipment by air.

Green and black with (black printing on green)



**§ 73.409 Poisonous articles and tear gas labels.**

(a) Labels for poisonous articles and tear gases must be of diamond shape, white in color, and with each side 4 inches long. Printing must be in red letters inside of a red-line border measuring 3½ inches on each side and as shown in this section.

(1) Poison gas label.

(Reduced size)

(Red printing on white)

(2) Poison label.

(Reduced size)

(Red printing on white)

(3) Tear gas label.

(Reduced size)

(Red printing on white)

(b) Label for shipment of poisonous articles, class B or class C, by air must be as shown in the following:

(1) Label for poisons for shipment by air.

White and red with (red printing on white)

**§ 73.410 Special fireworks label.**

(a) Labels for special fireworks must be square measuring 4 inches on each side and bright red in color. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side as shown in this section.

RED LABEL FOR SPECIAL FIREWORKS

(Reduced size)

(Black printing on red)

(b) Explosives label for shipment of special fireworks by air.

(Black printing on red)

**§ 73.411 Explosives samples for laboratory examination label.**

(a) Labels for samples of explosives for laboratory examination must be square measuring 4 inches on each side and bright red in color. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

RED LABEL FOR SAMPLES OF EXPLOSIVES

(Reduced size)

(Black printing on red)

(b) Explosives label for shipment of samples of explosives by air.

(Black printing on red)

**§ 73.412 Explosives, class B, label for express shipment.**

(a) Label for class B explosives, except special fireworks (see § 73.410), must be square measuring 4 inches on each side and bright red in color. Printing must be in black letters inside of a black-line border measuring 3½ inches on each side and as shown in this section.

(1) Red label for Class B explosives for express shipment.

(Reduced size)

(Black printing on red)

4 inches

EXPLOSIVES
CLASS B

HANDLE CAREFULLY
KEEP FIRE AWAY
DO NOT DROP OR THROW

This package must not be loaded or stored near steam pipes or other source of heat

This is to certify that the contents of this package are properly described by name and are packed and marked and are in proper condition for transportation according to the regulations prescribed by the Interstate Commerce Commission.

(Shipper's name)

4 inches

(b) Explosives label for shipment of class B explosives by air.

NOTE: No change in label.

(Black printing on red)

**§ 73.413 Empty container label.**

(a) Labels for empty containers must be not less than 6 inches on each side, white in color, and printed in letters not less than 1 inch high in black ink and as shown in this section.

WHITE LABEL FOR EMPTY CONTAINERS

(Reduced size)

(Black printing on white)

6 inches

EMPTY

6 inches

**§ 73.414 Radioactive materials labels.**

(a) Labels for radioactive materials (class D poisons) Group I and Group II must be of diamond shape, white in color, and with each side 4 inches long. Printing must be in red letters inside of a red-line border measuring 3½ inches on each side, as shown in this section.

LABEL FOR RADIOACTIVE MATERIALS GROUP I OR II

(Reduced size)

(Red printing on white)

NOTE: This label must be duly executed by the shipper and the number of radiation units must be shown. For purposes of these regulations 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm of hard gamma rays of radium filtered by ½ inch of lead.

(b) Labels for radioactive materials (class D poisons) Group III must be of diamond shape, white in color, and with each side 4 inches long. Printing must be in blue letters inside of a blue-line border measuring 3½ inches on each side, and as shown in this section.

LABEL FOR RADIOACTIVE MATERIALS GROUP III

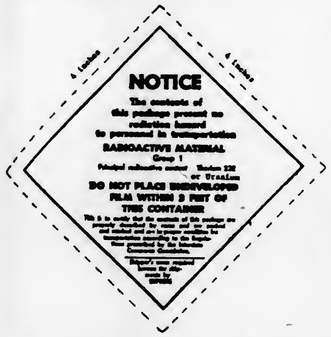
(Reduced size)

(Blue printing on white)

(c) Label for Radioactive Materials Groups I and II for shipment by air.

Red and white with (red printing on white)

NOTE 1: This label must be duly executed by the shipper and the number of radiation units must be shown. For purposes of these regulations 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm of hard gamma rays of radium filtered by ½ inch of lead.



(1) Label for Radioactive Materials Group III for shipment by air.

Blue and white with (blue printing on white)

(d) Label for radioactive material, such as magnesium-thorium alloys in formed shapes or uranium, normal or depleted, in solid metal form (see § 73.392 (e) or (f)), must be of diamond shape, white in color, and with each side 4 inches long. Printing must be in red letters inside of a red-line border measuring 3½ inches on each side, as shown in this paragraph.

## Subpart I—Shipping Instructions

**§ 73.425 "Order-Notify," "C.O.D.," and "Stop-off" shipments.**

(a) Except on through bills of lading to a foreign country, shipments of explosives, class A and blasting caps in any quantity must not be offered for transportation by carriers by rail freight or rail express when consigned "to order notify" or "C.O.D.". Shippers must not consign these shipments to themselves at points where they have not a resident representative.

(b) Explosives, class A must not be offered for transportation by carriers by rail freight or rail express subject to "stop-off" privileges en route for partial loading or unloading.

**§ 73.426 Cars containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases.**

(a) Delivery to carrier of cars containing lading fumigated or treated with flammable liquid or flammable gas is prohibited until 48 hours have elapsed after such fumigation or treatment, or until car has been ventilated so as to remove danger of fire or explosion due to the presence of flammable vapors.

(b) Cars containing lading which has been fumigated or treated with poisonous liquid, solid, or gas, such as carbolic acid, liquid or solid, chlorpicrin, hydrocyanic acid, methyl bromide, etc., must be placarded on each door or near thereto with placard reading as follows (for cleaning cars, see § 74.566 of this chapter):

(Reduced size)

(Red lettering on white cardboard)

10 inches

8 inches

DANGER

The lading of this car has been FUMIGATED or TREATED with

(Name of poisonous liquid, solid, or gas)

BEFORE UNLOADING, open both doors and DO NOT ENTER until car is free of gas. REMOVE ALL POISONOUS MATERIAL before release of empty car.

**§ 73.427 Shipping order and bill of lading description.**

(a) The shipper when offering for transportation by carriers by rail freight, rail express, highway, or water any class A, class B, or class C explosive, flammable liquid, flammable solid, oxidizing material, corrosive liquid, compressed gas, or poison, as defined by this part, must describe such article in the shipping order, bill of lading or other shipping paper by the shipping name used in § 72.5 (see commodity list) of this chapter and may add a further description not inconsistent therewith. Abbreviations must not be used. For shipments of blasting caps and/or electric blasting caps the shipper must, in addition, show the number of caps in the shipment.

NOTE 1: In commodity list (§ 72.5 of this chapter) shipping names are shown in roman, not *italics*.

**§ 73.428 Label or placard notation.**

(a) The shipping order, bill of lading or other shipping paper must also show thereon in connection with and following the entry of the article as prescribed in § 73.427, the color or kind of label applied, and for cars containing such articles loaded by the shipper, requiring placards the kind of placard applied to the car.

**§ 73.429 Receipts; rail express shipments.**

(a) A receipt upon the form prescribed by the originating rail express carrier must be issued to the shipper for each express shipment of explosives or other dangerous articles accepted for transportation. Before a receipt is issued, the shipper must apply the label prescribed in this part to each package containing any article requiring a label under Parts 71–78 of this chapter.

(b) Each receipt must show the proper and definite name of commodity, as listed in § 72.5 of this chapter, and the color or kind of label applied to the package if any is required. Abbreviations must not be used.

**§ 73.430 Certificate.**

(a) The shipper offering for transportation by carriers by rail freight, highway, water, or air, any class A or class B explosive and blasting caps or electric blasting caps in any quantity, and any flammable liquid, flammable solid, oxidizing material, corrosive liquid, compressed gas, or poison, requiring labels, or carloads requiring placards, as prescribed by Parts 71–78 of this chapter, must show on the shipping order, bill of lading, or other shipping paper, in the lower left-hand corner, the following certificate over the written or stamped facsimile signature of the shipper or his duly authorized agent:

This is to certify that the above named articles are properly described, and are packed and marked and are in proper condition for transportation according to the regulations prescribed by the Interstate Commerce Commission.

(b) For the relief of shippers from multiplicity of certifications required for packages which may move by various means of transportation, shipments may be certified for rail, motor vehicle, water, or air transportation by adding to the certificate required on the shipping document "and the Commandant of the Coast Guard," or "and the Administrator of the Federal Aviation Agency," as the case may be.

(c) Shipping papers for shipments made by air between the United States and other countries shall be certified in duplicate with certificate signed by the shipper reading as follows:

This is to certify that the contents of this package are properly described by name and are packed and marked and are in proper condition for transportation according to the regulations prescribed by the Interstate Commerce Commission and the Administrator of the Federal Aviation Agency. (For shipment on passenger-carrying aircraft the following must be added to certificate: This shipment is within the limitations prescribed for passenger carrying aircraft.)

**§ 73.431 Switching ticket.**

(a) When the initial movement is a switching operation, the switching order, switching receipt or switching ticket, and copies thereof, prepared by the shipper, must bear the placard indorsement and the shipper's certificate prescribed by §§ 73.430 and 74.584 (a) and (b) of this chapter.

**§ 73.432 Tank car shipments.**

(a) Tank cars containing flammable liquids or flammable poison gas having a flash point of 80° F. or below, except liquid road asphalt or tar, must not be offered for shipment unless originally consigned or subsequently reconsigned to parties having private-siding (see Note 1 of this section) or to parties using railroad-siding facilities which have been equipped for piping the liquid from tank cars to permanent storage tanks of sufficient capacity to receive contents of car.

(b) A tank car containing any compressed gas must not be offered for transportation unless the car is consigned for delivery (see paragraph (c) of this section) and unloading on a private track (see Note 1 of this section),

except that where no private track is available, delivery and unloading on carrier tracks is permitted provided the following conditions are complied with:

(1) Any tank car of ICC–106A or 110A type (see § 78.275, § 78.276 or § 78.293 of this chapter) may be offered for transportation and the loaded unit tanks may be removed from car frame on carrier tracks, provided the shipper has obtained from the delivering carrier and filed with originating carrier, written permission (see Note 2 of this section) for such removal. The consignee must furnish adequately safe mechanical hoist, obtained from the carrier if desirable, by which the tanks shall be lifted from the car and deposited directly upon vehicles furnished by the consignee for immediate removal from carrier property or tanks must be lifted by adequately safe mechanical hoist from car directly to vessels for further transportation.

(c) Any tank car of other than ICC–106A or 110A type (see § 78.275, § 78.276, or § 78.293 of this chapter), containing anhydrous ammonia, liquefied hydrocarbon or liquefied petroleum gas, and having interior pipes of liquid and gas discharge valves equipped with check valves, may be consigned for delivery and unloading on carrier tracks, if the lading is piped directly from the car to permanent storage tanks of sufficient capacity to receive the entire contents of the car. Such cars may also be consigned for storage on a private track or on a carrier track when designated by the carrier for such storage.

(d) For cars of the ICC–106A or 110A type (see § 78.275, § 78.276 or § 78.293 of this chapter), the tanks must be placed in position and attached to the car structure by the shipper.

(e) Flammable liquids must not be loaded into tank cars on carriers' property from tank trucks, wagons or drums.

Note 1: For this purpose, a private track is a track outside of carrier's right-of-way, yard, and terminals, and of which the carrier does not own either the rails, ties, roadbed or right-of-way; or a track or portion of a track which is devoted to the purpose of its user, either by lease or written agreement; in which case the lease or written agreement will be considered as equivalent to ownership.

Note 2: Carriers should give permission for the unloading of these containers on carrier tracks only where no private siding is available within reasonable trucking distance of final destination. The danger involved is the release of compressed gases due to accidental injury to container in handling. The exposure to this danger decreases directly with the isolation of the unloading point.

---

## PART 74—CARRIERS BY RAIL FREIGHT

Sec.

74.500 Purpose of the regulations in Parts 71–78 of this chapter.
74.501 Acceptable articles.
74.502 Forbidden explosives.
74.503 "Order—Notify", "C. O. D.", and "Stop-off" shipments.
74.504 Carriers' material and supplies.
74.505 Canadian shipments.
74.506 Improperly packed or damaged shipments in transportation.
74.507 Labels.
74.508 Violations and accidents to be reported.
74.509 Quantity limitations.

Subpart A—Loading, Unloading, Placarding and Handling Cars; Loading Packages Into Cars

74.525 Loading packages of explosives in cars, selection, preparation, inspection and certification.
74.526 Loading explosives into cars.
74.527 Forbidden mixed loading and storage.
74.528 Protect explosives from injury.
74.529 Cars for class B explosives.
74.530 Cars for class C explosives.
74.531 Lights.
74.532 Loading other dangerous articles.
74.533 Truck bodies or trailers on flat cars
74.534 Portable containers or tanks.

Subpart B—Loading and Storage Chart of Explosives and Other Dangerous Articles

74.538 Loading and storage chart of explosives and other dangerous articles.

Subpart C—Placards on Cars

74.540 "Explosives" placards.
74.541 "Dangerous" placards; "Dangerous—Radioactive material" placards; or "Caution—Residual phosphorus" placards.
74.542 "Poison gas" placards.
74.543 Placarding cars; passenger trains.
74.544 Placards not required.
74.545 Commodity name on carloads.
74.546 Placards must be standard.
74.547 Carrier's supply of placards.
74.548 Placarded cars.
74.549 Application of placards.
74.550 Explosives, class A placard.
74.551 Poison gas placard.
74.552 Dangerous placard.
74.553 Dangerous—Radioactive material placard.
74.554 Unauthorized use of placards.
74.555 "Caution — Residual phosphorus" placard.
73.556 Flammable poison gas placard.
73.557 Poison gas placard.

Subpart D—Unloading From Cars

74.560 Tank car delivery.
74.561 Tank car unloading.
74.562 Removal of placards and car certificate after unloading.
74.563 "Dangerous—Empty" placard.
74.564 Removal and disposition of explosives and other dangerous articles at destination.
74.565 Violations and accidents to be reported.
74.566 Cleaning cars.
74.567 Flammable vapors.

Subpart E—Handling by Carriers by Rail Freight

74.575 Restrictions.
74.576 Intermediate shippers and carriers.
74.577 Shipping days for explosives.
74.578 Flammable vapors.
74.579 Cars containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases.
74.580 Violations must be corrected.
74.581 Routing shipments.
74.582 Movement to be expedited.
74.583 Examination of shipping order and packages.
74.584 Waybills, switching orders, or other billing.
74.585 Nonagency shipments.
74.586 Handling explosives and other dangerous articles.
74.587 Lights.
74.588 Disposition of damaged or astray shipments.
74.589 Handling cars.
74.590 Record of change of seals of cars of explosives to be made.
74.591 Car magazines.
74.592 Cotton fires.
74.593 Charcoal fires.
74.594 Leaking tank cars.
74.595 Examination of empty tank cars.
74.596 Inspection of tank cars.
74.597 Leaking packages of acids or poisons.
74.598 Inspection of cars at interchange.
74.599 Handling by electric railways and motor cars.
74.600 In case of a wreck.
74.601 Calcium hypochlorite compounds, dry, involved in fires.
74.602 Placarded cars involved in fires.

AUTHORITY: The provisions of this Part 74 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

### § 74.500 Purpose of the regulations in Parts 71–78 of this chapter.

(a) To promote the uniform enforcement of law and to minimize the dangers to life and property incident to the transportation of explosives and other dangerous articles by rail freight carriers engaged in interstate or foreign commerce, Parts 71–78 of this chapter are prescribed to define these articles for transportation purposes and to state the precautions that must be observed by the carrier in handling them while in transit. It is the duty of each such carrier to make the prescribed regulations effective and to thoroughly instruct employes in relation thereto.

### § 74.501 Acceptable articles.

(a) Explosives, including samples of explosives and explosive articles not exceeding 5 pounds net weight and other dangerous articles may be accepted and transported, provided they are in proper condition and are certified for transportation by rail, highway, or water. Articles must be loaded, stayed, and handled in transit according to regulations applying to service or services used. Methods of manufacture, packing, and storage, in so far as they affect safety in transportation, must be open to inspection by a duly authorized representative of the initial carrier or by the Bureau of Explosives. Shipments of explosives or other dangerous articles not in proper condition for transportation, or loaded or stayed as required, or certified as to proper packing, marking and description as required in Parts 71–78 of this chapter, must not be accepted for transportation or transported.

### § 74.502 Forbidden explosives.

(a) The acceptance of the following articles for transportation by common carrier by rail freight, is forbidden:

(1) Diazodinitrophenol, dry.

(2) Dynamite, except gelatin dynamite, containing over 60 percent of liquid explosive ingredient.

(3) Dynamite having an unsatisfactory absorbent, or one that permits leakage of a liquid explosive ingredient under any conditions liable to exist during transportation or storage.

(4) Explosive compositions that ignite spontaneously or undergo marked decomposition when subjected for 48 consecutive hours to a temperature of 75° C. (167° F.).

(5) Explosives containing an ammonium salt and a chlorate.

(6) Explosives condemned by the Bureau of Explosives (except properly packaged samples for laboratory examinations).

(7) Explosives not packed, marked, described, and certified, in accordance with Parts 71–78 of this chapter.

(8) New explosives (except samples for laboratory examination (see § 73.86 of this chapter)) until approved for transportation by the Bureau of Explosives.

(9) Condemned or leaking dynamite must not be repacked and offered for shipment unless the repacking is done by a competent person in the presence of, or with the written consent of, an inspector, or with the written authority of the chief inspector, of the Bureau of Explosives.

(10) Leaking or damaged packages of explosives must not be accepted for transportation or transported by rail. Should any package of high explosives when offered for shipment show excessive dampness or be moldy or show outward signs of any oily stain or other indication that absorption of the liquid part of the explosive is not perfect, or that the amount of the liquid part is greater than the absorbent can carry, the package must be refused in every instance. The shipper must substantiate any claim that a stain is due to contact with material other than the liquid explosive ingredient of an explosive. In case of doubt the package must be rejected.

(11) Firecrackers, flash crackers, or salutes, the explosive contents of which exceed 12 grains each in weight.

(12) Fireworks that combine an explosive and a detonator or blasting cap.

(13) Fireworks containing an ammonium salt and a chlorate.

(14) Fireworks containing yellow or white phosphorus.

(15) Fireworks or fireworks compositions that ignite spontaneously or undergo marked decomposition when subjected for 48 consecutive hours to a temperature of 75° C. (167° F.).

(16) Fireworks properly condemned by the Bureau of Explosives, except properly repacked samples for laboratory examinations.

(17) Toy caps containing more than an average of twenty-five hundredths of a grain of explosive composition per cap.

(18) Toy torpedoes the maximum outside dimension of which exceeds ⅞ inch, or toy torpedoes containing a mixture of potassium chlorate, black antimony and sulfur with an average weight of explosive composition in each torpedo exceeding four grains.

(19) Toy torpedoes containing a cap composed of a mixture of red phosphorus and potassium chlorate exceeding an average of one-half (0.5) grain per cap.

(20) Fulminate of mercury, dry.

(21) Guanyl nitrosamino guanylidene hydrazine, dry.

(22) Lead azide, dry.

(23) Lead styphnate (lead trinitroresorcinate), dry.

(24) Nitroglycerin, liquid.

(25) Nitro mannite, dry.

(26) Nitrosoguanidine, dry.

(27) Pentaerythrite tetranitrate, dry.

(28) Tetrazene (guanyl nitrosamino guanyl tetrazene, dry.

(29) Fireworks containing copper sulfate and a chlorate.

### § 74.503 "Order-Notify", "C.O.D.", and "Stop-off" shipments.

(a) Except on through bills of lading to a foreign country, shipments of explosives, class A, and blasting caps in any quantity must not be accepted for transportation or transported by carrier by rail freight when consigned "to order notify" or "C.O.D.". Shippers must not consign these shipments to themselves at points where they have not a resident representative.

(b) Explosives, class A, must not be accepted for transportation or transported by carrier by rail freight subject to "stop-off" privileges en route for partial loading or unloading.

### § 74.504 Carriers' material and supplies.

(a) Parts 71–78 of this chapter apply also to shipments of carriers' material and supplies moving by rail.

### § 74.505 Canadian shipments.

(a) Explosives and other dangerous articles as defined in Parts 71–78 of this chapter, which are packed, marked, labeled, and loaded, in conformity with the regulations of the Board of Transport Commissioners for Canada, may be accepted and carried by carriers from point of entry in the United States to their destination in the United States or through the United States en route to a point in Canada.

Note 1: Because of the present emergency and until further order of the Commission, compressed gas cylinders 40 inches in length and 8 inches in diameter, charged with not more than 40 pounds of carbon dioxide or when charged with nitrogen not in excess of 2,000 pounds per square inch, and shipped by or to the Canadian Department of National Defense in accordance with Board of Transport Commissioners for Canada Order No. 76253 dated Mar. 10, 1951, may be shipped to destinations in the United States or through the United States to points in Canada.

### § 74.506 Improperly packed or damaged shipments in transportation.

(a) For the protection of the public against fire, explosion, or other, or further hazard with respect to shipments of explosives or other dangerous articles offered for transportation or in transit by any carrier by railroad, such carrier shall make immediate report to the Bureau of Explosives, 63 Vesey Street, New York 7, New York, for handling any of the following emergency matters coming to their attention:

(1) Instances of packages of explosives or other dangerous articles discovered in transit not properly prepared for transportation in accordance with applicable regulation in Parts 71–78 of this chapter.

(2) Railroad wrecks or accidents involving damage to containers of explosives or other dangerous articles to such a degree as to necessitate repacking of the articles. (See § 74.588.)

(3) Other like emergencies in which any carrier by railroad is or is likely to become involved, or may offer aid at its command.

(b) This section shall in no respect excuse either shipper or carrier by railroad for failure to exercise due care to prevent any departure from any regulation prescribed in Parts 71–78 of this chapter.

### § 74.507 Labels.

(See §§ 73.405 to 73.414 of this chapter for description of labels.)

(a) Carriers must keep on hand an adequate supply of labels. Lost or detached labels must be replaced from information given on revenue or other waybill, manifest, memo or other shipping paper.

(b) The carrier's name and stationery form number may be printed on the labels, in type not larger than 10 point, if placed within the black-line border and in the upper or lower corner of the diamond.

### § 74.508 Violations and accidents to be reported.

(a) Serious violations of Parts 71–78 of this chapter (such as defective packing, improper staying, or rough treatment of car), and accidents, fires or explosions, and leaking or broken containers occurring in connection with the transportation or storage on carrier's property of explosives or other dangerous articles, must be reported promptly by the rail carrier to the Bureau of Explosives.

(b) The Bureau of Explosives, upon receipt of reports from carriers should promptly report to the shipper full particulars covering all cases of defective packing, improper staying, leaking and broken shipping containers and rough treatment of cars resulting in leakage or damage to shipping containers or staying.

### § 74.509 Quantity limitations.

(a) When quantity limitations are specified in Parts 71–78 of this chapter by United States liquid measure or by avoirdupois weight it is authorized that quantities measured by the metric system may be substituted, up to but not exceeding 1 gallon for liquid and 10 pounds for solids, on the basis of 1 liter per quart specified and 500 grams per pound specified.

## Subpart A—Loading, Unloading, Placarding and Handling Cars; Loading Packages Into Cars

### § 74.525 Loading packages of explosives in cars, selection, preparation, inspection and certification.

(a) Except as provided in § 74.526 (b), (n), and (o), explosives, class A, must be loaded in closed cars, certified and placarded "Explosives."

(b) Certified closed cars must be inspected inside and outside, other cars must be inspected as applicable to the type of car, and must conform to the following specifications:

(1) Closed cars of not less than 80,000 pounds capacity, with steel underframes and friction draft gear, must be used when available, except that on narrow-gage and other railroads, explosives may be transported in cars of less than that

capacity, provided the available cars of greatest capacity and strength are used for this purpose.

(2) Must be equipped with air brakes and hand brakes in condition for service.

(3) Must have no loose boards or cracks in the roof, sides, or ends, through which sparks may enter, or unprotected decayed spots liable to hold sparks and start a fire.

(4) The roof of the car must be carefully inspected from the outside for decayed spots or broken boards, especially under or near the running board, and such spots must be covered or repaired to prevent their holding fire from sparks. A car with a roof generally decayed, even if tight, must not be used.

(5) The doors must shut so closely that no sparks can get in at the joints, and, when necessary, they must be stripped. The stripping for doors should be on the inside and be fastened to the door frames where it will form a shoulder against which the closed doors are pressed by means of wedges or cleats in door shoes or keepers. The openings under the doors should be similarly closed. The hasp fastenings must be examined with doors closed and fastened, and the doors must be cleated when necessary to prevent doors shifting. When the car is opened for any cause, wedges or cleats must be replaced before car containing explosives is permitted to proceed.

(6) The journal boxes and trucks must be carefully examined and put in such condition as to reduce to a minimum the danger of hotboxes or other failure necessitating the setting out of the car before reaching destination. The lids or covers of journal boxes must be in place.

(7) The car must be carefully swept out before it is loaded. For less-than-carload shipments the space in which the packages are to be loaded must be carefully swept.

(8) Holes in the floor or lining must be repaired and special care taken to have no projecting nails or bolts or exposed pieces of metal which may work loose or produce holes in packages of explosives during transit. Protruding nails in the floor or lining which have worked loose must be drawn, and if necessary for the purpose of fastening the floor or lining, new nails must be driven through other parts thereof.

(9) Metal floor plates must be completely covered with wood, plywood, or fiber or composition sheets of adequate thickness and strength to prevent contact of the floor plates with the packages of explosives under conditions incident to transportation, except that the covering of metal floor plates is not necessary for carload shipments loaded by the Department of the Army, Navy, or Air Force of the United States Government provided the explosives are of such nature that they are not liable to leakage of dust, powder, or vapor which might become the cause of an explosion.

(10) Cars equipped with automobile loading devices must not be used unless the loading device is securely attached to the roof of car with fastenings supplementing those already provided and so fixed that it cannot fall.

(11) The carrier must have the car examined by a competent employe to see that it is properly prepared, and must have a "Car Certificate" signed in triplicate upon the prescribed form (see paragraph (c) (2) and (3) of this section) before permitting the car to be loaded.

(12) Except as provided in § 74.584 (h), a car must not be loaded with any explosives, class A, until it shall have been thoroughly inspected by a competent employee of the carrier who shall certify as to its proper condition under this section and shall sign certificate No. 1 prescribed in paragraph (c) (2) and (3) of this section.

(c) After a certified car as prescribed in this section has been furnished by the carrier, the shipper or his authorized employe must, before commencing the loading of any such car, inspect the interior thereof and after loading, certify to the proper condition as specified in paragraph (b) of this section by signing certificate No. 2 of the car certificate prescribed by subparagraphs (2) and (3) of this paragraph.

(1) For all shipments loaded by the shipper, a competent employee of the carrier must inspect the finished load and certify to its compliance with this part before the car shall be accepted for transportation; and certificate No. 2 as prescribed by subparagraphs (2) and (3) of this paragraph shall be signed before the car is permitted to go forward. When a car is loaded by the carrier, certificate No. 2 must be signed only by the representative of the carrier.

(2) The certificates as prescribed in subparagraph (3) of this paragraph must not be signed by the carrier's or shipper's representative unless the condition of any car covered thereby meets the requirements of this part.

(3) Car certificate: The following certificate, printed on strong tag board measuring 7 by 7 inches, or 6 by 8 inches, must be duly executed in triplicate by the carrier, and by the shipper, if he loads the shipment; the original must be filed by the carrier at the forwarding station on a separate file; and the other two must be attached, one to each outer side of car to the fixed placard board or to the side of wooden car between car initials and the car door, or as otherwise provided. (See § 74.549.)

---------- Railroad

CAR CERTIFICATE

No. 1 ---------- Station, ----------, 19--

I hereby certify that I have this day personally examined Car Number ------ and that, as applicable to the type of car, there are no holes or other openings in the roof, sides, ends or car lining, through which sparks might enter; that the floor is clean and in good condition and it and the car lining are free of projecting uncovered pieces of metal or nails; that I have examined all the journal boxes and that they are properly covered, packed and oiled and that the air brakes and hand brakes are in condition for service.

---

(Railway employee inspecting car)

No. 2 ---------- Station, ----------, 19--

I have this day personally examined the above car and hereby certify that the explosives in or on this car; or in or on vehicles or in containers; have been loaded and braced, and that placards have been applied, according to the regulations prescribed by the Interstate Commerce Commission; that the doors of cars so equipped fit or have been stripped so that sparks cannot enter.

---

(Shipper or his authorized agent)

---

(Railway employee inspecting bracing)

NOTE 1: A shipper must decline to use a car not in proper condition.

No. 3 ---------- Station, ----------, 19--

I hereby certify that I have this day personally supervised the loading of the vehicles or containers on and their securement to the above car.

---

Shipper or railway employee inspecting loading and securement

NOTE 1: All certificates, where applicable, must be signed.

(4) Car certificates remaining on hand and which were authorized by regulations in effect prior to (March 18, 1964), may be used for closed car inspections until stocks are exhausted.

**§ 74.526 Loading explosives into cars.**

(a) Boxes or other containers of class A explosives named in §§ 73.53 to 73.87 of this chapter when marked "This Side Up" must be loaded accordingly. Boxes may be loaded crosswise or lengthwise of the car, but not so that the ends of wooden boxes will bear against the sides of fiberboard boxes, or so that the end of any box will cause a high pressure on a small area of another box.

(b) Shipments of explosive bombs, unfuzed explosive projectiles, rocket ammunition, and jet thrust units when not packed in wooden boxes, and large metal containers of incendiary bombs weighing 500 pounds or more, each, may be loaded in stock cars or in gondola cars (flat bottom) when adequately braced. Wooden boxed bombs, rocket ammunition, or jet thrust units which, due to size, cannot be loaded in closed cars may be loaded in open-top cars or on flat cars but must be protected against accidental ignition.

(c) Boxes of high explosives, low explosives, or black powder, packed in long cartridges, bags, or siftproof liners, and containing no liquid explosive ingredient, may be loaded on their sides or ends, but not so that the end of a box will cause a high pressure on a small area of another box.

(d) Explosives for which a certified and placarded car is prescribed (see § 74.525 (a)) must not be loaded higher than the permanent car lining unless additional lining is provided as high as the lading.

(e) When the lading of a car consists of or includes any explosives, the weight of the lading should be distributed so that it will be equalized on each side of the car and over the trucks.

(f) Explosives packed in metal kegs, except when boxed, must be loaded on their sides with ends towards ends of the car; packages of explosives must not be placed in the space opposite the doors unless the doorways are boarded on the inside as high as the lading. (This does not apply to palletized packages provided they are braced so that they cannot fall or slide into the doorways during transit.)

(g) Wooden or fiber kegs, barrels, or drums, may be loaded on their sides or ends, as will best suit the conditions.

(h) Packages containing any of the explosives for the transportation of which a certified and placarded car is prescribed (see § 74.525) and blasting caps or electric blasting caps in any quantity, must be stayed (blocked and braced) by the one who loads the car, so as to prevent change of position by the ordinary shocks incident to transportation. Special care must be used to prevent such packages from falling to the floor or from having anything fall on them or slide against them during transit. (See note 1.)

NOTE 1: For recommended methods of blocking and bracing, see Bureau of Explosives' Pamphlets 6 and 6A.

(i) To prevent delays to local freight trains, when there are shipments of explosives for different destinations loaded in a "peddler car" or "way car", the shipments for each destination must be stayed separately.

(j) Forwarding and transfer stations for explosives must be provided with the necessary materials for staying.

(k) Shippers must furnish the material for staying packages of explosives loaded by them.

(l) Explosives, class A, must not be loaded, transported, or stored in cars equipped with any type of lighted heater or open-flame device, or electric devices having exposed heating coils, or in cars equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(m) Blasting caps or electric blasting caps in quantity not exceeding 1,000 caps may be loaded in any closed car which is in good condition, without car certificates or placards.

(n) Container cars or portable containers on flat cars or gondola cars (drop-bottom cars not authorized), when properly loaded, blocked, and braced to prevent change of position under conditions incident to normal transportation, may be used for any class A explosive except black powder packed in metal containers. Portable containers must be of a type approved by the Bureau of Explosives. They must be designed and maintained so as to be weather-tight and so constructed that sparks cannot enter. Wooden containers must be painted or treated with fire-retardant material of a type approved by the Bureau of Explosives.

(1) Portable containers must be of such design and so braced that there will be no evidence of failure of the container or the bracing when subjected to impact from each end of at least 8 miles per hour. Efficiency shall be determined by actual test, using dummy loads equal in weight and general character to material to be shipped.

(2) Container cars or cars which are loaded with portable containers must be placarded with the "Explosives" placards as prescribed in § 74.550 and properly executed car certificates as required by § 74.525.

(3) Lading shall be so loaded, blocked, and braced within the container that it will not change position under impact from each end of at least 8 miles per hour.

(o) Explosives, class A, may be loaded and transported in tight, closed truck bodies or trailers on flat cars and wooden boxed bombs, rocket ammunition, or jet thrust units which, due to their size, cannot be loaded in tight, closed truck bodies or trailers may be loaded in or on open-top truck bodies or trailers but must be protected against accidental ignition, provided all of the following requirements are fulfilled and provided wooden containers are painted or treated with fire-retardant material of a type approved by the Bureau of Explosives:

(1) Truck body or trailer must meet the requirements of Part 77 of this chapter, applicable to shipments of explosives by motor vehicle.

(2) Truck body or trailer shall be so secured on the car that it will not permanently change position or show evidence of failure or impending failure of the method of securing truck body or trailer under impact from each end of at least 8 miles per hour. Efficiency shall be determined by actual test, using dummy loads equal in weight and general character to the material to be shipped.

NOTE 1: For recommended methods of blocking and bracing see Bureau of Explosives' Pamphlet 6C.

(3) Lading shall be so loaded, blocked, and braced within or on the truck body or trailer that it will not change position under impact from each end of at least 8 miles per hour.

NOTE 1: For recommended methods of blocking and bracing see Bureau of Explosives' Pamphlet 6C. Impact tests have been conducted on methods shown in this pamphlet.

(4) Cars or truck bodies or trailers on cars must be placarded with the "Explosives" placards as prescribed in § 74.550 and properly executed car certificates as required by § 74.525.

(5) All fuel tanks for heaters or refrigerating machinery with which truck bodies or trailers are equipped shall be drained and all automatic heating or refrigerating machinery shall be rendered inoperative by disconnection of the automatic controls or the source of power for their operation.

**§ 74.527 Forbidden mixed loading and storage.**

(a) Explosives, class A, and initiating or priming explosives must not be transported in the same car with, nor be stored on railway property near, any of the dangerous articles other than explosives for which red, yellow, green, white (acid or corrosive liquid) or radioactive material labels are prescribed in Parts 71–78 of this chapter, nor with charged electric storage batteries.

(b) Explosives must not be loaded together nor with other dangerous articles, except as provided in the loading and storage chart (see § 74.538). See § 74.584 (h) for loading shipments of explosives or any other material in a placarded and certified car containing a shipment of class A explosives.

**§ 74.528 Protect explosives from injury.**

(a) In a car containing explosives, the explosives and all other freight must be so loaded, and if necessary so braced and stayed, as to prevent injury to packages of explosives during transit. When practicable, explosives should be loaded so as to avoid transfer at stations.

**§ 74.529 Cars for class B explosives.**

(a) Explosives, class B, must not be loaded, transported, or stored in cars equipped with any type of lighted heater or open-flame device, or in cars equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(b) Shipments of class B explosives (see §§ 73.88 to 73.94 of this chapter) must be loaded in a closed car or container car which is in good condition, into which sparks cannot enter, and with roof not in danger of taking fire through unprotected decayed wood. These cars do not require the car certificate but must have attached to both sides and both ends the "DANGEROUS" placard prescribed by § 74.552, and the doors if not tight must be stripped to prevent entrance of sparks.

(c) Explosives, class B, may be carried in tight, closed truck bodies or trailers on flat cars provided all automatic heating or refrigerating machinery with which truck bodies or trailers are equipped shall be rendered inoperative. Packages of explosives shall be so braced and stayed as to prevent their movement and so as to prevent injury to them due to movement of other freight during transit. Ends, side walls, or doors of truck bodies or trailers shall not be relied upon to prevent the shifting of heavy loads unless adequately designed. "Dangerous" placards prescribed by § 74.552 must be securely attached to the car or truck body or trailer so as to be visible from both sides and ends of the car.

NOTE 1: For recommended methods of blocking and bracing see Bureau of Explosives' Pamphlet 6C.

**§ 74.530 Cars for class C explosives.**

(a) Explosives, class C, may be loaded into any closed car in good condition. With the exception of blasting caps and electric blasting caps, explosives, class C, may be loaded into any container car in good condition. No placards or car certificates are required.

(b) Explosives, class C, may be carried in tight, closed truck bodies or trailers on flat cars provided all automatic heating

or refrigerating machinery with which truck bodies or trailers are equipped shall be rendered inoperative. Ends, side walls, or doors of truck bodies or trailers shall not be relied upon to prevent the shifting of heavy loads unless adequately designed.

NOTE 1: For recommended methods of blocking and bracing see Bureau of Explosives' Pamphlet 6C.

**§ 74.531 Lights.**

(a) When necessary to use lights while handling explosives, it is recommended that where practicable incandescent electric lights be provided.

**§ 74.532 Loading other dangerous articles.**

(a) Shipments must be properly loaded in closed cars, container cars, or in tight closed truck bodies or trailers on flat cars, except as otherwise provided in Parts 71–78 of this chapter and cars placarded as prescribed, when accepted by carriers. Ends, side walls, or doors of truck bodies or trailers shall not be relied upon to prevent the shifting of heavy loads unless adequately designed.

NOTE 1: See Bureau of Explosives' Pamphlet No. 6 for recommended methods of blocking and bracing articles in cars. See loading and storage chart (§ 74.538) before loading labeled articles together or with explosives named in §§ 73.53 to 73.114 of this chapter.

NOTE 2: For recommended methods of blocking and bracing, in truck bodies or trailers on flat cars, see Bureau of Explosives' Pamphlet 6C.

(1) Shippers must furnish the material for staying packages of other dangerous articles loaded by them.

(b) Flammable liquids (red label) and flammable compressed gases (red gas label) must not be loaded, transported, or stored in cars equipped with any type of lighted heater or open-flame device, or in cars equipped with any apparatus or mechanism utilizing an internal combustion engine in its operation.

(1) Flammable liquids (red label) and flammable gases (red label) must not be loaded in truck bodies or trailers equipped with lighted heaters or any automatic heating or refrigerating apparatus when such truck bodies or trailers are loaded on flat cars.

(c) Packages protected by labels or exempted from labels by § 73.402(c) of this chapter must be so loaded that they cannot fall and in such a manner that other packages cannot fall onto or slide against them. This does not preclude the use of loading methods that are designed to permit movement of the load and that are acceptable to the Bureau of Explosives. Packages bearing marking "This Side Up" or "This End Up" must be so loaded. Dangerous articles for which red, yellow, green, or white (acid, alkaline caustic liquid, or corrosive liquid) labels are prescribed herein must not be loaded in the same car with explosives named in §§ 73.53 to 73.87 of this chapter. (See loading and storage chart § 74.538.) Packages protected by yellow labels must not be loaded in the same end of a car with packages protected by "Acid", "Alkaline Caustic Liquid", or "Corrosive Liquid" labels, except that shippers loading carload shipments, who have obtained prior approval from the Bureau of Explosives, may load such articles together when it is known that the mixture of contents would not cause a dangerous evolution of heat or gas.

(d) Metal barrels or drums containing flammable liquids may be loaded on steel gondola or flat cars or into stock cars, but must not be loaded into hopper bottom cars.

(e) Empty cylinders, barrels, kegs, or drums, previously used for the shipment of any dangerous article, as defined in Part 73 of this chapter, must have all openings including removable heads, filling and vent holes properly closed before being offered for transportation. Small quantities of the material with which containers were loaded may remain in "empty" containers and when the vapors remaining therein are unstable, it is permissible to add sufficient inert gas to render the vapors stable.

(1) They may be loaded in open or stock cars when desired. Cars should not be placarded but lighted open-flame lanterns or other open-flame lights should be kept away.

(f) Carboys previously used for the shipment of corrosive liquids when presented to carriers for transportation in carload or less-than-carload shipments as "empty" carboys, must be thoroughly (completely) drained. Whenever practicable they should not be loaded with valuable or perishable freight.

(g) Matches: Carload lots of strike-anywhere (friction) matches must be loaded as compactly as possible to avoid motion within the car, especially lengthwise of the car. Protruding nails, metal band anchors or other projections on sidewalls, ends, door posts, studding, or car floors liable to puncture packages must be removed or adequately covered to prevent damage to containers of matches. Car doorways should be boarded on the inside to keep packages from contact with the doors, and the inside lining of the car should be supplemented when necessary by strips nailed to the car and close enough together to keep the boxes from being jammed against the studding and broken by high pressures on small areas. The strongest dimension of the box should be loaded lengthwise of the car. Partial layers of boxes should be interlocked with the lower layers. The cars used should be made secure against the entrance of sparks or rain and should be the strongest cars available.

(1) [Reserved].

(2) Carload lots of strike-anywhere matches handled subject to stop off privileges must be loaded in accordance with paragraph (g) of this section and when necessary the load must be rearranged and/or blocked and braced by each consignee before forwarding.

(3) Less-than-carload lots of "strike-anywhere" matches should be carefully loaded so that they cannot fall and so that other packages of freight cannot fall on or injure them. Whenever practicable the packages of matches should be placed to facilitate ready removal in case of fire. A smoking box of matches should not be broken open; the fire will cease of itself if air can be kept from it.

(4) Carload or less-than-carload lots of "strike-anywhere" matches which have been damaged by fire, or by water in extinguishing a fire, in transit or on carrier's property, must be reloaded in properly prepared cars, and braced or blocked before being forwarded to destination, to freight claim department or claim adjusters, or to original shipper or other parties for salvage. Great care should be taken to examine and repair damaged outside packages before reloading into car. All loose matches should first be destroyed. Individual interior boxes and paper-wrapped cartons or packages, should then be carefully placed in tight outside packages complying, as nearly as circumstances will permit, with container specifications; but under no condition shall the outside package be of less strength than required by specification 15A or 12C (§§ 78.168 or 78.206 of this chapter), nor of greater capacity than authorized. Charred cases must not be used. Boards used in repairing wooden cases must be so nailed that they will not allow any interior boxes, cartons, or packages to fall out. In the event that the individual boxes or paper-wrapped packages do not fit snugly in the outside package, the vacant spaces should be filled tightly with dry and clean cotton waste, or elastic wads of dry newspapers or dry waste paper.

(h) Corrosive liquids: Carboys of acids or other corrosive liquids must not be loaded into container cars. They must be so blocked, braced or stayed that they cannot change position during transit when being handled with reasonable care. Carboys of nitric acid must not be loaded into box cars or in truck bodies or trailers on flat cars more than two tiers high, except that completely boxed carboys, specification 1D (§ 78.4 of this chapter), may be loaded three tiers high. Car doors may be cleated in an open position if desired. Flat or stock cars may be used for loading carboys of acids.

(1) When less-than-carload shipments are loaded with other freight, the carboys must be placed near the doorway and must have wooden strips not less than 2 inches in height nailed to the car floor about 8 inches from the bracing. These strips must be arranged so that the liquid from a broken carboy will drain toward the doorway and outside the car. The space between the strips and the floor braces or blocking used for staying the carboy boxes must be covered with at least 1 inch thickness of clean and dry sand or earth, not sawdust or other combustible material.

(2) Nitric acid, when loaded with other acids or other corrosive liquids in carboys, must be separated from the other carboys. A 2 by 6 inch plank, set on edge, should be nailed across the car floor at least 12 inches from the nitric acid carboys and the space between the plank and the carboys of nitric acid should be filled with sand, sifted ashes, or other incombustible absorbent material.

(3) Electric storage batteries (wet) for shipment must be completely protected so that short circuits will be prevented and must not be loaded or stored with explosives.

(4) Shipments of electric storage batteries (wet), and electrolyte packed as required by § 73.258 of this chapter, must be so blocked and braced that they cannot change position during transit when cars are handled with reasonable care; and must be so loaded that other freight cannot fall onto or slide against them. They may be loaded on gondola or flat cars, but must not be loaded into hopper bottom cars.

(i) Compressed gases in cylinders: Cylinders containing compressed gases shall be securely lashed in an upright position so as to prevent their overturning; or loaded into racks securely attached to the car; or packed in boxes or crates of such dimensions as to prevent their overturning; or loaded in a horizontal position. Spec. ICC–4L cylinders must be loaded in an upright position and be securely braced.

(1) Cylinders containing compressed gases may be loaded into steel gondola or flat cars or into stock cars, but must not be loaded into hopper bottom cars.

(j) Radioactive materials and radioactive ores, residues, and similar materials.

(1) Shipments of radioactive ores, residues or similar material as provided in § 73.392 of this chapter must be so loaded as to avoid spillage and scattering of loose material.

(i) The amount of radioactive ores, residues, and similar materials loaded in a car must be limited as provided in § 73.392 of this chapter.

(2) The amount of radioactive materials, other than radioactive ores, residues, or similar materials, loaded in a freight car, shall be limited so that the quantity does not exceed 40 units as determined by totaling the number of units shown on the individual labels on the packages. (The requirements of this paragraph do not apply to bundles, boxes, barrels, or crates of magnesium-thorium alloys or uranium, depleted or normal, described by § 73.392 (e) and (f) of this chapter.)

NOTE 1: For purposes of these regulations, 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm of hard gamma rays of radium filtered by ½ inch of lead.

(i) Containers of radioactive material weighing 5,000 pounds or more or strong wooden boxes with inside containers of solid radioactive material, securely braced and cushioned, and concrete-filled metal drums or concrete vaults weighing 700 pounds or more may be loaded in gondola cars (drop bottom cars not authorized); containers of radioactive material weighing 15,000 pounds or more may be loaded on flat cars. Containers must be so blocked and braced that they cannot change position during transit.

(3) No persons shall remain in a car containing radioactive material unnecessarily and the shipper must furnish the carrier with such information and equipment as is necessary for the protection of the carrier's employees.

(4) Any loose radioactive material must be removed from the car and placed in a closed container in a segregated location and held for instructions from the shipper or the Bureau of Explosives.

(k) Nitrates, except ammonium nitrate having organic coating, listed in § 73.182(b) of this chapter must be loaded in clean closed cars, which shall be free of loose boards, cracks, holes, or exposed decayed spots. Interior of cars must be swept clean and be free of any projections capable of injuring bags when so packaged. Doors of cars must have tight closures. Ammonium nitrate or ammonium nitrate fertilizer, having no organic coating, ammonium nitrate mixed fertilizer, or ammonium nitrate-phosphate, in bulk may be loaded in clean covered hopper cars. Ammonium nitrate having organic coating must be loaded in all-wood box cars, or wooden box cars with steel roofs, or steel box cars with wooden floors and must not be loaded in all-metal cars. Journals and boxes must be in good condition. (See § 74.541(a) (1) and (2).)

(l) Poison gas; class A, by rail freight: Poison gases, class A, may be shipped by, for, or to, the Departments of the Army, Navy, or Air Force of the United States Government, when loaded and handled as follows:

(1) In metal drums, specification ICC 5A (§ 78.81 of this chapter) or WD 5A,[1] in box cars, gondola cars, or stock cars (flat bottom) in carload lots.

(2) In tanks, specification ICC 106A (§§ 78.275 or 78.276 of this chapter), mounted on or secured to multi-unit cars or gondola cars (flat bottom) in carload lots only.

(3) In bombs, in box cars or gondola cars (flat bottom) in carload lots only.

(4) In projectiles or ammunition for cannon with gas filled projectiles in box cars in carload or less-than-carload lots.

(5) Gas handlers. Each shipment of one or more carloads, as described in subparagraphs (1), (2), (3), and (4) of this paragraph, shall be accompanied by a crew of qualified gas handlers, supplied with equipment to handle leaks or other container failure, which will permit the escape of gas. Gas handlers will remain with the shipment during the entire time that it is in the custody of the carrier. Gas handlers will, in the event of leakage or escape of gas, make repairs and perform decontamination, if necessary. If they need assistance they will advise the carrier's representative as to the nearest Chemical Warfare Service Depot and aid required.

(6) Loading and bracing in cars. Drums must be loaded in cars having level floors. Cars equipped with metal corrugated ends or cars having bowed ends must be supplied with end wall bulkheads constructed in accordance with requirements for center gates. (See Sketch 1, Bureau of Explosives Pamphlet No. 6.)

(7) Drums must be loaded not more than one tier (layer) high and with filling holes up. They must be loaded as closely together as possible both crosswise and lengthwise and so blocked and braced as to maintain their relative positions during transit.

(8) Drums with filling holes in heads must be loaded on their bottoms. They may be loaded in rows, lengthwise of the car and any space between the sides of car and the nearest row of drums must be "filled in" with wooden boards or lumber nailed to sides of car sufficient in length and width to contact both hoops of drums, or, drums may be loaded across car in staggered stacks of which the number of drums in alternate stacks is reduced by one drum. All drums in stacks following the first stack loaded in end of car must be placed tightly into the angle of space formed by the sidewalls of the drum in the preceding stack. Any space between the sides of car and the drums in stacks having the greater number of drums, must be "filled in" with wooden boards or lumber nailed to sides of car sufficient in length and width to contact both hoops of drums.

(9) Drums with filling holes in sides must be loaded on their sides with filling holes up. They must be loaded lengthwise of the car in rows and any space between sides of car and the nearest row of drums must be "filled in" with wooden boards or lumber nailed to sides of car sufficient in length and width to contact both hoops of drums.

(10) Drums must be loaded in box car from ends of car toward space between car doors, and there braced by center gates and wedges. (See Sketch 1, Bureau of Explosives Pamphlet No. 6.)

(11) Doorways of box cars must be protected by one of the methods prescribed in Sketch 1, Bureau of Explosives Pamphlet No. 6A.

(12) Tanks must be securely mounted on cars especially provided for them or on gondola cars prepared with substantial wooden frames and blocks.

(13) Bombs, projectiles, and cannon ammunition must be loaded, blocked and braced as shown in Bureau of Explosives Pamphlet 6A. When shipments are loaded in gondola cars they must be securely blocked and braced and not loaded higher than the sides of the car.

**§ 74.533 Truck bodies or trailers on flat cars.**

(a) Truck bodies or trailers containing explosives, class B, explosives, class C, or other dangerous articles as provided in Parts 71–78 of this chapter must be of such design and so loaded that they will not rupture or become seriously damaged under conditions normally incident to transportation and must be so secured on the flat car that they cannot permanently change position during transit. Packages of explosives and dangerous articles contained therein must be loaded and braced as provided by §§ 74.529, 74.530, and 74.532. Placards must be applied when prescribed by §§ 74.541 and 74.542.

(b) Truck bodies or trailers equipped with automatic heating or refrigerating equipment employing any fuel or article classed as a dangerous article in Parts

[1] War Department specification container.

71–78 of this chapter may be loaded and transported on flat cars if such equipment is of a type approved by the Bureau of Explosives. They must be so braced and stayed on the flat car that they cannot permanently change position during transit.

(c) A truck body or trailer on which is mounted any cargo tank containing any dangerous article shall not be accepted for transportation or transported except under conditions approved by the Bureau of Explosives.

### § 74.534 Portable containers or tanks.

(a) Portable containers or tanks must be of such design and so loaded and stayed in closed cars, in gondola cars, on flat cars, or in truck bodies or trailers on flat cars so they cannot permanently change position, rupture, or become seriously damaged under conditions normally incident to transportation. Ends, sidewalls, or doors of truck bodies or trailers shall not be relied upon to prevent shifting of portable containers or tanks.

## Subpart B—Loading and Storage Chart of Explosives and Other Dangerous Articles

### § 74.538 Loading and storage chart of explosives and other dangerous articles.

(a) Explosives or other dangerous articles must not be loaded, transported, or stored together, except as provided in the Loading and Storage Chart of Explosives and Other Dangerous Articles shown in this section.

The following table shows the explosives and other dangerous articles which must not be loaded or stored together.

The letter X at an intersection of horizontal and vertical columns shows that these articles must not be loaded or stored together, for example: Detonating fuzes class A, with or without radioactive components g horizontal column must not be loaded or stored with high explosives or propellant explosives, class A b vertical column.

| | | a | b | c | d | e | f | g | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Low explosives or black powder | High explosives or propellant explosives, class A | Initiating or priming explosives, wet: Diazodinitrophenol, fulminate of mercury, guanyl nitrosamino guanylidene hydrazine, lead azide, lead styphnate, nitro mannite, nitrosoguanidine, pentaerythrite tetranitrate, tetrazene, lead mononitroresorcinate | Blasting caps, with or without safety fuse (including electric blasting caps), detonating primers | Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles or shell, ammunition for small arms with explosive bullets, or ammunition for small arms with explosive projectiles, or rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles; and boosters (explosive), bursters (explosive), or supplementary charges (explosive), without detonators [4] | Explosive projectiles, bombs, torpedoes, or mines, rifle or hand grenades (explosive), jet thrust units (jato), explosive, class A or igniters, jet thrust (jato), explosive, class A [5] | Detonating fuzes, class A, with or without radioactive components | Ammunition for cannon with empty, inert-loaded or solid projectiles, or without projectiles, or rocket ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles | Propellant explosives, class B, jet thrust units (jato), class B, igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B | Fireworks, special or railway torpedoes | Small arms ammunition | Primers for cannon or small arms, empty cartridge bags—black powder igniters, empty cartridge cases, primed, empty grenades, primed, combination primers or percussion caps, toy caps, explosive cable cutters, explosive rivets | Percussion fuzes, tracer fuzes or tracers | Time, combination or detonating fuzes, class C | Cordeau detonant fuse, safety squibs, fuse lighters, fuse igniters, delay electric igniters, electric squibs, instantaneous fuse or igniter cord | Fireworks, common, highway fuses or railway fuses | Flammable liquids or compressed flammable gases, red label | Flammable solids or oxidizing materials, yellow label | Acids or corrosive liquids, white label | Compressed nonflammable gases, green label | Poisonous gases or liquids, in cylinders, projectiles or bombs, poison gas label | Radioactive materials (class D poisons) |

| Acids or corrosive liquids, white label | 12 | X | X | X | [3]X | X | X | X | [6]X | [6]X | | | | | | | | | | | | X | |
| Compressed nonflammable gases, green label | 13 | X | X | X | [3]X | X | X | X | | | | | | | | | | | | | | | |
| Poisonous gases or liquids, in cylinders, projectiles or bombs, poison gas label | 14 | X | X | X | X | X | X | X | X | X | X | X | | | | | X | X | X | X | | | |
| Radioactive materials (class D poisons) | 15 | X | X | X | X | X | X | X | | | | | | | | | | | | | | | |

[3] Blasting caps or electric blasting caps in quantities not exceeding 1,000 caps may also be loaded and transported with articles named in vertical and horizontal columns 3, 9, 10, 11, 12, and 13. Loading and transportation of blasting caps or electric blasting caps in any quantity with articles named in vertical or horizontal columns b, c, e, or f is prohibited.

[4] Unless loaded in opposite ends of car, acids or other corrosive liquids, white label, must not be loaded with yellow label articles, ammunition for cannon with or without projectiles, or propellant explosives, except that shippers loading carload shipments of white label and yellow label articles (and who have obtained prior approval from the Bureau of Explosives) may load such articles together when it is known that the mixture of contents will not cause a dangerous evolution of heat or gas.

[5] Explosives, class A, and explosives, class B, other than ammunition, must not be loaded or stored with chemical ammunition containing incendiary charges or white phosphorus either with or without bursting charges. Chemical ammunition containing incendiary charges or white phosphorus may be loaded and stored with other ammunition of the same classification.

[6] Bursters (explosive), boosters (explosive), or supplementary charges (explosive) without detonators when shipped by, to or for the Departments of the Army, Navy, and Air Force of the United States Government may be loaded with any of the articles named except those in columns c, d, 3, 9, 10, 11, 12, 13, 14, and 15.

[*] Does not include nitro carbo nitrate or ammonium nitrate, fertilizer grade, which may be loaded, transported or stored with high explosives or with blasting caps or electric blasting caps, and detonating primers.

NOTE 1: Charged electric storage batteries must not be loaded in the same car nor stored with any class A explosive.

NOTE 2: Cyanides or cyanide mixtures must not be loaded or stored with acids of corrosive liquids.

NOTE 3: Gas identification sets may be loaded and transported with all articles named except those in column c.

NOTE 4: Nitric acid, when loaded in the same car with other acids or other corrosive liquids in carboys, must be separated from the other carboys. A 2 by 6 inch plank, set on edge, should be nailed across the car floor at least 12 inches from the nitric acid carboys, and the space between the plank and the carboys of nitric acid should be filled with sand sifted ashes or other incombustible absorbent material.

NOTE 5: Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one car shall be classed as a flammable solid for purposes of transportation when approved for such classification by the Bureau of Explosives.

## Subpart C—Placards on Cars

**§ 74.540 "Explosives" placards.**

(a) Explosives placards as prescribed in § 74.550 must be applied to certified cars containing explosives, class A, specified in §§ 73.53 to 73.87 of this chapter. Placards must show in the spaces provided station name and date.

NOTE 1: For cars requiring the poison gas placard, see § 74.542.

**§ 74.541 "Dangerous" placards; "Dangerous—Radioactive material" placards; or "Caution—Residual phosphorus" placards.**

(a) "Dangerous" placard, as prescribed by § 74.552 must be applied to cars, and container cars, as follows:

(1) Cars containing one or more packages bearing red, yellow, white acid, or corrosive liquid caution labels, or white "poison" labels, as prescribed by §§ 73.405 to 73.408 and 73.409 (a) (2) of this chapter, or without labels as authorized in § 73.402 (c) of this chapter.

(2) Cars containing flammable solids, oxidizing materials or poisonous solids, class B, in bulk.

(3) Tank cars containing flammable liquids, flammable solids or oxidizing materials, acids or corrosive liquids, poisonous liquids or solids, class B, compressed flammable gases, compressed nonflammable gases.

(4) Cars containing shipments of explosives, class B.

NOTE 1: For cars also requiring the poison gas placard, see § 74.542.

(5) When explosives, class A, are loaded in the same car with explosives, class B, or poisonous solids or liquids, class B, only the "Explosives" placard is required.

(b) "Dangerous—Radioactive material" placards, as prescribed in § 74.553, must be applied to cars containing shipments of class D poisons as prescribed by §§ 73.392(c) and 73.393 of this chapter and bearing labels as described in § 73.414 (a), (b), and (c) of this chapter.

(c) "Caution—Residual phosphorus" placard, as prescribed in § 74.555, must be applied to tank cars which last contained shipments of white or yellow phosphorus and which are required to be filled with water or inert gas before tank car is offered for return movement as provided in § 73.190(b)(3) of this chapter.

**§ 74.542 "Poison gas" placards.**

(a) "Poison gas" placards as prescribed by § 74.551 must be applied to cars as follows:

(1) Cars containing one or more packages or articles bearing the "Poison gas" label.

(2) Cars containing ammunition for cannon with toxic gas projectiles, or projectiles, bombs, or other containers loaded with toxic gas requiring the "Poison gas" label.

NOTE 1: The poison gas placard must be applied to cars in addition to any other placards required.

(b) *"Flammable poison gas" placards.* "Flammable poison gas" placards as prescribed in § 74.556 must be applied to Class 105A–W tank cars containing hydrocyanic acid.

(c) *"Poison gas" placards.* "Poison gas" placards, for tank cars, as prescribed in § 74.557 must be applied to tank cars containing class A poisons except hydrocyanic acid.

**§ 74.543 Placarding cars; passenger trains.**

(a) When a freight, baggage, or express car containing freight shipments of explosives, class B, or freight shipments of dangerous articles other than explosives requiring labels as prescribed by Part 73 of this chapter (not including class A poison gases or liquids), is hauled in a passenger train and such car or cars are not occupied by an employe of the carrier, proper placards must be applied to the car as required by this part.

**§ 74.544 Placards not required.**

(a) Placards are not required for:

(1) Cars containing explosives, class C.

(2) Cars, other than tank cars, containing nonflammable compressed gas (green label).

(3) Cars containing class C poisons (tear gas label).

(4) Cars loaded with electric storage batteries containing electrolyte or corrosive battery fluid in carload lots.

(5) Cars carrying shipments of electrolyte acid or corrosive battery fluid together with self-propelled vehicles or mobile agricultural machinery in accordance with the provisions of § 73.257 (c).

(6) Cars containing radioactive material bearing label described in § 73.414 (d) of this chapter.

**§ 74.545 Commodity name on carloads.**

(a) Placards for carloads of class B explosives and other dangerous articles must show thereon, in the space provided, the proper name of the commodity as prescribed by § 72.5 of this chapter, or the commodity name must be shown on tag board cards measuring approximately 5 by 8 inches securely attached to each side of the car.

**§ 74.546 Placards must be standard.**

(a) Placards must conform to standards as prescribed. Samples will be furnished by the Bureau of Explosives on request.

(b) Tagboard placards must be printed on strong tagboard of quality and strength not less than that designated commercially as 100 percent sulphate, weighing 125 pounds per ream, of sheets 24 x 36 inches, and having a resistance of not less than 60 pounds per square inch Mullen test.

(c) Paper placards must be printed on strong white paper.

(d) Placards or car cards which by their shape, coloring, or printing may be readily confused with the standard placards prescribed in this part must not be used.

(e) Carrier's or shipper's name and stationery form number may be printed on placards in type not larger than 10 point, but must be printed thereon separate from any placard wording.

(f) When the tag board placards bear wording prescribed in § 74.552 (a) and provided the wording prescribed by § 74.563 (c) appears on the reverse side thereof, the words "removed or" may be omitted or the word "removed" changed to "reversed", as the case may be.

(g) Placards remaining on hand and in compliance with § 74.552(a) or § 74.553(a) in effect on June 19, 1960, may be used until present stocks are exhausted.

**§ 74.547 Carriers supply of placards.**

(a) Carriers must keep on hand an adequate supply of all necessary placards for placarding cars loaded by them and for the replacement of missing placards on loaded cars while in transit.

**§ 74.548 Placarded cars.**

(a) Shippers must have applied placards to cars loaded by them when cars are acceptable for transportation. (See § 74.549 for method of application.)

**§ 74.549 Application of placards.**

(a) Placards must be securely applied one to each end and each side of car, as follows:

(1) By tacking tag-board placards to each end and each side of cars, or to placard boards of suitable size provided for the purpose.

(2) Placards applied to the sides of closed or open top cars containing explosives or other dangerous articles must be attached to the fixed placard board or to the side of the wooden car between car initials and number and the car door.

(3) Tacks when used must have heads at least ¼ inch across. At least 5 tacks must be used, one at each corner and one in the center of the placard, or when stapling devices are used the staples should be made of flat metal of not less than 19 gauge, and the space between the legs of the staples should be at least ⅜ inch and length of staples not less than ¼ inch. At least 9 staples must be used, one at each corner, one along edge between each corner, and one in center. Tacks, nails, staples, or other devices used in previous application of placards must be removed when their presence interferes with proper application of placards.

(4) By insertion of tag-board placards in suitable placard holders affixed to cars.

(5) Paper placards must be securely pasted to metal or other smooth surfaces. Metal placard boards must be used when provided for the purpose. Grease or other substances which interfere with secure application must be removed from surfaces before pasting on placards.

(6) By application of adhesive tape, which shall be not more than 1¼ inches wide and which shall be applied around the entire perimeter of the placard so that approximately one-half the width of the tape adheres to the placard and one-half to the surface to which the placard is attached. Tape must be properly applied, weather-resistant, and capable of holding the placard securely in position under conditions normal to transportation. This method is authorized only when attachment of placards to metal surfaces is necessary and the metal surface is sufficiently smooth and of sufficient size to permit attachment of the placards in their proper position.

(b) Placards applied to cars must have the printing in horizontal position.

(c) "Explosives" placards and car certificates must be placed alongside of each other.

NOTE 1: Because of the present emergency and until further order of the Commission, gondola cars used for the shipments of bombs or poison gas, may be placarded on both sides and both ends of car.

(d) Placards applied to sides of tank cars must be placed as near the middle as possible. Side placard boards applied to tank cars near end of tank may be used until replaced by boards located near middle of tank, in accordance with requirements effective November 1, 1927.

(e) Placard holders must be so constructed as not to obstruct the wording, change the shape of the placard, or reduce the exposed surface of the placard more than three-eighths of an inch on each side.

NOTE 1: Permanent metal holders designed to provide for secure attachment, easy application, removal, or reversal of placards prescribed in these regulations are required on all new tank cars, on new underframes to which tanks are applied, and on all tank cars receiving general repairs.

(f) Placards as required by §§ 74.540, 74.541, and 74.542 must be securely applied to both sides and both ends of a container car on which a container or containers loaded with explosives, class A or B, or with dangerous articles requiring labels, are placed; or placards must be securely applied to both ends of such a car and to both sides of a container loaded with such articles. Car certificates required by § 74.525 must be securely applied to both sides of a container car on which a container or containers loaded with class A explosives are placed.

(g) Metal reversible placards, bearing on one side the "Dangerous" placard wording as prescribed in § 74.552 and on the reverse side the "Dangerous—Empty" placard wording as prescribed in § 74.563 may be used in lieu of placard holders prescribed in Note 1 to § 74.549 (e). The wording on these placards must be kept distinct as to colors and clearly legible.

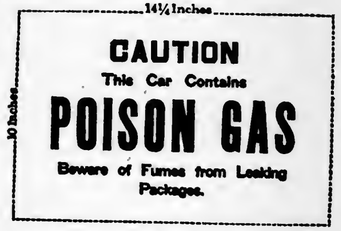
(h) Placards as required by §§ 74.540, 74.541, and 74.542 must be securely applied to both sides and both ends of car, or to both sides and both ends of truck body or trailer loaded on flat cars, containing explosives or other dangerous articles. Car certificates as required by § 74.525 must be securely applied to both sides of such cars. When more than one trailer is loaded on a flat car, placards must be applied so as to be plainly visible from both ends of the car.

**§ 74.550 Explosives, class A placard.**

(a) The "Explosives" placard must be of rectangular shape, measuring 11 by 14 inches, and must bear the wording as shown in the following cut; the printing must be in red and black as follows:

EXPLOSIVES PLACARD

(Reduced size)



**§ 74.551 Poison gas placard.**

(a) The "Poison gas" placard for other than tank cars must be of rectangular shape, measuring 10 x 14¼ inches, and must bear the wording as shown in the following cut; the printing must be in red as follows:

POISON GAS PLACARD

(Reduced size)

**§ 74.552 Dangerous placard.**

(a) The "Dangerous" placard must be of diamond shape, measuring 10¾ inches on each side, and must bear the wording as shown in the following cut; the word "Dangerous" must be in red, and the lettering in black, as follows:

DANGEROUS PLACARD

(Reduced size)

(b) The reverse side of such placards may bear the wording as prescribed for the "Dangerous-Empty" placard. (See § 74.563.)

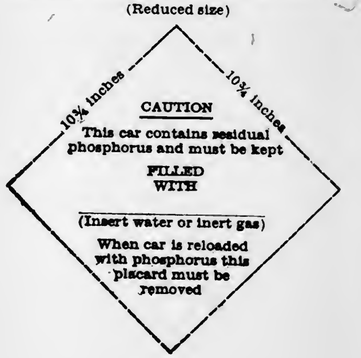
**§ 74.553 Dangerous-Radioactive material placard.**

(a) The "Dangerous-Radioactive material" placard for class D poisons must be of diamond shape, measuring 10¾ inches on each side, and must bear the wording in red letters as shown in the following cut:

DANGEROUS PLACARD FOR RADIOACTIVE MATERIAL

(Reduced size)

**§ 74.554 Unauthorized use of placards.**



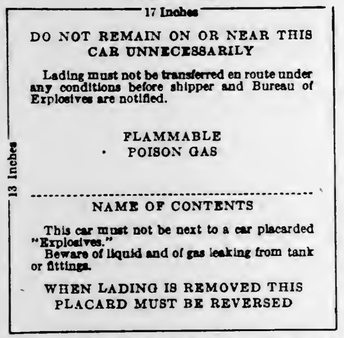
(a) Placards prescribed by this part must not be applied to cars containing articles not subject to Parts 71–78 of this chapter or specifically exempted therefrom.

**§ 74.555 "Caution—Residual phosphorus" placard.**

(a) Tank cars previously loaded with phosphorus, when shipped filled with water or inert gas, must bear a placard reading "Caution—This car contains residual phosphorus and must be kept filled with (water) or (inert gas)". The placard must be of diamond shape measuring 10¾ inches on each side, and must bear the wording in black letters as shown in the following cut:

CAUTION PLACARD FOR RESIDUAL PHOSPHORUS

(Reduced size)

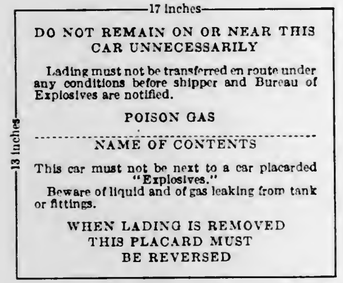


**§ 74.556 Flammable poison gas placard.**

(a) The "Flammable poison gas" placard must be of rectangular shape, measuring 13 by 17 inches, and must bear the wording as shown in the following cut; the printing must be in red with the exception of name of contents which must be in black, as follows:

FLAMMABLE POISON GAS PLACARD

(Reduced size)



(b) The reverse side of such placards may bear the wording as prescribed for the "Flammable Poison Gas—Empty" placard. (See § 74.563.)

**§ 74.557 Poison gas placard.**

(a) The "Poison gas" placard, for tank cars, must be of rectangular shape, measuring 13 inches by 17 inches, and must bear the wording as shown in the following cut; the printing must be in red with the exception of name of contents which must be in black, as follows:

POISON GAS PLACARD

(Reduced size)

(1) The reverse side of such placards may bear the wording as prescribed for the "Poison Gas—Empty" placard. (See § 74.563(f).)

## Subpart D—Unloading From Cars

**§ 74.560 Tank car delivery.**

(a) Tank cars containing flammable liquids or flammable poison gas having a flash point of 80° F. or below, except liquid road asphalt or tar, must not be delivered unless originally consigned or subsequently reconsigned to parties having private-siding (see Note 1 of this section) or to parties using railroad-siding facilities which have been equipped for piping the liquid from tank cars to permanent storage tanks of sufficient capacity to receive contents of car.

(b) No tank car containing compressed gas may be unloaded unless the car is consigned for delivery and unloading on a private track (see Note 1 to subparagraph (2) of this paragraph), except that where no private track is available, delivery and unloading on carrier tracks is permitted provided the following conditions are complied with:

(1) Any tank car of ICC–106A or 110A type (see § 78.275, § 78.276 or § 78.293 of this chapter) may be delivered and the loaded unit tanks may be removed from car frame on carrier tracks, if, before car is accepted for transportation, the shipper has obtained from the delivering carrier and filed with originating carrier, written permission (see Note 2 to subparagraph (2) of this paragraph) for such removal. The consignee must furnish adequately safe mechanical hoist, obtained from the carrier if desirable, by which the tanks are lifted from the car and deposited directly upon vehicles furnished by the consignee for immediate removal from carrier property or tanks must be lifted by adequately safe mechanical hoist from car directly to vessels for further transportation.

(2) Any tank car of other than ICC–106A or 110A type (see §§ 78.275, 78.276, or 78.293 of this chapter), containing anhydrous ammonia, liquefied hydrocarbon or liquefied petroleum gas, and having interior pipes of liquid and gas discharge valves equipped with check valves, may be delivered and unloaded on carrier tracks, if the lading is piped directly from the car to permanent storage tanks of sufficient capacity to receive the entire contents of the car. Such cars may also be stored on a private track or on a carrier track when designated by the carrier for such storage.

Note 1: For this purpose, a private track is a track outside of carrier's right-of-way, yard and terminals, and of which the carrier does not own either the rails, ties, roadbed or right-of-way; or a track or portion of a track which is devoted to the purpose of its user, either by lease or written agreement, in which case the lease or written agreement will be considered as equivalent to ownership.

Note 2: Carriers should give permission for the unloading of these containers on carrier tracks only where no private siding is available within reasonable trucking distance of final destination. The danger involved is the release of compressed gases due to accidental injury to container in handling. The exposure to this danger decreases directly with the isolation of the unloading point.

**§ 74.561 Tank car unloading.**

(a) In unloading tank cars the following rules must be observed (see also § 74.560 for compressed gases):

(1) Unloading operations should be performed only by reliable persons properly instructed and made responsible for careful compliance with this part.

(2) Brakes must be set and wheels blocked on all cars being unloaded.

(3) Caution signs must be so placed on the track or car as to give necessary warning to persons approaching car from open end or ends of siding and must be left up until after car is unloaded and disconnected from discharge connection. Signs must be of metal or other suitable material, at least 12 by 15 inches in size and bear the words, "STOP—Tank Car Connected", or "STOP—Men at Work", the word "STOP" being in letters at least 4 inches high and the other words in letters at least 2 inches high. The letters must be white on a blue background.

(4) Before manhole cover or outlet valve cap is removed, tank car must be relieved of all interior pressure by cooling tank with water or venting tank by raising safety valve or opening vent on dome at short intervals. If venting to relieve pressure will cause a dangerous amount of vapor to collect outside the car, venting and unloading must be deferred until pressure is reduced by allowing the car to stand overnight or otherwise cooling the contents. These precautions are not necessary when car is equipped with a manhole cover which hinges inward or with an inner manhole cover which does not have to be removed to unload the car, and when pressure is relieved by piping vapor into a condenser or storage tank.

(b) After pressure is released, seal should be broken and manhole cover removed as follows:

(1) *Screw type.* Cover must be loosened by placing bar between manhole cover lug and knob. After two complete turns, so that vent openings are exposed, the operation must be stopped, and if there is any sound of escaping vapor, the cover must be again screwed down tightly and interior pressure relieved as prescribed in paragraph (a)(4) of this section, before again attempting to remove the cover.

(2) *Hinged and bolted type.* All nuts must be unscrewed one complete turn, after which same precautions as prescribed for screw type cover must be observed.

(3) *Interior type.* All dirt and cinders must be carefully removed from around cover before yoke is unscrewed.

(c) When car is unloaded through bottom outlet valve, manhole cover must be adjusted as follows:

(1) *Screw type.* Manhole cover must be put in place, but not entirely screwed down, in order that air may enter tank through vent holes in threaded flange of cover.

(2) *Hinged and bolted type.* A small wooden block should be placed under one edge of cover.

(3) *Interior type.* Screw must be tightened up in yoke so that cover will be brought up within one-half inch of closed position.

(d) When unloading through bottom outlet of cars equipped with interior manhole type of covers, and in all cases where unloading is done through the manhole (unless special covers are used, provided with safety-vent opening and tight connection for discharge outlet), the manhole must be protected against entrance of sparks or other sources of ignition of vapor by asbestos or metal covers or by being covered and surrounded with wet burlap. Burlap must be kept damp by replacement or the application of water as needed.

(e) Seals or other substances must not be thrown into the tank. Also care must be taken to avoid spilling any of the contents over car or tank.

(f) Valve rod handle or control in dome must be operated a few times to see that outlet valve in bottom of tank is on its seat before valve cap is removed.

(g) Valve cap, or reducer when large outlet is to be used, must be removed with suitable wrench after set screws are loosened and a pail is placed in position to catch any liquid that may be in outlet chamber. If valve cap or reducer does not unscrew easily, it must be tapped lightly with mallet or wooden block in an upward direction. If leakage shows upon starting the removal, cap or reducer must not be entirely unscrewed, but sufficient threads must be left engaged and sufficient time allowed to permit escape of any accumulation of liquid in the outlet chamber. If leakage stops or initial rate of leakage diminishes materially, cap or reducer may be entirely removed. If initial rate of leakage continues, further efforts must be made to seat the outlet valve, see paragraph (f) of this section. If this fails, the cap or reducer must be screwed up tight and tank must be unloaded through the dome. If upon removal of the outlet cap the outlet chamber is found to be blocked with frozen liquid or any other matter, replace cap immediately and make careful examination to determine that outlet casting has not been cracked. If the obstruction is not frozen liquid, the car must be unloaded through the dome. If the obstruction is frozen liquid and no crack has been found in the outlet casting, the car may, if circumstances require it, be unloaded from the bottom as follows:

(1) Remove cap and attach unloading connections immediately. Then, before opening the valve inside the tank car, apply steam to outside of outlet casting or wrap casting with burlap or other rags and apply hot water to melt the frozen liquid. In any event, top unloading is considered safer than bottom unloading.

(h) Unloading connections must be securely attached to unloading pipes on dome or to bottom discharge outlets before discharge valves are opened.

(i) Tank cars must not be allowed to stand with unloading connections attached after unloading is completed, and throughout the entire period of unloading, or while car is connected to unloading device, the car must be attended by the unloader.

(j) If necessary to discontinue unloading a tank car for any reason, all unloading connections must be disconnected. All valves must first be tightly closed, and the closures of all other openings securely applied.

(k) As soon as a tank car is completely unloaded, all valves must be made tight, the unloading connections must be removed and all other closures made tight, except that heater coil inlet and outlet pipes must be left open for drainage. The manhole cover must be applied by the use of a bar or wrench, the outlet valves reducer and outlet valve cap by the use of a wrench having a handle at least 36 inches long, and the outlet valve cap plug, end plug, and all other closures of openings and of their protective housings by the use of a suitable tool.

(l) Railroad defect cards must not be removed.

(m) Ground around connections must be covered with fresh, dry sand or dirt, if oil or gasoline has been spilled previously.

(n) All tools and implements used in connection with unloading should be kept free from oil, dirt, and grit.

**§ 74.562 Removal of placards and car certificate after unloading.**

(a) When lading requiring placards or car certificates is removed from cars other than tank cars, placards and car certificates must be removed by the party unloading the car.

(b) After tank car is unloaded, the party unloading the car must remove all shipping cards and "Dangerous" placards from car, or may replace or cover the placards with the "Dangerous—Empty" placards prescribed in § 74.563, or reverse the reversible metal placards so as to exhibit the "Dangerous—Empty" wording, and must promptly notify the railroad agent that car is empty.

(c) Tank cars filled with water or an inert gas after unloading phosphorus must have the "Dangerous" placards replaced by the caution placard for residual phosphorus as prescribed in § 74.555.

(d) After flammable poison gas is unloaded from tank car, the party unloading the car must remove all shipping cards and "Flammable Poison Gas" placards from car. "Dangerous—Empty Flammable Poison Gas" placards detailed in § 74.563 must be applied to empty tank car.

(e) After poison gas is unloaded from tank car, the party unloading the car must remove all shipping cards and "Poison Gas" placards from car. "Dangerous—Empty Poison Gas" placards detailed in § 74.563(f) must be applied to empty tank car.

**§ 74.563 "Dangerous—Empty" placards.**

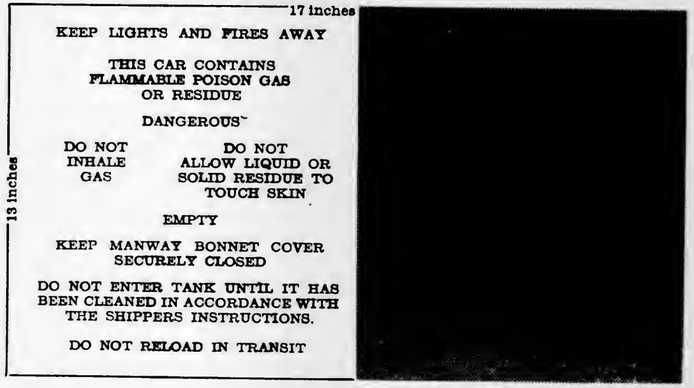
(a) "Dangerous—Empty" placards must measure 10¾ inches on each side (see paragraphs (d) and (f) of this section for "Flammable Poison Gas—Empty" and "Poison Gas—Empty" placards respectively). The printing must be as shown in the cuts in this section, in black on strong white paper, or on tag board designated commercially as 100 percent sulphate, weighing 125 pounds per ream, of sheets 24 inches by 36 inches, and having a resistance of not less than 60 pounds per square inch, Mullen test.

(b) The reverse side of such placards may bear the wording as prescribed for the "Dangerous" placard. (See § 74.552.)

(c) Paper placards must be securely pasted over the "Dangerous" placards pasted on metal placard boards provided for the purpose. Tag board placards must be securely tacked to wooden boards or inserted in holders provided for the purpose.

"DANGEROUS—EMPTY" PLACARD

(Reduced size)

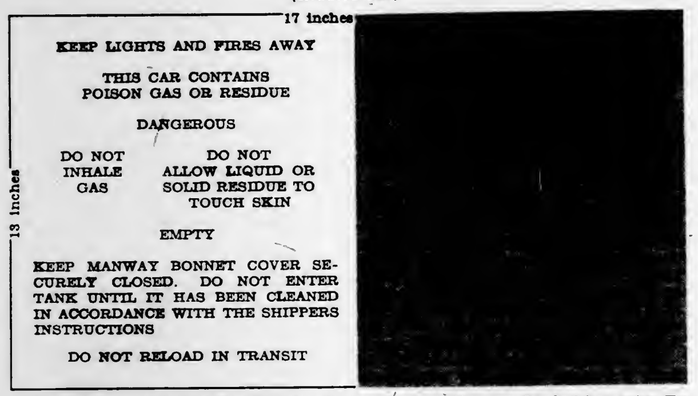


Note 1: The words *"Keep lights and fires away"* and *"Flammable or poisonous vapor"* may be omitted from placards attached to tank cars which previously contained alkaline corrosive liquids or corrosive liquids which do not react with the metal wall or lining of the tank to form a flammable or poisonous gas.

(d) "Flammable Poison Gas—Empty" placard must be of rectangular shape, measuring 13 inches by 17 inches and must bear the wording as shown in the following cut.

"FLAMMABLE POISON GAS—EMPTY" PLACARD

(Reduced Size)



(e) The reverse side of such placards may bear the wording as prescribed for the "Flammable Poison Gas" placard. (See § 74.556.)

(f) "Poison Gas—Empty" placard, for tank cars, must be of rectangular shape, measuring 13 inches by 17 inches and must bear the wording as shown in the following cut:

"POISON GAS—EMPTY" PLACARD

(Reduced size)

(1) The reverse side of such placards may bear the wording as prescribed for the "Poison Gas" placard. (See § 74.557.)

**§ 74.564 Removal and disposition of explosives and other dangerous articles at destination.**

(a) *Delivery at nonagency stations.* Shipments of explosives must not be unloaded at nonagency stations unless the consignee is there to receive them or unless properly locked and secure storage facilities are provided at that point for their protection.

(1) If delivery cannot be so made, shipment must be taken to next or nearest agency station for delivery.

(b) *Delivery at agency stations.* Carrier must require consignee to remove shipments of explosives and other dangerous articles from carrier's property within 48 hours after notice of arrival has been sent or given. Saturdays, Sundays, and holidays are not included. If not so removed, carrier must immediately dispose of the shipments as follows:

(1) Class A explosives, by storage at the expense of the owner or by return to the shipper if reasonably safe storage is not available; by sale; when necessary to safety, by destruction under supervision of a competent person.

(2) Explosives and other dangerous articles, except class A explosives, in carload and less-than-carload lots as prescribed in subparagraphs (3) and (4) of this paragraph.

(3) Carload shipments: By storage on carrier's property; by storage on other than carrier's property, if safe storage on carrier's propety is not available; by sale at expiration of 15 calendar days after notice of arrival has been sent or given to consignee, provided consignor has been notified of nondelivery at expiration of 48-hour period and orders for disposition have not been received.

(4) Less-than-carload shipments: By return to shipper if notice of nondelivery was requested and given consignor as prescribed by carrier's tariff, and orders for return to shipper have been received; by storage on carrier's property; by storage on other than carrier's property, if safe storage on carrier's property is not available; by sale at expiration of 15 calendar days after notice of arrival has been sent or given to consignee, provided consignor has been notified of nondelivery at expiration of 48-hour period and orders for disposition have not been received.

**§ 74.565 Violations and accidents to be reported.**

(a) Consignees must report promptly to the Bureau of Explosives all instances of improper staying and broken, leaking, or defective containers of explosives or other dangerous articles in shipments received by them.

(b) The Bureau of Explosives, upon receipt of reports from consignees, should promptly report to the shipper full particulars covering all cases of defective packing, improper staying, leaking and/or broken shipping containers and rough treatment of cars resulting in leakage or damage to shipping containers or staying.

**§ 74.566 Cleaning cars.**

(a) Cars which have contained arsenic, arsenate of lead, sodium arsenate, calcium arsenate, Paris green, calcium cyanide, potassium cyanide, sodium cyanide, or other poisonous articles, which show any evidence of leakage from packages, must be thoroughly cleaned after unloading before cars are again placed in service.

(b) After unloading poisons or potassium permanganate from steel hopper cars or other cars, cars must be thoroughly flushed out with water except that cars used exclusively in this service under the provisions of §§ 73.194(a)(3) and 73.368(a) of this chapter shall not be subject to this requirement.

(c) All loose powder or other explosive or any other dangerous article which has leaked from packages must be carefully removed from car and other railroad property.

(d) Any box car which, after use for the transportation of radioactive materials in carload lots, is contaminated with such materials to the extent that a survey of the interior surface shows that the beta-gamma radiation is greater than 10 milliroentgens physical equivalent in 24 hours or that the average alpha contamination is greater than 500 disintegrations per minute per 100 square centimeters shall be thoroughly cleaned in such a manner that a resurvey of the interior surface shows the contamination to be below these levels. A certificate to that effect must be furnished to the local agent of the carrier. Cars which are used solely for the transportation of radioactive materials are exempt from the provisions of this section.

**§ 74.567 Flammable vapors.**

(a) A box car or container car placarded "Dangerous", or known to contain flammable liquids, gases, or vapors must not be entered with a lighted open-flame lantern, torch, or other fire, until both car doors have been opened and sufficient time allowed for ventilation and escape of any vapors. The presence of these vapors will generally be indicated by characteristic odors. When leakage is continuous, ventilation will not remove the danger. The leaking package should be located and removed, using electric lights or waiting for daylight.

## Subpart E—Handling by Carriers by Rail Freight

**§ 74.575 Restrictions.**

(a) When local conditions make the acceptance, transportation, or delivery of explosives or other dangerous articles unusually hazardous, local restrictions may be imposed by the carrier.

(b) All carriers must report to the Bureau of Explosives for publication full information as to restrictions which may be imposed against the acceptance, delivery, or transportation of explosives or other dangerous articles, over any portion of their lines.

**§ 74.576 Intermediate shippers and carriers.**

(a) Forwarding companies must have on file shipper's certified bill of lading or shipping order, and know that packages delivered to carrier for transportation comply with Parts 71–78 of this chapter.

(b) Every carrier offering or delivering for rail transportation any loaded motor vehicle or any loaded motor vehicle trailer, semi-trailer, or container containing any shipment of an explosive or other dangerous article shall show on the shipping order, shipping paper, transfer sheet, or other billing issued in lieu thereof, in addition to the description of the vehicle or container, the proper and definite name of the commodity as shown

in § 72.5 of this chapter and the color or kind of label or kind of placards applied.

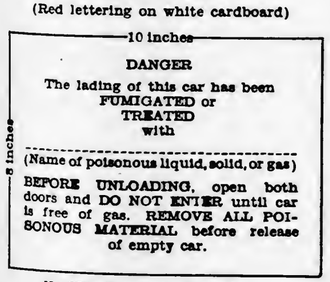
**§ 74.577 Shipping days for explosives.**

(a) When practicable at any point, regular days should be assigned for receiving from shippers less-than-carload lots of explosives, class A, as shown in Part 73 of this chapter.

(b) To enable the carrier to provide proper cars at stations where less-than-carload shipments of explosives, class A, are accepted for loading by the carrier, the shipper must give to the carrier not less than 24 hours' notice of his intention to offer such shipments, and state their destinations. When a regular day to receive all explosives shipments offered at such a station has been appointed, this notice may be waived by the carrier, but the explosives shipments must be delivered on such days in time to permit proper inspection, billing, and loading on that day.

**§ 74.578 Flammable vapors.**

(a) A box car or container car placarded "Dangerous," or known to contain flammable liquids, must not be entered with a lighted open-flame lantern, torch, or other fire, until both car doors have been opened and sufficient time allowed for ventilation and escape of any vapors. The presence of these vapors will generally be indicated by characteristic odors. When leakage is continuous, ventilation will not remove the danger. The leaking package should be located and removed, using electric lights or waiting for daylight.



**§ 74.579 Cars containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases.**

(a) Delivery to carrier or transportation of cars containing lading fumigated or treated with flammable liquid or flammable gas is prohibited until 48 hours have elapsed after such fumigation or treatment, or until car has been ventilated so as to remove danger of fire or explosion due to the presence of flammable vapors.

(b) Cars containing lading which has been fumigated or treated with poisonous liquid, solid, or gas, such as carbolic acid, liquid or solid, chlorpicrin, hydrocyanic acid, methyl bromide, etc., must be placarded on each door or near thereto with placard reading as follows (for cleaning cars, see § 74.566):

(Reduced size)

(Red lettering on white cardboard)

**§ 74.580 Violations must be corrected.**

(a) All violations discovered must be corrected before forwarding shipments of explosives.

**§ 74.581 Routing shipments.**

(a) Before any shipment of explosives, class A, as named in §§ 73.53 to 73.87 of this chapter, destined to a point beyond the lines of the initial carrier, is accepted from a shipper, the initial carrier must ascertain that the shipment can go forward by the route designated, and to avoid delays en route the initial carrier must be in possession of full rate information, before forwarding the shipment.

**§ 74.582 Movement to be expedited.**

(a) Carriers must forward shipments of explosives and other dangerous articles promptly and within 48 hours, Saturdays, Sundays, and holidays excluded, after acceptance at originating point or receipt at any yard, transfer station, or interchange point, except that where biweekly or weekly service only is performed, shipments of explosives and other dangerous articles must be forwarded on the first available train.

(b) No tank car loaded with flammable liquid, flammable poison gas or compressed flammable gas shall be received and held at any point, subject to forwarding orders, so as to defeat the purpose of this section or of § 74.560.

**§ 74.583 Examination of shipping order and packages.**

(a) Carriers must examine shipping order and determine that proper certificate, as required under § 73.430 of this chapter, is given and that packages are not broken or leaking when offered for transportation.

**§ 74.584 Waybills, switching orders, or other billing.**

(a) The revenue waybill, astray waybill, switching order or any other billing issued in lieu thereof, prepared from the shipping order or other shipping paper, or shipping orders used as waybills, must describe the article by shipping name as prescribed in § 72.5 of this chapter, and must show the color or kind of label notations for less-than-carload shipments or placard notations for carload shipments of explosives and other dangerous articles and placard indorsement as follows:

| | Label notation to follow entry of the article on the billing | Placard notation to follow entry of the article on the billing | Placard endorsement must be ½" high and appear on the billing near the space provided for the car number |
|---|---|---|---|
| For high explosives, initiating explosives, low explosives, and blasting caps or electric blasting caps more than 1,000 in quantity, class A. | None | "Explosives Placard" | "Explosives". |
| For explosive chemical ammunition containing class A poison gas. | Poison gas label | "Explosives and Poison Gas Placard". | "Explosives" and "Poison Gas". |
| For explosives, class B | None | "Dangerous Placard" | "Dangerous". |
| For explosives, class C | do | None | None. |
| For flammable liquids | Red label | "Dangerous Placard" | "Dangerous". |
| For flammable solids | Yellow label | do | Do. |
| For oxidizing materials | do | do | Do. |
| For corrosive liquids | White label | do | Do. |
| For compressed nonflammable gases in containers other than tank cars. | Green label | None | None. |
| For compressed nonflammable gases in tank cars. | None | "Dangerous Placard" | "Dangerous". |
| For compressed flammable gases | Red gas label | do | Do. |
| For poisonous gases or liquids, class A | Poison gas label | "Poison Gas Placard" | "Poison Gas". |
| For flammable poisonous liquids, class A, in tank cars. | None | "Flammable Poison Gas Placard". | "Flammable Poison Gas". |
| For poisonous liquids, class A, in tank cars. | None | "Poison Gas Placard" | "Poison Gas." |
| For poisonous liquids or solids, class B. | Poison label | "Dangerous Placard" | "Dangerous". |
| For tear gases, class C | Tear gas label | None | None. |
| For radioactive materials, class D poison. | Radioactive material label. | "Dangerous Radioactive material Placard".[1] | "Radioactive material".[1] |
| For tank cars filled with water or inert gas and last containing phosphorus. | None | "Caution—this car contains residual phosphorus and must be kept filled with (water) or (inert gas)". | "Caution—Residual Phosphorus". |
| For empty tank cars that last contained flammable poisonous liquids, class A. | None | "Dangerous-Flammable Poison Gas-Empty Placard". | "Dangerous—Flammable Poison Gas—Empty". |
| For empty tank cars that last contained poisonous liquids, class A | None | "Dangerous—Poison Gas—Empty Placard." | "Dangerous—Poison Gas—Empty." |

[1] These requirements do not apply to billing prepared for shipments of magnesium-thorium alloys or uranium depleted or normal, described in § 73.392 (e) and (f) of this chapter and bearing red label as described in § 73.414(d) of this chapter.

(b) Billing prepared from the shipping order or other shipping paper covering shipments of blasting caps, must, in addition, show the number of blasting caps in the shipment.

(c) Waybills, manifests, or memorandums for shipments offered for transportation by carrier by water must show the label notations as prescribed in this section.

(d) Abbreviations must not be used on shipping orders or billing for explosives or other dangerous articles.

(e) When the initial movement is a switching operation, the switching order, switching receipt or switching ticket, and copies thereof, prepared by the shipper, or by the carrier under the shipper's written authority, must bear the placard indorsement and the shipper's certificate prescribed by § 73.430 of this chapter and paragraph (a) of this section; for other switching movement, the switching ticket prepared by a railway employee must show the kind of placard required.

(f) The car ticket, card waybill, running slip, envelope containing waybills, or any other billing for any loaded car which in this chapter should bear "Explosives", "Dangerous", "Dangerous—Radioactive material", "Poison Gas", or "Flammable Poison Gas" placards must have plainly stamped, or plainly written, on the face of such billing, near the car number, in letters not less than three-eighths of an inch high, the words "Explosives", "Dangerous", "Dangerous—Radioactive material", "Poison Gas", or "Flammable Poison Gas"; and for container cars must also show which of the containers loaded thereon contain dangerous articles.

(g) For tank cars not loaded, the billing must show the word "Empty", except that for tank cars previously loaded with white or yellow phosphorus the billing must show the words "Caution—This car contains residual phosphorus and must be kept filled with (water) or (inert gas)".

(1) For tank cars that last contained poisonous liquids, class A, the billing must show the words "Dangerous—Poison Gas—Empty" except the billing for tank cars that last contained hydrocyanic acid must show the words "Dangerous—Flammable Poison Gas—Empty."

(h) At stations, or other points, where other shipments of any material are loaded into a properly certified and placarded car received with shipments of explosives, or when shipments of explosives are transferred or reloaded, or carload shipments are reconsigned, a record must be kept of the car, originating point, carrier's name and date of car certificate. The blocking or bracing at these points to secure the lading must be inspected as provided in § 74.525 and certified for compliance with these regulations by the person making the inspection who shall sign the car certificates immediately below the signature which appears on certificate No. 2 of the original car certificates attached to the car.

### § 74.585 Nonagency shipments.

(a) If shipments of explosives are accepted at nonagency stations, provisions must be made for the proper certification and placarding of cars, examination of shipments, and loading and staying of packages in cars.

### § 74.586 Handling explosives and other dangerous articles.

(a) In handling packages of explosives at stations and in transferring them to and from cars, the greatest care must be taken, and shocks or falls liable to injure the containers must be avoided. Where an inclined chute is employed, such chute shall be constructed of 1-inch planed boards, with side guards 4 inches high extending 3 inches above top face of bottom of chute and throughout its length, fastened with brass screws. D-shaped wooden strips or runners, not more than 6 inches apart and running lengthwise of chute, must be fastened to the upper surface of the bottom board by means of glue and wooden pegs extending through the bottom board and runners. Chutes must be occasionally wiped down with waste moistened with machine oil when dynamite packages are being handled.

(b) A stuffed mattress, 4 feet wide by 6 feet long and not less than 4 inches thick, or a heavy jute or hemp mat of like dimensions, must be placed under the discharging end of the chute.

(c) Careful men must be chosen to handle explosives, the platform and the shoes of the men must be as free as possible from grit, and all possible precautions must be taken against fire.

(d) Unauthorized persons must not have access to explosives and other dangerous articles at any time while such articles are in the custody of the carrier.

(e) Explosives and other dangerous articles must be kept in a safe place while being held for delivery or loading.

(f) In handling packages containing dangerous articles other than explosives at stations, and to and from cars, care must be taken to prevent their falling or being broken. Heavy packages should be trucked, rolled, or moved by use of skids or other satisfactory devices and must not be dropped from trucks, platforms, or cars. Planks for rolling trucks from platforms to cars should have beveled ends.

(g) Acid or other corrosive-liquid carboys should be handled so as not to spill the contents. "Empty" carboys, so called, should be handled with necks up, and with sufficient care to prevent burns to clothing or person from leaking acid or other corrosive liquid.

(h) A container of radioactive material bearing red label must not be placed in cars, depots or other places closer than 3 feet to an area which may be continuously occupied by passengers, employees, or shipments of animals. When more than one such container is present, the distance from occupied areas must be computed from the table in subparagraph (2) of this paragraph by adding the number of units shown on labels on the containers.

(1) In a combination car carrying passengers and/or express shipments, a container of radioactive material must not be placed closer than 3 feet to the dividing partition. For more than one such container the distance must be computed by method described in subparagraph (2) of this paragraph.

(2) A container of radioactive material, red label, must not be placed closer than 15 feet to any package containing undeveloped film. If more than one such container is present, the distance must be computed from the table in this subparagraph by adding the number of units shown on the labels on the packages.

TABLE

| Total number of units | Minimum distance in feet to nearest undeveloped film | Distance in feet to area that may be continuously occupied by passengers or employees | Distance in feet from dividing partition of a combination car |
|---|---|---|---|
| 1 to 10 | 15 | 3 | 3 |
| 11 to 20 | 20 | 4 | 4 |
| 21 to 30 | 25 | 5 | 5 |
| 31 to 40 | 30 | 6 | 6 |

NOTE 1: The distance in the table must be measured from the nearest point of the radioactive container or containers.

NOTE 2: 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm. of hard gamma rays of radium filtered by ½ inch of lead.

(3) Not more than 40 units of radioactive material (red label) shall be transported in any car or stored in any location at one time.

(4) All containers of radioactive material (red label) must be carried by the handles when handles are provided.

NOTE 1: The requirements of this paragraph shall not apply to magnesium-thorium alloy materials or uranium, depleted or normal, described in § 73.392 (e) and (f) of this chapter. The location of bundles, boxes, barrels, or crates of such material from packages of undeveloped film must be as stated on the label (see § 73.414(d) of this chapter).

### § 74.587 Lights.

(a) When necessary to use lights while handling explosives, it is recommended that where practicable incandescent electric lights be provided.

### § 74.588 Disposition of damaged or astray shipments.

(a) Packages of explosives found injured or broken in transit may be recoopered when this is evidently practicable and not dangerous. A broken box of high explosives that cannot be recoopered should be reinforced by stout wrapping paper and twine, placed in another strong box and surrounded by dry, fine sawdust or dry and clean cotton waste or elastic wads made from dry newspapers. A ruptured can or keg should be sealed with tape and should be inclosed in a grain bag of good quality and boxed. Injured packages thus protected and properly marked may be forwarded. The box and waybill should be marked to indicate that it has been repacked.

(b) Particles of explosive compositions from damaged containers possibly may be strewn on car floors or freight, and due care should be exercised in repacking such containers that no sparks may be produced by contact of metal or other hard surfaces, or otherwise. Water will prevent the explosion of practically all explosive substances except dynamite, and in such cases car floors should be thoroughly swept, and washed with a plentiful supply of water. Use of iron-wheel trucks, metal hammers or other metal tools that may produce sparks, should be avoided. This restriction does not apply to metal tools made of brass, bronze or copper.

(c) Unless they are leaking, or in a manifestly insecure condition, packages of dangerous articles other than explosives in transit must be forwarded to destination and report made of any violation observed. Leaking packages must not be forwarded until repaired or reconditioned. Packages of radioactive materials (class D poisons) which show any evidence of rough handling, leakage, or impending failure must be isolated from danger of human contact until qualified persons are available to supervise handling. The shipper and the Bureau of Explosives should be notified promptly.

(d) Packages of explosives showing evidence of leakage of liquid ingredients must (1) be returned immediately to shipper, if at point of shipment; or (2) disposed of to a person who is competent and willing to remove them from railway property, if leakage is discovered while in transit; or (3) removed immediately by consignee, if shipment is at destination.

(e) When disposition cannot be made as above, the leaking boxes must be packed in other boxes large enough to permit inclosure, and the leaking boxes must be surrounded by at least 2 inches of dry, fine sawdust or dry and clean cotton waste, and be stored in station magazine or other safe place until arrival of an inspector of the Bureau of Explosives, or other authorized person, to superintend the destruction or disposition of the condemned material.

(f) An astray shipment of explosives must be forwarded immediately to its destination if known, or returned to the shipper by the most practicable route, provided a careful inspection shows the packages to be in proper condition for safe transportation.

(g) When a package in an astray shipment is not in proper condition for safe transportation (see paragraphs (a), (d), and (e) of this section), or when name and address of consignee or shipper are unknown, disposition must be made as prescribed by paragraphs (d) and (e) of this section.

(h) An astray package of dangerous articles other than explosives of known destination and in proper condition for safe transportation, must be forwarded immediately on an "astray bill", showing proper label notation and placard indorsement, as prescribed by § 74.584 (a) to (f). When necessary to replace a label and doubt exists as to the kind, the red label should be used.

### § 74.589 Handling cars.

(a) *Definitions.* (1) "Person" means any individual, partnership, corporation, association, joint stock company, business trust or other organized group of persons, or any trustee, receiver, assignee, or personal representative, and includes any department or agency of the United States, any State, the District of Columbia, or any other political, governmental or legal entity;

(2) "Railroad" means any person engaged in transportation as a common carrier by rail and includes its agents or employees;

(3) "Engine" means any locomotive, propelled by any form of energy, used by a railroad;

(4) "Freight car" means any vehicle used for the transportation of property by rail;

(5) "Passenger car" means any vehicle used for the transportation of passengers by rail;

(6) "Combination car" means any vehicle used for the transportation of both property and passengers by rail;

(7) "Occupied caboose" means any vehicle used by railroad employees, caretakers, or others authorized to ride therein;

(8) "A train" is one or more engines coupled together with or without cars displaying markers;

(9) "Freight train" means one or more engines coupled with one or more freight cars, displaying markers;

(10) "Passenger train" means one or more engines coupled with one or more passenger cars carrying passengers, displaying markers;

(11) "Mixed train" means one or more engines coupled with one or more freight cars and passenger cars carrying passengers, displaying markers;

(12) "Placarded car" shall be construed to embrace also any car which under this part is required to be placarded;

(13) "Pickup and/or setoff service" shall be construed to mean trains in service that pick up and/or set off one or more cars at three or more stations en route; trains having cars from which less-than-carload freight is loaded or unloaded en route; or trains regularly scheduled to perform pickup and/or setoff service which on some days make less than three stops.

(b) *Placards on cars.* A car requiring car certificates and "Explosives," "Dangerous," "Dangerous—Radioactive Material," "Poison Gas," "Flammable Poison Gas," "Dangerous—Empty Flammable Poison Gas," "Dangerous—Empty Poison Gas" or "Caution—Residual Phosphorus" placards under the provisions of this part shall not be transported unless such freight car is at all times placarded and certificated as required. Placards and car certificates lost in transit shall be replaced at the next inspection point, and those not required shall be removed at the next terminal where the train is classified.

(1) At points where trains are inspected, cars placarded "Explosives" and adjacent cars shall be inspected; such cars shall continue in movement only when inspection shows them to be in condition for safe transportation.

(c) *Switching cars containing explosives, poison gas, or flammable poison gas or placarded trailers on flat cars.* A car placarded "Explosives", "Poison Gas", or "Flammable Poison Gas", or any flat car carrying a trailer placarded "Explosives", "Poison Gas", "Dangerous", or "Dangerous-Radioactive Material" shall not be cut off while in motion. No car moving under its own momentum shall be allowed to strike any car placarded "Explosives", "Poison Gas", or "Flammable Poison Gas", or any flat car carrying a trailer placarded "Explosives", "Poison Gas", "Dangerous", or "Dangerous-Radioactive Material", nor shall any such car be coupled into with more force than is necessary to complete the coupling.

(1) When transporting a car placarded "Explosives" in terminals, yards, side tracks, or sidings, such cars shall be separated from the engine by at least one nonplacarded car.

(2) Closed cars placarded "Explosives" shall have doors closed before they are moved.

(d) *Switching of cars containing dangerous articles.* In switching operations where use of hand brakes is necessary, a placarded loaded tank car, or a draft which includes a placarded loaded tank car shall not be cut off until the preceding car or cars clear the ladder track and the draft containing the placarded loaded tank car, or a placarded loaded tank car shall in turn clear the ladder before another car is allowed to follow.

(1) In switching operations where hand brakes are used, it shall be determined by trial that a car placarded "Dangerous" or that a car occupied by a rider in a draft containing a car placarded "Dangerous" has its hand brakes in proper working condition before it is cut off.

(e) *Placement of freight cars containing explosives in yards, on sidings, or sidetracks.* Cars placarded "Explosives" shall be so placed that they will be safe from all probable danger of fire. Freight cars placarded "Explosives" shall not be placed under bridges or overhead highway crossings, nor in or alongside of passenger sheds or stations except for loading or unloading purposes.

(f) *Notice to crews of cars containing explosives in freight trains or mixed trains.* At all terminals or other places where trains are made up by crews other than road crew accompanying the outbound movement of cars, the railroad shall execute a consecutively numbered notice showing the location in the freight train or mixed train of every car placarded "Explosives." A copy of such notice shall be delivered to the train and engine crew and a copy thereof showing delivery to the train and engine crew shall be kept on file by the railroad at each point where such notice is given. At points where train or engine crews are changed, the notice shall be transferred from crew to crew.

(g) *Position in freight train or mixed train of cars containing explosives.* In a freight train or a mixed train either standing or during transportation thereof, a car placarded "Explosives" shall, when length of train permits, be placed not nearer than the sixteenth car from both the engine or occupied caboose, except:

(1) When the length of freight train or mixed train will not permit it to be so placed, it shall be placed near the middle of the train.

(2) When transported in a freight train made up in "blocks" or classifications, a car placarded "Explosives" shall be placed near the middle of the "block" or classification in which moving, but not nearer than the sixth car from both the engine or occupied caboose.

(3) When transported in a freight train or a mixed train performing pickup and/or setoff service, it shall be placed not nearer than the second car from both the engine or occupied caboose, except as provided in paragraph (1) of this section.

(h) *Separating cars or flat cars carrying trailers or containers placarded "EXPLOSIVES" from other cars in trains.* In a freight train or a mixed train either standing or during transportation thereof, a car or flat car carrying trailers or containers placarded "EXPLOSIVES" must not be handled next to:

(1) Occupied passenger car; except as provided in paragraph (l) of this section.

(2) Occupied combination car; except as provided in paragraph (l) of this section.

(3) Any car placarded "Dangerous" or "Dangerous-Radioactive material".

(4) Engine.

(5) Any car placarded "Poison Gas" or "Flammable Poison Gas".

(6) Wooden underframe car (except on narrow gauge railroads).

(7) Loaded flat car, except that cars carrying trailers or containers placarded "Explosives" as authorized by the regulations in this chapter may be coupled to each other.

NOTE: Flat cars equipped with permanently attached ends of rigid construction shall be considered as open-top cars. See subparagraph (8) of this paragraph.

(8) Open-top car when any of the lading protrudes beyond the car ends or when any of the lading extending above the car ends is liable to shift so as to protrude beyond the car ends.

(9) Car, with automatic refrigeration or heating apparatus in operation; car, with open-flame apparatus in service or with internal combustion engine in operation.

(10) Car containing lighted heaters, stoves, or lanterns.

(11) Car loaded with live animals or fowl, occupied by an attendant.

(12) Occupied caboose, except as provided in paragraph (l) of this section.

(i) *Position in train of loaded placarded tank car.* In a freight train or a mixed train, except a train consisting entirely of placarded loaded tank cars and as provided in paragraph (j) of this section, a placarded loaded tank car shall when the length of the train permits, be not nearer than the sixth car from the engine, occupied caboose or passenger car.

(1) When the length of the freight train or mixed train will not permit it to be so placed, it shall be not nearer than the second car from the engine, occupied caboose or passenger car.

(2) When transported in a freight train engaged in "pickup" or "setoff" service, a placarded loaded tank car shall be not nearer than the second car from both engine or occupied caboose.

(j) *Separating loaded tank cars placarded "Dangerous" from other cars in trains.* In a freight train or mixed train either standing or during transportation thereof, a placarded loaded tank car must not be handled next to:

(1) Occupied passenger car, other than cars occupied by gas handlers and authorized personnel accompanying shipment.

(2) Occupied combination car, other than cars occupied by gas handlers and authorized personnel accompanying shipment.

(3) Any car placarded "Explosives".

(4) Engine or occupied caboose (except when train consists only of placarded loaded tank cars).

(5) Any car placarded "Poison Gas" or "Flammable Poison Gas".

(6) Wooden under-frame car (except on narrow gauge railroads).

(7) Loaded flat car, other than specially equipped cars in trailer-on-flat-car service or flat cars loaded with automobiles, trucks, or trailer bodies which are secured by means of a device or devices designed and permanently installed on the flat car for that purpose and of a type generally accepted for handling in interchange between railroads.

NOTE: Flat cars equipped with permanently attached ends of rigid construction shall be considered as open-top cars. See subparagraph (8) of this paragraph.

(8) Open-top car when any of the lading protrudes beyond the car ends or when any of the lading extending above the car ends is liable to shift so as to protrude beyond the car ends.

(9) Car, trailers or truck bodies on flat car with automatic refrigeration or heating apparatus in operation; car, trailers or truck bodies on flat car with open-flame apparatus in service or with internal combustion engines in operation.

(10) Car, trailers or truck bodies on flat car containing lighted heaters, stoves or lanterns except when car is occupied by gas handlers or authorized personnel accompanying shipment.

(11) Car loaded with live animals or fowl, occupied by an attendant.

(k) *Position in freight train or mixed train of cars placarded "POISON GAS," "FLAMMABLE POISON GAS," or containing poison liquids, class A.* In a freight train or mixed train either standing or during transportation thereof, a car placarded "POISON GAS," "FLAMMABLE POISON GAS" or containing poison liquids, class A, shall not be next to other freight cars placarded "EXPLOSIVES" or cars placarded "DANGEROUS."

(l) In a freight train or mixed train either standing or during transportation thereof, a loaded tank car placarded "POISON GAS," or "FLAMMABLE POISON GAS," must not be handled next to:

(i) Occupied passenger car, other than cars occupied by gas handlers and authorized personnel accompanying shipment.

(ii) Occupied combination car, other than cars occupied by gas handlers and authorized personnel accompanying shipment.

(iii) Any car placarded "EXPLOSIVES."

(iv) Engine or occupied caboose.

(v) Any car placarded "DANGEROUS."

(vi) Wooden under-frame car (except on narrow gauge railroads).

(vii) Loaded flat car, other than specially equipped cars in trailer-on-flat-car service or flat cars loaded with automobiles, trucks, or trailer bodies which are secured by means of a device or devices designed and permanently installed on the flat car for that purpose and of a type generally accepted for handling in interchange between railroads.

NOTE: Flat cars equipped with permanently attached ends of rigid construction shall be considered as open-top cars. See subdivision (viii) of this paragraph.

(viii) Open-top car when any of the lading protrudes beyond the car ends or when any of the lading extending above the car ends is liable to shift so as to protrude beyond the car ends.

(ix) Car, trailers or truck bodies on flat car with automatic refrigeration or heating apparatus in operation; car, trailers or truck bodies on flat car with open-flame apparatus in service or with internal combustion engines in operation.

(x) Car, trailers or truck bodies on flat car containing lighted heaters, stoves or lanterns except when car is occupied by gas handlers or authorized personnel accompanying shipment.

(xi) Car loaded with live animals or fowl, occupied by an attendant.

(l) *Position in freight train or mixed train of cars placarded "Explosives" or "Poison Gas", or both, and cars placarded "Flammable Poison Gas" when accompanied by cars carrying guards or gas handling crews.* A car requiring "Explosives" or "Poison Gas" placards, or both, and a car requiring "Flammable Poison Gas" placards, shall be next to and ahead of the car occupied by the guards or gas handling crews accompanying such car; except that when the car occupied by guards or gas handling crews is equipped with a lighted heater or stove it shall be the fourth car behind a car or cars requiring "Explosives" placards.

(m) *Cars containing explosives, poison gas, or flammable poison gas and tank cars placarded "Dangerous" in passenger or mixed trains.* Cars containing explosives, class A, poison gases or liquids, class A, or flammable poison gas, and tank cars requiring "Dangerous" placards shall not be transported in a passenger train. Such cars may be transported in mixed trains but only at such times and between such points that freight train service is not in operation.

(1) Cars containing explosives, class A, poison gases or liquids, class A, or flammable poison gas, and tank cars placarded "Dangerous" shall not be transported next to occupied cabooses or cars carrying passengers in mixed trains, except as provided in paragraph (l) of this section.

(2) When a car containing explosives, class B, or dangerous articles other than explosives requiring labels (not including class A poison gases or liquids) is moved in a mixed train and such car is not occupied by an employee of the carrier, placards must be applied to the car as required by this part.

(n) *Position in train of cars containing class D poisons.* In a freight train or mixed train either standing or during transportation thereof, a car placarded "Dangerous—Radioactive material" must not be handled next to cars placarded "Explosives" or next to carload shipments of undeveloped film.

**§ 74.590 Record of change of seals of cars of explosives to be made.**

(a) When a car seal is changed on a car placarded "Explosives" while en route or before delivery to a consignee, a record must be made showing the following information which shall be shown on or attached to waybill or other form of memorandum which shall accompany car to destination.

| Railroad | Place | Date |
|---|---|---|
| Car initials | Car number | |

Number or description of seal broken_____

Number or description of seal used to reseal car_____

Reasons for opening car_____

Conditions of load_____

Name and occupation of person opening car

**§ 74.591 Car magazines.**

(a) When specially authorized by the carrier, class A explosives in quantity not exceeding 150 pounds may be carried in construction or repair cars when the packages of explosives are placed in a "magazine" box made of sound lumber not less than 1 inch thick, covered on the exterior with metal, and provided with strong handles. This box must be plainly stenciled on the top, sides, and ends, in letters not less than 2 inches high, "EXPLOSIVES—DANGEROUS—HANDLE CAREFULLY". The box must be provided with strong hinges and with a lock for keeping it securely closed. Vacant space in the box must be filled with a cushioning material such as sawdust or excelsior, and the box must be properly stayed to prevent movement within the car. The car, when not occupied by a responsible employe, must be placarded "EXPLOSIVES".

**§ 74.592 Cotton fires.**

(a) When fire occurs in a shipment of cotton in transit at a point where it cannot be reconditioned, and where arrangements cannot be made with the originating line to sell it, all burnt cotton in the shipment must be stored under observation in as safe a place as practicable for not less than 10 days, and without further evidence of fire, before forwarding. The billing must be changed to read "Burnt Cotton", and the material must be forwarded as a dangerous article. (See § 73.159 of this chapter.)

**§ 74.593 Charcoal fires.**

(a) When fire occurs in charcoal in transit, water should not be used if it is practicable to locate and remove the material on fire, since wet charcoal is much more liable to ignite spontaneously, and the fire cannot be stopped permanently by the use of water. Any material which has become wet in extinguishing fire must be removed from the car and not reshipped; the remainder of the charcoal must be held under observation in a dry place for at least five days before forwarding.

**§ 74.594 Leaking tank cars.**

(a) Action in any particular case will depend upon existing conditions, and good judgment will be necessary to avoid disastrous fires on the one hand and useless sacrifice of valuable property on the other.

(b) Volatile, flammable, and combustible liquids, or flammable liquefied gases, such as gasoline, naphtha, petroleum oils, or liquefied petroleum gas, in large quantity and spread over a large surface, will form vapors that will ignite at a considerable distance, depending on the kind and quantity of liquid and the direction and force of the wind. Many of the liquids, regarded as safe to carry under ordinary conditions and transported in tank cars without the "Dangerous" placard, should still be treated as dangerous in handling a wreck.

(c) When tank cars are leaking, all lights or fires near them should be extinguished or removed until it is determined that contents are not flammable or combustible. Incandescent electric lights, or portable electric flash-lights should be used when available.

(d) Lanterns necessarily used for signaling should be kept on the side from which the wind is blowing and at as high an elevation as can be obtained. The vapors will go with the wind but not against it. The ash pan and fire box of a locomotive or steam derrick are sources of danger, especially when wind is blowing across the wrecked or leaking tank car toward them. Wrecks involving tank cars should in no case be approached with lighted pipes, cigars, or cigarettes, and all spectators should be kept away.

(e) Effort should be made to prevent the spread of liquid leakage over a large surface by collecting it in any available vessels or draining it into a hole or depression at a safe distance from the track. When necessary, trenches should be dug for this purpose.

(f) It is not safe to drain flammable or combustile liquids in large quantities into a sewer, since vapors may thus be carried to distant points and there ignited. Care should be exercised also not to permit these liquids to drain into streams of water which may be used by irrigation plants or for watering stock. Dry earth over spilled liquid will decrease the rate of evaporation and the danger. A stream of these liquids on the ground should be dammed and dry earth thrown on the liquid as it collects.

(g) Sudden shocks or jars that might produce sparks or friction should be avoided. When possible, the wrecked cars should be jacked carefully into position after removing other cars and freight that might be injured by fire. Only as a last resort, to meet an emergency, should a wrecked car be moved by dragging, and when this is done all persons should be kept at a safe distance. (See § 74.600.)

(h) No unnecessary attempt should be made to transport a damaged tank car from which flammable or combustible liquid is leaking. Safety in short movements may be secured by attaching a receptacle under small leaks to prevent spread of these liquids over tracks. Tracks at intervals in rear of a moving car should be covered with fresh earth to prevent fire overtaking the car. Engines should be kept away; also spectators who may be smoking. If damaged car is derailed, and not in a position to obstruct or endanger traffic, leaks should be stopped as far as possible, and the car should be left under guard until another tank car or sufficient receptacles can be provided for the transfer of the liquid, which should be transferred by pumping when practicable.

(i) Highly volatile products cannot be transferred in the usual way by a vacuum pump. The pump can only be used when placed so that liquid flows to it from the tank by gravity.

(j) Whenever the leaking condition of a tank car requires transfer of lading or renders the tank unfit for reloading, the car must be stenciled on both sides in letters three inches in size, adjacent to the car number, "Leaky Tank. Do Not Load Until Repaired", and indicate and mark at the location of the leak with the symbol "X", and the owner must be immediately notified by wire, such notification to indicate definitely location of leak. Stenciling must not be removed until the tank is repaired.

(k) Even a tank that is not leaking is liable to be ruptured by the use of slings, and slipping of chain slings may produce sparks. Saving of the contents of the tank is not as important as the prevention of fire.

(l) An empty or partially empty tank car, with or without placards, is very liable to contain explosive gases, and open flame lights must not be brought near it. (See § 74.595.)

**§ 74.595 Examination of empty tank cars.**

(a) Lighted lanterns. Many fatal accidents have resulted from using lanterns or lighted matches to examine the interior of empty tank cars or in using hot rivets to repair unseamed tank cars, which may contain flammable vapors even when the previous lading was not of flash point below 80° F. Only incandescent electric lights should be used for this examination. Fumes in any empty tank car should be considered as injurious to a person entering it. In no case should an empty tank be entered before it has been cleaned by steaming, without wearing a respirator, hose mask type only, and without having another person stationed at the manhole with a rope attached to the person entering the tank. Hobnailed shoes and metal tools are liable to create sparks and should not be used inside an empty tank.

(l) Small quantities of the material with which the tank car was loaded may remain in the "empty" tank car and when the vapors remaining therein are unstable it is permissible to add sufficient inert gas to render the vapors stable.

**§ 74.596 Inspection of tank cars.**

(a) Placarded loaded tank cars must be inspected by the carrier before acceptance at the originating points and when received in interchange to see that they are not leaking and that the air and hand brakes, journal boxes, and trucks are in proper condition for service.

(b) **Empty tank cars previously containing a dangerous article tendered for movement or when received in interchange must have manhole covers, outlet valve reducers, outlet valve caps, outlet valve cap plugs, end plugs, and plugs or caps of other openings securely in their proper places; except that heater coil inlet and outlet pipes must be left open for drainage.**

(c) **Safety valves on tank cars must not be tested while these cars are loaded. Whenever test of safety valves or tank is due on a loaded car while in transit, unless the car is leaking or in a manifestly insecure condition, it must be forwarded to destination, carded on each side with a card exhibiting the following notice:**

Safety valves / Tank } Overdue for test.
Moving under I. C. C. § 74.596 (c).

(1) **Prompt reports of such movements, showing initials and numbers of cars, must be made by the railroad carding the cars to the Bureau of Explosives, 63 Vesey Street, New York 7, New York.**

**§ 74.597 Leaking packages of acid or poisons.**

(a) **Whenever a car bearing the "Dangerous" placard is discovered in transit with packages in leaking condition, all unnecessary movement of the car must cease and at the first opportunity an examination must be made of the lading, and if practicable any broken or leaking packages of nitric or mixed acids should be removed promptly to prevent fire. Any acid or other corrosive liquid remaining on the car floor or on surrounding packages should be washed away with a plentiful supply of water, or if not available, cleaned up with a liberal application of sand or earth. Care should be exercised to prevent inhalation of gases liberated through the application of water; when employes are injured by acid or other corrosive liquid, the liquid should be washed off immediately by a liberal application of water.**

(b) **Cars which have contained arsenic, arsenate of lead, sodium arsenate, calcium arsenate, Paris green, calcium cyanide, potassium cyanide, sodium cyanide, or other poisonous articles, which show any evidence of leakage from packages, must be thoroughly cleaned after unloading before cars are again placed in service.**

(c) **Leakage of dangerous articles is often accompanied by odors characteristic of the articles, and all available opportunities for noting such odors must be utilized in order that the source of leakage may be discovered and the leakage stopped, or the leaking package removed from the car, or the contents of tank cars transferred. If artificial light is necessary, only electric lights should be used. Leaking tank cars containing compressed gases should be switched to a location distant from habitation and highways and proper action taken for transferring contents under competent supervision.**

(d) **Cars containing leaking packages or leaking tank cars must be protected against ignition of liquid or vapors by flame of inspector's lanterns or torches, by burning fusees, by switch-lights, by switch-thawing flames, by fires on side of track, by hot coals from locomotives, or otherwise. All unnecessary movement of a car discovered in transit in leaking condition must cease until the unsafe condition is remedied.**

(e) ***Radioactive materials—Poison class D.*** **In event of breakage of container, wreck, fire, or unusual delay involving cars placarded "Dangerous—Radioactive material" as prescribed in § 74.541(b), the car and any loose radioactive material must be isolated as far as possible from danger of human contact and no persons must be allowed to remain close to the car or contents needlessly until qualified persons are available to supervise handling. The shipper and the Bureau of Explosives should be notified immediately. Details involving the handling of radioactive materials in the event of a wreck may be found in Bureau of Explosives' Pamphlet No. 22 covering "Recommended Practice for Handling Collisions and Derailments involving Explosives, Gasoline and Other Dangerous Articles."**

(1) **Cars, buildings, areas, or equipment in which class D poisons have been spilled must not be again placed in service or occupied until decontaminated by qualified persons.**

**§ 74.598 Inspection of cars at interchange.**

(a) **Cars containing explosives requiring explosives placards (see § 74.525 (a)), which are offered by connecting lines must be carefully inspected by the receiving line on the outside, including the roof; and, if practicable, the lading must also be inspected. These cars must not be forwarded until all discovered violations have been corrected.**

(b) **If the car shows evidence of or if there is any reason to suspect that it has received rough treatment, the lading must be inspected and placed in proper condition before the car is permitted to proceed. When interchange occurs and inspection is necessary after daylight hours, electric flash lights should be provided. Naked lights must not be used.**

(c) **Shipments of explosives and other dangerous articles offered by connecting lines must comply with Parts 71–78 of this chapter, and the revenue waybill, freight bill, manifest of lading, card waybill, switching order, transfer slip ticket, or other billing, must bear label notation and placard indorsement prescribed by § 74.584.**

(d) **Cars containing packages of dangerous articles other than explosives should not be offered in interchange if packages are in leaking condition. If small leaks have developed in movement of tank cars to interchange, and where short movements are necessary to make delivery for unloading by consignee, and this movement may be safely made, the precaution prescribed by § 74.594, must be observed.**

**§ 74.599 Handling by electric railways and motor cars.**

(a) **Explosives, class A, as specified in §§ 73.53 to 73.87 of this chapter, must not be transported in any self-propelled car operated by electric or other motive power, if such car is carrying passengers.**

(b) **Dangerous articles other than explosives, and class B, and class C, explosives when transported in self-propelled motor cars, must be carried in a compartment of such cars in which there shall be no electrically operated apparatus, or electric circuits, other than circuits in conduits properly installed.**

(c) **When the motor car is used as a freight or baggage car and not as a passenger car, not more than 500 pounds net of explosives, or not exceeding 5,000 blasting caps or electric blasting caps, may be transported. The explosives must be placed in a "magazine" box made of sound lumber not less than 1 inch thick, covered on the exterior with metal, and provided with strong handles. This box must be plainly stenciled on the top, sides, and ends, in letters not less than 2 inches high, "EXPLOSIVES—DANGEROUS—HANDLE CAREFULLY". The box must be provided with strong hinges and with a lock for keeping it securely closed. Vacant space in the box must be filled with a cushioning material such as sawdust or excelsior, and the box must be properly stayed to prevent movement within the car.**

(d) **Explosives may be transported in a trailer or other closed car and must be securely blocked, braced and stayed so as to prevent movement during transit, and other freight must not be permitted to fall on or slide against such shipments.**

(e) **Trailer cars or other cars not occupied by a representative of the carrier must bear the standard placards as prescribed in this part.**

(f) **Explosives and other dangerous articles must not be loaded and transported together, except as permitted by the loading and storage chart, § 74.538.**

(g) **All the requirements of Parts 71 to 78 of this chapter as to packing, marking, labeling, description, certification and waybilling, must be complied with for all shipments of explosives or other dangerous articles transported by electric railways or other self-propelled motor car lines engaged in interstate or foreign commerce.**

**§ 74.600 In case of a wreck.**

(a) **Details involving the handling of explosives and other dangerous articles in the event of a wreck may be found in Bureau of Explosives Pamphlet No. 22 covering "Recommended practice for handling collisions and derailments involving explosives, gasoline and other dangerous articles".**

(b) **Whenever a car placarded "Explosives" is involved in an accident or wreck it must be opened and contents examined, and whenever opened for any purpose inspection must be made of the packages of explosives as soon as practicable without unnecessary disturbance of lading, to see that they are properly loaded and stayed and in good condition. Upon the discovery of leaking or broken packages they must be carefully removed to a safe place. Loose powder or other explosives must be swept up and carefully removed. If the floor is wet with nitroglycerin the car is unsafe to use, and a representative of the Bureau of Explosives should be immediately called to superintend the thorough mopping and washing of the floor with a warm, saturated solution of concentrated lye or sodium carbonate. If necessary, the car must be placed on an isolated siding and proper notice given.**

(c) **Whenever a car placarded "Dangerous-Radioactive material" is involved in a wreck resulting in damage to any container of radioactive material, such container should be isolated as far as practicable from human contact. The shipper and the Bureau of Explosives must be notified immediately. Cars, building, equipment, or areas in which radioactive materials have been spilled must not be again placed in service or occupied until it has been determined that no dangerous contamination exists.**

**§ 74.601 Calcium hypochlorite compounds, dry, involved in fires.**

(a) **Calcium hypochlorite compounds, dry, packed in metal drums when involved in cars where fire has occurred from any cause must be held at least five days before forwarding. Drums showing evidence of spontaneous heating or stress from internal pressure must not be reshipped.**

**§ 74.602 Placarded cars involved in fires.**

(a) **Placarded cars which have been on fire due to hot journals or any other cause shall not be transported, except to the extent necessary to facilitate fire fighting, until it has been determined that there is no fire remaining within the car.**

---

## PART 75—CARRIERS BY RAIL EXPRESS

Sec.

75.650 **Purpose of regulations in Parts 71–78 of this chapter.**
75.651 **Acceptable articles.**
75.652 **Application.**
75.653 **Labels.**
75.654 **Receipts.**
75.655 **Protection of packages.**
75.656 **Removal at destination.**
75.657 **Waybills.**
75.658 **Connecting line shipments.**
75.659 **Astray shipments.**
75.660 **Violations and accidents or fires must be reported.**

**Subpart A—Transportation of Explosives by the Railway Express Agency, Incorporated, in Passenger or Express Train Service.**

75.675 **Explosives via Railway Express Agency, Inc.**

AUTHORITY: The provisions of this Part 75 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

**§ 75.650 Purpose of regulations in Parts 71–78 of this chapter.**

(a) **To promote the uniform enforcement of law and to minimizing the dangers to life and property incident to the transportation of explosives and other dangerous articles, by rail express carriers engaged in interstate or foreign commerce, Parts 71–78 of this chapter are prescribed to define these articles for rail express transportation purposes, and to state the precautions that must be observed by the carrier in handling them while in transit. It is the duty of each such carrier to make the prescribed regulations effective and to thoroughly instruct employees in relation thereto.**

**§ 75.651 Acceptable articles.**

(a) **Explosives and other dangerous articles, except such as will not be accepted, may be offered for transportation to rail express carriers engaged in interstate or foreign commerce and transported, provided they are in proper condition for transportation and are certified that the regulations in Parts 71–78 of this chapter have been complied with, and provided their method of manufacture, packing and storage, so far as they affect safe transportation, are open to inspection by a duly authorized representative of the initial carrier or of the Bureau of Explosives. Shipments of explosives or other dangerous articles not in proper condition for transportation, or loaded or stayed as required, or certified as to proper packing, marking and description as required in Parts 71–78 of this chapter must not be accepted for transportation or transported.**

**§ 75.652 Application.**

(a) **Parts 71–78 of this chapter apply to all shipments of explosives and other dangerous articles as defined in Part 73 of this chapter including carriers' material and supplies.**

**§ 75.653 Labels.**

(a) **Labels prescribed by the Commission's regulations, Part 73 of this chapter, must be applied to rail express shipments, unless exempt from Parts 71–78 of this chapter, and in addition the shipper must certify to compliance with the regulations by writing, stamping, or printing his name underneath the certificate printed thereon.**

(b) **Carriers must keep on hand an adequate supply of labels. Lost or detached labels must be replaced from information given on the waybill or from information on the package.**

**§ 75.654 Receipts.**

(a) **A receipt upon the form prescribed by the originating rail express carrier must be issued to the shipper for each express shipment of explosives or other dangerous articles accepted for transportation. Before a receipt is issued, the shipper must apply the label prescribed in Part 73 of this chapter to each package containing any article requiring a label under Parts 71–78 of this chapter.**

(b) **Each receipt must show the proper and definite name of commodity, as listed in § 72.5 of this chapter, and the color or kind of label applied to the package if any is required. Abbreviations must not be used.**

**§ 75.655 Protection of packages.**

(a) **In handling packages containing explosives or other dangerous articles, care must be taken to prevent them from falling or from being broken. They must not be thrown, dropped, or rolled. Packages bearing the marking "This Side Up" or "This End Up" as required by Part 73 of this chapter must be so handled and loaded.**

(b) **Packages protected by labels must be so loaded that they cannot fall to the car floor and in such manner that other freight cannot fall onto or slide against them.**

(c) **Unless sealed cars are equipped with a suitable guard or screen to prevent the lading coming in contact with hot steam pipes, or heat exits used in electrically-heated equipment, packages containing explosives or other dangerous articles must not be transported in them.**

(d) **Shipments of explosives or other dangerous articles, except poisons and nonflammable compressed gases, when transported in passenger carrying trains, should be loaded in the car occupied by an express employee or in connecting cars to which an express employee has access through end doors, and in a place that will permit their ready removal in case of fire. They must not be loaded in cars or stored in stations near steam pipes or other sources of heat. Explosives, flammable liquids (red label), and flammable compressed gases (red gas label) must not be loaded, transported, or stored in cars or stations equipped with lighted heaters or where open-flame lights or stoves or electric devices having exposed heating coils are used. No placards are required on such cars when occupied by an express employee. Shipments bearing poison label, when practicable, should be loaded in sealed cars; when loaded in cars occupied by messenger, care should be taken to prevent any contents sifting or leaking from containers.**

(e) **When an express or baggage car containing any package requiring a label prescribed by Part 73 of this chapter is not occupied by an express employee, or is not a connecting car to which an express employee has access through an end door, and the car is handled in a passenger, mixed, or freight train, the proper placards must be attached thereto as required by Part 74 of this chapter for the transportation of such articles by rail freight.**

(f) **Packages containing dangerous articles, as defined by Part 73 of this chapter, that are loaded in sealed cars for express movement from the point of origin, must be loaded in a place that will permit of their ready removal in case of fire, wreck, or unloading, and near the car door, if possible.**

(g) **Not to exceed 10 gas identification sets may be transported in any car at any time.**

(h) **It is important to prevent contact of contents of packages bearing either yellow or white corrosive liquid labels with combustible substances, such as sawdust, shavings, or sweepings, that may be present in express cars. The space should be swept or cleaned.**

(i) **Unless they are leaking, or in a manifestly insecure condition, packages of dangerous articles other than explosives in transit must be forwarded to destination and report made of any violation observed. Leaking packages must be reconditioned or repaired promptly and forwarded to destination.**

(j) **A container of radioactive material bearing red label must not be placed in cars, depots or other places closer than 3 feet to an area which may be continuously occupied by passengers, employees, or shipments of animals.**

When more than one such container is present, the distance from occupied areas must be computed from the table in subparagraph (2) of this paragraph by adding the number of units shown on labels on the containers.

(1) In a combination car carrying passengers and/or express shipments, a container of radioactive material must not be placed closer than 3 feet to the dividing partition. For more than one such container the distance must be computed by method described in subparagraph (2) of this paragraph.

(2) A container of radioactive material, red label, must not be placed closer than 15 feet to any package containing undeveloped film. If more than one such container is present, the distance must be computed from the table in this subparagraph by adding the number of units shown on the labels on the packages.

TABLE

| Total number of units | Minimum distance in feet to nearest undeveloped film | Distance in feet to area that may be continuously occupied by passengers or employes | Distance in feet from dividing partition of a combination car |
|---|---|---|---|
| 1 to 10 | 15 | 3 | 3 |
| 11 to 20 | 20 | 4 | 4 |
| 21 to 30 | 25 | 5 | 5 |
| 31 to 40 | 30 | 6 | 6 |

NOTE 1: The distance in the table must be measured from the nearest point of the radioactive container or containers.

NOTE 2: 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm. of hard gamma rays of radium filtered by ½ inch of lead.

(3) Not more than 40 units of radioactive material (red label) shall be transported in any car or stored in any location at one time.

(4) All containers of radioactive material (red label) must be carried by the handles when handles are provided.

(5) Radioactive materials (class D poisons) must not be loaded in the same car with samples of explosives.

(6) If for any reason, a package containing radioactive material (red label) would otherwise remain in the same building for a period longer than 24 hours, it must be moved to a different location after each 24 hours.

(7) In case of fire, wreck, breakage or unusual delay involving any shipment of radioactive material, the package or material should be segregated as far as possible from human contact. The shipper and the Bureau of Explosives should be immediately notified. In case of breakage of a package containing radioactive material and when it appears likely that the inside container may have been damaged, great care must be exercised to prevent contact with, inhalation, or any other means of the radioactive material entering the body. Cars, buildings, areas, or equipment in which class D poisons have been spilled must not be again placed in service or occupied until decontaminated by qualified persons.

NOTE 1: Except for subparagraph (7), the requirements of this paragraph shall not apply to magnesium-thorium alloy materials or uranium, depleted or normal, described in § 73.392 (e) and (f) of this chapter. The location of bundles, boxes, barrels, or crates of such material from packages of undeveloped film must be as stated on the label (see § 73.414(d) of this chapter).

**§ 75.656 Removal at destination.**

(a) Shipments of explosives and other dangerous articles as defined by Part 73 of this chapter which cannot be delivered within 48 hours after arrival at destination, Saturdays, Sundays, and holidays not included, or shipments which are refused by the consignee, must be promptly disposed of (1) by return to the shipper, if in proper shipping condition, or (2) by storage, provided a suitable storage place for such articles is available off the carrier's property, or (3) by sale, or (4) when necessary to safety, by destruction: *Provided*, That charged electric batteries may be held for 30 days after arrival at destination, pending delivery or disposition.

**§ 75.657 Waybills.**

(a) The waybill or delivery sheet when used as a waybill, or other billing issued in lieu thereof, and the transfer sheet, or interchange record used for transferring such shipments to a connecting carrier, must properly describe the articles by name as shown in § 72.5 of this chapter, and show color or kind of label applied. Abbreviations must not be used.

**§ 75.658 Connecting line shipments.**

(a) Shipments of dangerous articles offered by connecting express or other transportation lines must comply with Parts 71–78 of this chapter.

**§ 75.659 Astray shipments.**

(a) Any astray shipment of dangerous articles must be forwarded promptly to destination, if known, provided a careful inspection shows the package to be in proper condition for safe transportation. If the package is not labeled and the exact nature of the contents is unknown, the red label must be applied.

**§ 75.660 Violations and accidents or fires must be reported.**

(a) Violations and accidents or fires must be reported promptly by the express carrier to the Bureau of Explosives, 63 Vesey Street, New York 7, New York, as follows:

(1) Serious violations of Parts 71–78 of this chapter.

(2) Facts relating to leaking or broken containers.

(3) Accidents or fires in connection with the transportation or storage on express or railway property of explosives or other dangerous articles. (See § 74.588 of this chapter.)

## Subpart A—Transportation of Explosives by the Railway Express Agency, Incorporated, in Passenger or Express Train Service

**§ 75.675 Explosives via Railway Express Agency, Inc.**

(a) Except as provided in this section, shipments of explosives may be tendered for transportation by Railway Express Agency in passenger or express train service only when the Commission finds that an emergency requires such expedited movement. Emergency shipments shall be subject to regulations which the Commission deems advisable or necessary in the interest of the public in each emergency:

*Exception No. 1.* Samples of explosives for laboratory examination, fireworks, or other similar authorized explosives may continue to be transported in passenger or express train service, subject to the published regulations. (See §§ 72.5 and 73.86 (d) of this chapter.)

*Exception No. 2.* In time of war or of national emergency proclaimed by the President, shipments of explosives by, for or to the Armed Forces of the United States of America may be tendered for transportation in passenger or express train service when such shipments comply with the special regulations furnished to the Department of Defense, Railroads and the Railway Express Agency, Incorporated.

## PART 76—RAIL CARRIERS IN BAGGAGE SERVICE

Sec.
76.700 Purpose of regulations in Parts 71–78 of this chapter.
76.701 Application.
76.702 Dangerous articles.
76.703 Acceptable articles.
76.704 Labels.
76.705 Placards.
76.706 Handling of packages.
76.707 Reporting violations and accidents or fires.

AUTHORITY: The provisions of this Part 76 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

**§ 76.700 Purpose of regulations in Parts 71–78 of this chapter.**

(a) To provide for the safe transportation of dangerous articles in rail baggage service on passenger-carrying trains of carriers engaged in interstate or foreign commerce, the following regulations are prescribed to define these articles for rail baggage transportation purposes, and to state the precautions that must be observed by the carrier in handling them while in transit.

**§ 76.701 Application.**

(a) Parts 71–78 of this chapter apply to all shipments in rail baggage service of dangerous articles as prescribed in this part. Shipments of explosives other than small arms ammunition, or any dangerous articles, except as provided in this part, must not be accepted for transportation in rail baggage service. The Commission will make provision as occasion and safety may require for dangerous articles other than those described in this part. Carriers engaged in interstate or foreign commerce must make the regulations in this part effective and must provide for the thorough instruction of their employees.

NOTE 1: Explosives or other dangerous articles, consisting of carrier's materials and supplies such as are acceptable for rail express transportation, may be transported in baggage cars when packed, marked, and labeled as prescribed by regulations for rail express shipments in Part 75 of this chapter.

**§ 76.702 Dangerous articles.**

(a) No dangerous article described by Parts 71–78 of this chapter shall be accepted for transportation or transported in rail baggage service except as provided for in § 76.703 and which must be packed, marked and labeled as required by Part 73 of this chapter.

**§ 76.703 Acceptable articles.**

(a) The following articles may be transported in rail baggage service under this part:

(b) Compressed gases:

| | | |
|---|---|---|
| Dichlorodifluoromethane | Green gas label | In cylinders not exceeding 12 x 51 inches, and with pressure not exceeding 300 pounds at 70° F. |
| Dichlorodifluoromethane-dichlorotetrafluoroethane mixture | Green gas label | |
| Dichlorodifluoromethane-trichlorotrifluoroethane mixture | Green gas label | |
| Dichlorodifluoromethane-monochlorodifluoromethane mixture. | Green gas label | |
| Dichlorodifluoromethane - trichloromonofluoromethane - monochlorodifluoromethane mixture. | Green gas label | |
| Hydrogen | Red gas label | |
| Oxygen | Green gas label | |
| Anhydrous ammonia | Green gas label | |
| Chlorine | Green gas label | |
| Ethylene | Red gas label | |
| Liquefied carbon dioxide | Green gas label | |
| Liquefied petroleum | Red gas label | |
| Methyl chloride | Red gas label | |
| Nitrous oxide | Green gas label | |
| Oxygen | Green gas label | |
| Sulfur dioxide | Green gas label | |

(1) Compressed gases must be shipped in metal cylinders complying with specifications and regulations as prescribed for freight shipments.

(c) Motion-picture films, yellow label. In containers as prescribed by paragraphs (e) to (g) of this section.

(d) Mine-rescue equipment. Cylinders of compressed gas for mine rescue or medical work may be shipped when packed with other equipment pertaining to such work; cylinders not over 4½ by 22 inches may be shipped when packed in traveling bags, suitcases, trunks, or other suitable outside containers. When so packed, the prescribed label must be placed on each outside container.

(e) Flammable motion-picture films must be packed in sparkproof metal cases or trunks complying with spec. 32A, 32B, or 32C (§§ 78.146, 78.147, or 78.148 of this chapter). Not more than 12,000 feet of standard width (1⅜ inches wide), 12 reels of approximately 1,000 feet each, or equivalent thereof, or more than 3 reels of stereoscopic film (2½ inches wide and approximately 1,500 feet each), may be packed in one such outside container; or as follows:

(1) In outside wooden boxes, spec. 15A, 15B, 15C, or 16A (§§ 78.168, 78.169, 78.170, or 78.185 of this chapter), provided each reel is placed in a tightly closed inside metal container. The gross weight of such a package must not exceed 80 pounds. Boxes must be equipped with handles, and covers securely fastened by metal hasp and staple with a strong lock or other efficient device.

(f) When slow-burning (nonflammable) motion-picture films are packed in the same outside containers with flammable motion-picture films, the outside packages must bear the yellow label, and the total contents of the outside container must not exceed the quantity or gross weight permitted for flammable films. (See paragraph (e) of this section.)

(g) Packages of motion-picture films with advertising matter attached to the outside container must not be offered or accepted for transportation. Shippers desiring to include advertising matter with their shipments of motion-picture films must place the advertising matter inside the outside box containing the films.

**§ 76.704 Labels.**

(a) All packages containing samples of explosives for laboratory examination, special fireworks and other dangerous articles for which labels are prescribed by Part 73 of this chapter, must be conspicuously labeled by the shipper. Labels should be applied when practicable to that part of the package bearing the consignee's name and address, or baggage check. The shipper must certify to compliance with Parts 71–78 of this chapter by writing, stamping, or printing his name underneath the certificate printed thereon. Shippers must furnish and attach labels prescribed for their shipments.

(b) Carriers must keep on hand an adequate supply of labels. Lost or detached labels must be replaced.

**§ 76.705 Placards.**

(a) Placards ordinarily used to indicate the presence in cars of flammable articles will not be required on baggage cars in charge of a railroad employee and moving in passenger trains, or on electric or gasoline motor cars in charge of an employee of the carrier, and which are run independently of cars carrying passengers. (See § 74.543 of this chapter for placarding of cars not occupied by carrier's employee.)

**§ 76.706 Handling of packages.**

(a) In handling packages containing dangerous articles, care must be taken to prevent them from falling or from being broken. They must not be thrown, dropped, or rolled.

(b) Packages containing dangerous articles when transported in baggage service in passenger-carrying trains must be loaded in the car occupied by a railway employee, and in a place that will permit their ready removal in case of fire. They must not be loaded in cars nor stored in stations near steam pipes or other sources of heat.

(c) The originating carrier, when a shipment is offered to it that is known to contain dangerous articles as defined by Parts 71–78 of this chapter, must see that the packages are marked and labeled as prescribed in Part 73 of this chapter.

(d) Shipments of dangerous articles offered by connecting transportation lines must comply with the regulations in Parts 71–78 of this chapter.

(e) An astray shipment of dangerous articles or a shipment made in violation of Parts 71–78 of this chapter without the knowledge of the carrier, must be forwarded promptly to destination, if known, provided a careful inspection shows the package to be in proper condition for safe transportation.

(f) Unauthorized persons must not be allowed to have access to dangerous articles in transit at any time while such articles are in the custody of the carrier.

**§ 76.707 Reporting violations and accidents or fires.**

(a) Serious violations of the regulations in Parts 71–78 of this chapter, facts relating to leaking or broken containers, and accidents or fires in connection with the transportation or storage on railway property of explosives or other dangerous articles, must be reported promptly by the rail carrier in baggage service to the Bureau of Explosives, 63 Vesey Street, New York 7, New York. (See § 74.588 of this chapter.)

## PART 77—SHIPMENTS MADE BY WAY OF COMMON, CONTRACT, OR PRIVATE CARRIERS BY PUBLIC HIGHWAY

### Subpart A—General Information and Regulations

Sec.
77.800 Purpose of regulations in Parts 71–78 of this chapter.
77.801 Scope of regulations in Parts 71–78 of this chapter.
77.802 Application of regulations in Parts 71–78 of this chapter.
77.803 Import shipments by domestic carriers by motor vehicles.
77.804 Export shipments by domestic carriers by motor vehicle.
77.805 Canadian shipments.
77.806 United States Government shipments.
77.807 Improperly packed or damaged shipments in transportation.
77.808 Connecting carrier shipments.
77.809 Carrier's material and supplies.
77.810 Vehicular tunnels.
77.811 Astray shipments.
77.812 Containers required.
77.813 Inefficient containers.
77.814 Accidents to be reported.
77.815 Labels.
77.816 Marking on containers.
77.817 Shipping papers.
77.818 Receipts.
77.819 Certificate.
77.820 Waybills, manifests, etc.
77.821 Explosives or other dangerous articles forbidden or limited for transportation.
77.822 Acceptable articles.
77.823 Marking on motor vehicles and trailers.
77.824 Retesting of cargo tanks.

### Subpart B—Loading and Unloading

77.834 General requirements.
77.835 Explosives.
77.836 Nonexplosive material.
77.837 Flammable liquids.
77.838 Flammable solids and oxidizing materials.
77.839 Corrosive liquids.
77.840 Compressed gases.
77.841 Poisons.

**Subpart C—Loading and Storage Chart of Explosives and Other Dangerous Articles**

Sec.
77.848 Loading and storage chart of explosives and other dangerous articles.

**Subpart D—Vehicles and Shipments in Transit; Accidents**

77.853 Transportation and delivery of shipments.
77.854 Disabled vehicles and broken or leaking packages; repairs.
77.855 Accidents; explosives.
77.856 Accidents; flammable liquids.
77.857 Accidents; flammable solids and oxidizing materials.
77.858 Accidents; corrosive liquids.
77.859 Accidents; compressed gases.
77.860 Accidents; poisons.

**Subpart E—Regulations Applying to Explosives or Other Dangerous Articles on Motor Vehicles Carrying Passengers for Hire**

77.870 Regulations for passenger carrying vehicles.

AUTHORITY: The provisions of this Part 77 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

[The regulations in Parts 71–78 of this chapter are applicable to every common and contract carrier by motor vehicle and every private carrier of property by motor vehicle subject to the regulatory provisions of Sections 831–835, 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 831–835.

[Private carriers of property by motor vehicle subject to Parts 71–78 of this chapter are prohibited from transporting any explosive or other dangerous article unless the article is properly described by name in papers required by Parts 71–78 of this chapter to accompany every shipment of such article; and every such article must be packed and marked and in proper condition for transportation according to the regulations in Parts 71–78 of this chapter.]

NOTE 1: Because of the present emergency and until further order of the Commission, the following regulations shall apply to transportation of flammable liquids by private carriers of property in interstate or foreign commerce:

All regulations heretofore applying to common or contract carriers by motor vehicle shall apply to such private carriers, except:

Cargo tanks of tank motor vehicles constructed previous to June 15, 1943, may be continued in service if maintained in safe operating condition and sufficiently frequent inspections are maintained to determine compliance with all requirements as specified in this Note.

Any defect or deficiency, due to accident or otherwise, that is likely to cause serious hazard must be corrected before any such tank is continued in or returned to service; see, however, § 77.856.

Requirements applying to tests of tanks, and provisions for markers thereon except that indicating the flammable nature of the cargo, are waived.

Outages for shipments shall be those provided for by Part 73 of this chapter, except that filling of tanks to outage markers already incorporated in tanks, having due regard for safety in the transportation of the flammable liquids, need not be changed.

Section 77.815, labels, and § 77.819, certification of packages, need not be complied with by such private carriers, except as to packages transferred from one carrier to another.

## Subpart A—General Information and Regulations

### § 77.800 Purpose of regulations in Parts 71–78 of this chapter.

(a) To promote the uniform enforcement of law and to minimize the dangers to life and property incident to the transportation of explosives and other dangerous articles, by common and contract carriers, by motor vehicle engaged in interstate or foreign commerce, the regulations in Parts 71–78 of this chapter are prescribed to define these articles for motor vehicle transportation purposes, and to state the precautions that must be observed by the carrier in handling them while in transit. It is the duty of each such carrier to make the prescribed regulations effective and to thoroughly instruct employees in relation thereto.

### § 77.801 Scope of regulations in Parts 71–78 of this chapter.

(a) Explosives and other dangerous articles, except such as may not be accepted and transported under Parts 71–78 of this chapter, may be accepted and transported by common and contract carriers by motor vehicle engaged in interstate or foreign commerce, provided they are in proper condition for transportation and are certified as being in compliance with Parts 71–78 of this chapter, and provided the method of manufacture, packing, and storage, so far as they affect safety in transportation, are open to inspection by a duly authorized representative of the initial carrier or of the Bureau of Explosives. Shipments of explosives or other dangerous articles not in proper condition for transportation, or loaded or stayed as required, or certified as to proper packing, marking and description as required in Parts 71–78 of this chapter, must not be accepted for transportation or transported.

### § 77.802 Application of regulations in Parts 71–78 of this chapter.

(a) Parts 71–78 of this chapter apply to all common and contract carriers by motor vehicle transporting explosives and/or other dangerous articles as defined by Interstate Commerce Commission "Regulations for Transportation of Explosives and Other Dangerous Articles by Land and Water in Rail Freight, Express and Baggage Services and by Motor Vehicle (Highway) and Water". When shipments are accepted by motor vehicle for further transportation by rail express (see also paragraph (c) of this section), rail baggage (see also paragraph (d) of this section), rail freight or by water on board vessel, they must, in addition to Parts 71–78 of this chapter, comply with the applicable regulations for the service by which they are to be transported.

(b) The regulations prescribed by the Commandant of the Coast Guard governing the transportation of "Explosives or Other Dangerous Articles on Board Vessels" also include combustible liquids and hazardous articles.

(c) The fifth column of the Commodity List, § 72.5 of this chapter, indicates the maximum quantity of an article that may be accepted for transportation by rail express or that the article is not acceptable for transportation by rail express.

(d) The mark ϕ preceding an article in the Commodity List, § 72.5 of this chapter, indicates that the article may be accepted for rail baggage transportation. All articles not so marked are not acceptable for rail baggage transportation.

### § 77.803 Import shipments by domestic carriers by motor vehicles.

(a) Import shipments of explosives and other dangerous articles offered in the United States in original packages for transportation by carriers by motor vehicle must comply with all requirements of Parts 71–78 of this chapter. Except for shipments from Canada conforming with § 73.8 of this chapter, the importer must furnish with the order to the foreign shipper, and also to the forwarding agent at the port of entry, full and complete information as to the packing, marking, labeling, and other requirements, as prescribed in Parts 71–78 of this chapter, and the forwarding agent must file with the initial carrier in the United States a properly certified shipping order or other shipping papers as prescribed in Parts 71–78 of this chapter.

(b) Import shipments transferred in port areas by motor vehicle: Except for the requirements of §§ 77.817 and 77.823, the provisions of Parts 71–78 of this chapter do not apply to such transportation by motor vehicle as may be necessary to effect transfer of import shipments from place of discharge to other places within the same port area or delivery to a water carrier within the same port area (including contiguous harbors). Further transportation of such import shipments by connecting water carrier shall be subject to the regulations prescribed by the Commandant of the Coast Guard.

### § 77.804 Export shipments by domestic carriers by motor vehicle.

(a) Explosives and other dangerous articles authorized to be exported from the United States when packed, marked, labeled, and described, in accordance with rules and regulations in force at destination ports, must not be offered to any common or contract carrier by motor vehicle for domestic transportation unless in full accordance with Parts 71–78 of this chapter.

(b) Export shipments transferred in port areas by motor vehicle: Except for the requirements of §§ 77.817 and 77.823, the provisions of Parts 71–78 of this chapter do not apply to such transportation by motor vehicle as may be necessary to effect transfer of export shipments from place of shipment to other places within the same port area or delivery to a water carrier within the same port area (including contiguous harbors). Further transportation of such export shipments by connecting water carrier shall be subject to the regulations prescribed by the Commandant of the Coast Guard.

### §77.805 Canadian shipments.

(a) Explosives or other dangerous articles which are packed, marked, labeled, and loaded, in conformity with the regulations of the Board of Transport Commissioners for Canada, may be accepted and carried by carriers from point of entry in the United States to their destination in the United States or through the United States en route to a point in Canada.

NOTE 1: Because of the present emergency and until further order of the Commission, compressed gas cylinders 40 inches in length and 8 inches in diameter, charged with not more than 40 pounds of carbon dioxide or when charged with nitrogen not in excess of 2,000 pounds per square inch, and shipped by or to the Canadian Department of National Defense in accordance with Board of Transport Commissioners for Canada Order No. 76253, dated March 10, 1951, may be shipped to destinations in the United States or through the United States to points in Canada.

### § 77.806 United States Government shipments.

(a) Shipments of explosives or other dangerous articles offered by or consigned to the Departments of the Army, Navy, and Air Force of the United States Government, must be packed, including limitations of weight in accordance with the regulations in Part 73 of this chapter or in containers of equal or greater strength and efficiency as required by their regulations.

(b) Shipments of radioactive materials, made by the Atomic Energy Commission, or under its direction or supervision, which are escorted by personnel specially designated by the Atomic Energy Commission, are exempt from the regulations in Parts 71–78 of this chapter.

### § 77.807 Improperly packed or damaged shipments in transportation.

(a) For the protection of the public against fire, explosion, or other, or further hazard, with respect to shipments of explosives or other dangerous articles offered for transportation or in transit by any common or contract carrier by motor vehicle, such carrier shall make immediate report to the Bureau of Explosives, 63 Vesey Street, New York 7, New York, for handling, any of the following emergency matters coming to their attention (see also §§ 77.853 to 77.870 for handling shipments in transit):

(1) Instances of packages of explosives or other dangerous articles discovered in transit not properly prepared for transportation in accordance with applicable regulations in Parts 71–78 of this chapter.

(2) Motor carrier accidents involving damage to container of explosives or other dangerous articles to such a degree as to necessitate repacking of the articles. (See § 74.588 of this chapter.)

(3) Other like emergencies in which any common or contract carrier by motor vehicle is or is likely to become involved, or may offer aid at its command.

(4) This section shall in no respect excuse either shipper or carrier by motor vehicle for failure to exercise due care to prevent any departure from any regulation prescribed in Parts 71–78 of this chapter.

### § 77.808 Connecting carrier shipments.

(a) Shipments of explosives or other dangerous articles offered by connecting transportation lines must comply with Parts 71–78 of this chapter.

### § 77.809 Carrier's material and supplies.

(a) The regulations in Parts 71–78 of this chapter apply to all shipments of explosives and other dangerous articles, including carrier's material and supplies.

### § 77.810 Vehicular tunnels.

(a) Nothing contained in Parts 71–78 of this chapter shall be so construed as to nullify or supersede regulations established and published under authority of State statute or municipal ordinance regarding the kind, character, or quantity of any explosive or other dangerous article permitted by such regulations to be transported through any urban vehicular tunnel used for mass transportation.

### § 77.811 Astray shipments.

(a) Any astray shipment of dangerous articles other than explosives must be forwarded promptly to destination, if known, provided a careful inspection shows the package to be in proper condition for safe transportation. If the package is not labeled and the exact nature of the contents is unknown, the red label must be applied.

### § 77.812 Containers required.

(a) Containers required for explosives and other dangerous articles are prescribed in Part 73 of this chapter, Regulations Applying to Shippers.

### § 77.813 Inefficient containers.

(a) The results of experience gained by examination of broken or leaking containers must be recorded by the Bureau of Explosives to the end that further use of any particular kind of container shown by experience to be inefficient, may be prohibited by the Commission.

### § 77.814 Accidents to be reported.

(a) Fires or explosions occurring in connection with the transportation, or storage on carrier's property, of explosives or other dangerous articles, and leaking, broken, or seriously damaged containers, must be reported promptly by the highway carrier to the Commission. These reports are required to the end that further use of containers shown by experience to be inefficient may be prohibited by the Commission:

No. 3666

Report to

BUREAU OF SAFETY AND SERVICE
INTERSTATE COMMERCE COMMISSION
WASHINGTON, D. C.

FIRES, EXPLOSIONS, AND LEAKING, BROKEN, OR SERIOUSLY DAMAGED CONTAINERS

[that can be attributed in whole or in part to the transportation or storage of explosives or other dangerous articles]

Give all essential facts and details of handling (use additional sheet if necessary), stating: (1) Part of package damaged or leaking, and what was done to stop leak, (2) rate of leakage, (3) probable cause of fire, explosion, or leaking, broken, or seriously damaged container, (4) distance between source of ignition and point of leakage of flammable liquid or vapor, (5) description of package, packing or cushioning material, and method of loading and bracing in vehicle, (6) for tank motor vehicle, speed of vehicle, condition of highway, degree and elevation of curve, if any, (7) any defective condition of vehicle likely to contribute directly to accident, and (8) specification number, type, or other identifying description of tank, and date built, if shown.

Is this accident also being reported to the Commission on Form BMC–50? _____
(Yes or no)

This report is required by § 77.814 of regulations in Docket 3666.
Information furnished on this form will not be open to public inspection.

(Signed) _____

### § 77.815 Labels.

(See § 73.405 to § 73.414 of this chapter for description of labels.)

(a) Labels prescribed by the Commission's regulations, Part 73 of this chapter, must have been applied to shipments, unless exempt from Parts 71–78 of this chapter, and in addition the shipper must have certified to compliance with the regulations by writing, stamping, or printing his name underneath the certificate printed thereon or on the shipping papers.

(b) Labels and marking name of contents are not required on truckload quantities of dangerous articles, except class A, class C, or class D poisons, when such shipments are unloaded by the consignee or his duly authorized agent from the motor vehicle in which originally loaded.

(1) Truckload shipments of chemical ammunition, explosive, containing poisonous gases, solids or liquids, class A, class B or class C, or poisons class A, class B, class C or class D offered for transportation by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government are exempt from labeling requirements when shipments are loaded or unloaded by the shipper or his duly authorized agent and such shipments are accompanied by qualified personnel supplied with equip-

ment to repair leaks or other container failure which will permit escape of contents.

(c) Except on class A, class C, or class D poisons, labels are not required on less-than-truckload shipments by motor vehicle by public highway when the articles are readily identifiable by reason of type of container or when the container is plainly marked to indicate its contents and;

(1) When the shipment is transported from origin to destination without transfer between vehicles and;

(2) When the shipper or its employes are in direct control or perform the loading, transporting and unloading.

(d) When it is known that subsequent shipments of these packages in less-than-truckload quantities will probably be made by the consignee, labels should be attached to the packages as would be required for less-than-truckload shipments.

(e) Carriers must keep on hand an adequate supply of labels. Lost or detached labels must be replaced from information given on waybill, manifest, memorandum, or other shipping paper.

(f) Samples will be furnished, on request, by the Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(g) The carrier's name and stationery form number may be printed on the labels, in type not larger than 10 point, if placed within the red or black-line border and in the upper or lower corner of the diamond.

(h) Additional shipping information not inconsistent with Parts 71–78 of this chapter may be shown by the shipper on a container of dangerous articles other than explosives if so desired, but no label or marking may be of a design, or form, or size, as may be confused with the label or marking required by Part 73 of this chapter.

**§ 77.816 Marking on containers.**

(a) Each package of explosives or other dangerous articles must show the name and address of the consignee. Whenever the transportation of any explosive or other dangerous article is to be exclusively by motor vehicle between points between which the articles are not to be transferred from one motor carrier to another, in either truckload or less-than-truckload lots, the individual packages need not be marked with the consignee's name and address.

**§ 77.817 Shipping papers.**

(a) Every motor carrier operating a motor vehicle transporting explosives or other dangerous articles shall require the driver of the vehicle to have in his possession, and the driver shall keep in his possession during the course of such transportation, a manifest, memorandum receipt, bill of lading, shipping order, shipping paper, or other memorandum setting forth the following information for each class of such article being transported: The shipping name, the total quantity by weight, volume, or otherwise as appropriate of each kind of explosive or other dangerous article, and the prescribed label when required for the outside container of such article. For shipments of blasting caps or electric blasting caps the shipper must, in addition, show the number of caps in the shipment.

(1) Every carrier offering or delivering for rail transportation any loaded motor vehicle or any loaded motor vehicle trailer, semi-trailer, or container containing any shipment of an explosive or other dangerous article shall show on the shipping order, shipping paper, transfer sheet, or other billing issued in lieu thereof, in addition to the description of the vehicle or container, the proper and definite name of the commodity as shown in § 72.5 of this chapter and the color or kind of label or kind of placards applied.

**§ 77.818 Receipts.**

(a) A receipt upon the form prescribed by the originating express carrier must be issued to the shipper for each express shipment of explosives or other dangerous articles accepted for transportation. Before a receipt is issued, the shipper must apply the label prescribed in Part 73 of this chapter to each package containing any article requiring a label under Parts 71–78 of this chapter.

(b) Each receipt must show the proper and definite name of commodity, as listed in § 72.5 of this chapter, and the color or kind of label applied to the package if any is required. Abbreviations must not be used.

**§ 77.819 Certificate.**

(a) Except as provided in this section, no motor carrier may accept for transportation or transport any class A or class B explosives, blasting caps or electric blasting caps in any quantity, or any dangerous articles requiring label as prescribed by Part 73 of this chapter, unless it be certified to him by the shipper's name inserted in the certificate on the label or by the following certificate over the written or stamped facsimile signature of the shipper or his duly authorized agent in the lower left-hand corner of the manifest, memorandum receipt, bill of lading, shipping order, shipping paper, or other memorandum:

This is to certify that the above named articles are properly described, and are packed and marked and are in proper condition for transportation according to the regulations prescribed by the Interstate Commerce Commission.

(b) For the relief of shippers from multiplicity of certifications required for packages which may move by various means of transportation, shipments may be certified for rail, motor vehicle, water, or air transportation by adding to the certificate required on the shipping document "and the Commandant of the Coast Guard," or "and the Administrator of the Federal Aviation Agency," as the case may be.

**§ 77.820 Waybills, manifests, etc.**

(a) The waybill, manifest, dispatch, memorandum receipt, bill of lading, transfer sheet, or interchange record, when prepared for shipments and used for transferring such shipments to a connecting carrier, must properly describe the articles by name as shown in § 72.5 of this chapter, and show the color or kind of label applied. (See § 77.817.)

**§ 77.821 Explosives or other dangerous articles forbidden or limited for transportation.**

(a) *Nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate forbidden to common carriers.* Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, except as defined in § 73.53 (e) of this chapter, may not be accepted for transportation or be transported by any common carrier by motor vehicle.

(b) *Rejection of leaking containers of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate.* Any individual container used for the transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, or any boot used therewith, found in such a condition as to permit leakage, shall be discarded and shall not thereafter be repaired for further use.

(c) *Explosives or other dangerous articles forbidden or limited for transportation.* No motor carrier may accept for transportation or transport any explosive or other dangerous article listed in Commodity List (§ 72.5 of this chapter), as "forbidden" for transportation by all motor carriers; nor, if there be any prohibition or limitation regarding the transportation of any particular explosive or other dangerous article by a particular kind of motor carrier, may any such article be accepted for transportation or be transported by that kind of carrier, except as indicated in this part. (See § 77.870.)

(d) *Leaking or damaged packages of high explosive must not be accepted for transportation or transported.* Should any package of high explosive when offered for shipment show excessive dampness or be moldy or show outward signs of any oily stain or other indication that absorption of the liquid part of the explosive is not perfect, or that the amount of the liquid part is greater than the absorbent can carry, the package must be refused in every instance. The shipper must substantiate any claim that a stain is due to contact with material other than the liquid explosive ingredient of the explosive. In case of doubt the package must be rejected.

(e) *Condemned or leaking dynamite; repacking.* Condemned or leaking dynamite must not be repacked and offered for shipment unless the repacking is done by a competent person in the presence of or with the written consent of an inspector, or with the written authority of the chief inspector, of the Bureau of Explosives.

(f) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one motor vehicle shall be classed as a flammable solid for purposes of transportation when approved for such classification by the Bureau of Explosives. Maximum quantity in any inside container must not exceed eight pounds and inside containers must be arranged and protected so as to prevent simultaneous ignition of the contents. The complete package must be a type approved by the Bureau of Explosives. Each outside shipping container shall be labeled as prescribed in § 73.402(a)(2) of this chapter.

**§ 77.822 Acceptable articles.**

(a) Any motor carrier may accept for transportation or transport any acceptable explosive or other dangerous articles listed in the Commodity List, § 72.5 of this chapter: *Provided, however,* That no provision of this section shall be so construed as to permit the acceptance or transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, other than as defined in § 73.53 (e) of this chapter, by any common carrier.

(b) *Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate.* Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, other than as defined in § 73.53 (e) of this chapter, may be transported only by motor carriers other than common carriers in containers complying with specification MC200 (§ 78.315 of this chapter). No form of trailer may be attached.

**§ 77.823 Marking on motor vehicles and trailers.**

(a) Every motor vehicle, other than tank motor vehicles, transporting any quantity of explosives, class A; poison gas, class A; or radioactive material, poison class D requiring red radioactive materials label except label described in § 73.414(d) of this chapter for which placards are not required; and every motor vehicle transporting 2,500 pounds gross weight or more of explosives, class B, flammable liquids, flammable solids or oxidizing materials, corrosive liquids, compressed gas, class B poisons, and tear gas, or 5,000 pounds gross weight or more of two or more articles of these groups shall be marked or placarded on each side and rear with a placard or lettering in letters not less than 3 inches high on a contrasting background as follows:

| | |
|---|---|
| (1) Explosives, class A | EXPLOSIVES |
| (2) Explosives, class B | DANGEROUS |
| (3) Flammable liquid | DANGEROUS |
| (4) Flammable solid | DANGEROUS |
| (5) Oxidizing material | DANGEROUS |
| (6) Corrosive liquid | DANGEROUS |
| (7) Compressed gas | COMPRESSED GAS |
| (8) Poison gas, class A | POISON GAS |
| (9) Tear gas | DANGEROUS |
| (10) Poisons, class B | DANGEROUS |
| (11) Dangerous, class D poison | DANGEROUS—RADIOACTIVE MATERIAL |

(b) *Tank motor vehicles.* Every tank motor vehicle used for the transportation of any flammable liquid or flammable solid, regardless of the quantity being transported, or whether loaded or empty, shall be conspicuously and legibly marked on each side and the rear thereof, in letters at least 3 inches high on a background of sharply contrasting color, optionally, as follows:

(1) With a sign or lettering on the motor vehicle, with the word "FLAMMABLE".

(2) With the common name of the flammable liquid or flammable solid being transported.

(3) With the name of the carrier or his trade-mark, when and only when such name or mark plainly indicates the flammable nature of the cargo.

(c) *Tank motor vehicles.* Every tank motor vehicle used for the transportation of any corrosive liquid, regardless of the quantity being transported, or whether loaded or empty, shall be conspicuously and legibly marked on each side and the rear thereof, in letters at least 3 inches high on a background of sharply contrasting color, optionally, as follows:

(1) The common name of the corrosive liquid being transported.

(2) A sign or lettering on the motor vehicle, with the word "ACID", or, when transporting corrosive liquids other than acids, the words "CORROSIVE LIQUID".

(d) *Tank motor vehicles.* Every tank motor vehicle used for the transportation of any compressed gas, regardless of the quantity being transported, or whether loaded or empty, shall be conspicuously and legibly marked on each side and the rear thereof on a background of sharply contrasting color with a sign or lettering on the tank or motor vehicle with the words "COMPRESSED GAS," "FLAMMABLE COMPRESSED GAS," or "FLAMMABLE GAS," as appropriate in letters at least 6 inches high; and in letters at least 2 inches high with a commonly accepted name of the contents, such as "ANHYDROUS AMMONIA," "CARBON DIOXIDE," "CHLORINE," "NITROUS OXIDE," "SULFUR DIOXIDE," "LIQUEFIED PETROLEUM GAS," "PROPANE," or "BUTANE."

(1) Every cargo tank shall be marked with the name of the motor carrier who owns the vehicle of which such tank forms a part; or, if the operator of the vehicle is not the owner, the name of the owner thereof.

(2) In addition to the markings hereinbefore required, there may be marked on any cargo tank the trademark appropriate to the commodity being transported therein; *Provided, however,* That no such marking shall be of such size and character as to render inconspicuous the required markings.

(3) No markings either required or permitted under the terms of this paragraph shall be in lieu of any other marking or markings required by the Commission.

(e) *Tank motor vehicles.* Every tank motor vehicle used for the transportation of any less dangerous poison, class B, regardless of the quantity being transported, or whether loaded or empty, shall be conspicuously and legibly marked on each side and the rear thereof, in letters at least 3 inches high, on a background of a sharply contrasting color, optionally, as follows:

(1) With a sign or lettering on the motor vehicle with the word "POISON".

(2) With the common name of the Class B poison being transported.

(f) *Removal of signs or lettering.* Every sign or lettering required by paragraph (a) of this section shall be removed from or covered on any motor vehicle to which it is attached or affixed when such motor vehicle is not transporting the article for which the sign is appropriate, except that no such sign or lettering is required to be removed or covered when such motor vehicle is used exclusively in the transportation of any article for which the sign or lettering is appropriate.

(g) *Only one marking required.* Whenever any motor vehicle is transporting more than one class of dangerous article for which signs or placards are required to be lettered on or affixed to any such motor vehicle, no more than one kind of sign, lettering, or placard need be displayed. The sign, lettering, or placard used shall be the one which, in the judgment of the motor carrier, designates the most dangerous article being transported.

**§ 77.824 Retesting of cargo tanks.**

(a) *Flammable liquid and poisonous liquid cargo tanks, specs. MC 300, MC 301, MC 302, MC 303, and MC 305.* Every cargo tank constructed in compliance with specs. MC 300, MC 301, MC 302, MC 303, and MC 305 (§§ 78.321, 78.323, 78.324, and 78.326 of this chapter) used for the transportation of any flammable liquid or poisonous liquid, class B, shall be retested as follows:

(1) *Tank out of service one year or more.* Every cargo tank which has been out of transportation service for a period of one year or more shall not be returned again to or placed in such service until it has successfully fulfilled the testing requirements set forth in the applicable specification.

(2) *Specification tanks.* Every cargo tank complying with the requirements of Specification No. 1001, 1937 Edition of the American Petroleum Institute, specifications of the National Fire Protection Association 1929 or 1933, or specifications MC 300, MC 301, MC 302, MC 303, and MC 305 (§§ 78.321, 78.323, 78.324, and 78.326 of this chapter), shall be tested at least once in every 5-year period and shall not be returned to service until it has successfully fulfilled the testing requirements set forth under § 78.321–16 of this chapter. If tested no oftener than once in every 5 years, at least one such test shall be made in the last year of any such 5-year period. The time of reckoning for such testing of such cargo tanks shall be from the time of the last test made in accordance with the requirements set forth under § 78.321–16 of this chapter.

(3) *Nonspecification tanks.* Every cargo tank not complying with the requirements of Specification No. 1001, 1937 Edition of the American Petroleum Institute, specifications of the National Fire Protection Association 1929 or 1933, or specifications MC 300, MC 301, MC 302, MC 303, and MC 305 (§§ 78.321, 78.323, 78.324, and 78.326 of this chapter), shall be tested at least once in every calendar year and shall successfully fulfill the requirements set forth under § 78.321–16 of this chapter. No two such required tests shall be closer together than 6 months.

(b) *Pressurized flammable liquid and poisonous liquid cargo tanks, spec. MC 304.* Every cargo tank constructed in compliance with spec. MC 304 (§ 78.325 of this chapter) or footnote 1 of § 78.325 of this chapter, shall be retested as specified in § 78.325–16 of this chapter. Each cargo tank used for the transportation of commodities specified in § 78.325 of this chapter shall be withheld from service until it has successfully fulfilled the testing requirements. Each such cargo tank shall be retested as follows:

(1) Whenever any such cargo tank, new or old, is acquired by a motor car-

rier; except that suitable testing of new tanks when completed by the manufacturer and before such tanks are placed in service will be considered as complying with this requirement.

(2) When such cargo tank has been out of service for one year or longer.

(3) When or before the test date required by § 78.325–17 of this chapter to be painted on the tank is five years old.

(4) When or before the test date required by § 78.325–17 of this chapter to be painted on the tank is two years old, in the case of tanks not complying with all requirements of this specification but continuing in service as authorized in footnote 1 of § 78.325 of this chapter.

(c) *Corrosive liquid cargo tanks, specs. MC 310 and MC 311.* Every cargo tank constructed in compliance with specs. MC 310 and MC 311 (§§ 78.330 and 78.331 of this chapter) used for the transportation of any corrosive liquid shall be retested as follows:

(1) *Tank out of service one year or more.* Every cargo tank which has been out of transportation service for a period of one year or more shall not be returned again, to or placed in such service until it has successfully fulfilled the testing requirements set forth in the applicable specification.

(2) *Specification tanks.* Every cargo tank complying with specs. MC 310, MC 311 (§ 78.330 or 78.331 of this chapter), or the requirements set forth in footnote 1 of § 78.330 or 78.331 of this chapter, shall be tested at least once in every 5-year period and shall successfully fulfill the testing requirements set forth in the applicable specification. If tested no oftener than once every 5 years, at least one such test shall be made in the last year of any such 5-year period. The time of reckoning of such testing of such cargo tanks shall be from the time of the last test made in accordance with the testing requirements set forth in the applicable specification.

(3) *Nonspecification tanks.* Every cargo tank not complying with specs. MC 310, MC 311 (§ 78.330 or 78.331 of this chapter), or the requirements set forth in footnote 1 of § 78.330 or 78.331 of this chapter, shall be tested at least once in every calendar year and shall successfully fulfill the testing requirements set forth under § 78.330–16 or 78.331–16 of this chapter, whichever is applicable. No two such required tests shall be closer together than 6 months.

(d) *Compressed gas cargo tanks, spec. MC–330.* Every cargo tank constructed in compliance with spec. MC–330 (§ 78.336 of this chapter) used for the transportation of any compressed gas shall be retested in accordance with the following provisions:

(1) Not later than January 31, 1965, an external and internal visual inspection shall be made to determine whether the tank is in compliance with the requirements of the regulations, specifications, and provisions of the code under which it was built, provided that an external inspection of shell and heads shall not be required on insulated tanks and internal inspection shall not be required in tanks without manways or as to tanks constructed of other than quenched and tempered steel which have a water capacity of 3,000 gallons or less. Particular determination shall be made as follows:

(i) Whether excessive weld metal build-up, above that permitted by the code provisions, or other indication of improper welding during fabrication exists.

(ii) Whether evidence of a crack or cracks, or other damage exists.

(iii) Whether openings in the tank are grouped as required by § 78.336–1(c) of this chapter.

(iv) Whether valves, fittings, accessories, safety relief devices, and gauging devices are adequately protected against mechanical damage as required by § 78.336–10 of this chapter.

(v) Whether marking and placarding are legible and meet the size requirements of § 77.823(d).

(vi) Whether the automatic excess flow valve required by § 73.33(o) of this chapter conforms to all requirements of that section, particularly that the capacity of all connections and lines is greater than the rated flow of the excess flow valve.

(vii) Whether the manually operated shut-off valve, required by § 73.33(o)(3) of this chapter, is operative and in conformity with the regulation.

(viii) Whether pipes, fittings, valves, valve connections, or nozzles extend to or beyond a point at which they are protected from mechanical damage.

(2) If any inspection discloses any failure to comply with requirements of the code under which the tank was built or with any other provision of Commission regulations, or if evidence of any substantial or significant damage is found, repairs, or modifications shall be made to bring the tank into compliance with such code provisions or regulations before it is returned to service.

(3) (i) At time intervals specified herein tests shall be made of all welds in or on tank shells and heads, both inside and outside, of tanks of more than 3,000 water gallon capacity, if constructed of quenched and tempered steel, and if used for transportation of toxic or flammable gases, provided that welded appurtenances need not be removed for this purpose, and provided that any tank, if insulated, need not be subjected to exterior testing and that any tank not equipped with a manway need not be subjected to internal testing. At least ten percent of the tanks in use by a carrier shall be tested not later than September 30, 1964. The test shall be made of every tank not later than the first occasion when it is due for the test required by § 73.33(k). Tanks constructed prior to January 1, 1959, shall be tested at first priority, with oldest tanks to be tested first. Any tank tested in accordance with these requirements subsequent to December 31, 1962, shall be deemed to have complied with the requirement of this subparagraph. Similar tests of not less than ten percent of the tanks in use by a carrier shall be made during each period of six months after September 30, 1964, until all tanks in service have been tested. If any carrier has less than ten such tanks, at least one such tank shall be tested during each period of six months.

(ii) The test required by this subparagraph shall be made either by the magnetic particle method, the radiographic method, or by the ultrasonic method. If the magnetic particle method is used, the test shall be conducted in accordance with appendix VI, section VIII, 1962 edition of the ASME Code, except that permanent magnets may not be used for this purpose. The ultrasonic method may be used only in full compliance with the provisions of Case Interpretation 1275N of the ASME Code. If the radiographic method is used, the test shall be conducted in accordance with the requirements of section VIII, 1962 edition of the ASME Code. If any failure to comply with the provisions of the code, or any defective plate or weldment, is disclosed by such test it shall be repaired prior to replacing the vehicle in service.

(4) Reports required:

(i) Each motor carrier, whether common, contract, or private, operating such tank vehicles, shall make a written report in triplicate, concerning all tanks inspected or tested in accordance with subparagraphs (1), (2), and (3) of this paragraph. Such reports shall be filed, in duplicate, with the District Director of the Bureau of Motor Carriers, having jurisdiction at the place of the principal office of the carrier not later than 15 days after September 30, 1964, as to those tanks which have been inspected or tested on or before September 30, 1964. Such report shall indicate the number of tanks remaining to be inspected in accordance with subparagraph (1), of this paragraph, if any. A similar report shall be filed not later than 15 days after completion of the inspections and repairs of all tanks in service required to be inspected and repaired in accordance with subparagraphs (1) and (2) of this paragraph. Similar reports shall be made not later than 15 days after completion of each six months' period succeeding September 30, 1964, until all such tanks have been inspected, tested, and repaired as required. If by September 30, 1964, or at the end of any succeeding period of six months, all tanks in use by a carrier, including any tanks acquired or placed in service during such periods, shall have been inspected or tested, that fact shall be reported and no further report is required unless and until additional vehicles are placed in the carrier's service. A copy of the report shall be retained by the carrier during the period the tank is in the carrier's service and for one year thereafter.

(ii) Each carrier shall cause to be prepared a record, signed by the inspector, of the inspection of each tank required by subparagraphs (1) and (2) of this paragraph. The signed inspection record shall be retained with the carrier's file copy of the report filed with the Commission. The report shall state the identification, by company designation number, of each vehicle inspected, the name of the inspecting agency and person, the nature of any defects or damage discovered, and shall state how such defect or damage was corrected and by what method. If no defect or damage was discovered, that fact shall be reported.

(iii) Each carrier shall cause to be furnished to it a record of the test of each tank required by subparagraph (3) of this paragraph, signed by the representative of the firm or agency making the test, or signed by the employee of the carrier making the test, which report shall be retained with the carrier's file copy of the report filed with the Commission. The report shall state the identification, by company designation number, of each vehicle tested during the period covered. The report shall state what method of test was used, the name of the inspecting agency and person, the nature of any defects or damage discovered, and how such defect or damage was corrected. If no defect or damage was discovered, that fact shall be reported. Any vehicle involved in an accident resulting in damage to the cargo tank, shall be tested and reported upon in accordance with the requirements of this subdivision and subparagraph (3) of this paragraph.

(iv) The reports required of a carrier by subdivisions (i), (ii), and (iii) of this subparagraph may be combined in a single report.

(5) The inspection and test required shall be in addition to the testing requirements of § 73.33 of this chapter.

(e) *Novel cargo tanks.* Every cargo tank which shall have been authorized by the Commission under the provisions of § 73.33 (h) and (j) of this chapter shall be retested under the requirements set forth in the terms of such authorization.

(f) *Testing following accidents.* Every cargo tank capable of suitable repair following any accident in which a tank motor vehicle may have been involved shall not be returned to service until it has successfully been retested in accordance with the test prescribed for its periodic retest if the cargo tank has itself been damaged in a manner likely to affect the safety of operation of the tank motor vehicle, or if the damage to the tank motor vehicle is such as to make the safety of the cargo tank uncertain.

(g) *Special testing required by the Commission.* Upon the showing of probable cause of the necessity for retest, the Commission may, at its discretion, cause any cargo tank to be retested at any time in accordance with the requirements prescribed for its periodic retest.

(h) *Test date markings.* The date of the last test shall be painted on the tank in letters not less than 1¼ inches high, in legible colors, immediately below the metal identification plate specified in the applicable specification.

## Subpart B—Loading and Unloading

NOTE: For prohibited loading and storage of explosives and other dangerous articles, see § 77.848.

### § 77.834 General requirements.

(a) *Containers secured in vehicle.* Any tank, barrel, drum, or cylinder, not designed to be permanently attached to a motor vehicle, containing any flammable liquid, compressed gas, corrosive liquid, or poisonous article, shall be reasonably secured against movement within the motor vehicle by which it is being transported.

(b) *No explosives or other dangerous articles on pole trailers.* No explosive or other dangerous article may be loaded into or on or transported in or on any pole trailer.

(c) *No smoking while loading or unloading.* Smoking on or about any motor vehicle while loading or unloading any explosive, flammable liquid, flammable solid, oxidizing material, or flammable compressed gas is forbidden.

(d) *Keep fire away, loading and unloading.* Extreme care shall be taken in the loading or unloading of any explosive, flammable liquid, flammable solid, oxidizing material, or flammable compressed gas into or from any motor vehicle to keep fire away and to prevent persons in the vicinity from smoking, lighting matches, or carrying any flame or lighted cigar, pipe, or cigarette.

(e) *Handbrake set while loading and unloading.* No explosive or other dangerous article shall be loaded into or on, or unloaded from, any motor vehicle unless the handbrake be securely set and all other reasonable precautions be taken to prevent motion of the motor vehicle during such loading or unloading process.

(f) *Use of tools, loading and unloading.* No tools which are likely to damage the effectiveness of the closure of any package or other container, or likely adversely to affect such package or container, shall be used for the loading or unloading of any explosive or other dangerous article.

(g) *Prevent relative motion between containers.* Containers of explosives, flammable liquids, flammable solids, oxidizing materials, corrosive liquids, acids, compressed gases, and poisonous liquids or gases, must be so braced as to prevent motion thereof relative to the vehicle while in transit. Containers having valves or other fittings must be so loaded that there will be the minimum likelihood of damage thereto during transportation.

(h) *Precautions concerning containers in transit; fueling road units.* Reasonable care should be taken to prevent undue rise in temperature of containers and their contents during transit. There must be no tampering with such container or the contents thereof nor any discharge of the contents of any container between point of origin and point of billed destination. Discharge of contents of any container, other than a cargo tank, must not be made prior to removal from the motor vehicle. Nothing contained in this paragraph shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction or maintenance.

(i) *Tank motor vehicles attended, loading and unloading.* Under no circumstances shall a tank motor vehicle be left unattended during the loading or unloading process. For the purpose of this part, the delivery hose, when attached to the motor vehicle, shall be deemed a part thereof.

(j) *Prohibited loading combinations.* In any single driven motor vehicle or in any single unit of a combination of motor vehicles, explosives and other dangerous articles shall not be loaded together if prohibited by loading and storage chart, § 77.848. This section shall not be so construed as to forbid the carrying of materials essential to safe operation of motor vehicles. (See Motor Carrier Safety Regulations, Part 193 of this chapter.)

(k) *Access to mixed ladings.* Flammable solids, oxidizing materials, or corrosive liquids, when transported on a motor vehicle with other lading not otherwise forbidden, shall be so loaded as to provide ready access thereto for shifting or removal.

(l) *Truck bodies or trailers equipped with heaters or automatic refrigeration apparatus.* Except as provided in subparagraph (1) of this paragraph flammable liquids (red label) and flammable gases (red label) must not be loaded in truck bodies or trailers equipped with heaters or automatic refrigerating apparatus unless the automatic apparatus be rendered inoperative. The fuel tanks for such apparatus shall be empty or removed from the vehicle, except that liquefied petroleum gas fuel tanks exterior to the vehicle body may have their valves closed and disconnected from the fuel feed lines in lieu of being emptied or removed.

(1) This prohibition does not apply, and heating or refrigeration apparatus may be operated on motor vehicles loaded with flammable liquids and flammable gases, when the lading space is equipped with no electrical apparatus other than of nonsparking or explosion-proof types, no combustion apparatus in the lading space, and no connection for return of air from the lading space to any combustion apparatus. The heating system must be such that no part of the lading is heated over 130° F., and conform to § 193.77 of this chapter.

### § 77.835 Explosives.

(See also § 77.834 (a) to (k).)

(a) *Engine stopped.* No explosives shall be loaded into or on or be unloaded from any motor vehicle with the engine running.

(b) *Care in loading, unloading, or other handling of explosives.* No bale hooks or other metal tools shall be used for the loading, unloading, or other handling of explosives, nor shall any package or other container of explosives, except barrels or kegs, be rolled. No packages of explosives shall be thrown or dropped during process of loading or unloading or handling of explosives. Special care shall be exercised to the end that packages or other containers containing explosives shall not catch fire from sparks or hot gases from the exhaust tailpipe.

(1) Whenever tarpaulins are used for covering explosives, they shall be secured by means of rope or wire tie downs. Explosives placards or markings required by § 77.823 shall be secured, in the appropriate locations, directly to the equipment transporting the explosives. If the vehicle is provided with placard boards, the placards must be applied to these boards.

(c) *Explosives transported on vehicles or combination of vehicles.* Class A explosives may not be loaded into or transported in any vehicle of a combination of vehicles except as follows: In a truck and in one semitrailer or one full trailer at-

tached thereto, with no other trailer included in the combination, in a semitrailer attached to a truck-tractor and in a full trailer attached thereto, with not more than one semitrailer and one full trailer in the combination. As used in this paragraph a full trailer includes a semitrailer equipped with a front axle dolly.

(1) Each full trailer used in any of the above combinations, in any vehicle of which combination any class A explosive is transported, must have a wheel base of at least 184 inches. No class A explosive may be loaded into or transported on any vehicle in any combination of vehicles if any vehicle in the same combination contains any explosive or other dangerous article which may not be loaded or stored with explosives class A under the provisions of § 77.848.

(d) [Reserved]

(e) *No sharp projections inside body of vehicles.* No motor vehicle transporting any kind of explosive shall have on the interior of the body in which the explosives are contained, any inwardly projecting bolts, screws, nails, or other inwardly projecting parts likely to produce damage to any package or container of explosives during the loading or unloading process or in transit.

(1) All fuel tanks for heaters or refrigerating machinery with which truck bodies or trailers are equipped shall be drained and all automatic heating or refrigerating machinery shall be rendered inoperative by disconnection of the automatic controls or the source of power for their operation.

(f) *Explosives vehicles, floors tight and lined.* Motor vehicles transporting class A or class B explosives shall have tight floors; shall have that portion of the interior in contact with the load lined with either non-metallic material or non-ferrous metals, except that the lining is not required for truck load shipments loaded by the Departments of the Army, Navy or Air Force of the United States Government provided the explosives are of such nature that they are not liable to leakage of dust, powder, or vapor which might become the cause of an explosion. The interior of the cargo space must be in good condition so that there will not be any likelihood of containers being damaged by exposed bolts, nuts, broken side panels or floor boards, or any similar projections.

(g) *Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse and/or electric blasting caps in same vehicle with other explosives.* Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse and/or electric blasting caps, without limitation as to quantity except as limited in paragraph (m) of this section, may be transported in the same motor vehicle with high explosives (dynamites and similar explosives) when the net weight of the high explosives (dynamites and similar explosives) does not exceed 5,000 pounds, as follows: The blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse and electric blasting caps must be packed in authorized I.C.C. specification outside shipping containers, or in prescribed inside I.C.C. packages in an outside box made of 1 inch lumber lined with suitable padding material not less than ½ inch thick or a box made of not less than 12 gauge sheet metal lined with plywood or other suitable material not less than ⅜ inch thick so that no metal is exposed. Hinged cover and fastening device are required on boxes. These boxes must be loaded in motor vehicle so that contents or box will be immediately accessible for removal and so that other containers in the motor vehicle will not fall on them or otherwise damage them during transit. Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse or electric blasting caps when not packed in containers referred to above in this paragraph must be transported in containers as prescribed in spec. MC 201 (§ 78.318 of this chapter). See paragraph (m) of this section for shipment of blasting caps with liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate. Explosive projectiles with detonating fuzes assembled in place must not be transported unless shipped by, for, or to the Departments of the Army, Navy, and Air Force of the United States Government, or unless of a type approved by the Bureau of Explosives.

(h) *Lading within body or covered, tailgate closed.* Except as provided in paragraphs (g), (k), and (m) of this section, dealing with the transportation of liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, other than as defined in § 73.53 (e) of this chapter, all of that portion of the lading of any motor vehicle which consists of explosives shall be contained entirely within the body of the motor vehicle or within the horizontal outline thereof, without overhang or projection of any part of the load, and if such motor vehicle has a tailboard or tailgate, it shall be closed and secured in place during such transportation. Every motor vehicle transporting explosives must either have a closed body or have the body thereof covered with a tarpaulin, and in either event care must be taken to protect the load from moisture and sparks, except that subject to other provisions of these regulations, explosives other than black powder may be transported on flat-bed vehicles if the explosive portion of the load on each vehicle is packed in fire and water resistant containers or covered with a fire and water resistant tarpaulin.

(i) *Explosives to be protected against damage by other lading.* No motor vehicle transporting any explosive may transport as a part of its load any metal or other articles or materials likely to damage such explosive or any package in which it is contained, unless the different parts of such load be so segregated or secured in place in or on the motor vehicle and separated by bulkheads or other suitable means as to prevent such damage.

(j) *Transfer of explosives en route.* No class A or class B explosive shall be transferred from one container to another, or from one motor vehicle to another vehicle, or from another vehicle to a motor vehicle, on any public highway, street, or road, except in case of emergency. In such cases red electric lanterns, red emergency reflectors or red flags shall be set out in the manner prescribed for disabled or stopped motor vehicles. (See Motor Carrier Safety Regulations, Part 192 of this chapter.) In any event, all practicable means, in addition to these hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer or against the hazard occasioned by the emergency making such transfer necessary.

(k) *Loading requirements for liquid nitroglycerin, desensitized liquid nitroglycerin, or diethylene glycol dinitrate.* Liquid nitroglycerin, desensitized liquid nitroglycerin, or diethylene glycol dinitrate, other than as defined in § 73.53 (e) of this chapter, may be accepted for transportation and transported only by motor carriers other than common carriers if it be loaded into or on a truck having the type of body specified in spec. MC200 (§ 78.315 of this chapter). No liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate may be loaded directly above any other explosive, or in any quantity in excess of 900 quarts on one motor vehicle or 10 quarts in any one individual container. Additional quantities of explosives, other than nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, excepting any type of blasting or percussion cap or other detonating device, may be carried on such motor vehicle in a closed or covered bed or body which shall be firmly bolted or fastened above the lid of the compartment containing the nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate. In no case shall the net load be more than 7,500 pounds. (See paragraph (m) of this section and spec. MC201 (§ 78.318 of this chapter).)

(l) *Separation of tools and supplies for preparing charges.* Motor vehicles transporting liquid nitroglycerin; desensitized liquid nitroglycerin or diethylene glycol dinitrate, may also transport the tools and supplies necessary for preparing and firing charges thereof: *Provided,* That such tools and supplies be properly secured in place so as to prevent their coming in contact with the body above specified.

(m) *Caps or other explosives.* Any explosives, including desensitized liquid explosives as defined in § 73.53 (e) of this chapter, other than liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, transported on any motor vehicle transporting liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate, shall be segregated; each kind from every other kind, and from tools or other supplies. Any percussion caps, detonators, blasting caps, or electric blasting caps, shall be carried either in a cloth container having individual pockets for each such cap, or by at least equally safe means. No greater number of any such caps shall be carried in the manner described than is necessary for use on any particular trip.

**§ 77.836 Nonexplosive material.**

(a) No restrictions are prescribed in Parts 71–78 of this chapter for the packing, handling, and transportation of material relating to ammunition for cannon, but containing no explosive or other dangerous article, such as cartridge cases, "dummy" or "drill" cartridges, etc., sand-loaded projectiles, sand-loaded bombs, empty projectiles, empty mines, empty bombs, solid projectiles, or empty torpedoes. Rotating bands should be protected against deformation by method of packing or loading.

**§ 77.837 Flammable liquids.**

(See also § 77.834 (a) to (k).)

(a) *Engine stopped.* Unless the engine of the motor vehicle is to be used for the operation of a pump, no flammable liquid shall be loaded into or on or unloaded from any other motor vehicle than a tank motor vehicle with the engine running; and in any event care should be exercised to prevent ignition of the vapors from any such liquid.

(b) *Bonding or grounding containers prior to and during transfers.* For containers which are not in metallic contact with each other, either metallic bonds or ground conductors shall be provided for the neutralization of possible static charges prior to and during transfers of flammable liquids between such containers. Such bonding shall be made by first connecting an electric conductor to the container to be filled and subsequently connecting the conductor to the container from which the liquid is to come, and not in any other order. To provide against ignition of vapors by discharge of static electricity, the latter connection shall be made at a point well removed from the opening from which the flammable liquid is to be discharged.

(c) Tanks complying with ICC–106A or ICC–110 (§ 78.275 or 78.293 of this chapter) specifications used for the transportation of flammable liquids as authorized in §§ 73.134 (a) (2) and 73.148 (a) (4) of this chapter may be transported in or on motor vehicles and in the manner authorized in § 77.840 (c), provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

**§ 77.838 Flammable solids and oxidizing materials.**

(See also § 77.834(a) to (k).)

(a) *Lading within body or covered; tailgate closed; pick-up and delivery.* All of that portion of the lading of any motor vehicle transporting flammable solids or oxidizing materials shall be contained entirely within the body of the motor vehicle and shall be covered by such body, by tarpaulins, or other suitable means, and if such motor vehicle has a tailboard or tailgate, it shall be closed and secured in place during such transportation: *Provided, however,* That the provisions of this paragraph need not apply to "pick-up and delivery" motor vehicles when such motor vehicles are used in no other transportation than in and about cities, towns, or villages.

(b) *Articles to be kept dry.* Special care shall be taken in the loading of any motor vehicle with flammable solids or oxidizing materials which are likely to become hazardous to transport when wet, to keep them from being wetted during the loading process and to keep them dry during transit. Special care shall also be taken in the loading of any motor vehicle with flammable solids or oxidizing materials, which are likely to become more hazardous to transport by wetting, to keep them from being wetted during the loading process and to keep them dry during transit. Examples of such dangerous materials are charcoal screenings, ground, crushed, or pulverized charcoal, and lump charcoal.

(c) *Lading ventilation, precautions against spontaneous combustion.* Whenever a motor carrier has knowledge concerning the hazards of spontaneous combustion or heating of any article to be loaded on a motor vehicle, such article shall be so loaded as to afford sufficient ventilation of the load to provide reasonable assurance against fire from this cause; and in such a case the motor vehicle shall be unloaded as soon as practicable after reaching its destination. Charcoal screenings, or ground, crushed, granulated, or pulverized charcoal, in bags, shall be so loaded that the bags are laid horizontally in the motor vehicle, and so piled that there will be spaces for effective air circulation, which spaces shall not be less than 4 inches wide; and air spaces shall be maintained between rows of bags. Bags shall not be piled closer than 6 inches from the top of any motor vehicle with a closed body.

(d) *Loose or baled nitrate of soda bags.* Loose or baled unwashed, empty bags, having contained nitrate of soda, may be transported in truckload lots only in motor vehicles, and such motor vehicles must have closed or covered bodies lined with paper; such shipments are required to be loaded by the shipper and to be unloaded by the consignee.

(e) *Staying or blocking of packages of matches.* Special care shall be exercised in the loading of packages containing "strike-anywhere" matches to prevent the shifting or jamming of any such package during transit. To this end, the packages shall be compactly loaded with the strongest dimensions of each box or other container loaded lengthwise of the motor vehicle.

(1) *Smooth vehicle interior for matches.* Unless strike-anywhere matches are contained in wooden outside boxes, special care shall be taken to provide that the inside surfaces of any motor vehicle into which such matches are to be loaded and with which surfaces the containers might come in contact, shall be smooth, without protrusions of any sort, such as bolts, nuts, sharp edges, or corners, etc., and there shall be provided for this purpose smooth wooden inner linings, if the interior of the motor vehicle is not otherwise smooth in accordance with this requirement.

(2) *Matches not loaded next to red label articles.* Matches of whatever character shall not be loaded next to packages protected by the red caution label.

(f) Nitrates, except ammonium nitrate having organic coating, listed in § 73.182 (b) must be loaded in closed or open type motor vehicles, which must be swept clean and be free of any projections capable of injuring bags when so packaged. When shipped in open type motor vehicles, the lading must be suitably covered. Ammonium nitrate having organic coating must not be loaded in all-metal vehicles, other than those made of aluminum or aluminum alloys, of the closed type. (See § 77.823 (a) (4) and (5).)

(g) Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one motor vehicle shall be classed as a flammable solid for purposes of transportation when approved for such classification by the Bureau of Explosives. Maximum quantity in any inside container must not exceed eight pounds and inside containers must be arranged and protected so as to prevent simultaneous ignition of the contents. The complete package must be a type approved by the Bureau of Explosives. Each outside shipping container shall be labeled as prescribed in § 73.402 (a) (2) of this chapter.

**§ 77.839 Corrosive liquids.**

(See also § 77.834 (a) to (k).)

(a) *Nitric acid.* In addition to the requirements set forth in paragraph (b) of this section no carboy or other container of nitric acid shall be loaded above any container containing any other kind of material. The loading of carboys or other containers of nitric acid shall be limited to two tiers high.

(b) *Carboys and frangible containers.* In general, individual carboys and frangible containers of acids or other corrosive liquids, including charged electric storage batteries, shall, when loaded by hand, be individually loaded into and unloaded from any motor vehicle in which they are to be, or have been, transported. All reasonable precautions shall be taken to prevent, by all practicable means, the dropping of any such containers or batteries containing corrosive liquids. No such container or battery shall be loaded into a motor vehicle having an uneven floor surface. It shall be permissible to load on or transport in any motor vehicle any authorized carboys or frangible shipping containers, containing acids or other corrosive liquids, more than one tier high above any floor only if such carboys or other containers are boxed or crated, or are in barrels or kegs, as required by Parts 71–78 of this chapter, and only if such containers are so stacked that the weight of each tier above the first is entirely supported by the boxes, crates, barrels, kegs, or other authorized means of enclosing the carboys or frangible containers. Only so many tiers as may adequately be so supported without danger of crushing or breaking, shall be permitted. Means shall be provided to prevent by all practicable means, in all cases, the shifting of containers or batteries during transit. Nothing contained in this section shall be so construed as to prevent the use of cleats or other retaining means for the purpose of preventing shifting of containers or batteries. For the purposes of this section a false floor or platform, secured against relative motion within

the body of the motor vehicle, shall be deemed to be a floor. (For recommendations for handling leaking or broken packages, see § 77.858 (a).)

(c) *Storage batteries.* In addition to the requirements set forth in paragraph (b) of this section, all storage batteries containing any electrolyte shall be so loaded, if loaded with other lading, that all such batteries will be protected against other lading falling onto or against them; and adequate means shall be provided in all cases for the protection and insulation of battery terminals against short circuits.

(d) Tanks complying with ICC–106A (§ 78.275 of this chapter) specification used for the transportation of corrosive liquids as authorized in § 73.264(b) (6) of this chapter may be transported in or on motor vehicles and in the manner authorized in § 77.840(c), provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

### § 77.840 Compressed gases.

(See also § 77.834 (a) to (k).)

(a) *Floors or platforms essentially flat.* Cylinders containing compressed gases shall not be loaded onto any part of the floor or platform of any motor vehicle which is not essentially flat; cylinders containing compressed gases may be loaded onto any motor vehicle not having a floor or platform only if such motor vehicle be equipped with suitable racks having adequate means for securing such cylinders in place therein. Nothing contained in this section shall be so construed as to prohibit the loading of such cylinders on any motor vehicle having a floor or platform and racks as hereinbefore described.

(1) *Cylinders.* Cylinders containing compressed gases shall be securely lashed in an upright position so as to prevent their overturning; or loaded into racks securely attached to the motor vehicle; or packed in boxes or crates of such dimensions as to prevent their overturning; or loaded in a horizontal position. Spec. ICC–4L cylinders must be loaded in an upright position and be securely braced.

(b) Portable tank containers containing compressed gases shall be loaded on motor vehicles only as follows:

(1) Onto a flat floor or platform of a motor vehicle.

(2) Onto a suitable frame of a motor vehicle.

(3) In either such case, such containers shall be safely and securely blocked or held down to prevent movement relative to each other or to the supporting structure when in transit, particularly during sudden starts and stops and changes of direction of the vehicle.

(4) Requirements of subparagraphs (1) and (2) of this paragraph shall not be construed as prohibiting stacking of containers, provided the provisions of subparagraph (3) of this paragraph are fully complied with.

(c) Tanks complying with ICC–106A or ICC–110A (§ 78.275, 78.276, 78.278, 78.293 or 78.295 of this chapter) specifications used for the transportation of compressed gases as authorized in § 73.314(a), Note 12 of this chapter, may be transported in a combination of vehicles as follows: (1) in or on a truck and in or on one semi-trailer or one full trailer attached thereto, with no other trailer included in the combination, (2) in or on a semi-trailer attached to a truck-tractor and in or on a full trailer attached thereto, with not more than one semi-trailer and one full trailer in the combination, provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting. As used herein a full trailer includes a semi-trailer equipped with a front axle dolly. Each full trailer used in any of the above combinations, in or on any vehicle of which combination any such tank is transported, must have a wheel base of at least 184 inches. See § 74.560 of this chapter for rail-freight-motor vehicle shipments.

(d) *Engine to be stopped in tank motor vehicles, except for transfer pump.* No flammable compressed gas shall be loaded into or on or unloaded from any tank motor vehicle with the engine running unless the engine is used for the operation of the transfer pump of the vehicle. Unless the delivery hose is equipped with a shut-off valve at its discharge end, the engine of the motor vehicle shall be stopped at the finish of such loading or unloading operation while the filling or discharge connections are disconnected.

(e) Chlorine cargo tanks shall be shipped only when equipped (1) with a gas mask of a type approved by the U.S. Bureau of Mines for chlorine service; (2) with an emergency kit for controlling leaks in fittings on the dome cover plate.

(f) No chlorine tank motor vehicle used for transportation of chlorine shall be moved, coupled or uncoupled, when any loading or unloading connections are attached to the vehicle, nor shall any semi-trailer or trailer be left without the power unit unless such semi-trailer or trailer be checked or equivalent means be provided to prevent motion.

### § 77.841 Poisons.

(See also § 77.834 (a) to (k).)

(a) *Arsenical compounds in bulk.* Care shall be exercised in the loading and unloading of "arsenical dust", "arsenic trioxide", and "sodium arsenate", allowable to be loaded into sift-proof, steel hopper-type or dump-type motor-vehicle bodies equipped with water-proof, dust-proof covers well secured in place on all openings, to accomplish such loading with the minimum spread of such compounds into the atmosphere by all means that are practicable; and no such loading or unloading shall be done near or adjacent to any place where there are or are likely to be, during the loading or unloading process assemblages of persons other than those engaged in the loading or unloading process, or upon any public highway or in any public place.

(b) *No class A or class C poisons in cargo tanks.* No dangerous poison, class A, or any tear gas or irritating substance, class C, may be loaded into or transported in any cargo tank.

(c) *Class A or class C poisons.* It shall not be permissible to transport class A or class C poisons if there be any interconnecting means of any character between the containers.

NOTE 1: Tanks complying with ICC–106A (§ 78.275 or 78.276 of this chapter) specification containing class A or B poisons as authorized in §§ 73.333(a)(2), 73.336(a)(3), 73.338(a)(3), 73.353(a)(5) and 73.357(b)(4) of this chapter may be transported in or on motor vehicles and in the manner authorized in § 77.840(c), provided adequate facilities are present for handling tanks where transfer in transit is necessary. Tanks must be securely chocked or clamped thereon to prevent shifting.

(d) *Radioactive material.* A container of radioactive material, red label, must not be placed in vehicles, terminals, or other places closer than 3 feet to an area which may be continuously occupied by passengers, employees, or shipments of animals. When more than one such container is present, the distance from occupied areas must be computed from the table in subparagraph (1) of this paragraph by adding the number of units shown on labels on the containers.

(1) A container of radioactive material, red label, must not be placed closer than 15 feet to any package containing undeveloped film. If more than one such container is present the distance must be computed from the table in this subparagraph by adding the number of units shown on the labels on the packages.

TABLE

| Total number of units | Minimum distance in feet to nearest undeveloped film | Distance in feet to area that may be continuously occupied by passengers or employes for periods: | |
|---|---|---|---|
| | | Up to 8 hours | Exceeding 8 hours |
| 1 to 10 | 15 | 3 | 5 |
| 11 to 20 | 20 | 4 | 7 |
| 21 to 30 | 25 | 5 | 9 |
| 31 to 40 | 30 | 6 | 10 |

NOTE 1. The distance in the table must be measured from the nearest point of the radioactive container or containers.

NOTE 2. 1 unit equals 1 milliroentgen per hour at 1 meter for hard gamma radiation or the amount of radiation which has the same effect on film as 1 mrhm. of hard gamma rays of radium filtered by ½ inch of lead.

(2) Not more than 40 units of radioactive material, red label, shall be transported in any vehicle or stored in any location at one time. Packages must be so blocked or braced in vehicles as to prevent any shift of lading under conditions normally incident to transportation.

(3) All containers of radioactive material, red label, must be carried by the handles when handles are provided.

(4) Radioactive materials (class D poisons) must not be loaded in the same vehicle with Class A explosives.

(5) If for any reason, a package containing radioactive materials, red label, would otherwise remain in the same building for a period longer than 24 hours, it must be moved to a different location after each 24 hours.

NOTE 1: The requirements of this paragraph shall not apply to magnesium-thorium alloy materials or uranium, normal or depleted, described in § 73.392 (e) and (f) of this chapter. The location of bundles, boxes, barrels, or crates of such material from packages of undeveloped film must be as stated on the label (see § 73.414(d) of this chapter).

## Subpart C—Loading and Storage Chart of Explosives and Other Dangerous Articles

### § 77.848 Loading and storage chart of explosives and other dangerous articles.

(a) Explosives or other dangerous articles must not be loaded, transported or stored together, except as provided in the Loading and Storage Chart of Explosives and Other Dangerous Articles shown in this section.

The following table shows the explosives and other dangerous articles which must not be loaded or stored together.

The letter X at an intersection of horizontal and vertical columns shows that these articles must not be loaded or stored together, for example: Detonating fuzes class A, with or without radioactive components g horizontal column must not be loaded or stored with high explosives or propellant explosives, class A b vertical column.

| | | a | b | c | d | e | f | g | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Low explosives or black powder | High explosives or propellant explosives, class A | Initiating or priming explosives, wet: Diazodinitrophenol, fulminate of mercury, guanyl nitrosamino guanylidene hydrazine, lead azide, lead styphnate, nitro mannite, nitrosoguanidine, pentaerythrite tetranitrate, tetrazene, lead mononitroresorcinate | Blasting caps, with or without safety fuse (including electric blasting caps), detonating primers | Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles or shell, ammunition for small arms with explosive bullets, or ammunition for small arms with explosive projectiles, or rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles and boosters (explosive), bursters (explosive), or supplementary charges (explosive) without detonators [4] | Explosive projectiles, bombs, torpedoes, or mines, rifle or hand grenades (explosive), jet thrust units (jato), explosive, class A or igniters, jet thrust (jato), explosive, class A [5] | Detonating fuzes, class A, with or without radioactive components | Ammunition for cannon with empty, inert-loaded or solid projectiles, or without projectiles, or rocket ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles | Propellant explosives, class B, jet thrust units (jato), class B, igniters, jet thrust (jato), class B, or starter cartridges, jet engines, class B | Fireworks special or railway torpedoes | Small arms ammunition | Primers for cannon or small arms, empty cartridge bags—black powder ignited, combination primers or percussion caps, toy caps, explosive cable cutters, explosive rivets | Percussion fuzes, tracer fuzes or tracers | Time, combination or detonating fuzes, class C | Cordeau detonant fuse, safety squibs, fuse lighters, fuse igniters, delay electric igniters, electric squibs, instantaneous fuse or igniter cord | Fireworks, common, highway fuses or railway fuses | Flammable liquids or compressed flammable gases, red label | Flammable solids or oxidizing materials, yellow label | Acids or corrosive liquids, white label | Compressed nonflammable gases, green label | Poisonous gases or liquids, in tank car tanks, cylinders, projectiles or bombs, poison gas label | Radioactive materials (class D poisons) |
| CLASS A EXPLOSIVES | | | | | | | | | | | | | | | | | | | | | | | |
| Low explosives or black powder | (6) | | X | | | | | | | | X | | | | | | X | X | X | X | X | X | X |
| High explosives or propellant explosives, class A | (6) | | X | | •X | | | X | | | X | | | | | | X | X | •X | X | X | X | X |
| Initiating or priming explosives, wet: Diazodinitrophenol, fulminate of mercury, guanyl nitrosamino guanylidene hydrazine, lead azide, lead styphnate, nitro mannite, nitrosoguanidine pentaerythrite tetranitrate, tetrazene, lead mononitroresorcinate | (c) | X | •X | | X | X | X | X | X | X | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Blasting caps, with or without safety fuse (including electric blasting caps), detonating primers | (d) | | X | X | | X | X | | | | •X | | | | | | •X | •X | ••X | •X | •X | X | X |
| Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles or shell ammunition for small arms with explosive bullets, or ammunition for small arms with explosive projectiles, or rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles; and boosters (explosive), bursters (explosive), or supplementary charges (explosive) without detonators [4] | (e) | | | X | X | | | X | | | X | | | | | | X | X | X | X | X | X | X |
| Explosive projectiles, bombs, torpedoes, or mines, rifle or hand grenades (explosive), jet thrust units (jato), explosive, class A, or igniters, jet thrust (jato), explosive, class A [5] | (f) | | | X | X | | | X | | | X | | | | | | X | X | X | X | X | X | X |
| Detonating fuzes, class A, with or without radioactive components | (c) | | X | X | | X | X | | | | X | | | | | | X | X | X | X | X | X | X |
| CLASS B EXPLOSIVES | | | | | | | | | | | | | | | | | | | | | | | |
| Ammunition for cannon with empty, inert-loaded or solid projectiles, or without projectiles, or rocket ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles | 1 | | | X | | | | | | | | | | | | | | | | •X | | X | |
| "2" Propellant explosives, class B, jet thrust units (jato), class B, igniters, jet thrust (jato), class B, or starter cartridges, jet engine, class B | 2 | | | X | | | | | | | | | | | | | | | | •X | | X | |
| Fireworks, special or railway torpedoes | 3 | X | X | X | •X | X | X | X | | | | | | | | | | | | | | X | |

See footnotes at end of table.

The following table shows the explosives and other dangerous articles which must not be loaded or stored together.

The letter X at an intersection of horisontal and vertical columns shows that these articles must not be loaded or stored together, for example: Detonating fuzes class A, with or without radioactive components g horisontal column must not be loaded or stored with high explosives or propellant explosives, class A b vertical column.

| | | a | b | c | d | e | f | g | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Low explosives or black powder | High explosives or propellant explosives, class A | Initiating or priming explosives, wet: Diazodinitrophenol, fulminate of mercury, guanyl nitrosamino guanylidene hydrazine, lead azide, lead styphnate, nitrocellulose, tetracene, trinitroresorcinol, potassium dinitrobenzofuroxane, or other similar explosive compounds. | Blasting caps, with or without safety fuse (including electric blasting caps), detonating primers | Ammunition for cannon with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles, or chemical projectiles, with exploding charge; or ammunition for small arms with explosive projectiles, or rocket ammunition with explosive projectiles, gas projectiles, smoke projectiles, incendiary projectiles, illuminating projectiles; and boosters (explosive), bursters (explosive), or supplementary charges (explosive) without detonators.[a] | Explosive projectiles, bombs, torpedoes, or mines, rifle or hand grenades (explosive); jet thrust units (jato), explosive, class A or igniters, jet thrust (jato), explosive, class A | Detonating fuzes, class A, with or without radioactive components | Ammunition for cannon with empty, inert-loaded or solid projectiles, or without projectiles; or ammunition with empty projectiles, inert-loaded or solid projectiles or without projectiles | Propellant explosives, class B, jet thrust units (jato), class B; igniters, jet thrust (jato); class B, or starter cartridges, jet engines, class B | Fireworks, special or railway torpedoes | Small arms ammunition | Primers for cannon or small arms, empty cartridge bags—black powder igniters, empty cartridge cases, primed, empty grenades, primed, combination primers or percussion caps, toy caps, explosive cable cutters, explosive rivets | Percussion fuzes, tracer fuzes or tracers | Time, combination or detonating fuzes, class C | Cordeau detonant fuse, safety squibs, fuse lighters, fuse igniters, delay electric igniters, electric squibs, instantaneous fuse or igniter cord | Fireworks, common, highway fusees or railway fusees | Flammable liquids or compressed flammable gases, red label | Flammable solids or oxidizing materials, yellow label | Acids or corrosive liquids, white label | Compressed nonflammable gases, green label | Poisonous gases or liquids in tank car tanks, cylinders, projectiles or bombs, poison gas label | Radioactive materials (class D poisons) |

| Radioactive materials class D (poisons) | 15 | X | X | X | X | X | X | X | | | | | | | | | | | | | | | |

[a] Blasting caps or electric blasting caps in quantities not exceeding 1,000 caps may also be loaded and transported with articles named in vertical and horizontal columns 3, 9, 10, 11, 12, and 13. Loading and transportation of blasting caps or electric blasting caps except as prescribed in § 77.835, in any quantity, with articles named in vertical or horizontal columns b, c, j, or f is prohibited.

[b] Acid or other corrosive liquids, white label, must not be loaded above or adjacent to flammable solids or oxidizing materials, yellow label, ammunition for cannon with or without projectiles, or propellant explosive, except that shippers loading truckload shipments of white label and yellow label packages and who have obtained prior approval from the Bureau of Explosives may load such articles together when it is known that the mixture of contents would not cause a dangerous evolution of heat or gas.

[c] Explosives, class A, and explosives, class B, other than ammunition, must not be loaded or stored with chemical ammunition containing incendiary charges or white phosphorus either with or without bursting charges. Chemical ammunition containing incendiary charges or white phosphorus may be loaded and stored with other ammunition of the same classification.

[d] Bursters (explosive), boosters (explosive), or supplementary charges (explosive) without detonators when shipped by, to or for the Departments of the Army, Navy, and Air Force of the United States Government may be loaded with any of the articles named except those in columns c, d, 3, 9, 10, 11, 12, 13, 14, and 15.

[e] Does not include nitro carbo nitrate or ammonium nitrate, fertilizer grade, which may be loaded, transported or stored with high explosives or with blasting caps or electric blasting caps, and detonating primers.

NOTE 1: Charged electric storage batteries must not be loaded in the same vehicle with explosives, class A.

NOTE 2: Cyanides or cyanide mixtures must not be loaded or stored with acids or corrosive liquids.

NOTE 3: Gas identification sets may be loaded and transported with all articles named except those in column c.

NOTE 4: Nitric acid, when loaded in the same motor vehicle with other acids or other corrosive liquids in carboys, must be separated from the other carboys, A 2 by 6 inch plank, set on edge, should be nailed across the motor vehicle floor at least 12 inches from the nitric acid carboys, and the space between the plank and the carboys of nitric acid should be filled with sand, sifted ashes, or other incombustible absorbent material.

NOTE 5: Smokeless powder for small arms in quantities not exceeding 100 pounds net weight in one motor vehicle shall be classed as a flammable solid for purposes of transportation when approved for such classification by the Bureau of Explosives.

## Subpart D—Vehicles and Shipments in Transit; Accidents

NOTE: See § 77.807 for emergency shipments.

### § 77.853 Transportation and delivery of shipments.

(a) *No unnecessary delay in movement of shipments.* All shipments of explosives or other dangerous articles shall be transported without unnecessary delay, from and including the time of commencement of the loading of the cargo until its final discharge at destination.

(b) *Delivery at destination.* Shipments of explosives and other dangerous articles which are refused by the consignees, or which can not be delivered within 48 hours after arrival at destination, must be promptly disposed of (1) by return to the shipper, if in proper shipping condition, or (2) by storage, provided a suitable storage place for such articles is available, or (3) by sale, or (4) when necessary to safety, by destruction: *Provided,* That charged electric batteries may be held for 30 days after arrival at destination, pending delivery or disposition.

(c) *Delivery to authorized person, or magazine.* Every shipment of dangerous explosives by motor vehicle shall be delivered only to someone authorized to receive it, except such explosives shipments as are placed in magazines which are immediately thereafter locked.

### § 77.854 Disabled vehicles and broken or leaking packages; repairs.

(See also Forbidden articles, § 77.821)

(a) *Care of lading, explosives or other dangerous articles.* Whenever for any cause other than necessary traffic stops any motor vehicle transporting any explosive or other dangerous article is stopped upon the traveled portion of any highway or shoulder thereof, special care shall be taken to guard the vehicle and its load or to take such steps as may be necessary to provide against hazard. Special effort shall be made to remove the motor vehicle to a place where the hazards of the materials being transported may be provided against. See §§ 192.22 to 192.26 inclusive, of this chapter, for signals required to be displayed on the highway.

(b) *Disposition of containers found broken or leaking in transit.* When leaks occur in packages or containers during the course of transportation, subsequent to initial loading, disposition of such package or container shall be made by the safest practical means afforded under paragraphs (c), (d), and (e) of this section.

(c) *Repairing packages.* Packages may be repaired when safe and practicable, such repairing to be in accordance with the best and safest practice known and available.

(d) *Transportation of repaired packages.* Any package repaired in accordance with the requirements of paragraph (c) of this section, except as provided in §§ 77.855 (c), 77.856 (c), and 77.858 (b), may be transported to the nearest place at which it may safely be disposed of only in compliance with the following requirements:

(1) The package must be safe for transportation.

(2) The repair of the package must be adequate to prevent contamination of or hazardous admixture with other lading transported on the same motor vehicle therewith.

(3) If the carrier is not himself the shipper, the consignee's name and address must be plainly marked on the repaired package.

(e) *Disposition of unsafe broken packages.* In the event any leaking package or container cannot be safely and adequately repaired for transportation or transported, it shall be stored pending proper disposition in the safest and most expeditious manner possible.

(f) *Stopped vehicles; other dangerous articles.* Whenever any motor vehicle transporting flammable liquids, flammable solids, oxidizing materials, corrosive liquids, compressed gases, or poisons, is stopped for any cause other than necessary traffic stops upon the traveled portion of any highway, or a shoulder next thereto, the following requirements shall be complied with during the period of such stop:

(1) For motor vehicles other than cargo tank motor vehicles used for the transportation of flammable liquids or flammable compressed gases and not transporting explosives, class A or class B, flares (pot torches), fusees, red electric lanterns, red emergency reflectors, and red flags shall be displayed as required under §§ 192.22, 192.23, 192.24, and 192.26 of this chapter.

(2) For cargo tank motor vehicles used for the transportation of flammable liquids or flammable compressed gases, whether loaded or empty, and vehicles transporting explosives class A or class B, red electric lanterns, red emergency reflectors and red flags shall be displayed as required in §§ 192.25 and 192.26 of this chapter.

(g) *Repairs to disabled vehicles.* No repairs shall be made on any motor vehicle containing explosives or other dangerous articles except in case such repairs may be made without hazard; nor shall any such loaded motor vehicle be repaired in a closed garage.

(h) *No repair with flame unless gas-free.* No repair of a cargo tank used for the transportation of any flammable liquid or poisonous liquid, or any compartment thereof, or of any container for fuel of whatever nature, may be repaired by any method employing a flame, arc, or other means of welding, unless the tank or compartment shall first have been made gas-free.

### § 77.855 Accidents; explosives.

(a) *Vehicle disabled; warning of nearby persons; removal of explosives.* In the event of an accident involving any motor vehicle transporting any explosives, every available means shall be employed to prevent individuals, other than those employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep flame away, and to safeguard against the aggravation of the hazard present, and to warn other users of the highway. In the event that any motor vehicle laden with or carrying dangerous explosives is entangled with another or with any other object or structure, following an accident, no attempt shall be made to disentangle either vehicle, or the laden vehicle from the object or structure, until the lading, together with any fragments thereof, be removed to a place at least 200 feet from the vehicle (and preferably 200 feet from any habitation). In the event of fire, involving a motor vehicle laden with any explosive, every practicable effort shall be made to give warning of danger of explosion to habitants in the vicinity and to other users of the highway.

(b) *Disposition of spilled or leaking explosives.* In the event of any accident involving any motor vehicle transporting any explosive in which packages are broken, all unbroken packages and as much of any broken packages as possible shall be carefully gathered and removed to a place of safety, in order to prevent fire or explosion. In clearing any wreck in which a motor vehicle containing any explosive is involved, care shall be exercised not to produce sparks with tools or by other means in moving of or working about the wreckage, so as to avoid as far as possible fires or explosions.

(c) *Explosives packages in transit capable of repair.* Any package of explosives found injured or broken in transit may be repaired or recoopered when this is evidently practicable and not dangerous. When a box that contains any explosive is so damaged that it cannot be repaired it should be reinforced by stout wrapping paper and twine, placed in another strong box, and surrounded by dry, fine sawdust, or dry and clean cotton waste, or elastic wads made from dry newspapers. The box cover should then be securely attached. A ruptured can or keg should be inclosed in a grain bag of good quality, and boxed. Injured packages thus protected, and properly marked with name of contents and consignee's name and address, may be carried to destination: *Provided, however,* That the motor carrier, if himself the shipper, need not mark his own name and address on the package.

(d) *Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate.* When any liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate has been spilled on any portion of any motor vehicle it shall be washed with a suitable neutralizing agent until all of any such spillage shall have become completely neutralized.

NOTE 1: Liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate may be destroyed by use of a solution composed of:

| | |
|---|---|
| 60 percent commercial sodium sulfide | 1 ounce. |
| Denatured alcohol | 7½ fluid ounces. |
| Acetone | 2 fluid ounces. |
| Water | 3 fluid ounces. |

(e) *Explosives other than liquid nitroglycerin, desensitized liquid nitroglycerin*

*or diethylene glycol dinitrate.* When particles of any explosive composition other than liquid nitroglycerin, desensitized liquid nitroglycerin or diethylene glycol dinitrate have escaped from a damaged container to the floor of the body of the carrier's motor vehicle, the floor shall be thoroughly swept and any absorbed portion removed.

(f) *Unrepairable explosives packages.* When any package of explosives in transit is found to be leaking or damaged and cannot be recoopered, it may not be transported beyond the minimum distance necessary to reach a place where the explosive may be disposed of with safety, except as provided in § 77.854 (e) and paragraph (c) of this section.

**§ 77.856 Accidents; flammable liquids.**

(a) *Accident to vehicle; warnings; no sparks or flame.* In the event of an accident involving any motor vehicle transporting any flammable liquid every available means shall be employed to prevent individuals, other than those employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep fires or flame away, to safeguard against the hazard present, and to warn other users of the highway. (See also § 77.-814.)

(b) *Prevent leakage from spreading.* Whenever any flammable liquid is escaping from a container, all practical means shall be taken to prevent such liquid from spreading over a wide area, from flowing into sewers and streams, and from becoming ignited.

(c) *Disposition of contents of cargo tank when unsafe to continue.* In the event of a leak in a cargo tank of such a character as to make further transportation unsafe, the leaking vehicle should be removed from the traveled portion of the highway; and every available means employed for the safe disposal of the leaking liquid by preventing, so far as practicable, its spread over a wide area, such as by digging trenches to drain to a hole or depression in the ground, diverting the liquid away from streams or sewers if possible, or catching the liquid in containers if practicable. Smoking and the lighting of cigarettes, cigars, or pipes in the vicinity is prohibited, and fires or flames in the vicinity of the leaking cargo tank must be extinguished.

(d) *Transfer of flammable liquids en route.* No flammable liquid shall be transferred from one container to another, or from one motor vehicle to another vehicle, or from another vehicle to a motor vehicle, on any public highway, street, or road, except in case of emergency. In such cases red electric lanterns, red emergency reflectors, or red flags shall be set out in the manner prescribed for disabled or stopped motor vehicles. (See Motor Carrier Safety Regulations, Part 192 of this chapter.) In any event, all practicable means, in addition to those hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer, or against the hazard occasioned by the emergency making such transfer necessary. Nothing contained in this rule shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction and maintenance.

(e) *Transportation of leaking cargo tanks.* A leaking cargo tank may only be transported the minimum distance necessary to reach a place where the contents of the tank or compartment may be disposed of with safety. Every available means must be utilized to prevent the leakage or spillage of the liquid upon the highway.

**§ 77.857 Accidents; flammable solids and oxidizing materials.**

(a) *Dangerous articles spilled; warning of nearby persons.* In the event of any accident involving any motor vehicle in which any flammable solid or oxidizing material may have become spilled, every practicable and available means shall be taken to warn all approaching persons of the hazard of fire.

(b) *Prevent spread of fire where possible.* Care shall be exercised in the event of damage to packages of flammable solids or oxidizing materials which either have been or may be on fire, to limit the spread of the fire.

(c) *Disposition of spilled or leaking materials.* In the event of any accident involving any motor vehicle transporting any flammable solid or oxidizing material in which packages are broken, as much as possible of any broken packages shall be carefully gathered and removed to a place of safety, and if the removal of unbroken packages from the motor vehicle would decrease the hazard of fire or other hazard, they shall be removed. The handling of any such materials not contained in packages shall be such as to promote the greatest safety to other users of the highway.

(d) *Reloading of damaged packages of matches; repairs.* In the event of damage to matches or packages of matches by fire or by water in extinguishing a fire in transit, they shall be reloaded in accordance with the applicable requirements for the packing and loading of matches. Great care shall be taken, however, first to examine and repair any damage to outside containers before reloading, and all loose matches shall be destroyed. Smoking boxes of matches shall not be opened in the vicinity of the remainder of the lading. Such boxes shall be destroyed at a safe distance from the motor vehicle, preferably by burning, and shall not be left, either smoking or burning.

(e) *Calcium hypochlorite compounds, dry, involved in fires.* Calcium hypochlorite compounds, dry, packed in metal drums when involved in motor vehicles where fire has occurred from any cause must be held at least five days before forwarding. Drums showing evidence of spontaneous heating or stress from internal pressure must not be reshipped.

**§ 77.858 Accidents; corrosive liquids.**

(a) *Accident to vehicle; other lading damaged; vehicle washed.* In the event of any accident involving any motor vehicle transporting corrosive liquids in which has been involved the breakage, spillage, or leakage of containers of such liquids, care shall be exercised in the handling of any other lading which may have become damaged thereby so as to minimize the hazard in handling such damaged lading during the unloading process; and the interior of any other parts of the motor vehicle upon which the corrosive liquid may have become spilled shall be thoroughly washed with water as soon after the unloading process as feasible and prior, in any event, to the subsequent reloading of the motor vehicle. (See also § 77.814.)

(b) *Leaking cargo tanks.* In the event of leakage of liquid from any cargo tank or any compartment thereof used for the transportation of corrosive liquids, which develops or is discovered subsequent to the commencement of transportation, any one of the following means, or any means in addition to those herein prescribed, equally or more effective, shall be employed to minimize further hazard:

(1) Further to transport the cargo tank only the minimum distance to reach a place where the contents of the tank or compartment which is leaking may be disposed of with safety, meanwhile employing every available means to prevent the spillage or leaking of any liquid on the highway.

(2) In the event the leak is of such a character as to make further transportation of the cargo tank unsafe, to draw off the traveled portion of the highway, and to employ every available means for the safe disposal of the leaking liquid by preventing, so far as practicable, its spread over a wide area, as by absorbing by means of the use of noncombustible absorbent material, such as fine ashes, sand, earth, etc., or by any other practicable means; by digging trenches to drain to a hole or depression in the ground; by diverting the liquid away from streams or sewers if possible; or by catching the liquid in containers if practicable. So far as practicable, every available means shall be employed to prevent the congregation of spectators and to prevent them from coming in contact with the liquid or its fumes. All available means shall be taken to prevent injury or damage to other users of the highway, or to livestock or farm animals, which might be occasioned by the unloading of the corrosive liquid.

**§ 77.859 Accidents; compressed gases.**

(a) *Accident to vehicle; warnings; keep fire away.* In the event of an accident involving any motor vehicle transporting any compressed gas, the release of which would constitute a hazard to other users of the highway, due care shall be taken that only persons employed in the removal of hazards or wreckage shall be allowed in proximity to the motor vehicle, and the shipper should be notified. In such cases, every practicable and available means shall be taken to warn all approaching persons of the danger involved and to caution them against the use of matches or flame-producing devices, if the gas is flammable.

(b) *Transfer of flammable gas en route; no flame or sparks.* No flammable compressed gas shall be transferred from one container to another, or from one tank motor vehicle to another tank vehicle, or from another tank vehicle to a tank motor vehicle, on any public highway, street, or road, except in case of emergency. In such cases every precaution shall be taken to prevent the escape of gas. Red electric lanterns, red emergency reflectors, or red flags shall be set out in the manner prescribed in Motor Carrier Safety Regulations (Part 192 of this chapter). All cargo tanks involved in such transfer shall be grounded. The transfer shall be made only during daylight, unless the emergency occurs at night or extends into hours of darkness and the hazard would be increased by waiting until daylight. In any such event, all practicable means, in addition to those hereinbefore prescribed, shall be taken to protect and warn other users of the highway against the hazard involved in any such transfer, or against the hazard occasioned by the emergency making such transfer necessary. Every precaution shall be taken to prevent the ignition of any flammable compressed gas from any source; and when it is possible to prevent the congregation of persons not directly concerned with the emergency, this shall be done. Every practicable precaution shall be taken to keep flames or fire away from the scene of the emergency and to prevent smoking or the lighting of pipes, cigars, or cigarettes. Similarly, special care shall be exercised in the operation of any engine, whether of the motor vehicles involved or any other, and where the operation of any such engine would be likely to produce ignition of the flammable compressed gas, the transfer shall be accomplished by other means, if possible. Nothing contained in this section shall be so construed as to prohibit the fueling of machinery or vehicles used in road construction and maintenance.

**§ 77.860 Accidents; poisons.**

(a) *Accident to vehicle; warnings; no sparks of flame.* In the event of an accident involving any motor vehicle transporting any poison which is flammable, noxious, or toxic, every available means shall be employed in the protection of persons or property or in the removal of hazards or wreckage, from congregating in the vicinity; such means shall also be employed to prevent smoking, to keep flame away, to safeguard against the aggravation of the hazard present, and to warn other users of the highway. Care shall also be taken to prevent any poison, whether flammable or nonflammable, from contaminating streams or flowing or being spilled into sewers, and poison in powdered form from being scattered by wind. (See also § 77.814.)

(b) *Leaking cargo tanks.* In the event of leakage of liquid from any cargo tank or any compartment thereof used for the transportation of any poison which is also flammable, or which would come also within the definition of a flammable liquid, or of any gas or combination of gas and liquid, or any poison which would come within the definition of a compressed gas, the requirements shall be the same as those set forth for flammable liquids and compressed gases. In addition, all possible care shall be taken to warn bystanders or other users of the highway against the hazard of inhaling vapors or coming in contact with the poison.

(c) *Radioactive materials; poison D.* In case of accident to vehicle resulting in breakage of, or unusual delay to any shipment of radioactive material the package or material should be segregated as far as possible from human contact. The shipper and the Bureau of Explosives should be immediately notified. In case of breakage of a package containing radioactive material and when it appears likely that the inside container may have been damaged, great care must be exercised to prevent contact with or inhalation of radioactive material by any person.

(d) *Cleaning vehicles.* Any motor vehicle which, after use for the transportation of radioactive materials in truckload lots, is contaminated with such materials to the extent that a survey of the interior surface shows that the beta-gamma radiation is greater than 10 milliroentgens physical equivalent in 24 hours or that the average alpha contamination is greater than 500 disintegrations per minute per 100 square centimeters shall be thoroughly cleaned in such a manner that a resurvey of the interior surface shows the contamination to be below these levels. A certificate to that effect must be furnished the carrier or to the driver of the motor vehicle. Motor vehicles which are used solely for the transportation of radioactive materials are exempt from the provisions of this section.

## Subpart E—Regulations Applying to Explosives or Other Dangerous Articles on Motor Vehicles Carrying Passengers for Hire

**§ 77.870 Regulations for passenger carrying vehicles.**

(a) *Vehicles transporting passengers and property.* In addition to the regulations in Parts 71 to 78 of this chapter the following requirements shall apply to vehicles transporting passengers and property.

(b) *No explosives or other dangerous articles on passenger-carrying vehicles, exceptions.* No explosives or other dangerous articles except small-arms ammunition, emergency shipments of drugs, chemicals and hospital supplies, and the accompanying munitions of war of the Departments of the Army, Navy, and Air Force of the United States Government, are authorized by Parts 71–78 of this chapter to be transported on motor vehicles carrying passengers for hire where other practicable means of transportation is available.

(c) *Explosives in passenger-carrying space forbidden.* No explosive, except small-arms ammunition, may be carried in the passenger-carrying space of any motor vehicle transporting passengers for hire.

(d) *Explosives and other dangerous articles on passenger-carrying vehicles; quantity.* Where no other practicable means of transportation is available the following articles in the quantities as shown may be transported in motor vehicles carrying passengers for hire in a space other than that provided for passengers: Not to exceed 100 pounds gross weight of any or all of the kinds of explosives permitted to be transported by rail express or rail baggage services, may be transported on a motor vehicle transporting passengers: *Provided, however,* That samples of explosives for laboratory examination, not exceeding a net weight of one-half pound each, and not exceeding 20 samples or not to exceed a total of 100 blasting caps at one time in a single motor vehicle, may be transported in a motor vehicle transporting passengers. (See § 72.5 of this chapter.)

(e) *Articles other than explosives on passenger-carrying vehicles.* The gross weight of any given class of dangerous article other than explosives shall not exceed 100 pounds, and the aggregate weight of all such other dangerous articles shall not exceed 500 pounds. This provision does not apply to nontoxic, nonflammable refrigerants, when such refrigerant is for servicing operations of a motor carrier on whose motor vehicles the refrigerant is used. A cylinder secured against movement while in transit and not exceeding 250 pounds gross weight may be transported.

(f) *Poisons on passenger-carrying vehicles.* No motor carrier may transport any extremely dangerous poison, class A, any tear gas or irritating substance, class C, any less dangerous poison, class B, which is a liquid, or any paranitraniline, in any amount, in or on any bus while engaged in the transportation of passengers; or any less dangerous poison, class B, which is other than a liquid, in any amount exceeding an aggregate of 100 pounds gross weight in or on any such bus.

(g) *Radioactive materials on passenger-carrying vehicles.* No motor carrier may transport any radioactive material, poison, class D, requiring red or blue radioactive material label under these regulations in or on any bus while engaged in the transportation of passengers except where no other practicable means of transportation is available. Packages of radioactive materials must be handled and placed in the vehicle in accordance with the requirements of § 77.841 (d).

Washington, Tuesday, December 29, 1964

Interstate Commerce Commission

# Explosives and Other Dangerous Articles

## Revision of Regulations

(Continued)

## PART 78—SHIPPING CONTAINER SPECIFICATIONS

Subpart A—Specifications for Carboys, Jugs in Tubs, and Rubber Drums

Sec.
78.1 Specification 1A; boxed carboys.
78.2 Specification 1B; boxed lead carboys.
78.3 Specification 1C; carboys in kegs.
78.4 Specification 1D; boxed glass carboys.
78.5 Specification 1X; boxed carboys, 5 to 6½ gallons, for export only.
78.6 Specification 1EX; glass carboys in plywood drums.
78.7 Specification 1E; glass carboys in plywood drums.
78.8 Specification 2B; metal-jacketed lead carboys.
78.9 Specification 28A; metal-jacketed lead carboys.
78.12 Specification 34B; aluminum carboys.
78.13 Specification 1H; polyethylene carboys in low carbon steel or other equally efficient metal crates.
78.14 Specification 1K; glass carboys cushioned with expandable polystyrene in wooden wirebound box outside containers.
78.15 Specification 31; jugs in tubs.
78.18 Specification 43A; rubber drums.

Subpart B—Specifications for Inside Containers and Linings

78.20 Specification 2A; inside containers, metal cans, pails and kits.
78.21 Specification 2T; polyethylene container.
78.22 Specification 2C; inside containers, corrugated fiberboard cartons.
78.23 Specification 2D; inside containers, duplex paper bags.
78.24 Specification 2U; molded or thermoformed polyethylene containers having rated capacity of over one gallon.
78.25 Specification 2F; inside metal containers and liners.
78.26 Specification 2G; inside containers, fiber cans and boxes.
78.27 Specification 2TL; polyethylene container.
78.28 Specification 2J; inside containers, waterproof paper bags for linings.
78.29 Specification 2K; inside containers, paper bags for lining.
78.30 Specification 2L; lining for boxes.
78.31 Specification 2M; waterproofed paper lining.
78.32 Specification 2N; inside containers, metal cans.
78.33 Specification 2P; inside metal containers.
78.34 Specification 2R; inside containers, metal tubes.
78.35 Specification 2S; polyethylene drums.
78.35a Specification 2SL; molded or thermoformed polyethylene container.

Subpart C—Specifications for Cylinders

78.36 Specification 3A; seamless steel cylinders.
78.37 Specification 3AA; seamless steel cylinders, made of definitely prescribed steels.
78.38 Specification 3B; seamless steel cylinders.
78.39 Specification 3BN; seamless nickel cylinders.
78.40 Specification 3C; seamless steel cylinders.
78.41 Specification 3D; seamless steel cylinders.
78.42 Specification 3E; seamless steel cylinders.
78.43 Specification 3A480X; seamless steel cylinders.
78.44 Specification 3HT; inside containers, seamless steel cylinders for aircraft use made of definitely prescribed steel.
78.47 Specification 4DS; inside containers, welded stainless steel for aircraft use.
78.48 Specification 4; forge welded steel cylinders.
78.49 Specification 4A; forge welded steel cylinders.
78.50 Specification 4B; welded and brazed steel cylinders.
78.51 Specification 4BA; welded or brazed steel cylinders made of definitely prescribed steels.
78.52 Specification 4C; welded and brazed steel cylinders.
78.53 Specification 4D; inside containers, welded steel for aircraft use.
78.54 Specification 4B240–FLW; welded or welded and brazed cylinders with fusion-welded longitudinal seam.
78.55 Specification 4B240ET; welded and brazed cylinders made from electric resistance welded tubing.
78.56 Specification 4AA480; welded steel cylinders made of definitely prescribed steels.
78.57 Specification 4L; welded cylinders insulated.
78.58 Specification 4DA; inside containers, welded steel for aircraft use.
78.59 Specification 8; steel cylinders with approved porous filling for acetylene.
78.60 Specification 8AL; steel cylinders with approved porous filling for acetylene.
78.63 Specification 9; inside containers, seamless or welded or brazed steel cylinders.
78.66 Specification 40; inside containers, non-refillable seamless or welded or brazed steel cylinders.
78.67 Specification 41; inside containers, non-refillable seamless or welded or brazed steel cylinders.
78.68 Specification 4E; welded aluminum cylinders.

Appendix A—Special orders.

Subpart D—Specifications for Metal Barrels, Drums, Kegs, Cases, Trunks and Boxes

78.80 Specification 5; steel barrels or drums.
78.81 Specification 5A; steel barrels or drums.
78.82 Specification 5B; steel barrels or drums.
78.83 Specification 5C; steel barrels or drums.
78.84 Specification 5D; steel barrels or drums, lined.
78.85 Specification 5F; steel drums.
78.87 Specification 5H; steel barrels or drums, lead lined.
78.88 Specification 5K; nickel barrels or drums.
78.89 Specification 5L; steel barrels or drums.
78.90 Specification 5M; monel drums.
78.91 Specification 5X; steel drums, aluminum lined.
78.92 Specification 5P; lagged steel drums.
78.97 Specification 6A; steel barrels or drums.
78.98 Specification 6B; steel barrels or drums.
78.99 Specification 6C; steel barrels or drums.
78.100 Specification 6J; steel barrels and drums.
78.101 Specification 6K; steel barrels or drums.
78.102 Specification 6D; cylindrical steel overpack, straight sided, for inside plastic container.
78.107 Specification 42B; aluminum drums.
78.108 Specification 42C; aluminum barrels or drums.
78.109 Specification 42D; aluminum drums.
78.110 Specification 42F; aluminum barrels or drums.
78.111 Specification 42G; aluminum drums.
78.112 Specification 42H; aluminum drums.
78.115 Specification 17C; steel drums.
78.116 Specification 17E; steel drums.
78.117 Specification 17F; steel drums.
78.118 Specification 17H; steel drums.
78.119 Specification 17X; steel barrels or drums.
78.130 Specification 37K; steel drums.
78.131 Specification 37A; steel drums.
78.132 Specification 37B; steel drums.
78.133 Specification 37P; steel drums with polyethylene liner.
78.134 Specification 37M; cylindrical steel overpack, straight sided for inside plastic container; nonreusable containers.
78.135 Specification 37C; steel drums.
78.136 Specification 42E; aluminum drums.
78.140 Specification 13; metal kegs.
78.141 Specification 13A; metal drums.
78.146 Specification 32A; metal cases, riveted or lock seamed.
78.147 Specification 32B; metal cases, welded or riveted.
78.148 Specification 32C; metal trunks.
78.149 Specification 32D; metal boxes for old and worn-out motion-picture film no longer exhibitable.
78.150 Specification 33A; polystyrene cases.

Subpart E—Specifications for Wooden Barrels, Kegs, Boxes, Kits, and Drums

78.155 Specification 10A; wooden barrels and kegs (tight).
78.156 Specification 10B; wooden barrels and kegs (tight).
78.157 Specification 10C; wooden barrels and kegs (tight).
78.160 Specification 11A; wooden barrels and kegs (slack).
78.161 Specification 11B; wooden barrels and kegs (slack).
78.165 Specification 14; wooden boxes, nailed.
78.168 Specification 15A; wooden boxes, nailed.
78.169 Specification 15B; wooden boxes, nailed.
78.170 Specification 15C; wooden boxes, nailed.
78.171 Specification 15D; wooden boxes, nailed.
78.172 Specification 15E; wooden boxes, fiberboard lined.
78.176 Specification 15L; wooden boxes with inside containers for desensitized liquid explosives.
78.177 Specification 15M; wooden boxes, metal lined, with inside containers for desensitized liquid explosives.
78.181 Specification 15X; wooden boxes for two five-gallon cans.
78.182 Specification 15P; glued plywood, or wooden box for inside containers.
78.185 Specification 16A; plywood or wooden boxes, wirebound.
78.186 Specification 16B; wooden boxes, wirebound.
78.187 Specification 16D; wooden wirebound overwrap for inside containers.
78.190 Specification 19A; wooden boxes, glued plywood cleated.
78.191 Specification 19B; wooden boxes, glued plywood, nailed.
78.193 Specification 18B; wooden kits.
78.196 Specification 22A; wooden drums, glued plywood.
78.197 Specification 22B; wooden drums, glued plywood.
78.198 Specification 22C; plywood drum for plastic inside container.

Subpart F—Specifications for Fiberboard Boxes, Drums, and Mailing Tubes

78.205 Specification 12B; fiberboard boxes.
78.206 Specification 12C; fiberboard boxes.
78.207 Specification 12D; fiberboard boxes.
78.208 Specification 12E; fiberboard boxes.
78.209 Specification 12H; fiberboard boxes.
78.210 Specification 12A; fiberboard boxes.
78.211 Specification 12P; fiberboard boxes.
78.214 Specification 23F; fiberboard boxes.
78.218 Specification 23G; special cylindrical fiberboard box for high explosives.
78.219 Specification 23H; fiberboard boxes.
78.224 Specification 21C; fiber drums.
78.226 Specification 29; mailing tubes.

Subpart G—Specifications for Bags, Cloth, Burlap or Paper

78.230 Specification 36A; lined cloth bags (triplex).
78.233 Specification 36B; burlap bags, lined.
78.234 Specification 36C; burlap bags, paper lined.
78.236 Specification 44B; multiwall paper bags.
78.237 Specification 44C; multiwall paper bags.
78.238 Specification 44D; multiwall paper bags.
78.239 Specification 44E; multiwall paper bags.
78.240 Specification 45B; bags, cloth and paper, lined.

Subpart H—Specifications for Portable Tanks

78.245 Specification 51; steel portable tanks.
78.246 Specification 52; aluminum or magnesium portable tanks.
78.250 Specification 55; metal-encased, lead or uranium metal-shielded, radioactive materials container.
78.255 Specification 60; steel portable tanks.

Subpart I—[Reserved]

Subpart J—Specifications for Containers for Motor Vehicle Transportation

78.315 Specification MC 200; containers for liquid nitroglycerine, desensitized liquid nitroglycerine or diethylene glycol dinitrate.
78.318 Specification MC 201; container for blasting caps, electric blasting caps, and percussion caps.
78.321 Specification MC 300; cargo tanks constructed of mild (open hearth, or blue annealed) steel, or combination of mild steel with high-tensile steel, or stainless steel, primarily for the transportation of flammable liquids, or poisonous liquids, class B.
78.323 Specification MC 302; cargo tanks constructed of welded aluminum alloy (ASTM B209–57T), primarily for the transportation of flammable liquids, or poisonous liquids, class B.
78.324 Specification MC 303; cargo tanks constructed of welded ferrous alloy (high-tensile steel) or stainless steel, primarily for the transportation of flammable liquids, or poisonous liquids, class B.
78.325 Specification MC 304; cargo tanks constructed of mild (open hearth or blue annealed) steel, welded ferrous alloy (high-tensile steel) or aluminum, primarily for the transportation of flammable liquids, or poisonous liquids, class B, having Reid (ASTM D–323) vapor pressures of 18 psia, or more at 100° F., but less than those stated in § 73.300 of this chapter in defining compressed gases.
78.326 Specification MC 305; cargo tanks constructed of aluminum alloys for high-strength welded construction, primarily for the transportation of flammable liquids, or poisonous liquids, class B.
78.330 Specification MC 310; cargo tanks constructed of ferrous materials, primarily for the transportation of corrosive liquids.
78.331 Specification MC 311; cargo tanks constructed of ferrous metals or aluminum, primarily for the transportation of corrosive liquids.
78.336 Specification MC 330; cargo tanks constructed of steel, primarily for transportation of compressed gases.

Authority: The provisions of this Part 78 issued under 62 Stat. 738, 74 Stat. 808; 18 U.S.C. 834.

### Subpart A—Specifications for Carboys, Jugs in Tubs, and Rubber Drums

**§ 78.1 Specification 1A; boxed carboys.**

Glass, earthenware, clay, or stoneware.

**§ 78.1–1 Compliance.**

(a) Required in all details.

**§ 78.1–2 Reuse of packages.**

(a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 78.1–9.

**§ 78.1–3 Closing devices required.**

(a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

**§ 78.1–4 Capacity and marking of carboy.**

(a) Containers 5 to 13 gallons are classed as carboys. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the Bureau of Explosives.

**§ 78.1–5 Glass carboys.**

(a) Thoroughly annealed; top of lip smooth and even; must contain at least 20 pounds of glass for 12-gallon carboys and 21 pounds for 13-gallon carboys. Glass in side walls should be well distributed and at least 1/16" thick. Defective carboys not authorized.

**§ 78.1–6 Earthenware, clay, or stoneware carboys.**

(a) Of acidproof material.

**§ 78.1–7 Outside containers.**

(a) Wooden boxes completely enclosing body of carboy or wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. (See paragraph (e) of this section).

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means. Cleats for shoes to be along edges of bottom parallel to carrying cleats. (See paragraph (e) of this section).

(d) Parts and dimension as follows:

| Nominal carboy capacity not over | Minimum dimensions | | | Nails—sides and bottom | |
|---|---|---|---|---|---|
| | Thickness sides, top, bottom and ends | [1] Vertical corner posts | [1] Carrying cleats and shoes | [2] Size not less than | [3] Spacing average not over |
| *Gallons* | *Inch* | *Inches* | *Inches* | *Penny* | *Inches* |
| 5 to 7 | 5/8 | 5/8 x 2½ | 5/8 x 1⅞ | 7 | 2¼ |
| | | | | 6 | 2 |
| from 7 to 13 | 25/32 | 25/32 x 3⅛ | 25/32 x 2 1/32 | 9 | 2¾ |
| | | | | 8 | 2½ |

[1] Other dimensions with equal cross section acceptable.
[2] Screws of equal efficiency authorized.
[3] Spacing 6 inches acceptable along edge grain of bottoms.

(e) In place of bottom cleats, the following is authorized: 2 angle irons at least 1¼" x 1¼" x 1/16", applied across grain of bottom boards from corner to corner, supported by acid resistant metal corner supports securely fastened to sides and ends at each bottom corner so as to raise bottom boards of box at least ¾" above bottom of corner supports; nailing along end grain of bottom boards not required.

(f) Special box. Must comply with this specification except as follows: Bottom of box must be nailed to 4 nailing cleats which form part of the sides and ends of box. Top of box must be reinforced by 2 cleats of ½-inch lumber 4 inches wide, extending the entire width of the top at right angles to the sides of the boards forming the top; a vacant space of 1 inch between outside edge of top and cleat should be allowed for nailing top to box; parts and dimensions must be as follows:

| Carboy capacity, not over (gallons) | Minimum dimensions | | | | | Nails, sides, and bottom | |
|---|---|---|---|---|---|---|---|
| | Thickness of sides, top, and ends | Thickness of bottom | Thickness and width of bottom nailing cleats | Carrying cleats and shoes | Triangular vertical corner posts | Size not less than [1] | Spacing average not over [2] |
| | *Inch* | *Inches* | *Inches* | *Inches* | *Inches* | *Penny* | *Inches* |
| 5 to 13 | ⅝ | 25/32 | 25/32 by 2½ | 25/32 by 2½ | 2½ by 2½ (short sides). | 8 | 2⅛ |
| | | | | | | 10 | 2¾ |

[1] Screws of equal efficiency authorized.
[2] Spacing 6 inches acceptable along edge grain of bottoms.

(g) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

**§ 78.1–8 Marking of outside container.**

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC—1A. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

**§ 78.1–9 Tests.**

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55" measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

NOTE 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages with carboys differing over 2 gallons.

(4) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

REPORT OF TESTS OF CARBOYS

(As required by I. C. C. Regulations and Specifications)

(Place) _____

(Date) _____

Test made for _____

_____

(Give name and address of plant for which tests were made)

| Description of package | Results | | | | | |
|---|---|---|---|---|---|---|
| | Number of test | 55-inch swing | | Number of test | 55-inch swing | |
| | | Side | Bottom | | Side | Bottom |
| Capacity | 1 | | | 13 | | |
| Condition [1] | 2 | | | 14 | | |
| | 3 | | | 15 | | |
| Type of inside container [2] | 4 | | | 16 | | |
| | 5 | | | 17 | | |
| Cushioning [3] | 6 | | | 18 | | |
| | 7 | | | 19 | | |
| Diameter of bottle | 8 | | | 20 | | |
| | 9 | | | 21 | | |
| Size of outside container (inside) | 10 | | | 22 | | |
| | 11 | | | 23 | | |
| | 12 | | | 24 | | |

[1] State whether outside container is new or used.
[2] State whether glass, earthenware; etc.
[3] State whether hay, mineral wool, ground cork, excelsior, wood strips _____ type, cork pads _____ type, etc.

Specification mark is _____

(Per) _____

**§ 78.1–10 Approval of veneer, plywood, and laminated wood boxes.**

(a) Boxes of veneer, plywood, laminated wood, or any combination thereof, which comply with §§ 78.1–1 to 78.1–10 (except § 78.1–7 (a), (c), and (d), are approved provided:

(1) Outside containers shall completely enclose body of carboy or body and neck of carboy.

(2) That complete inner packing and box specifications have been filed with and approved by the Bureau of Explosives.

(3) That these boxed carboys pass the regular tests prescribed in § 78.1–9.

(4) That boxed carboys after a minimum service period of 6 months pass the tests prescribed in § 78.1–9.

(5) That a detailed report of tests prescribed under paragraph (a) (4) of this section has been filed with and accepted as satisfactory by the Bureau of Explosives.

**§ 78.2 Specification 1B; boxed lead carboys.**

**§ 78.2–1 Compliance.**

(a) Required in all details.

**§ 78.2–2 Reuse of packages.**

(a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Test, see § 78.2–7, required before each shipment.

**§ 78.2–3 Closing.**

(a) By stoppers securely fastened.

**§ 78.2–4 Capacity, marking, and manufacture of carboy.**

(a) *Capacity and marking of carboy.* Containers 5 to 13 gallons are classed as carboys. Must be permanently marked to indicate maker and year of manufacture; mark of maker to be registered with the Bureau of Explosives.

(b) *Manufacture of carboy.* Of pure-chemical or pure-electrolytic virgin lead; side and bottom sheets 8 pounds and top sheets 10 pounds per square foot minimum; all seams burned.

**§ 78.2–5 Outside containers.**

(a) Wooden box, completely enclosing body of carboy, with 4 vertical corner posts, 2 cleats for shoes, and 2 carrying cleats. Corner posts not required when ends are twice the specified thickness.

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means. Cleats for shoes to be along edges of bottom parallel to carrying cleats. (See paragraph (e) of this section.)

(d) Parts and dimensions as follows:

| Carboy capacity, not over | Minimum dimensions | | | Nails—Sides and bottom | |
|---|---|---|---|---|---|
| | Thickness—Sides, top, bottom, and ends | [1] Vertical corner posts | [1] Carrying cleats and shoes | [2] Size, not less than | [3] Spacing, average not over |
| *Gallons* | *Inches* | *Inches* | *Inches* | *Penny* | *Inches* |
| 5 to 6 | ⅝ | ⅜ x 2½ | ⅝ x 1⅞ | 7 | 2¼ |
| 7 to 13 | 25/32 | 25/32 x 3⅛ | 25/32 x 2 31/32 | 6 | 2 |
| | | | | 9 | 2¾ |
| | | | | 8 | 2½ |

[1] Other dimensions with equal cross-section acceptable.
[2] Screws of equal efficiency authorized.
[3] Spacing 6 inches acceptable along edge grain of bottoms.

(e) In place of bottom cleats, the following is authorized: 2 angle irons at least 1¼" x 1¼" x 1/16", applied across grain of bottom boards from corner to corner, supported by acid resistant metal corner supports securely fastened to sides and ends at each bottom corner so as to raise bottom boards of box at least ¾" above bottom of corner supports; nailing along end grain of bottom boards not required.

**§ 78.2–6 Marking of outside container.**

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1B. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

**§ 78.2–7 Tests.**

(a) To 5 pounds per square inch internal pressure without leakage; required before each shipment.

**§ 78.2–8 Approval of veneer, plywood and laminated wood boxes.**

(a) Boxes of veneer, plywood, laminated wood, or any combination thereof, which comply with §§ 78.2–1 to 78.2–8 except § 78.2–5 (a), (c), and (d) are approved provided:

(1) Outside containers shall completely enclose body of carboy or body and neck of carboy.

(2) That complete inner packing and box specifications have been filed with and approved by the Bureau of Explosives.

(3) That these boxed carboys pass the regular tests prescribed in § 78.2–7.

(4) That boxed carboys after a minimum service period of 6 months pass the tests prescribed in § 78.2–7.

(5) That a detailed report of tests prescribed under subparagraph (4) of this paragraph has been filed with and accepted as satisfactory by the Bureau of Explosives.

**§ 78.3 Specification 1C; carboys in kegs.**

Glass, earthenware, clay or stoneware.

**§ 78.3–1 Compliance.**

(a) Required in all details.

**§ 78.3–2 Reuse of packages.**

(a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 78.3–9.

**§ 78.3–3 Closing devices required.**

(a) As follows except when otherwise authorized in the packing requirements:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

**§ 78.3–4 Capacity and marking of carboy.**

(a) Containers 5 to 13 gallons are classed as carboys. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the Bureau of Explosives.

**§ 78.3–5 Glass carboys.**

(a) Thoroughly annealed; top of lip smooth and even; must contain at least 20 pounds of glass for 12-gallon carboys and 21 pounds for 13-gallon carboys. Glass in side walls should be well distributed and at least 1/8" thick. Defective carboys not authorized.

**§ 78.3–6 Earthenware, clay, or stoneware carboys.**

(a) Earthenware, clay, or stoneware carboys of acidproof material.

**§ 78.3–7 Manufacture of kegs.**

(a) Manufacture of kegs as follows:

(1) *Staves and headings.* To be of white oak, chestnut oak, red oak, black cherry, or Douglas fir; quarter sawed with the grain, from straight-grained timber, so no annual ring shall slope over half the thickness of stave or head; thoroughly kiln dried, moisture content 7 percent to 11 percent; free from rotten sap, checks, pitch pockets, cat faces, and other defects that show through on both sides.

(2) *Hoops.* To be of cooperage-grade hoop steel.

(b) Staves: To be sawed evenly and circular; croze center to be within 1⅛" of end of stave; stave end to have ⅛" free from bevel.

(1) *Heading.* Of uniform thickness and properly circled; planed on outside and properly jointed and glued, or doweled and flagged; dowel diameter not over 5/12 thickness of head.

(c) The keg: Stave joints reasonably flush on outside.

(d) Parts required and dimensions, as follows:

(1) Staves, when finished on outside:

| Capacity of container, not over | Maximum | | | Minimum | |
|---|---|---|---|---|---|
| | Length | Width | Bilge circle | Staves | Thickness |
| *Gallons* | *Inches* | *Inches* | *Inches* | *Number* | *Inch* |
| 30 | 30 | 5 | 74 | 16 | 5/8 |
| 15 | 24 | 4½ | 54 | 14 | 9/16 |
| 10 | 22 | 4¼ | 50 | 12 | ½ |
| 5 | 18 | 4 | 40 | 10 | ½ |

Foregoing thicknesses are of staves finished on one side. One-sixteenth inch must be added for unfinished staves.
Foregoing maximum lengths are authorized to be increased 6 percent or less, provided the thickness of stave is increased at least one-sixteenth inch for each increase of 1 inch in length or fraction thereof.

(2) Heading, after planing:

| Capacity of container, not over | Maximum | | Minimum | |
|---|---|---|---|---|
| | Pieces | Diameter | Thickness | Width |
| *Gallons* | *Number* | *Inches* | *Inch* | *Inches* |
| 30 | 6 | 18 | 5/8 | 2⅛ |
| 15 | 5 | 14 | 9/16 | 2 |
| 10 | 5 | 13 | ½ | 2 |
| 5 | 4 | 11 | ½ | 2 |

(3) Hoops, number and size:

| Capacity of container, not over (gallons) | Minimum number of hoops | Minimum size of hoops (inches in width and Birmingham gauge) | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Head | | First quarter | | Second quarter | | Bilge | |
| | | Inch | Gauge | Inch | Gauge | Inch | Gauge | Inch | Gauge |
| 30 | 6 | 1½ | 18 | 1¼ | 19 | ---- | ---- | 1½ | 18 |
| 15 | 6 | 1¼ | 19 | 1⅛ | 19 | ---- | ---- | 1¼ | 19 |
| 10 | 6 | 1⅛ | 19 | 1 | 19 | ---- | ---- | 1⅛ | 19 |
| 5 | 6 | 1 | 19 | 1 | 19 | ---- | ---- | 1 | 19 |

(e) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

**§ 78.3–8 Marking of outside container.**

(a) On each container with letters and figures at least ¾ inch high applied near the bilge by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1C. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

**§ 78.3–9 Tests.**

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55" measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

NOTE 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages with carboys differing over 2 gallons.

(4) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

REPORTS OF TESTS OF CARBOYS

(As required by I. C. C. Regulations and Specifications)

(Place) _____

(Per) _____

[1] State whether outside container is new or used.
[2] State whether glass, earthenware; etc.
[3] State whether hay, mineral wool, ground cork, excelsior, wood strips ____ type, cork pads ____ type, etc.

### § 78.4 Specification 1D; boxed glass carboys.

### § 78.4–1 Compliance.

(a) Required in all details.

### § 78.4–2 Reuse of packages.

(a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 78.4–8.

### § 78.4–3 Closure.

(a) Threaded screw cap which shall be constructed of a suitable plastic or other material resistant to lading.

(b) Gasket or lining for cap must be used and shall be resistant to lading and:

(1) Must be liquid tight or;

(2) Must be liquid tight up to venting pressure when such venting is prescribed for the material which is to be shipped.

(c) At least one complete continuous thread must be engaged with gasket in place.

### § 78.4–4 Capacity and marking of carboy.

(a) *Capacity.* 6.5 United States gallons nominal capacity, 7.0 United States gallons overflow, tolerance plus or minus 10 fluid ounces.

(b) *Marking.* Each carboy bottle must be embossed in bottom as follows:

**Maker's mark (to be registered with Bureau of Explosives)**
**Year of Manufacture**
**ICC–1D**

### § 78.4–5 Glass carboy bottle.

(a) Must be machine-blown, thoroughly and properly annealed, with screw thread finish having at least one continuous thread to accommodate closure; top of lip smooth and even; must contain 14 pounds of glass, tolerance minus 8 ounces plus 16 ounces. Minimum thickness to be .075 inch. Defective carboys not authorized.

### § 78.4–6 Outside containers.

(a) Wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. An opening not exceeding 3 inches in width may be provided directly above the neck of bottle, if the top of the box is made up of not more than two pieces of lumber of $\frac{25}{32}$ inch thickness. Bottom board of the two ends of the box must be constructed of lumber at least one inch thick, must be flush with the carrying cleats and be at least 2¾ inches in width. Cleats or other fasteners used to secure cover must not extend beyond carrying cleats.

(b) Lumber to be well seasoned commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means (friction closure not authorized). Cleats for shoes to be along edges of bottom parallel to carrying cleats and at right angle to the direction of bottom board or boards.

(d) Parts and dimensions as follows:

| Carboy capacity, nominal not over (gallons) | Minimum dimensions: [1] Thickness—Sides, top, bottom, and ends | [2] Vertical corner posts | [3] Carrying cleats and shoes | [4] Nails—Sides and bottom: Size | [5] Spacing, average |
|---|---|---|---|---|---|
| | *Inch* | *Square inches* | *Inches* | *Penny* | *Inches* |
| 6.5 | ½ | 2.0 | ½x2¾ | 6 | 2 |

[1] Except as prescribed or permitted under § 78.4–6 (a).
[2] Cross sectional area.
[3] Other dimensions with equal cross section acceptable. In lieu of separate carrying cleats, side board, at point where cleat should be located, may be constructed of lumber not less than one inch thick so that overhang will be at least ½ inch.
[4] Screws of equal efficiency authorized.
[5] Spacing 6 inches acceptable along edge grain of bottoms.

(e) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

### § 78.4–7 Marking of outside container.

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1D. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

### § 78.4–8 Tests.

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55" measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock, test at least 5 carboys.

NOTE 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

REPORT OF TESTS OF CARBOYS

(As required by I. C. C. Regulations and Specifications)

(g) *Internal pressure test.* Bottles shall be capable of withstanding a sustained internal pressure of 20 p. s. i. gauge for a 15-day period. Bottle manufacturer shall demonstrate to Bureau of Explosives that bottles of a proposed design will meet this test prior to start of production.

(h) *Hydrostatic pressure test.* One bottle selected at random from each 200 produced on each mold shall be subjected to an instantaneous hydrostatic pressure test to bursting. Pressure at which bottle bursts must not be less than 40 p. s. i. gauge. If bottle so tested fails at a pressure less than 40 p. s. i., 12 additional samples must be selected from the same lot of 200 bottles and tested in the same manner. All 12 samples must pass required test otherwise entire lot shall be rejected.

### § 78.5 Specification 1X; boxed carboys, 5 to 6½ gallons, for export only.

Glass, earthenware, clay, or stoneware. Single-trip container.

### § 78.5–1 Compliance.

(a) Required in all details.

### § 78.5–2 Closing devices required.

(a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

(3) For box: Two flat metal nailless straps, at least ⅝ inch by 0.020 inch, encircling top, sides, and bottom and securely sealed, are required.

### § 78.5–3 Capacity and marking of carboy.

(a) Containers must be 5 to 6½ gallon size and embossed to indicate maker and year of manufacture.

### § 78.5–4 Glass carboys.

(a) Thoroughly annealed; top of lip smooth and even. Glass in side walls should be well distributed and at least 1/16 inch thick. Defective carboys not authorized.

### § 78.5–5 Earthenware, clay, or stoneware carboys.

(a) Earthenware, clay, or stoneware carboys of acidproof material.

### § 78.5–6 Outside containers.

(a) Wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts. Top may consist of cap fitting snugly inside body of box and resting on corner posts.

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemble sides and ends with grain of wood horizontal and nail as specified; nail bottom to ends; fasten top by any efficient means.

(d) Parts and dimensions. Sides, top, and bottom at least ½ inch thick; vertical corner posts at least 2.25 square inches cross section; nails at least 6-penny at 2-inch intervals or 5-penny at 1¾-inch intervals.

(e) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

### § 78.5–7 Marking of outside container.

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1X. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

### § 78.5–8 Marking.

(a) Each outside container must also be plainly marked "FOR EXPORT ONLY, NOT RETURNABLE" and the top must be marked "THIS SIDE UP".

### § 78.5–9 Tests.

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55" measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock; same for bottom shock.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside container).

(2) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

### § 78.6 Specification 1EX; glass carboys in plywood drums.

Single trip container.

### § 78.6–1 Compliance.

(a) Required in all details.

### § 78.6–2 Lumber.

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

### § 78.6–3 Closing devices required.

(a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

### § 78.6–4 Capacity and marking of carboy.

(a) Containers must be 5 to 6½ gallons capacity and embossed to indicate maker and year of manufacture.

### § 78.6–5 Glass carboys.

(a) Thoroughly annealed; top of lip smooth and even. Glass in side walls should be well distributed and at least 1/16 inch thick. Defective carboys not authorized.

### § 78.6–6 Outside containers.

(a) Plywood drums completely enclosing body and neck of carboy and constructed as follows:

(1) *Body shell.* To be of two plies of hardwood veneer, each not less than ½ inch in thickness, firmly glued together, with the grain of the outside ply parallel and the inner ply vertical to the heads. The body shall be butt-jointed and shall be fastened on the outside with a 28-gauge steel strip, not less than 1½ inches in width. 17-gauge staples shall be driven on each side of the joint, spaced

not more than 1½ inches apart and clinched on inside of the body.

(2) *Heads.* Top and bottom heads shall be of three ply hardwood veneer, each ply not less than 1/12 inch in thickness, all firmly glued together, with the grain of each outer ply at right angles to the grain of the center ply. Each head shall be circled to fit snugly inside of the body. Interior heads shall be of the same construction.

(3) *Hoops.* To be of hardwood veneer, not less than 1¾ inches wide by ⅛ inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than 3 inch centers and shall be overlapped not less than 3 inches.

(4) *Head liners.* When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall overlap not less than 3 inches. The bottom head liner and the inside liner strips for the false head and support of the top head shall be fastened by 17-gauge staples on not less than 3 inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips; except that the strips holding the false head shall have staples only through the body shell and liner. The top liner which forms the final closure shall be fastened to the body by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4 inch centers.

(5) *Battens.* A ⅝ inch by 2 inch batten shall be applied to top and bottom and shall be secured at each end by two nails driven through the hoops and shell.

(b) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

**§ 78.6–7 Approval.**

(a) The complete inner packing and drum specification must be filed with and approved by the Bureau of Explosives.

**§ 78.6–8 Marking of outside container for compliance with specification.**

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1EX. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

**§ 78.6–9 Marking of outside container for use.**

(a) Each outside container must also be plainly marked "SINGLE-TRIP CONTAINER" just above or below the mark specified in § 78.6–8(a)(1) of this section.

**§ 78.6–10 Tests.**

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55" measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

NOTE 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside containers).

(2) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

[3] State whether hay, mineral wool, ground cork, excelsior, wood strips ____ type, cork pads ____ type, etc

**§ 78.7 Specification 1E; glass carboys in plywood drums.**

**§ 78.7–1 Compliance.**

(a) Required in all details.

**§ 78.7–2 Reuse of packages.**

(a) Outside container, including metal side seam, must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 78.7–8

**§ 78.7–3 Capacity and marking of carboy.**

(a) Glass containers 5 to 7 gallons in this specification are classed as carboys. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the Bureau of Explosives.

**§ 78.7–4 Glass carboys.**

(a) Thoroughly annealed; top of lip smooth and even. Glass in side walls should be well distributed and at least 1/16 inch thick. Defective carboys not authorized.

(b) *Closing devices required.* (For carboys without screw thread finish.) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

**§ 78.7–5 Glass carboy bottle.**

(a) (Threaded screw-cap closure only.) Must be machine-blown, thoroughly and properly annealed, with screw thread finish having at least one continuous thread to accommodate closure; top of lip smooth and even; must contain 14 pounds of glass, tolerance minus 8 ounces plus 16 ounces. Minimum thickness to be 0.075 inch. Defective carboys not authorized.

(b) *Closure.* (1) Threaded screw cap which shall be constructed of a suitable plastic or other material resistant to lading.

(2) Gasket or lining for cap must be used and shall be resistant to lading and must be liquid tight; or must be liquid tight up to venting pressure when such venting is prescribed for the material which is to be shipped.

(3) At least one complete continuous thread must be engaged with gasket in place.

**§ 78.7–6 Outside containers.**

(a) Plywood drums completely enclosing body of carboy or completely enclosing body and neck of carboy and constructed as follows:

(1) *Lumber.* To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(2) *Body shell.* To be of two plys of good commercial box or sheathing grade hardwood veneer, each not less than 1/11 inch in thickness, firmly glued together with waterproof glue (a section of plywood from body shell is immersed in water at room temperature for 48 hours. If no delamination or separation of plys is apparent, the glue is deemed to be waterproof) with the grain of the outside ply parallel and the inner ply vertical to the heads. The body shall be butt-jointed and shall be fastened on the outside with a 28-gauge steel strip, not less than 1½ inches in width. Staples of 17-gauge shall be driven on each side of the joint, spaced not more than 1½ inches apart and clinched on inside of the body.

(3) *Heads.* To be of three plys of good commercial box or sheathing grade hardwood veneer, each not less than 1/10 inch in thickness, firmly glued together with waterproof glue (a section of plywood from head is immersed in water at room temperature for 48 hours; if no delamination or separation of plies is apparent, the glue is deemed to be waterproof), with the grain of each outer ply at right angles to the grain of the center ply. Each head shall be circled to fit snugly inside of the body. Interior heads shall be of the same construction.

(4) *Hoops.* To be of hardwood veneer, not less than 1¾ inches wide by ⅛ inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than 3-inch centers and shall be overlapped not less than 3 inches.

(5) *Head liners. (Plywood drum completely enclosing body of carboy).* When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall overlap not less than 3 inches. The top head liners shall be fastened by 17-gauge staples on not less than 3-inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips. The bottom head liners shall be fastened the same as top head liners, or, by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4-inch centers.

(6) *Head liners. (Plywood drum completely enclosing body and neck of carboy).* When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than ⅓ inch in thickness and ⅝ inch in width and shall overlap not less than 3 inches. The inside head liners and the inside liner strips for the false head and support of the top head shall be fastened by 17-gauge staples on not less than 3-inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips, except that the strips holding the false head shall have staples only through the body and shell liner. The top head liner which forms the final closure shall be fastened to the body by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4-inch centers. The bottom head liners shall be fastened the same as top head liners, or, by 17-gauge staples driven through the outer hoop and body and clinched on the inside of the veneer strips on not less than 3-inch centers.

(7) *Battens.* At least ⅝ inch by 2 inches secured at each end by two nails driven through the hoops and body shell. One batten must be applied to the bottom of plywood drums, completely enclosing the body of carboys; and two battens must be applied to plywood drums completely enclosing the body and neck of carboys, one of which must be affixed to the top and the other to the bottom of the drum.

(b) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

**§ 78.7–7 Marking of outside container.**

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) ICC–1E. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in paragraph (a) (1) of this section.

**§ 78.7–8 Tests.**

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55 inches measured from wall to nearest bottom edge of basket:

(1) Side shock; test at least 10 carboys.

(2) Bottom shock; test at least 5 carboys.

NOTE 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages with carboys differing over 2 gallons.

(4) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to Bureau of Explosives on form as follows:

**§ 78.8 Specification 2S; metal-jacketed lead carboys.**

**§ 78.8–1 Compliance.**

(a) Required in all details.

**§ 78.8–2 Size.**

(a) Not over 15 gallons (nominal).

**§ 78.8–3 Test.**

(a) By 5 pounds internal pressure, without leakage, before each shipment.

**§ 78.8–4 Parts required and dimensions.**

(a) As in §§ 78.8–5 to 78.8–8.

**§ 78.8–5 Carboy closing device.**

(a) To consist of follower-ring with stud bolts, plate-gasket, and cap as shown in § 78.8–8.

(b) Follower-ring to be 1½" wide with machined top face, inner edges rounded off to about ¼" radius, and fitted with 4 stud bolts, fastened to prevent turning, for 2" neck and 6 bolts for larger necks.

(c) Neck of carboy to be flanged over to edge of follower-ring and may be swedged out under it; inside diameter of neck not over 4".

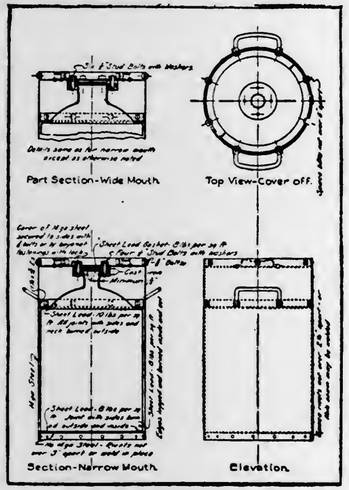
**§ 78.8–6 Outside container.**

(a) Welding authorized in place of rivets shown; body rivets, if used, to be countersunk on inside.

(b) Bayonet fastenings, or other efficient method, authorized to secure top to body in place of bolts shown.

(c) Two adequate lifting handles required on body.

(d) Projections above level of top edge of body not authorized.



**§ 78.8–7 Marking on each outside container.**

(a) By embossing on top with raised marks ¾" high as follows (stamping authorized if clearly legible):

(1) ICC–28. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.8–8 Shipping container specification No. 28.**

**§ 78.9 Specification 28A; metal-jacketed lead carboys.**

**§ 78.9–1 Compliance.**

(a) Required in all details.

**§ 78.9–2 Size.**

(a) Not over 15 gallons (nominal).

**§ 78.9–3 Test.**

(a) By 5 pounds internal pressure, without leakage, before each shipment.

**§ 78.9–4 Parts required and dimensions.**

(a) As in §§ 78.9–5 to 78.9–8.

**§ 78.9–5 Carboy closing device.**

(a) To consist of follower-ring with stud bolts, plate-gasket, and cap as shown.

(b) Follower-ring to be 1½" wide with machined top face, inner edges rounded off to about ¼" radius, and fitted with 4 stud bolts, fastened to prevent turning, for 2" neck and 6 bolts for larger necks.

(c) Neck of carboy to be flanged over to edge of follower-ring and may be swedged out under it; inside diameter of neck not over 8".

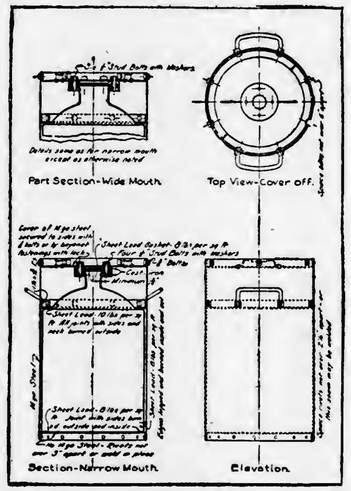
**§ 78.9–6 Outside container.**

(a) Welding authorized in place of rivets shown; body rivets, if used, to be countersunk on inside.

(b) Bayonet fastenings, or other efficient method authorized to secure top to body in place of bolts shown.

(c) Two adequate lifting handles required on body.

(d) Projections above level of top edge of body not authorized.



**§ 78.9–7 Marking on each outside container.**

(a) By embossing on top with raised marks ¾" high as follows (stamping authorized if clearly legible):

(1) ICC–28A. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.9–8 Shipping container specification No. 28A.**

**§ 78.12 Specification 34B; aluminum carboys.**

**§ 78.12–1 Compliance.**

(a) Required in all details.

**§ 78.12–2 Rated capacity.**

(a) As marked, see § 78.12–9: 5 to 15 gallons; actual capacity shall be rated capacity plus at least 2 percent.

**§ 78.12–3 Composition.**

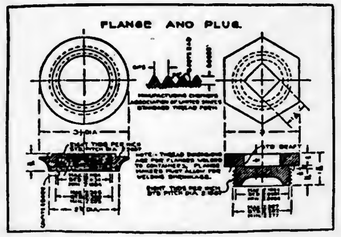
(a) Body and heads of aluminum at least 99 percent pure, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

**§ 78.12–4 Outage.**

(a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

**§ 78.12–5 Seams.**

(a) Welded, including attachment of handles and other devices. Circumferential seams at least 3" from bottom.



**§ 78.12–6 Parts and dimensions.**

(a) Thickness of material at least 0.110"; handles required.

**§ 78.12–7 Closures.**

(a) Adequate to prevent leakage; openings over 2.3" not authorized; suitable gaskets required.

(b) When threaded plugs, or caps, are used, they must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged. Thread form must conform with the following drawing:

**§ 78.12–8 Projections.**

(a) Closing devices and other parts must be able to withstand tests prescribed in § 78.12–11.

**§ 78.12–9 Marking on each container.**

(a) On top by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–34B. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Nominal thickness of metal in decimals of an inch of the thinnest part; rated capacity in gallons; year of manufacture (for example, 0.110–15–50).

**§ 78.12–10 Size of marking.**

(a) Size of marking (minimum): ½" high.

**§ 78.12–11 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage except that leakage through closure shall not constitute failure. Tests to be made by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike on bottom edge or circumferential seam.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes.

**§ 78.12–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior pressure of at least 10 pounds per square inch. Leakers shall be rejected or repaired and retested.

**§ 78.13 Specification 1H; polyethylene carboys in low carbon steel or other equally efficient metal crates.**

**§ 78.13–1 Compliance.**

(a) Required in all details.

**§ 78.13–2 Capacity and marking of carboy.**

(a) Containers 5 to 13 gallons capacity are classed as carboys. Actual capacity must be marked capacity plus 5 percent minimum. Must be permanently marked to indicate marked capacity, maker (symbols, if used, must be registered with the Bureau of Explosives), month and year of manufacture, and ICC–2T in figures and letters at least ¼ inch high.

**§ 78.13–3 Polyethylene carboys.**

(a) Carboys shall be made of polyethylene with no plasticisers or additives and have a maximum melt index value of 2.5 grams per 10 minutes as determined in accordance with method acceptable to the Bureau of Explosives. Carboys must have a minimum weight and wall thickness in accordance with the following table:

| Marked capacity | Minimum wall thickness | Minimum weight of bottles |
|---|---|---|
| *Gallons* | *Inch* | *Pounds* |
| 5 | 1/16 | 3 |
| 6½ | 1/16 | 4 |
| 13 | 1/16 | 8 |

(b) Closing device shall be of material resistant to the lading and adequate to prevent leakage. Opening for closure shall not be over 3½ inches in diameter.

(c) Polyethylene carboys, as manufactured and filled to marked capacity with a material which remains in a liquid form, shall be capable of withstanding a 4-foot drop without leakage, after prior conditioning so that contents will be 0° Fahr. or colder, onto solid concrete on any portion of the carboy.

**§ 78.13–4 Outside containers.**

(a) Metal crates:

(1) Specifications for each size outside container must be filed by each plant prior to start of production and be approved by the Bureau of Explosives.

**§ 78.13–5 Marking of outside container.**

(a) Each outside container must be plainly marked by attachment of a metal plate, or permanent marking in contrasting color directly on the polyethylene carboy in a visible area. Marking must be in letters and figures at least ¾ inch high and must be by embossing or stamping when applied on metal plates. Marking must be as follows:

(1) ICC–1H. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with the specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in paragraph (a) (1) of this section.

**§ 78.13–6 Tests.**

(a) One sample, taken at random and with inner container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage or serious rupture of outer container. Tests shall be made of each size by each company starting production. The type tests are as follows:

(1) Complete package must be capable of withstanding 2 drops from a height of 4 feet onto solid concrete, the first drop to be made diagonally so top corner will strike the concrete; the second drop onto a 2-inch by 6-inch timber resting on the concrete with the 6-inch leg vertical, the drop being made with the package in a horizontal position and at right angles to the timber so that impact is near the center of the crate side-wall members.

**§ 78.14 Specification 1K; glass carboys cushioned with expandable polystyrene in wooden wirebound box outside containers.**

**§ 78.14–1 Reuse of packages.**

(a) Top, base or side sections of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seat must be even. Packages must be capable of passing tests prescribed in § 78.14–8.

**§ 78.14–2 Closing devices required.**

(a) As follows except when otherwise authorized in the packing regulations:

(1) Acidproof stoppers or other devices, with gaskets, securely fastened; venting closures are required when necessary to prevent internal pressure in excess of 8 pounds per square inch gauge at 130° F.

(2) Glass stoppers ground to fit and securely fastened are authorized when internal pressures do not exceed 8 pounds per square inch gauge at 130° F.

**§ 78.14–3 Capacity and marking of carboy.**

(a) Thirteen gallon bottles. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the Bureau of Explosives.

**§ 78.14–4 Bottles.**

(a) Thoroughly annealed; top of lip smooth and even; must contain at least 21 pounds of glass. Glass in side walls should be well distributed and at least 1/16 inch thick.

**§ 78.14–5 Cushions.**

(a) Expandable polystyrene, molded to produce a completely fused closed cell structure and designed as to provide a snug fit in all areas of contact with the inside container, in the following forms:

(1) Formed in place around the inside container; density 1.25 plus or minus 0.25 pounds per cubic foot, minimum thickness of sidewalls 1 inch and of bottoms 1.5 inches.

(2) Preformed cushions, one top and one bottom; density 2.75 plus or minus 0.5 pounds per cubic foot, minimum thickness of side walls 1 inch and of bottoms 1.37 inches.

(b) Assembled containers must be capable of passing tests prescribed in § 78.14–8.

**§ 78.14–6 Outside containers.**

(a) Wooden wirebound boxes completely enclosing body of carboy or completely enclosing body and neck of carboy.

(b) Lumber shall be as follows:

(1) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

(2) Authorized tolerances; cleats, battens and handles, minus 1/32 inch; single thickness veneer minus 5 percent; resawn boards, 1/32 inch below specified thickness for boards ¼ inch or more thick.

(3) Woods authorized are in the following groups:

| | |
|---|---|
| GROUP 2 | |
| Southern yellow pine. | North Carolina pine. |
| Hemlock. | Douglas fir. |
| | Larch (Tamarack). |
| GROUP 3 | |
| White elm. | Black ash. |
| Red gum. | Black gum. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple-soft or silver. |
| GROUP 4 | |
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

(c) Binding wires and staples shall be as follows:

(1) Galvanized coated annealed steel or other material of equal strength, Washburn and Moen sizes.

(d) Minimum construction requirements shall be as follows:

(3) Packages differing in kind or shape of cushioning from a manufacturer or shipper who has had tests made.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) *Reports.* Required to be made to the Bureau of Explosives on form as follows:

REPORT OF TESTS OF CASBOYS

(As required by I.C.C. Regulations and Specifications)

(Place) .....
(Date) .....

Test made for .....
(Give name and address of plant for which tests were made) .....

| Description of package | No. of test | Results: 55-inch swing, Side | 55-inch swing, Bottom | No. of test | 55-inch swing, Side | 55-inch swing, Bottom |

[1] State whether outside container is new or used.
[2] State whether glass, earthenware, etc.
[3] State whether hay, mineral wool, ground cork, excelsior, wood strips ..... type cork pads ..... type, etc.

**§ 78.15 Specification 31; jugs in tubs.**

**§ 78.15–1 Compliance.**

(a) Required in all details.

**§ 78.15–2 Jugs.**

(a) Of acid-resisting material; capacity not over 2 gallons; only 1 jug in each tub.

**§ 78.15–3 Size of tub.**

(a) Sufficient to allow 1½" space and figures at top where ½" space around jug except at top is acceptable.

**§ 78.15–4 Material for tub.**

(a) Of sound wood; 7/16" staves; 7/16" top and bottom; at least 5 wooden hoops 7/8" x 1/16" (approx.) or 3 metal hoops with rolled edge at least ¾" x 29 gauge United States standard.

**§ 78.15–5 Construction.**

(a) Staves to be set up evenly; bottom hoop to be fastened with at least seven 4-penny nails driven through hoop, through staves, and into bottom of tub; other hoops to be securely fastened in place.

**§ 78.15–6 Cushioning.**

(a) To be tightly packed with adequate cushioning material.

**§ 78.15–7 Marking.**

(a) On each container with letters and figures at least ½" high in rectangle as follows:

| ICC–31 |
|---|

(b) This mark shall be understood to certify that the package complies with all specification requirements.

**§ 78.15–8 Closing for shipment.**

(a) Jug to be closed by rubber stoppers, or other closure equally acid-resistant; cork stoppers not authorized. Top of tub to be secured in place by at least four substantial metal strips, at least 7/16" x 3½" nailed to side and top of tub.

| Wirebound boxes | Square box for preformed cushions | Octagonal box for preformed cushions | Cylindrical box for preformed cushions | Octagonal box for formed-in-place cushions |
|---|---|---|---|---|
| **Faceboard thickness (sides only—without handle cleats)** | | | | |
| Group 2 woods | 5/16" | 5/16" | 5/16" | ¾" |
| Groups 3 and 4 woods | ¾" | ¾" | 5/16" | ¾" |
| **Faceboard thickness (sides only—with handle cleats)** | | | | |
| Group 2 woods | ¾" | ¾" | 5/16" | ¾" |
| Group 3 woods | 5/16" | 5/16" | 5/16" | ¾" |
| Cleats | 13/16" x ¾" | 13/16" x ¾" | 13/16" x ¾" | 13/16" x ¾". |
| Handle cleat | 2⅛" x ⅞" | 2⅛" x ⅞" | None | 2⅛" x ⅞". |
| *Binding wires* | | | | |
| Number and gauge over outside cleats | 2-12 gauge | 2-12 gauge | 2-12 gauge | 2-12 gauge. |
| Number and gauge intermediate wires | 3-13 gauge | 3-13 gauge | 2-12 gauge | 2-13 gauge. |
| Staples | 1¼"-16 gauge | 1¼"-16 gauge | 1"-16 gauge | 1¼"-16 gauge. |
| *Top* [1] | | | | |
| Face material thickness | 5/16" | 5/16" | ½" plywood | 5/16" |
| Battens | 4-1⅜" x ⅞" | 2-1⅜" x ⅞" | None | 2-1⅜" x ⅞". |
| *Base* | | | | |
| Face material thickness | 5/16" | 5/16" | ⅜" plywood | 5/16" |
| Battens | 4-1⅜" x ⅞" | 3-1⅜" x ⅞" | 2-1⅜" x ⅞" | 3-1⅜" x ⅞". |
| Runners | 3⅝" x 5/16" | 2-1⅜" x ⅞" | 2-1⅜" x ⅞" | 2-1⅜" x ⅞". |

[1] A hole of suitable type may be made in top of box to provide for the protruding neck of inner container. There shall be 1 inch minimum clearance between bottle and inside of hole.

(e) *Assembly:*

(1) The box shall be constructed to provide a snug fit with the cushioning for the inside container. Wooden shims of correct thickness may be used to keep carboy tight in overpack.

(2) The boxes shall be closed with threaded loop fasteners using a regular clinch.

**§ 78.14–7 Marking of outside container.**

(a) On each container with letters and figures at least ¾ inch high applied by hot branding iron or colored ink with high pressure dies as follows:

(1) ICC–1K. This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with specification requirements. This must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

**§ 78.14–8 Tests.**

(a) *Apparatus.* Standard required. Detail prints can be obtained from the Bureau of Explosives, 63 Vesey Street, New York 7, New York.

(b) *Method.* Fill with water to lower edge of neck; swing 55 inches measured from wall to nearest bottom edge of basket:

(1) Test 10 carboys each against bottom and one side.

NOTE 1: Instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) *Acceptable results.* One hundred percent of carboys must not break under side or bottom shocks. If failures occur, the test is to be repeated with an additional 10 carboys for which the passing requirement shall be 100 percent.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of the Bureau of Explosives; separate tests required for:

(1) New packages.

(2) Used packages.

**§ 78.18 Specification 43A; rubber drums.**

**§ 78.18–1 Compliance.**

(a) Required in all details.

**§ 78.18–2 Rated capacity.**

(a) As marked, see § 78.18–8. Actual capacity shall be rated capacity plus at least 2 percent.

**§ 78.18–3 Body and heads.**

(a) Of at least two laminations; inside lamination of synthetic rubber, or of pale crepe rubber compounded with paraffin or otherwise treated, such as to be capable of withstanding the action of hydrofluoric acid, up to 65 percent hydrofluoric acid maximum, for 30 days without any substantial deterioration; other laminations of cotton fiber and rubber.

**§ 78.18–4 Rolling hoops.**

(a) Tough rubber free from cotton or other fiber.

**§ 78.18–5 The drum.**

(a) Body, heads, lining, rolling hoops, and filling hole flange to be all vulcanized together at one operation. No cements, adhesives or secondary vulcanization authorized.

**§ 78.18–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| [1] Rated capacity (U. S. wine gallons) | Minimum weight (pounds) | Minimum thickness: Body (inch) | Minimum thickness: Heads (inch) | Rolling hoops: Chime (quarter round) Width (inches) | Rolling hoops: Chime (quarter round) Depth (inch) | Rolling hoops: Body (half round) Width (inches) | Rolling hoops: Body (half round) Depth (inch) |
|---|---|---|---|---|---|---|---|
| 5 | 18 | 3/8 | ½ | 1¾ | ¾ | | |
| 13 | 30 | 5/8 | ½ | 2 | 1 | 2 | 1 |
| 30 | 85 | 9/16 | 1 1/16 | 2 9/16 | 1 | 2¼ | 1 |

[1] Other capacities not authorized.

**§ 78.18–7 Closures.**

(a) To be such as to prevent spillage or leakage in transit and must be approved by the Bureau of Explosives.

**§ 78.18–8 Marking on each container.**

(a) Marking on top head plainly and permanently as follows:

(1) ICC–43A; this mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Rated gallonage and year of manufacture (for example, 5–50).

**§ 78.18–9 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on top chime. Also a 4-foot drop to strike directly on closing device. Parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes, using drums which have passed the drop test; side walls must not expand beyond chime hoops.

**§ 78.18–10 Material test.**

(a) Samples from side wall and end must have breaking strength at least 1,200 pounds per square inch.

## Subpart B—Specifications for Inside Containers, and Linings

**§ 78.20 Specification 2A; inside containers, metal cans, pails and kits.**

**§ 78.20–1 Capacity, thickness of metal, test, and closure.**

(a) *Capacity.* Not over 10 gallons.

(b) *Thickness of metal.* At least 28-gauge, United States standard (commercial 135-pound tin plate), for cans over 1-gallon capacity; smaller cans of metal of adequate thickness.

(c) *Test.* By interior pressure on each completed can, without leakage.

(d) *Closure.* Air-tight and leakproof.

**§ 78.21 Specification 2T; polyethylene container.**

**§ 78.21–1 Compliance.**

(a) Required in all details.

**§ 78.21–2 Capacity and marking of container.**

(a) Containers 5 to 13 gallons capacity are covered by this specification. Actual capacity must be the marked capacity plus 5 percent minimum. Must be permanently marked to indicate marked capacity, maker (symbols, if used, must be registered with the Bureau of Explosives), month and year of manufacture, and ICC–2T in figures and letters at least ¼ inch high.

**§ 78.21–3 Material.**

(a) Containers shall be made of polyethylene and shall have the following properties (see Note 1):

| | |
|---|---|
| Melt index | 2.6 maximum. |
| Density | 0.910–0.925. |
| Tensile strength | 1500 pounds per square inch minimum. |
| Percent elongation | 400 percent minimum. |

NOTE 1: Properties to be obtained by a test method approved by Bureau of Explosives. Other materials may be added which shall not affect the properties specified in paragraph (a) of this section.

(1) Container must have a minimum weight and wall thickness in accordance with the following table:

| Marked capacity not over (gallons) | Minimum wall thickness (inch) | Minimum weight of containers (pounds) |
|---|---|---|
| 5 | 0.0625 | 3 |
| 6½ | .0625 | 4 |
| 13 | .0625 | 8 |

(b) Closing device shall be of material resistant to the lading and adequate to prevent leakage and not over 3½ inches in diameter.

(c) Tests. Samples taken at random, empty or filled, and prepared as specified and closed as for use, shall be capable of withstanding the following tests without breakage or leakage:

(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 0° F.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.

(3) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

(d) Polyethylene container must fit snugly in outside container.

**§ 78.22 Specification 2C; inside containers, corrugated fiberboard cartons.**

**§ 78.22–1 Construction.**

(a) To be of double-wall board, 275-pound strength, or 2 thicknesses of double-faced board, 175-pound strength, Mullen or Cady test; slides or linings to be 1-piece with joint cloth-taped.

**§ 78.22–2 Outside container.**

(a) Outside container must be lined throughout with, and cartons separated by, double-wall corrugated fiberboard of 275-pound strength, Mullen or Cady test.

**§ 78.23 Specification 2D; inside containers, duplex paper bags.**

**§ 78.23–1 Construction.**

(a) Bags to be at least 2 thicknesses of shipping sack Kraft paper, or equivalent, and as follows:

| Maximum weight of contents (pounds) | Minimum [1] weight (per 500 sheets 24" x 36"): One sheet, weight [1] (pounds) | Minimum [1] weight (per 500 sheets 24" x 36"): Other sheet, weight [1] (pounds) |
|---|---|---|
| 2 | 30 | 30 |
| 6 | 50 | 40 |
| 12 | 60 | 50 |
| 25 | 70 | 60 |

[1] Weight 15 percent less authorized for rope paper containing 35 percent or more of manila rope fiber.

**§ 78.23–2 Test.**

(a) Bags, filled and closed as for shipment, must be able to withstand drop of 4 feet onto concrete without rupture or sifting, except that 2-foot drop is acceptable for bags to contain 25 pounds.

**§ 78.24 Specification 2U; molded or thermoformed polyethylene containers having rated capacity of ever one gallon. Removable head containers or containers fabricated from film not authorized.**

**§ 78.24–1 Compliance.**

(a) Required in all details.

**§ 78.24–2 Material.**

(a) Containers shall be made of polyethylene and shall have the following properties (see Note 1):

| | |
|---|---|
| Melt index | 2.6 maximum. |
| Density | 0.910–0.925. |
| Tensile strength | 1,500 pounds per square inch minimum. |
| Percent elongation | 400 percent minimum. |

NOTE 1: Properties to be obtained by a test method approved by Bureau of Explosives. Other materials may be added which shall not affect the properties specified in paragraph (a) of this section.

**§ 78.24–3 Construction capacity.**

(a) Container must be constructed in accordance with the following table:

| Rated capacity not over (gallons) | Minimum overall thickness (inch) [1] | Percent outage over marked capacity permitted |
|---|---|---|
| 5 | 0.010 | 15 |
| 15 | .015 | 15 |
| 55 | .015 | 5 |

[1] For cubical containers, the area adjacent to and forming the opening for closure may have a minimum thickness of 0.008 inch for 5 gallons rated capacity and sizes larger than 5 gallons may have a minimum thickness of 0.010 inch.

**§ 78.24–4 Closure.**

(a) Shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 73 of this chapter authorized. No opening over 2.7 inches in diameter authorized.

**§ 78.24–5 Marking.**

(a) Each container must be permanently marked by embossment to show rated capacity, month and year of manufacture, maker (symbols, if used, must be registered with the Bureau of Explosives), and ICC–2U in figures and letters at least ¼ inch in size.

**§ 78.24–6 Type test.**

(a) Samples taken at random shall withstand prescribed test without breakage. Test shall be made on each type and size at each manufacturing location starting production and shall be repeated every four months. The type test is as follows:

(1) Empty inner container shall be dropped on any part from a height of 6 feet onto solid concrete immediately after conditioning for at least 24 hours at 0° F.

**§ 78.24–7 Tests.**

(a) Samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the following tests without leakage:

(1) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

(3) The polyethylene container in a prescribed outer specification container, as authorized in Part 73 of this chapter, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using an amplitude of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

**§ 78.25 Specification 2F; inside metal containers and liners.**

**§ 78.25–1 Construction.**

(a) Containers over 1-gallon capacity and all lining must be at least 30 gauge, United States standard (commercial 107-pound tin plate) and sealed leakproof.

**§ 78.26 Specification 2G; inside containers, fiber cans and boxes.**

**§ 78.26–1 Capacity, and thickness of metal and fiber.**

(a) Capacity not over 6 pounds, net. Metal tops, bottoms, and connections of suitable thickness are authorized. Minimum fiber thickness as follows:

(1) Up to ¼-pound size: 0.021".
(2) Up to 1-pound size: 0.026".
(3) Up to 3-pound size: 0.036".
(4) Up to 6-pound size: 0.050", provided that 0.036" fiber heads with 130-pound strength [1] are authorized; or 0.028" with 175-pound strength; [1] or 0.036" with 90-pound strength,[1] provided each container is wrapped with shipping sack Kraft paper of 60-pound base weight pasted thereon.

**§ 78.27 Specification 2TL; polyethylene container.**

**§ 78.27–1 Material requirements.**

(a) Container shall be made of polyethylene and shall have the following properties (see Note 1):

| | |
|---|---|
| Melt index | 2.6 maximum. |
| Density | 0.910–0.925. |
| Tensile strength | 1500 pounds per square inch minimum. |
| Percent elongation | 400 percent minimum. |

NOTE 1: Properties to be obtained by a test method approved by the Bureau of Explosives. Other materials may be added which shall not affect the properties specified in paragraph (a) of this section.

[1] Mullen or Cady test.

**§ 78.27–2 Construction, capacity and marking.**

(a) Container must be constructed in accordance with the following table:

| Marked capacity [1] not over (gallons) | Minimum wall thickness (inches) | Minimum weight of containers (pounds) |
|---|---|---|
| 5 | 0.015 | 1 |
| 14 | .050 | 5¼ |

[1] Actual capacity must be the marked capacity plus 5 percent minimum.

(b) Closure: Closure shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 73 of this chapter authorized. No opening over 3½ inches in diameter authorized.

(c) Marking: Each container must be permanently marked to show the rated (marked) capacity, month and year of manufacture, maker (symbols, if used, must be registered with the Bureau of Explosives) and ICC–2TL in figures and letters at least ¼ inch in size.

(d) Polyethylene container must fit snugly in outside container.

**§ 78.27–3 Type test.**

(a) Samples taken at random shall withstand prescribed test without breakage. Test shall be made on each type and size at each manufacturing location starting production and shall be repeated every four months. The type test is as follows:

(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 0° F.

**§ 78.27–4 Tests.**

(a) Samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the following tests without leakage:

(1) The polyethylene container in a prescribed outer specification container as authorized by Part 73 of this chapter, filled to 98 percent capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or on any part considered weaker.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

**§ 78.28 Specification 2J; inside containers, waterproof paper bags for linings.**

**§ 78.28–1 Material.**

(a) Two sheets of paper cemented together and creped to afford 25 percent stretch; paper to be shipping sack Kraft, 30 pounds per ream (500 sheets, 24" x 36") before creping; total weight 90 pounds per ream.

**§ 78.28–2 Test.**

(a) Material folded into cones and filled with water to depth of 2" at 70° F. must not show water on outside within 24 hours.

**§ 78.28–3 Construction.**

(a) Form to fit the outside container without stretching; seams and closures to afford a siftproof bag.

**§ 78.29 Specification 2K; inside containers, paper bags for linings.**

**§ 78.29–1 Paper and construction.**

(a) Shipping sack Kraft paper, creped; at least 45 pounds per ream (500 sheets, 24" x 36") before creping.

(b) *Construction.* Form to fit the outside container without stretching; seams and closure to afford a siftproof bag.

**§ 78.30 Specification 2L; lining for boxes.**

**§ 78.30–1 Box lining.**

(a) Box lining must be of strong paraffined paper, or other suitable material, without joints or other openings at the bottom or at sides of box, and shall fully protect contents in contact with top of box.

(b) Tensile strength of material must be at least 35 pounds with the grain and 17 pounds across grain, tested by direct pull on strips measuring 3" by 1". Average results of three or more tests with the grain and three or more across grain shall be used.

(c) Material shall be impervious to water and nitroglycerin at 77° F. Test for imperviousness shall consist of folding material into cones, loosely to avoid breakage at creases. Cones tested for nitroglycerin shall be filled to 1" depth; those for water to 2". No leakage of liquid shall occur during 24 hours' exposure.

(d) Material must transmit no oily or greasy stain to unglazed paper. Test shall consist of placing one thickness of material, with two thicknesses of unglazed paper on each side, in an oven at 104° F. for 24 hours, under pressure of a lead disk 1½" thick and of 10 pounds weight resting edgewise on the paper.

(e) Saturating paraffin, when used, shall have melting point of 125° F. or above. Test shall consist of extracting paraffin from 1 ounce or more of material with ether. After evaporation of all ether, paraffin shall be melted and poured upon the surface of water contained in a hemispherical dish approximately 3¾" in diameter. Dish shall be three-fourths full of water above melting point of paraffin. Thermometer shall be placed with bulb three-fourths immersed in center of dish. Water and paraffin shall be allowed to cool until paraffin upon the surface of water commences to solidify. Temperature shall then be read and recorded as melting point of paraffin.

**§ 78.30–2 Bag.**

(a) Bag complying with requirements of paragraphs (b), (c), and (d) of this section also authorized.

(b) Material must be: 2 sheets of shipping sack Kraft paper joined by asphaltum, or equivalent; outer sheet at least 60 pounds and inner sheet at least 30 pounds per ream (500 sheets, 24" x 36"); inner sheet coated with wax, or equivalent, with melting point at least 125° F.; compliance with § 78.30–1 (b) and (c) required.

(c) Seams must be pasted with adhesive not affected by nitroglycerin.

(d) Completed bag must be formed to fit outside container without undue strain and must be impervious to seepage of nitroglycerin.

**§ 78.31 Specification 2M; waterproofed paper lining.**

**§ 78.31–1 Waterproofed paper.**

(a) Waterproofed paper for box lining must be strong, folded or constructed without joints or openings at sides, bottoms, or ends, and shall fully protect contents at top of box.

**§ 78.32 Specification 2N; inside containers, metal cans.**

**§ 78.32–1 Size.**

(a) Not over 14-pounds water capacity (388 cubic inches).

**§ 78.32–2 Material.**

(a) Tin plate, good quality, as follows:

| Maximum diameter of can | Minimum thickness of metal (inch) | |
|---|---|---|
| | In body | In heads |
| 4 11/16 inches | 0.01134 (1C–107 pound tin plate). | 0.01305 (1XL–128 pound tin plate). |
| 6 11/16 inches | 0.01134 (1C–107 pound tin plate). | 0.01485 (2XL–148 pound tin plate). |

NOTE 1: Because of the present emergency and until further order of the Commission, the minimum thickness of metal in heads may be 1XL–107-pound tin plate for cans of not over 4 11/16 inch diameter and 1XL–135-pound tin plate for cans of not over 6 11/16 inches diameter, provided side seams are soldered and heads are attached to body by full double seams internally soldered.

**§ 78.32–3 Manufacture.**

(a) Seams soldered or full double seam. Outside surface rustproofed by lacquer or equivalent.

**§ 78.32–4 Test.**

(a) When closed as for shipment, must be capable of standing 40-pound interior pressure without leakage.

**§ 78.33 Specification 2P; inside metal containers.**

**§ 78.33–1 Compliance.**

(a) Required in all details.

**§ 78.33–2 Type and size.**

(a) Single-trip inside containers. Must be seamless, or with seams, welded, soldered, brazed, double seamed, or swedged.

(b) The maximum capacity of containers in this class shall not exceed 31.83 cubic inches (17.6 fluid ounces). The maximum inside diameter shall not exceed 3 inches.

**§ 78.33–3 Inspection.**

(a) By competent inspector.

**§ 78.33–4 Duties of inspector.**

(a) To inspect material and completed containers and witness tests, and to reject defective materials or containers.

**§ 78.33–5 Material.**

(a) Uniform quality steel plate such as black plate, electro-tin plate, hot dipped tin plate, tern plate or other commercially accepted can making plate; or nonferrous metal of uniform drawing quality.

(b) Material with seams, cracks, laminations or other injurious defects not authorized.

**§ 78.33–6 Manufacture.**

(a) By appliances and methods that will assure uniformity of completed containers; dirt and scale to be removed as necessary; no defect acceptable that is likely to weaken the finished container appreciably; reasonably smooth and uniform surface finish required.

(b) Seams when used must be as follows:

(1) Circumferential seams: By welding, swedging, brazing, soldering, or double seaming.

(2) Side seams: By welding, brazing or soldering. Side seams not authorized on aluminum containers.

(c) Ends: The ends shall be of pressure design (not flat).

**§ 78.33–7 Wall thickness.**

(a) The minimum wall for any container shall be 0.009 inch.

**§ 78.33–8 Tests.**

(a) One out of each lot of 5,000 containers or less, successively produced per day, shall be pressure tested to not less than 180 pounds per square inch gauge with no bulging of either end. The container tested shall be complete with ends assembled.

(b) One out of each lot of 5,000 containers or less, successively produced per day, shall be pressure tested to destruction and must not burst below 210 pounds per square inch of pressure. The container tested shall be complete with ends assembled.

(c) Each such 5,000 containers or less, successively produced per day, shall constitute a lot and if the test container shall fail, the lot shall be rejected or ten additional may be selected at random and subjected to the test under which failure occurred. These containers shall be complete with ends assembled. Should any of the ten containers thus tested fail, the entire lot must be rejected. All containers constituting a lot shall be of like material, size, design, construction, finish and quality.

**§ 78.33–9 Marking.**

(a) On each container by printing, lithographing, embossing, or stamping manufacturer's name or symbol. If symbol is used it must be registered with the Bureau of Explosives.

**§ 78.34 Specification 2R; inside containers, metal tubes.**

**§ 78.34–1 Materials.**

(a) Metal tubes shall be stainless steel, malleable iron, or brass, or other materials having equivalent physical strength and fire resistance.

**§ 78.34–2 Manufacture.**

(a) The ends of the tubes must be fitted with screw-type closures or flanges (see § 78.34–4), except that one or both

ends of the tube may be permanently closed by a welded or brazed plate. Welded or brazed side seams are authorized.

(b) Welding or brazing must be done in a workmanlike manner and must be free from defects.

**§ 78.34–3 Size.**

(a) Inside diameter of the tube shall not exceed 12 inches, exclusive of flanges for handling or fastening devices and shall have wall thickness and length in accordance with the following:

| Inside diameter not over (inches) | Wall thickness minimum (inch) | Length maximum (inches) |
|---|---|---|
| 2 | 3/32 | 16 |
| 6 | 1/8 | 72 |
| 12 | 1/4 | 72 |

**§ 78.34–4 Closing devices.**

(a) Closing devices shall be as follows:

(1) Screw-type, caps or plugs; number of threads per inch must not be less than United States standard pipe threads and must have sufficient length of thread to engage at least 5 threads when securely tightened.

(2) Openings exceeding 3 inches inside diameter may be closed by securely bolted flanges and leak-tight gasket.

**§ 78.34–5 Marking.**

(a) Each container shall be marked with the words "RADIOACTIVE MATERIAL" either by embossing or die-stamping directly onto the container or by securely affixing by welding or brazing a metal plate bearing this notation to the container.

**§ 78.35 Specification 2S; polyethylene container.**

Removable head container not authorized.

**§ 78.35–1 Compliance.**

(a) Required in all details.

**§ 78.35–2 Material requirements.**

(a) Container shall be made of polyethylene and shall have the following properties (see Note 1):

Melt index---------- 2.6 maximum.
Density---------- 0.910–0.925.
Tensile strength--------- 1,500 pounds per square inch minimum.
Percent elongation------- 400 percent minimum.

NOTE 1: Properties to be obtained by a test method approved by the Bureau of Explosives. Other materials may be added which shall not affect the properties.

**§ 78.35–3 Construction, capacity and marking.**

(a) Container must be constructed in accordance with the following table:

| Marked capacity not over (gallons) [1] | Maximum capacity (gallons) | Minimum thickness—side wall and heads (inches) [2] | Minimum weight (pounds) |
|---|---|---|---|
| 5 | 6 | 0.0625 | 1.4 |
| 13.5 | 14.5 | .0625 | 3.25 |
| 15 | 16 | .0625 | 3.5 |
| 29 | 30 | .0625 | 5.5 |
| 53 | 54 | .0625 | 9 |

[1] Marked capacity shall be minimum capacity.
[2] Side openings are not authorized.

(b) **Marking.** Each container must be permanently marked to show minimum capacity, month and year of manufacture, maker (symbols, if used, must be registered with the Bureau of Explosives) and ICC–2S in figures and letters at least ¼ inch in size.

(c) Polyethylene container must fit snugly in outside container.

**§ 78.35–4 Closures.**

(a) Closing devices must be of screw thread type or fastened by positive means and be of material resistant to the lading and adequate to prevent leakage.

(b) Openings over 2.3 inches in diameter not permitted.

**§ 78.35–5 Tests.**

(a) Samples taken at random, empty or filled, and prepared as specified and closed as for use, shall be capable of withstanding the following tests without breakage or leakage:

(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete, immediately after conditioning for at least 24 hours at 0° F.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.

(3) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

**§ 78.35a Specification 2SL; molded or thermoformed polyethylene container.**

Removable head container or container fabricated from film not authorized.

**§ 78.35a–1 Material requirements.**

(a) Container shall be made of polyethylene and have the following properties (see Note 1):

Melt index---------- 2.6 maximum.
Density ---------- 0.910–0.925.
Tensile strength---- 1,500 pounds per square inch minimum.
Percent elongation-- 400 percent minimum.

NOTE 1: Properties to be obtained by a test method approved by the Bureau of Explosives. Other materials may be added which shall not affect the properties of this section.

**§ 78.35a–2 Construction, capacity and marking.**

(a) Container must be constructed in accordance with the following table:

| Marked capacity not over (gallons) [1] | Maximum capacity (gallons) | Minimum thickness—side wall and heads (inches) [2] | Minimum weight (pounds) |
|---|---|---|---|
| 13.5 | 14.5 | 0.030 | 2 |
| 15 | 16 | .030 | 2.25 |
| 29 | 30.5 | .030 | 3.25 |
| 53 | 54.5 | .040 | 5 |

[1] Marked (actual) capacity shall be minimum capacity.
[2] Side openings are not authorized.

(b) **Closure:** Closure shall be of material resistant to lading and adequate to prevent leakage. Vented closures where specified under Part 73 of this chapter are authorized. No opening over 2.3 inches in diameter authorized.

(c) **Markings:** Each container must be permanently marked to show minimum capacity, month and year of manufacture, maker (symbols, if used, must be registered with the Bureau of Explosives) and ICC–2SL in figures and letters at least ¼ inch in size.

(d) Polyethylene container must fit snugly in outside container.

**§ 78.35a–3 Type test.**

(a) Samples taken at random shall withstand prescribed test without breakage. Test shall be made on each type and size at each manufacturing location starting production and shall be repeated every four months. The type test is as follows:

(1) Empty container shall be dropped on any part from a height of 6 feet onto solid concrete immediately after conditioning for at least 24 hours at 0° F.

**§ 78.35a–4 Tests.**

(a) Samples taken at random, filled and prepared as specified and closed as for use, shall be capable of withstanding the following tests without leakage:

(1) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with water shall be dropped from a height of 4 feet onto solid concrete so as to drop diagonally on top edge or any part considered weaker.

(2) The polyethylene container in a prescribed outer specification container, as authorized by Part 73 of this chapter, filled to 98 percent of capacity with a solution which is compatible with polyethylene and remains liquid at 0° F. shall be dropped from a height of 4 feet onto solid concrete on any part of the container when container and contents are at or slightly below 0° F.

(3) The polyethylene container in a prescribed outer specification container, as authorized in Part 73 of this chapter, filled to 98 percent of capacity with water shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using an amplitude of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

## Subpart C—Specifications for Cylinders

**§ 78.36 Specification 3A; seamless steel cylinders.**

**§ 78.36–1 Compliance.**

(a) Required in all details.

**§ 78.36–2 Type, size and service pressure.**

(a) *Type and size.* Seamless; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 150 pounds per square inch.

**§ 78.36–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.36–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after parting and shown to be free from pipe, cracks, excessive segregation and other injurious defects.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided*, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.36–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.36–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorous, 0.045; sulphur, 0.050.

**§ 78.36–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.36–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.36–8 Manufacture.**

(a) By best appliance and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

**§ 78.36–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of neckrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in § 78.36–8 (a).

NOTE 1: Cylinders used solely in anhydrous ammonia service may have a ½ inch diameter bar welded within their concave bottoms in accordance with the foregoing requirements.

**§ 78.36–10 Wall thickness.**

(a) For cylinders with service pressure less than 900 pounds the wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where
$S$ = wall stress in pounds per square inch;
$P$ = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.36–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.36–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.36–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34 (f) and 73.301 (i) of this chapter).

**§ 78.36–14 Hydrostatic test.**

(a) By water-jacket, or other suitable methods, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

**§ 78.36–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder,[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.36–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 [1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16-inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3A2000 indicates the service pressure as 2,000 pounds per square inch.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ½ inch per minute during yield strength determination.

**§ 78.36–17 Acceptable results for physical and flattening tests.**

(a) Either of the following:

(1) Elongation at least 40 percent for 2-inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2-inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

**§ 78.36–18 Leakage test.**

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least 1 minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 78.36–19.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.36–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.36–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

**§ 78.36–20 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3A followed by the service pressure (for example, ICC–3A1800, etc.).

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

**§ 78.36–21 Size of marks.**

(a) At least ¼" inch high if space permits.

**§ 78.36–22 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas Cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.

Marks stamped into the shoulder of the cylinder are:
Specification ICC— _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____

These cylinders were made by process of _____

The _____ permitted in
(neckrings—footrings)
§ 78.36–9 were attached by process of _____
(welding—brazing)

The material used was identified by the following _____
(heat-purchase order)
numbers _____.

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3A were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3A except as follows:

Exceptions: _____

(Signed) _____
Inspector.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:*

ICC—3A1800
1254
XY

**§ 78.37 Specification 3AA; seamless steel cylinders, made of definitely prescribed steels.**

**§ 78.37–1 Compliance.**

(a) Required in all details.

**§ 78.37–2 Type, size and service pressure.**

(a) *Type and size.* Seamless; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 150 pounds per square inch.

**§ 78.37–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.37–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after parting and shown to be free from pipe, cracks, excessive segregation and other injurious defects.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.37–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.37–5 Authorized steel.**

(a) Open hearth or electric steel of uniform quality. The following chemical analyses are authorized (see note 1):

| Designation | 4130X (percent) (see note 2) | NE–8630 (percent) (see note 2) | 9115 (percent) (see note 2) | 9125 (percent) (see note 2) |
|---|---|---|---|---|
| Carbon | 0.25/0.35 | 0.28/0.33 | 0.10/0.20 | 0.20/0.30. |
| Manganese | 0.40/0.90 | 0.70/0.90 | 0.50/0.75 | 0.80/0.75. |
| Phosphorus | 0.04 max | 0.04 max | 0.04 max | 0.04 max. |
| Sulphur | 0.05 max | 0.04 max | 0.04 max | 0.04 max. |
| Silicon | 0.20/0.35 | 0.20/0.35 | 0.60/0.90 | 0.60/0.90 |
| Chromium | 0.80/1.10 | 0.40/0.60 | 0.50/0.65 | 0.80/0.65. |
| Molybdenum | 0.15/0.25 | 0.15/0.25 | | |
| Zirconium | | | 0.05/0.15 | 0.05/0.15. |
| Nickel | | 0.40/0.70 | | |

| Designation | 9115X (percent) (see note 2) | 9125X (percent) (see note 2) | Intermediate manganese (percent) |
|---|---|---|---|
| Carbon | 0.10/0.20 | 0.20/0.30 | 0.40 max. |
| Manganese | 0.50/0.75 | 0.50/0.75 | 1.35/1.65. |
| Phosphorus | 0.04 max | 0.04 max | 0.04 max. |
| Sulphur | 0.04 max | 0.04 max | 0.05 max. |
| Silicon | 0.60/0.90 | 0.60/0.90 | 0.10/0.30. |
| Chromium | 0.50/0.65 | 0.50/0.65 | |
| Molybdenum | 0.10/0.20 | 0.10/0.20 | |
| Zirconium | 0.05/0.15 | 0.05/0.15 | |
| Nickel | | | |

NOTE 1: A heat of steel made under any of the above specifications, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6–4 of "Supplementary Information July 1958, Alloy Steel: Semi-finished; Hot Rolled and Cold Finished Bars, July 1955," are not exceeded, or provided the variation in chemical analysis is approved by the Bureau of Explosives.

NOTE 2: This designation shall not be restrictive and the commercial steel is limited in analysis as shown in the table.

**§ 78.37–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.37–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.37–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defects acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

**§ 78.37–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of neckrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3AA2000 indicates the service pressure as 2,000 pounds per square inch.

which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in § 78.37–8.

**§ 78.37–10 Wall thickness.**

(a) For cylinders with service pressure less than 900 pounds the wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) For cylinders with service pressure of 900 p. s. i. or more the minimum wall shall be such that the wall stress at the minimum specified test pressure shall not exceed 67 percent of the minimum tensile strength of the steel as determined from the physical tests required in §§ 78.37–16 and 78.37–17 and shall be not over 70,000 p. s. i.

(c) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where

$S$ = wall stress in pounds per square inch;
$P$ = minimum test pressure prescribed for water jacket test of 450 pounds per square inch whichever is the greater;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.37–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat treated prior to tests. Heat treatment of cylinders of the authorized analyses shall be as follows:

(1) All cylinders must be oil quenched except as noted in subparagraphs (5) and (7) of this paragraph.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall exceed 1750° F.

(3) All steels shall be tempered at a temperature most suitable for that steel.

(4) The minimum tempering temperature shall be not less than 1000° F. except as noted in subparagraph (6) of this paragraph.

(5) Steel 4130X may be normalized at a temperature of 1650° F. instead of being quenched, and cylinders so normalized need not be tempered.

(6) Intermediate manganese steels may be tempered at temperatures not less than 1150° F., and after heat treating, each cylinder must be submitted to a magnetic test to detect the presence of quenching cracks. Cracked cylinders shall be rejected and destroyed.

(7) Steels coming under this specification may be quenched in molten salt bath maintained at a temperature not less than 375° F.

**§ 78.37–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.37–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.37–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

**§ 78.37–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.37–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 [1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: *Provided*, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.37–17 Physical and flattening tests.**

(a) Acceptable results for physical and flattening tests; elongation at least 20 percent for 2" gauge length or at least 10 percent in other cases; flattening required without cracking to 6 times wall thickness.

**§ 78.37–18 Leakage test.**

(a) All spun cylinders and plugged cylinders (See Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, aproximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 78.37–19.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.37–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.37–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

**§ 78.37–20 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3AA followed by the service pressure (for example, ICC–3AA1800, etc.).

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950, so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

**§ 78.37–21 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.37–22 Inspector's report.**

(a) Required to be clear, legible, and in the following form:

(Place) _____
(Date) _____

*Gas Cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter
by _____ inches long

Marks stamped into the shoulder of the cylinder are:
Specification ICC _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____ (welding—brazing)
The cylinders were heat treated by the process of _____ (neckrings—footrings)
The _____ permitted in § 78.37–9 were attached by process of _____ (welding—brazing)
The material used was identified by the following _____ (heat-purchase order) numbers _____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____ (were—were not) marked on the material.
All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.
The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.
Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3AA were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.
I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3AA except as follows:
Exceptions: _____
_____
_____
(Signed) _____
Inspector.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:* ICC–3AA1800
1234
XY

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

**§ 78.38 Specification 3B; seamless steel cylinders.**

**§ 78.38–1 Compliance.**

(a) Required in all details.

**§ 78.38–2 Type, size, and service pressure.**

(a) *Type and size.* Seamless; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 150 to not over 500 pounds per square inch.

**§ 78.38–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.38–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.38–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.38–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

**§ 78.38–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.38–7 Defects.**

(a) Material with seams, racks, laminations, or other injurious defects, not authorized.

**§ 78.38–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3B300 indicates the service pressure as 300 pounds per square inch.

**§ 78.38–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of neckrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in § 78.38–8.

**§ 78.38–10 Wall thickness.**

(a) The wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.090" for any cylinder over 6" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$ = wall stress in pounds per square inch;
$P$ = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.38–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.38–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 4 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.38–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34 (f), 73.301 (i) and 73.124(a) of this chapter).

**§ 78.38–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) Each cylinder; to at least 2 times service pressure.

(2) Or, 1 cylinder out of each lot of 200 or less; to at least 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defect.

**§ 78.38–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.38–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: Provided, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000.

[1] For lots of 30 or less physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.38–17 Acceptable results for physical and flattening tests.**

(a) Either of the following:

(1) Elongation at least 40 percent for 2-inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2-inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

**§ 78.38–18 Leakage test.**

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 78.38–19.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A spun cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.38–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.38–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

**§ 78.38–20 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3B followed by the service pressure (for example, ICC–3B300, etc.).

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below the ICC mark; location[2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added; and word "*SPUN*" or "*PLUG*" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

(b) Marking stamped into the sidewalls of cylinders having a service pressure of 150 psi is permitted only if all of the following conditions are met:

(1) Wall stress at test pressure shall not exceed 24,000 psi.

(2) Minimum wall thickness shall be not less than 0.090".

(3) Depth of stamping shall be no greater than 15 percent of the minimum wall thickness, but at no time shall it exceed 0.015".

(4) Maximum outside diameter of cylinder shall not exceed 5".

(5) Carbon content of cylinder shall not exceed 0.25 percent. If the carbon content exceeds 0.25 percent, the complete cylinder must be normalized after stamping.

(6) Stamping shall be adjacent to top head.

**§ 78.38–21 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.38–22 Inspector's report.**

(a) Required to be clear, legible, and in following form:

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 170 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Size _____ inches outside diameter by _____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC– _____
Serials numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____
_____
The _____ permitted
(neckrings—footrings)
in § 78.38–9 were attached by process of _____
(welding—brazing)
The material used was identified by the following _____ numbers
(heat-purchase order)
_____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3B were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3B except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of_____pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed)_____

**§ 78.39 Specification 3BN; seamless nickel cylinders.**

**§ 78.39–1 Compliance.**

(a) Required in all details.

**§ 78.39–2 Type, size and service pressure.**

(a) *Type and size.* Seamless; not over 125 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 150 to not over 500 pounds per square inch.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3BN400 indicates the service pressure as 400 pounds per square inch.

**§ 78.39–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.39–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests, verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.39–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.39–5 Nickel.**

(a) At least 99.0 percent pure nickel plus cobalt.

**§ 78.39–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.39–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.39–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Cylinders closed in by spinning process not authorized.

**§ 78.39–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except that welding is authorized for the attachment of neckrings and footrings which are nonpressure parts, and only to the tops and bottoms of cylinders. Neckrings and footrings must be of weldable material, carbon content of which must not exceed 0.25 percent Nickel welding rod must be used.

**§78.39–10 Wall thickness.**

(a) The wall stress shall not exceed 15,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.39–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.39–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.39–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.39–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 2 times service pressure.

**§ 78.39–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.39–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material: Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.39–17 Acceptable results for physical and flattening tests.**

(a) Either of the following:

(1) Elongation at least 40 percent for 2" gauge length or at least 20 percent in other cases; yield point not over 50 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2" gauge length or 10 percent in other cases; yield point not over 50 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

**§ 78.39–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding not authorized.

**§ 78.39–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3BN followed by service pressure (for example ICC–3BN400, etc.).

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below the ICC mark; location[2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark, near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.39–20 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.39–21 Inspector's report.**

(a) Required to be clear, legible, and in following form:

**§ 78.40 Specification 3C; seamless steel cylinders.**

**§ 78.40–1 Compliance.**

(a) Required in all details.

**§ 78.40–2 Type, size, and service pressure.**

(a) *Type and size.* Seamless; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 90 to not over 300 pounds per square inch.

**§ 78.40–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3C300 indicates the service pressure as 300 pounds per square inch.

**§ 78.40–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.40–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.40–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

**§ 78.40–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.40–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.40–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thickness to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

**§ 78.40–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding or brazing is authorized for the attachment of neckrings and footrings which are non-pressure parts, and only to the tops and bottoms of cylinders having a service pressure of 500 pounds per square inch or less. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

(2) As permitted in § 78.40–8.

**§ 78.40–10 Wall thickness.**

(a) The wall stress shall not exceed 24,000 pounds per square inch. Minimum wall 0.090" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.40–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.40–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.40–13 Safety advices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(1) of this chapter).

**§ 78.40–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows: 1 cylinder out of each lot of 200 or less; to at least 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defect. If tested cylinder fails, each cylinder in the lot may be tested; those passing are acceptable.

**§ 78.40–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.40–16 Physical test.**

(a) *To determine yield strength, tensile strength, elongation, and reduction of area of material.* Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.40–17 Acceptable results for physical and flattening tests.**

(a) Either of the following:

(1) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

**§ 78.40–18 Leakage test.**

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 § 78.40–19.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.40–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.40–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

**§ 78.40–20 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3C followed by the service pressure (for example ICC–3C300, etc.).

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below the ICC mark; location[2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added; and word *"SPUN"* or *"PLUG"* near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

**§ 78.40–21 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.40–22 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) .....
(Date) .....

*Gas cylinders*

Manufactured for ..... Company
Location at .....
Manufactured by ..... Company
Location at .....
Consigned to ..... Company
Location at .....
Quantity .....
Size ..... inches outside diameter by .....

[1] For lots of 30 or less physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:*

ICC–3C300
1234
XY

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers.....
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ------ inch. The outside diameter was determined by a close approximation to be ------ inches. The wall stress was calculated to be ------ pounds per square inch under an internal pressure of ------ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3C were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3C except as follows:

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of ..... pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[3] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[2] Report approximate maximum and minimum volumetric capacity for the lot.
(Signed) .....

**§ 78.41 Specification 3D; seamless steel cylinders.**

**§ 78.41–1 Compliance.**

(a) Required in all details.

**§ 78.41–2 Type, size, and service pressure.**

(a) *Type and size.* Seamless; not over 125 pounds water capacity (nominal); closing of bottom ends by spinning or swedging not authorized.

(b) *Service pressure.*[1] Must be 480 pounds per square inch.

**§ 78.41–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.41–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted. Inspection of valves and protection caps is required.

(d) Render complete report (§ 78.41–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.41–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

**§ 78.41–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.41–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.41–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required.

(b) Extension ring: Top end of cylinder over 5" outside diameter must be fitted with section of tubing shrunk on, not welded to cylinder, and extending at least 4" below shoulder and above neck; thickness of ring as prescribed for cylinder wall; drain holes required.

(c) Valve and protection cap of metal substantially noncorrodible.

(d) Valve body and other parts subject to gas pressure when closed to be of forged, drawn, or extruded metal. Plug instead of valve is authorized.

(e) Protection cap must be at least 5/16" thick, gas tight, with 3/4" faced seat for gasket, and with United States standard form thread; it must not project beyond extension ring.

(f) Assembly of valves to cylinder: Selective method required so that at least 1 thread is left disengaged when screwed home. Efficient luting material required. Assembly by shippers is permitted without supervision by inspector.

**§ 78.41–9 Welding or brazing.**

(a) Welding or brazing is authorized, but only for the sealing of neckrings which must be threaded on the external neck of cylinders of not over 500 cubic inches capacity. Cylinders and neckrings must be weldable steel, the carbon content of which must not exceed 0.25 percent except that the use of 4130X steel is authorized. The weld free from moisture must be tested with gas or air at not less than 800 pounds per square inch.

**§ 78.41–10 Wall thickness.**

(a) The wall stress shall not exceed 16,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=800 pounds per square inch;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.41–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.41–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

**§ 78.41–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3D480 indicates the service pressure as 480 pounds per square inch.

**§ 78.41–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

**§ 78.41–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to 1/2" radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.41–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 [1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1 1/2 inches; or, gauge length 2 inches with width not over 1 1/2 inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed 1/8 inch per minute during yield strength determination.

**§ 78.41–17 Acceptable results for physical and flattening tests.**

(a) Either of the following:

(1) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test is required, without cracking, to 4 times wall thickness.

**§ 78.41–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is not authorized.

**§ 78.41–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck, and also on extension ring, as follows:

(1) ICC–3D480.

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.41–20 Size of marks.**

(a) At least 1/4" high if space permits.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

**§ 78.42 Specification 3E; seamless steel cylinders.**

**§ 78.42–1 Compliance.**

(a) Required in all details.

**§ 78.42–2 Type, size, and service pressure.**

(a) *Type and size.* Seamless. Must have outside diameter not greater than 2 inches nominal, length less than 2 feet.

(b) *Service pressure.*[1] Must be 1,800 pounds per square inch.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3E1800 indicates the service pressure as 1,800 pounds per square inch.

**§ 78.42–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.42–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of steel by analysis or by obtaining certified analysis: *Provided,* That check analysis of samples taken from one cylinder out of each lot of 200 or less is acceptable.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.42–15) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.42–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.55; phosphorus, 0.045; sulphur, 0.050.

**§ 78.42–6 Identification of steel.**

(a) Required; any suitable method.

**§ 78.42–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.42–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cyclinder appreciably; reasonably smooth and uniform surface finish required. The thickness of the spun bottom is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thickness to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

**§ 78.42–9 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 4 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.42–10 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.42–11 Hydrostatic test.**

(a) Cylinders must be tested as follows:

(1) One cylinder out of each lot of 500 or less to be subjected to hydrostatic pressure of 6,000 pounds per square inch or higher.

(2) The cylinder referred to in subparagraph (1) of this paragraph shall burst at a pressure higher than 6,000 pounds per square inch without fragmenting or otherwise showing lack of ductility, or shall hold a pressure of 12,000 pounds per square inch for 30 seconds without bursting, in which case it shall be subjected to a flattening test without cracking to six times wall thickness between knife edges, wedge shaped, 60 degree angle, rounded out to ½ inch radius.

NOTE 1: Inspector's report shall be suitably changed to show results of latter alternate and flattening test.

(3) Other cylinders must be examined under pressure of at least 3,000 pounds per square inch and not to exceed 3,600 pounds per square inch and show no defect. The pressure must be maintained for at least 30 seconds and sufficiently longer to insure complete examination.

**§ 78.42–12 Leakage test.**

(a) All spun cylinders and plugged cylinders (See Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 78.42–13.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.42–13 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.42–12 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

**§ 78.42–14 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently as follows:

(1) ICC–3E1800.

(2) An identifying symbol (letters); location to be just following or below the ICC mark. The symbol must be that of purchaser, user or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

*Example:*

ICC–3E1800
XY

(3) Date of test (such as 5–50 for May 1950).

**§ 78.42–15 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Date) .....

*Steel gas cylinders*

Manufactured for ..... Company
Location at .....
Manufactured by ..... Company
Location at .....
Consigned to ..... Company
Location at .....
Quantity .....
Size ..... inches outside diameter by ..... inches long
Marks stamped into the shoulder of the cylinder are:
Specification ICC—3E1800
Serial numbers ..... to ..... inclusive (if numbered).
Identifying symbol (registered) .....
Test date .....
These cylinders were made by process of .....
.....
The steel used was identified by the following ..... numbers .....
(heat-purchase order)

The steel used was verified as to chemical analysis and record thereof is attached hereto.

All material, such as plates, billets, and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ..... inch. The tare weight per cylinder without valve is ..... (approx.). The volumetric capacity per cylinder is ..... (approx.).

Each and every cylinder was properly tapped with a taper thread; the threads were inspected and found to be clean-cut, of proper length, and correct as to gauge.

One finished cylinder out of each lot of 500 or less was taken at random and burst by interior pressure with the following results:

| Date of test | Pressure at which cylinder ruptured |
|---|---|
| | |

Each and every cylinder with bottom closed in by spinning was subjected to an interior gas pressure of at least 1,800 pounds per square inch and showed no leakage.

Each and every cylinder was subjected to an interior pressure of at least 3,000 pounds per square inch and showed no defect.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3E except as follows:

Exceptions .....

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long
Made by _____ Company
For _____ Company

| Serial numbers of cylinders tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters) [1] | Permanent expansion (cubic centimeters) [1] | Percent ratio of permanent expansion to total expansion [1] | Tare weight (pounds) [2] | Volumetric capacity |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of _____ pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

(Signed)_____

### § 78.43 Specification 3A480X; seamless steel cylinders.

### § 78.43–1 Compliance.

(a) Required in all details.

### § 78.43–2 Type, size, and service pressure.

(a) *Type and size.* Seamless, having not more than 278 pounds nominal water capacity.

(b) *Service pressure.*[1] 480 pounds per square inch.

### § 78.43–3 Inspection by whom and where.

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3A480X indicates the service pressure as 480 pounds per square inch.

### § 78.43–4 Duties of inspector.

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.43–22) to purchaser, cylinder maker, and the Bureau of Explosives.

### § 78.43–5 Steel.

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: carbon, 0.40; phosphorus, 0.045; sulphur, 0.050.

### § 78.43–6 Identification of material.

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

### § 78.43–7 Defects.

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

### § 78.43–8 Manufacture.

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. If not originally free from such defects, the surface may be machined or otherwise treated to eliminate these defects. The thickness of the bottoms of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position.

### § 78.43–9 Neckrings and footrings.

(a) Welding for any purpose whatsoever is prohibited except as follows:

(1) Welding is authorized for the attachment of neckrings and footrings which are nonpressure parts, and only to the tops and bottoms. Cylinders, neckrings, and footrings must be made of weldable steel, carbon content of which must not exceed 0.25 percent.

(2) As permitted in § 78.43–8.

NOTE 1: Cylinders used solely in anhydrous ammonia service may have a ½ inch diameter bar welded within their concave bottoms in accordance with the foregoing requirements.

### § 78.43–10 Wall thickness.

(a) Minimum wall 0.100'' for any cylinder over 5'' outside diameter. Wall stress shall not exceed 40,000 pounds per square inch.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=800 pounds per square inch;
$D$=Outside diameter in inches.
$d$=inside diameter in inches.

### § 78.43–11 Heat treatment.

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

### § 78.43–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

### § 78.43–13 Safety devices and protection for valves, safety devices, and other connections, if applied.

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(f) of this chapter).

### § 78.43–14 Hydrostatic test.

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

### § 78.43–15 Flattening test.

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½'' radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

### § 78.43–16 Physical test.

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

### § 78.43–17 Acceptable results for physical and flattening tests.

(a) Either of the following:

(1) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(2) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases; yield strength not over 73 percent of tensile strength; flattening required, without cracking, to 6 times wall thickness.

### § 78.43–18 Leakage test.

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See Note 1 to § 78.43–19.)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

### § 78.43–19 Rejected cylinders.

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

NOTE 1: Spun cylinders rejected under the provisions of § 78.43–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping and plugging.

### § 78.43–20 Marking.

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–3A480X.

(2) A serial number and an identifying symbol (letters); location[1] of number to be just below the ICC mark; location[1] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or effected by plugging.

### § 78.43–21 Size of marks.

(a) At least ¼ inch high if space permits.

### § 78.43–22 Inspector's report.

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC– _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____

[1] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:*

ICC–3A480X
1234
XY

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

The footrings _____ welded
(were—were not)
as permitted in § 78.43–9.

The material used was identified by the following _____ numbers
(heat-purchase order)
_____

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3A480X were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3A480X except as follows:

**§ 78.44 Specification 3HT; inside containers, seamless steel cylinders for aircraft use made of definitely prescribed steel.**

**§ 78.44–1 Compliance.**

(a) Required in all details.

**§ 78.44–2 Type, size and service pressure.**

(a) *Type and size.* Seamless; not over 150 pounds water capacity (nominal).

(b) *Service pressure.*[1] At least 900 pounds per square inch.

**§ 78.44–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.44–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.44–25) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.44–5 Authorized steel.**

(a) Open hearth or electric furnace steel of uniform quality. Steel of the following chemical analysis is authorized (see notes 1 and 2):

| Designation | AISI 4130 (percent) |
|---|---|
| Carbon | 0.28/0.33. |
| Manganese | 0.40/0.60. |
| Phosphorus | 0.040 maximum. |
| Sulfur | 0.040 maximum. |
| Silicon | 0.20/0.35. |
| Chromium | 0.80/1.10. |
| Molybdenum | 0.15/0.25. |

NOTE 1: A heat of steel made under the above specification, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6–4 of "Supplementary Information July 1958, Alloy Steel: Semifinished; Hot Rolled and Cold Finished Bars, July 1955," are not exceeded, or provided the variation in chemical analysis is approved by the Bureau of Explosives.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–3HT2000 indicates the service pressure as 2,000 pounds per square inch.

NOTE 2: Grain size 6 or finer according to ASTM Spec. E19–46.

**§ 78.44–6 Identification of material.**

(a) Required; any suitable method. Steel stamping of heat identifications shall not be made in any area which will eventually become the side wall of the cylinder. Depth of stamping shall not encroach upon the minimum prescribed wall thickness of the cylinder.

**§ 78.44–7 Defects.**

(a) Material with seams, cracks, laminations, severe inclusions, numerous or severe draw marks, or any other injurious defect not authorized.

**§ 78.44–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished container appreciably; the general surface finish shall not exceed a roughness of 250 RMS. Individual irregularities such as draw marks, scratches, pits, etc., should be held to a minimum consistent with good high stress pressure vessel manufacturing practices. If the cylinder is not originally free of such defects or does not meet the finish requirements, the surface may be machined or otherwise treated to eliminate these defects. The point of closure of cylinders closed by spinning is not to be less than two times the prescribed wall thickness of the cylindrical shell. Cylinder end contour shall be hemispherical or ellipsoidal with a ratio of major to minor axis not exceeding two to one and with concave side to pressure.

**§ 78.44–9 Welding or brazing.**

(a) Welding or brazing for any purpose whatsoever is prohibited except as follows:

(1) Welding by spinning is permitted to close the bottom of spun cylinders. Machining or grinding to produce proper surface finish at point of closure is required.

**§ 78.44–10 Wall thickness.**

(a) Minimum wall thickness for any cylinder shall be 0.050 inch.

(b) Minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not exceed 75 percent of the minimum tensile strength of the steel as determined from the physical tests required in § 78.44–18 and shall not be over 105,000 psi.

(c) Calculations must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$P$ = wall stress in pounds per square inch;
$D$ = minimum test pressure prescribed for water jacket test;
$d$ = outside diameter in inches;
$S$ = inside diameter in inches.

(d) Wall thickness of hemispherical bottoms only permitted to 90 percent of minimum wall thickness of cylinder sidewall but shall not be less than 0.050 inch. In all other cases, thickness to be no less than prescribed minimum wall.

**§ 78.44–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heated prior to tests. Heat treatment of the cylinders of the authorized analysis shall be as follows:

(1) All cylinders must be oil quenched except as noted in subparagraph 4 of this paragraph.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall it exceed 1750° F.

(3) The steel shall be tempered at a temperature most suitable for the particular steel analysis but not less than 850° F.

(4) Quenching in a molten salt bath maintained at a temperature of not less than 375° F. is permitted.

**§ 78.44–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required to be clean cut, even, without cracks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for National Gas Tapered Thread (NGT) as required by American Standard Compressed Gas Cylinder Valve Outlet and Inlet Connections.[1]

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and a calculated shear stress of at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.44–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.44–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least 5/3 times service pressure.

**§ 78.44–15 Cycling tests.**

(a) Prior to the initial shipment of any specific cylinder design, cyclic pressurization tests shall have been performed on at least three representative samples without failure as follows:

(1) Pressurization shall be performed hydrostatically between approximately zero psig and the service pressure at a rate not in excess of 10 cycles per minute. Adequate recording instrumentation shall be provided if equipment is to be left unattended for periods of time.

(b) Tests prescribed in paragraph (a)(1) of this section shall be repeated on one random sample out of each lot of cylinders. Cylinder may then be subjected to burst test.

(c) A lot is defined as a group of cylinders fabricated from the same heat of steel, manufactured by the same process and heat treated in the same equipment under the same conditions of time, temperature, and atmosphere, and shall not exceed a quantity of 200 cylinders.

(d) All cylinders used in cycling tests must be destroyed.

**§ 78.44–16 Burst test.**

(a) One cylinder taken at random out of each lot of cylinders shall be hydrostatically tested to destruction.

**§ 78.44–17 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius, test one cylinder taken at random out of each lot of cylinders after hydrostatic test. Axis of cylinder must be at 90° angle to knife edges.

**§ 78.44–18 Physical tests.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 cylinder taken at random out of each lot of cylinders.

(b) Specimens must be: Gauge length at least 24 times thickness with width not over six times thickness. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000.

[1] Available for a nominal charge from the American Standards Association, 70 East 45th Street, New York 17, New York and the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.44–19 Magnetic particle inspection.**

(a) Inspection shall be performed on inside of container before closing and externally on the finished container after heat treatment. Evidence of discontinuities, which in the opinion of a qualified inspector may appreciably weaken or decrease the durability of the cylinder, shall be cause for rejection.

**§ 78.44–20 Leakage test.**

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by dry gas or dry air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾ inch in diameter, including the closure, for at least one minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected (see Notes 1, 2, and 3 and § 78.44–22).

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.44–21 Acceptable results of tests.**

(a) Flattening required without cracking to ten times the wall thickness of the cylinder.

(b) Physical tests:

(1) Elongation at least 6 percent in gauge length of 24 times wall thickness.

(2) Tensile strength shall not exceed 160,000 pounds per square inch.

(c) Burst pressure shall be at least 4/3 times the test pressure.

(d) Cycling—at least 10,000 pressurizations.

**§ 78.44–22 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding or spinning is not authorized.

**§ 78.44–23 Marking.**

(a) Cylinders shall be marked by low stress type steel stamping in an area and to a depth which will insure that the wall thickness measured from the root of the stamping to the interior surface is equal to or greater than the minimum prescribed wall thickness. Stamping must be permanent and legible. Stamping on side wall not authorized. The following markings shall appear:

(1) ICC–3HT followed by the service pressure (for example, ICC–3HT1800, etc.).

(2) A serial number and an identifying symbol (letters); location[1] of number to be just below the ICC mark; location of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test such as 5–59 for May 1959, so placed that dates of subsequent tests can be easily added; and word "SPUN" or "PLUG" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process, or affected by plugging.

(4) Elastic expansion in cubic centimeters to the nearest 1 percent near the date of test.

**§ 78.44–24 Name plates.**

(a) Authorized, provided that they can be permanently and securely attached to the cylinder. Attachment by either brazing or welding is not permitted. Attachment by soldering is permitted provided steel temperature does not exceed 500° F.

**§ 78.44–25 Inspector's report.**

(a) Required to be clear, legible, and in the following form:

(Place) _____
(Date) _____

*Gas Cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____

[1] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Example: ICC–3HT1800
1234
XY

Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long
Marks stamped into the shoulder of the cylinder are:
Specification ICC _____
Serial numbers _____ to _____ inclusive
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____
The cylinders were heat treated by the process of _____
The material used was identified by the following _____
(Heat-purchase order)
numbers _____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____ marked on the material.
(were—were not)

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–3HT were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 3HT except as follows:

**§ 78.47 Specification 4DS; inside containers, welded stainless steel for aircraft use.**

**§ 78.47–1 Compliance.**

(a) Required in all details.

**§ 78.47–2 Type, size and service pressure.**

(a) Type and size, welded stainless steel spheres (two seamless hemispheres) or circumferentially welded cylinders not over 100 pounds water capacity.

(b) Service pressure.[1] At least 500 to not over 900 pounds per square inch.

**§ 78.47–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within the limits of the United States.

**§ 78.47–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

[1] The "service pressure" limits the use of the container. It is shown by marks on container; for example ICC–4DS500 indicates the service pressure as 500 pounds per square inch.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis; provided, that a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one container out of each lot of 200 or less.

(c) Verify compliance of containers with all requirements including markings; inspect inside before closing; verify heat treatment and welding procedure as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gage; report volumetric capacity and tare weight and minimum thickness of wall noted. Verify that all tests are conducted at temperatures between 60° F. and 90° F.

(d) Render complete report to purchaser, container maker, and the Bureau of Explosives.

**§ 78.47–5 Steel.**

(a) Types 304, 321 and 347 stainless steel are authorized with proper welding procedure and complying with the following analyses:

| | Stainless steels | | |
|---|---|---|---|
| | 304 (percent) | 321 (percent) | 347 (percent) |
| Carbon (maximum) | 0.08 | 0.08 | 0.08 |
| Manganese (maximum) | 2.00 | 2.00 | 2.00 |
| Phosphorus (maximum) | .030 | .030 | .030 |
| Sulfur (maximum) | .030 | .030 | .030 |
| Silicon (maximum) | .75 | .75 | .75 |
| Nickel | 8.0/11.0 | 9.0/13.0 | 9.0/13.0 |
| Chromium | 18.0/20.0 | 17.0/20.0 | 17.0/20.0 |
| Molybdenum | | | |
| Titanium | | [1] | |
| Columbium | | | [2] |

[1] Titanium shall be not less than 5 x C and not more than 0.60%.

[2] Columbium shall be not less than 10 x C and not more than 1.0%.

**§ 78.47–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.47–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized. Defects in welded joints shall not exceed the limits specified in § 78.47–16 covering radiographic inspection.

**§ 78.47–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished container appreciably, reasonably smooth and uniform surface finish required. No abrupt change in wall thickness permitted. Certification of welders and/or process required in accordance with the sections that apply of Compressed Gas Association Standard for Welding and Brazing on Thin Walled Containers (CGA Pamphlet C–3–1954).[1]

(b) All seams of the sphere or cylinder must be fusion welded. Seams shall be of the butt type and means must be provided for accomplishing complete penetration of the joint.

**§ 78.47–9 Attachments.**

(a) Attachments to the container are authorized by fusion welding provided that such attachments are made of weldable stainless steel in accordance with § 78.47–5.

**§ 78.47–10 Wall thickness.**

(a) The minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not be over 60,000 psi. Minimum wall 0.040 inch for any diameter container.

(b) Calculation for sphere must be made by the formula:

$$S=\frac{PD}{4tE}$$

where

$S$ = Wall stress in pounds per square inch;
$P$ = Test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;

[1] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

$D$ = Outside diameter in inches;
$t$ = Minimum wall thickness in inches;
$E$ = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat zones which zone shall extend a distance of 6 times wall thickness from center of weld);
$E$ = 1.0 (for all other areas).

(c) Calculation for a cylinder must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$ = Wall stress in pounds per square inch;
$P$ = Test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;
$D$ = Outside diameter in inches;
$d$ = Inside diameter in inches.

**§ 78.47–11 Heat treatment.**

(a) The seamless hemispheres and cylinders may be stress relieved or annealed for forming. Welded container shall be stress relieved at a temperature of 775° F. ±25° after process treatment and before hydrostatic test.

**§ 78.47–12 Openings in container.**

(a) Each opening in the container must be provided with a fitting, boss, or pad of weldable stainless steel securely attached to the container by fusion welding.

(b) Attachments to a fitting, boss, or pad must be adequate to prevent leakage. Threads must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container; gaskets required, adequate to prevent leakage.

**§ 78.47–13 Safety relief devices.**

(a) Safety relief devices must be as required by Interstate Commerce Commission Regulations (see § 73.34(f) of this chapter).

**§ 78.47–14 Process treatment.**

(a) Each container shall be hydraulically pressurized in a water jacket to at least 100 percent, but not more than 110 percent, of the test pressure and maintained at this pressure for a minimum of 3 minutes. Total and permanent expansion shall be recorded and included in the inspector's report.

**§ 78.47–15 Hydrostatic test.**

(a) By water-jacket, operated so as to obtain accurate data. Pressure gage must permit reading to an accuracy of 1 percent. Expansion gage must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each container must be tested to at least 2 times service pressure.

(e) Container will then be inspected. Wall thickness lower than that required by § 78.47–10 shall be cause for rejection. Bulges and cracks shall be cause for rejection. Weld joint defects exceeding requirements of § 78.47–16 shall be cause for rejection.

**§ 78.47–16 Radiographic inspection.**

(a) Required on all welded joints which are subjected to internal pressure, except that at the discretion of the disinterested inspector, openings less than 25 percent of the container diameter need not be subjected to radiographic inspection. Evidence of any defects likely to seriously weaken the container shall be cause for rejection.

(b) Radiographic inspection shall be performed subsequent to hydrostatic test.

**§ 78.47–17 Burst test.**

(a) One container taken at random out of 200 or less shall be hydrostatically tested to destruction. Rupture pressure shall be included as part of the inspector's report.

**§ 78.47–18 Flattening test.**

(a) *Flattening test for spheres.* At the weld between parallel steel plates on a press with welded seam at right angles to the plates, test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) *Flattening test for cylinders.* Between knife edges, wedge shaped, 60° angle, rounded to ½-inch radius; test one cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.47–19 Acceptable results for flattening and burst tests.**

(a) Flattening required to 50 percent of the original outside diameter without cracking.

(b) Burst pressure shall be at least 3 times service pressure.

**§ 78.47–20 Rejected containers.**

(a) Repair of welded seams by welding prior to process treatment authorized; subsequent thereto containers must be heat treated and pass all prescribed tests.

**§ 78.47–21 Marking.**

(a) Marking on each container by stamping plainly and permanently only on a permanent attachment or on a metal nameplate permanently secured to the container by means other than soft solder, as follows:

(1) ICC–4DS followed by the service pressure (for example: ICC–4DS900).

(2) A serial number and an identifying symbol (letters) location of a number to be just below the ICC mark; location of symbol to be just below the number. The symbols and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives, duplications unauthorized;

Example: ICC–4DS900
1234
XY

(3) Inspector's official mark, near serial number, date of test (such as 8–61 for August 1961) so placed that dates of subsequent tests can be easily added.

**§ 78.47–22 Size of marks.**

(a) Of sufficient size to be legible.

**§ 78.47–23 Inspector's report.**

(a) Required to be clear, legible, and in the following form:

**§ 78.48 Specification 4; forge welded steel cylinders.**

**§ 78.48–1 Compliance.**

(a) Required in all details.

**§ 78.48–2 Type, size, and service pressure.**

(a) *Type and size.* Must be welded type; forge lap-welded seams required; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.* Must be 300 pounds per square inch.

**§ 78.48–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.48–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.48–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.48–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulphur, 0.050; *Provided,* That Bessemer steel with phosphorus not over 0.11 percent is authorized when carbon content is 0.20 percent or less.

**§ 78.48–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.48–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.48–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Cylinders closed in by spinning process not authorized.

**§ 78.48–9 Brazing or welding.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized: *Provided,* That such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

**§ 78.48–10 Wall thickness.**

(a) The wall stress shall not exceed 18,000 pounds per square inch. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$ = wall stress in pounds per square inch;
$P$ = 700 pounds per square inch;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.48–11 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat treated. Heat treatment after tests is authorized.

**§ 78.48–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads required; to be of length not less than as specified for American Standard taper pipe threads.

**§ 78.48–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(f) of this chapter).

**§ 78.48–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to pressure of at least 700 pounds per square inch.

**§ 78.48–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.48–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 [1] cylinder, or part thereof heat-treated as required, taker at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 5/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.48–17 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

*Exception:* Flattening test is required, without cracking, to 6 times wall thickness when cylinders are made of lap-welded pipe; in such case rings (crop ends) cut from each end of pipe must be tested with weld 45° or less from point of greatest stress; if a ring fails, another from the same end of pipe may be tested.

**§ 78.48–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

**§ 78.48–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck, provided that cylinders not less than 0.090" thick may be stamped on the side wall adjacent to the top head, as follows:

(1) ICC–4.

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the serial number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.48–20 Size of marks.**

(a) At least ¼" high if space permits.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variations in location authorized only when necessitated by lack of space.

*Example:*

ICC–4
1234
XY

**§ 78.48–21 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas cylinders*

Manufactured by _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC–_____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____
_____
The _____ permitted
(neckrings, footrings, etc)
in § 78.48–9 were attached by process of _____
(welding—brazing)
The material used was identified by the following _____
(heat-purchase order)
numbers _____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4 were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4 except as follows:

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long
Made by _____ Company
For _____ Company

| Serial numbers of cylinders tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters) [1] | Permanent expansion (cubic centimeters) [1] | Percent ratio of permanent expansion to total expansion [1] | Tare weight (pounds) [2] | Volumetric capacity [3] |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Volumetric capacity on 2 percent of the cylinders is acceptable.

(Signed) _____

**§ 78.49 Specification 4A; forge welded steel cylinders.**

**§ 78.49–1 Compliance.**

(a) Required in all details.

**§ 78.49–2 Type, size, and service pressure.**

(a) *Type and size.* Must be welded type; forge lap-welded seams required; not over 1,000 pounds water capacity (nominal).

(b) *Service pressure.* [1] At least 150 to not over 500 pounds per square inch.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–4A300 indicates the service pressure as 300 pounds per square inch.

**§ 78.49–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.49–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.49–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.49–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

**§ 78.49–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.49–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.49–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no fissure or other defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Cylinders closed in by spinning process not authorized.

**§ 78.49–9 Welding or brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

**§ 78.49–10 Wall thickness.**

(a) The wall stress shall not exceed 18,000 pounds per square inch for cylinders with longitudinal side seam nor 24,000 pounds per square inch for cylinders without such seam. Minimum wall 0.100" for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S = \frac{P(1.3D^2 + 0.4d^2)}{D^2 - d^2}$$

where

$S$ = wall stress in pounds per square inch;
$P$ = minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.49–11 Heat treatment.**

(a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

**§ 78.49–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required, to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

**§ 78.49–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.49–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder must be tested to at least ⅝ times service pressure.

**§ 78.49–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½'' radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.49–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 [2] cylinder, or part thereof of heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches: *Provided*, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over ⅞ inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.49–17 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

Exception: Flattening test is required, without cracking, to 6 times wall thickness when cylinders are made of lap-welded pipe; in such case rings (crop ends) cut from each end of pipe must be tested with weld 45° or less from point of greatest stress; if a ring fails, another from the same end of pipe may be tested.

**§ 78.49–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

**§ 78.49–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck, provided that cylinders not less than 0.090'' thick may be stamped on the side wall adjacent to the top head, as follows:

(1) ICC–4A followed by the service pressure (for example, ICC–4A300, etc.)

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.49–20 Size of marks.**

(a) At least ¼'' high if space permits.

**§ 78.49–21 Inspector's report.**

(a) Required to be clear, legible, and in following form:

**§ 78.50 Specification 4B; welded and brazed steel cylinders.**

**§ 78.50–1 Compliance.**

(a) Required in all details.

**§ 78.50–2 Type, size, and service pressure.**

(a) *Type and size.* Must be welded or brazed type; longitudinal seams must be forge lap-welded or brazed; not over 1,000 pounds water capacity (nominal). Cylinders closed in by spinning process not authorized.

(b) *Service pressure.* [1] At least 150 to not over 500 pounds per square inch.

**§ 78.50–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.50–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided*, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.50–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.50–5 Steel.**

(a) Open-hearth, electric or basic oxygen process steel of uniform quality. Content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

**§ 78.50–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.50–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.50–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18'' long must be protected by footrings. Seams must be made as follows:

(1) Circumferential seams: By welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) Longitudinal seams in shells: By forged lap welding, by copper brazing, by copper alloy brazing, or by silver alloy brazing. Copper alloy composition must

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:*

ICC–4A300
1234
XY

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–4B300 indicates the service pressure as 300 pounds per square inch.

be: Copper, 95 percent minimum; Silicon, 1.5 percent to 3.85 percent; Manganese, 0.25 percent to 1.10 percent. The melting point of the silver alloy brazing material must be in excess of 1000° F. When brazed, the plate edge must be lapped at least eight times the thickness of plate, laps being held in position, substantially metal to metal, by riveting or electric spot-welding; brazing must be done by using a suitable flux and by placing brazing material on one side of seam and applying heat until this material shows uniformly along the seam of the other side.

**§ 78.50–9 Welding or brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized: *Provided*, That such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

**§ 78.50–10 Wall thickness.**

(a) For outside diameters over 6" the minimum wall thickness shall be 0.090 inch. In any case the minimum wall thickness shall be such that calculated wall stress at minimum test pressure (§ 78.50–14(d)) shall not exceed the following values:

(1) 24,000 pounds per square inch for cylinders without longitudinal seam;

(2) 22,800 pounds per square inch for cylinders having copper brazed or silver alloy brazed longitudinal seam;

(3) 18,000 pounds per square inch for cylinders having forged lapped welded longitudinal seam.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test or 450 pounds per square inch whichever is the greater;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.50–11 Heat treatment.**

(a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

**§ 78.50–12 Opening in cylinders.**

(a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. Fitting, boss, or pad must be of steel suitable for the method of attachment employed, and which need not be identified or verified as to analysis, except that if attachment is by welding, carbon content must not exceed 0.25 percent. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

NOTE 1: A brass fitting may be brazed to the steel boss or flange on cylinders used as component parts of hand fire extinguishers.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.50–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f), 73.301 (i) and 73.124(a) of this chapter.)

**§ 78.50–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (1) of this paragraph must be examined under pressure of at least two times service pressure and show no defect.

**§ 78.50–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.50–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.50–17 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

*Exception:* Flattening test is required, without cracking, to 6 times wall thickness when cylinders are made of lap-welded pipe; in such case rings (crop ends) cut from each end of pipe must be tested with weld 45° or less from point of greatest stress; if a ring fails, another from the same end of pipe may be tested.

**§ 78.50–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

**§ 78.50–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, neck or valve protection collar which is permanently attached to the cylinders and forming an integral part thereof, provided that cylinders not less than 0.090 inches thick may be stamped on the side wall adjacent to top head, as follows:

(1) ICC–4B followed by the service pressure (for example, ICC–4B300, etc.).

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below the ICC mark; location[2] of symbol to be just below the serial number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark, near serial number; date of test (such as 5–50 for May 1950), so placed that date of subsequent test can be easily added.

**§ 78.50–20 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.50–21 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____
*Gas cylinders*
Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC–_____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____
_____
The _____ permitted in
(neckrings, footrings, etc)
§ 78.50–9 were attached by process of _____
_____
(welding—brazing)
The material used was identified by the following _____ numbers
(heat-purchase order)
_____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.
All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4B were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4B except as follows:

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long
Made by _____ Company
For _____ Company

| Serial numbers of cylinders tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters) [1] | Permanent expansion (cubic centimeters) [1] | Percent ratio of permanent expansion to total expansion [1] | Tare weight (pounds) [2] | Volumetric capacity [3] |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of _____ pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) _____

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 170 cubic inches.

[2] Symbol in front of or following the number with ample space between or symbol and serial number stamped into welded or brazed-on valve spud directly above the ICC specification mark located on head of cylinder are also authorized. Other variations in location authorized only when necessitated by lack of space.

*Example:*

ICC–4B300
1234
XY

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

**§ 78.51 Specification 4BA; welded or brazed steel cylinders made of definitely prescribed steels.**

**§ 78.51–1 Compliance.**

(a) Required in all details.

**§ 78.51–2 Type, size, and service pressure.**

(a) Must be welded or brazed type; not over 1,000 pounds water capacity (nominal); service pressure at least 225 and not over 500 pounds per square inch gauge. Closures welded by the spinning process not permitted.

**§ 78.51–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.51–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements of this specification. For cylinders made by the billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided*, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with specification requirements including: markings; condition of inside; tests; threads; heat treatment. Obtain samples for all tests, and check chemical analyses, witness all tests; report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Render complete report (§ 78.51–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.51–5 Steel.**

(a) Designations and limited chemical compositions of steels authorized by this specification shall be as shown in § 78.51–20, Table I.

**§ 78.51–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with the heat number.

**§ 78.51–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.51–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18 inches long must be protected by footrings. Seams must be made as follows: Minimum thickness of heads and bottoms shall be not less than 90 percent of the required thickness of the side wall.

(b) Circumferential seams. By welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and must be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(c) Longitudinal seams in shells: By copper brazing, copper alloy brazing, or by silver alloy brazing. Copper alloy composition must be: Copper 95 percent minimum, Silicon 1.5 percent to 3.85 percent, Manganese 0.25 percent to 1.10 percent. The melting point of the silver alloy brazing material must be in excess of 1,000° F. The plate edge must be lapped at least eight times the thickness of plate, laps being held in position, substantially metal to metal, by riveting or by electric spot-welding. Brazing must be done by using a suitable flux and by placing brazing material on one side of seam and applying heat until this material shows uniformly along the seam of the other side.

(1) Strength of longitudinal seam: Copper brazed longitudinal seam must have strength at least 3/2 times the strength of the steel wall.

**§ 78.51–9 Welding and brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

**§ 78.51–10 Wall thickness.**

(a) For outside diameters over 6" the minimum wall thickness shall be 0.078". In any case the minimum wall thickness shall be such that the calculated wall stress at minimum test pressure (§ 78.51–14) shall not exceed the lesser value of any of the following:

(1) The value shown in table I, § 78.51–20, for the particular material under consideration;

(2) One-half of the minimum tensile strength of the material determined as required in § 78.51–15;

(3) 35,000 pounds per square inch.

(4) Further provided that wall stress for cylinders having copper brazed longitudinal seams must not exceed 95 percent of any of the above values. Measured wall thickness shall not include galvanizing or other protective coating.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

(c) Cylinders with wall thickness less than 0.100 inch, the ratio of tangential length to outside diameter shall not exceed 4.0.

**§ 78.51–11 Heat treatment.**

(a) Each cylinder must be uniformly and properly heat treated prior to test by the applicable method shown in § 78.51–20, Table 1. Heat treatment must be accomplished after all forming and welding operations, except that when brazed joints are used, heat treatment must follow any forming and welding operations, but may be done before, during or after the brazing operations.

(b) Heat treatment is not required after welding or brazing weldable low carbon parts to attachments of similar material which have been previously welded or brazed to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

**§ 78.51–12 Openings in cylinders.**

(a) All openings must be in the heads or bases.

(b) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing, by welding, or by threads. If threads are used they must comply with the following:

(1) Threads must be clean-cut, even, without checks and cut to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(c) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.51–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f), 73.124 (a), and 73.301(f) of this chapter).

**§ 78.51–14 Hydrostatic test.**

(a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of the total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (1) of this paragraph must be examined under pressure of at least two times service pressure and show no defect.

**§ 78.51–15 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder having passed the hydrostatic test, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches, provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.51–16 Elongation.**

(a) Physical test specimens must show at least 40 percent for 2-inch gauge length length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2-inch specimens, and by 1 in other cases, for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per suqare inch to a maximum of four such increments.

**§ 78.51–17 Tests of welds.**

(Does not apply to brazed seams.)

(a) *Tests of welds. Tensile test.* A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen shall be taken across the major seam and shall be prepared and tested in accordance with and must meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(b) *Guided bend test.* A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in paragraph (b) of this section. Specimens shall be taken across the major seam and shall be prepared and tested in accordance with and shall meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

(c) *Alternate guided-bend test.* This test may be used and shall be as required by Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in § 78.51–16(a).

**§ 78.51–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

**§ 78.51–19 Marking.**

(a) Marking on each cylinder stamped as follows:

(1) ICC–4BA followed by the service pressure (for example, ICC–4BA240, etc.).

(2) A serial number and an identifying symbol, both to be of the purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives. Duplications unauthorized. Lot numbers in place of serial numbers authorized for cylinders not over 2 inches outside diameter or for cylinders with volumetric capacity not exceeding 60 cubic inches.

(3) Inspector's official mark.

(4) Date of test (such as 4–50 for April 50).

(5) Additional markings are permitted.

(b) Sequence of marks. Number shall be just below the ICC marking; identifying symbol shall be just below the number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent test can easily be added. Symbol in front of or following the number, with space between, or symbol and serial number stamped into welded or brazed-on valve spud directly above the ICC mark located on head or cylinder are also authorized. Other variations in sequence of marks authorized only when necessitated by lack of space.

(c) Location of markings. Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads not less than 0.087 inch thick.

(2) On side wall adjacent to top head for side walls not less than 0.090 inch thick.

(3) On neck, valve boss, valve protection sleeve, or similar part permanently attached to top end of cylinder.

(4) On a plate attached to the top of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least 1/16 inch thick and must be attached by welding, or by brazing at a temperature of at least 1100° F, throughout all edges of the plate.

(5) Variations in location of markings authorized only when necessitated by lack of space.

(d) Size of marks. Space permitting, at least ¼ inch high.

**§ 78.51–20 Authorized steel.**

(a) Open hearth or electric steel of uniform quality. The following chemical analyses are authorized. (See footnote 1):

[1] The welded test plate shall be of one of the heats in the lot of 200 or less which it represents, in the same condition and approximately the same thickness as the cylinder wall except that in no case shall it be of lesser thickness than that required for a one-quarter size Charpy impact specimen. The weld must be made by the same procedure and subjected to the same heat treatment as the major weld on the cylinder.

[1] A heat of steel made under any of the above specifications, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6-4 of "Supplementary Information July 1958, Alloy Steel: Semi-finished; Hot Rolled and Cold Finished Bars, July 1955" are not exceeded or provided the variation in chemical analysis is approved by the Bureau of Explosives.

[2] This designation shall not be restrictive and the commercial steel is limited in analysis shown in the table.

[3] Any suitable heat treatment in excess of 1,100° F., except that liquid quenching is not permitted.

[4] Addition of other elements to obtain alloying effect is not authorized.

[5] Ferritic grain size 6 or finer, according to ASTM E-112-58T.

[6] Only fully killed steel authorized.

**§ 78.51–21 Inspector's report.**

----------

These cylinders were made by process of ----------

The material used was type ____ authorized in table I of Spec. No. 4BA.

The material used was identified by the following ---------- numbers
(heat-purchase order)
----------

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers ----------
(were—were not)
marked on the material.

All material was inspected and all that was accepted was found free from seams, cracks, laminations and other injurious defects.

The compliance of cylinders with specification requirements was verified including markings, condition of inside, tests, threads, etc. All cylinders with defects which might prove injurious were rejected. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostratic tests, tensile tests of material, and other tests as prescribed in specification No. ICC–4BA ____ were made in the presence of the inspector and all cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

Each cylinder ---------- been equipped
(has-has not)
with safety devices as follows: ----------

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4BA except as follows:

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered ---------- to ---------- inclusive.
Size ---------- inches outside diameter by ---------- inches long
Made by ---------- Company
For ---------- Company

| Serial Nos. of cylinders tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters) [1] | Permanent expansion (cubic centimeters) [1] | Percent ratio of permanent expansion to total expansion [1] | Tare weight (pounds) [2] | Volumetric capacity [3] |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of---------- pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) ----------

**§ 78.52 Specification 4C; welded and brazed steel cylinders.**

**§ 78.52–1 Compliance.**

(a) Required in all details.

**§ 78.52–2 Type, size, and service pressure.**

(a) *Type and size.* Must be welded or brazed type; longitudinal seams must be forge lap-welded or brazed; not over 1,000 pounds water capacity (nominal). Cylinders closed in by spinning process not authorized.

(b) *Service pressure.*[1] At least 90 to not over 300 pounds per square inch.

**§ 78.52–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.52–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.52–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.52–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

**§ 78.52–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.52–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.52–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18" long must be protected by footrings. Seams must be made as follows:

(1) *Circumferential seams.* By welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) *Longitudinal seams in shells.* By forged lap welding or by copper brazing. When brazed, the plate edge must be lapped at least eight times the thickness of plate, laps being held in position, substantially metal to metal, by riveting or electric spot welding; brazing must be done by placing flux and brazing material on one side of seam and applying heat until this material shows uniformly along the seam on the other side.

**§ 78.52–9 Welding or brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130X steel which may be used with proper welding procedure.

**§ 78.52–10 Wall thickness.**

(a) The wall stress shall not exceed 18,000 pounds per square inch for cylinders with longitudinal side seam nor 24,000 pounds per square inch for cylinders without such seam: *Provided,* That a wall stress of not over 22,800 pounds per square inch is authorized for cylinders with copper brazed side seam having strength at least 3/2 times the strength of the steel wall. Minimum wall 0.090 inch for any cylinder over 5" outside diameter.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=test pressure prescribed for water jacket test or 348 pounds per square inch whichever is the greater;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.52–11 Heat treatment.**

(a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

**§ 78.52–12 Openings in cylinders and connections (valves, fuse plugs, etc.) for those openings.**

(a) Threads required to be clean cut, even, without checks, and to gauge.

(b) Taper threads, when used, to be of length not less than as specified for American Standard taper pipe threads.

(c) Straight threads having at least 6 engaged threads are authorized; to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinders; gaskets required, adequate to prevent leakage.

**§ 78.52–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.52–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–4C300 indicates the service pressure as 300 pounds per square inch.

If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows: 1 cylinder out of each lot of 200 or less; to 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defect. If tested cylinder fails, each cylinder in the lot may be tested; those passing are acceptable.

**§ 78.52–15 Flattening test.**

(a) Between knife edges, wedge, shaped, 60° angle, rounded to ½" radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.52–16 Physical test.**

(a) Required on 2 specimens cut from 1 [1] cylinder, or part thereof heat treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under approximate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.52–17 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

*Exception:* Flattening test is required, without cracking, to 6 times wall thickness when cylinders are made of lap-welded pipe; in such case rings (crop ends) cut from each end of pipe must be tested with weld 45° or less from point of greatest stress; if a ring fails, another from the same end of pipe may be tested.

**§ 78.52–18 Rejected cylinder.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

**§ 78.52–19 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, or neck, provided that cylinders not less than 0.090" thick may be stamped on the side wall adjacent to the top head, as follows:

(1) ICC–4C followed by the service pressure (for example, ICC–4C300, etc.).

(2) A serial [1] number and an identifying symbol (letters); location [2] of number to be just below the ICC mark; location [2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to the same heat treatment as the finished cylinder.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front of or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Example: ICC--4C300
1234
XY

**§ 78.52–20 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.52–21 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas cylinders*

Manufactured for _____ Company

Other marks (if any) _____
These cylinders were made by process of _____
_____
_____
The _____ permitted
(neckrings, footrings, etc.)
in § 78.52–9 were attached by process of _____
(welding—brazing)
The material used was identified by the following _____ numbers
(heat-purchase order)
_____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4C were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4C except as follows:

compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.53–20) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.53–5 Steel.**

(a) Open-hearth or electric steel of uniform and weldable quality. Content percent for the following not over: Carbon, 0.25; phosphorus, 0.045; sulphur, 0.050, except that the following steels commercially known as 4130X, Type 304, 316, 321, and 347 stainless steels may be used with proper welding procedure and complying with the following analyses:

| | 4130X | Stainless steels | | | |
|---|---|---|---|---|---|
| | | 304 (percent) | 316 (percent) | 321 (percent) | 347 (percent) |
| | *Percent* | | | | |
| Carbon | 0.25/0.35 | 0.08 | 0.08 | 0.08 | 0.08 |
| Manganese | 0.40/0.60 | 2.00 | 2.00 | 2.00 | 2.00 |
| Phosphorus | 0.04 max. | .045 | .045 | .030 | .030 |
| Sulfur | 0.05 max. | .030 | .030 | .030 | .030 |
| Silicon | 0.20/0.35 | 1.00 | 1.00 | .75 | 1.00 |
| Chromium | 0.80/1.10 | 8.0/11.0 | 10.0/14.0 | 9.0/13.0 | 9.0/13.0 |
| Molybdenum | 0.15/0.25 | 18.0/20.0 | 16.0/18.0 | 17.0/20.0 | 17.0/20.0 |
| Zirconium | | | | | |
| Nickel | | | | (1) | (2) |

[1] Titanium shall be not less than 5XC and not more than 0.60 percent.
[2] Columbium shall be not less than 10XC and not more than 1.0 percent.

[1] The "service pressure" limits the use of the container. It is shown by marks on container; for example ICC–4C300 indicates the service pressure as 300 pounds per square inch.

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of _____ pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) _____

**§ 78.53–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.53–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.53–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished container appreciably; reasonably smooth and uniform surface finish required.

**§ 78.53–9 Wall thickness.**

(a) The wall stress at minimum test pressure shall not exceed 24,000 pounds per square inch, except where steels commercially known as 4130X, Type 304, 316, 321, and 347 stainless steels are used, stress at test pressures shall not exceed 37,000 pounds per square inch. Minimum wall 0.040 inch for any diameter container.

(b) Calculation for a sphere must be made by the formula:

$$S=\frac{PD}{4tE}$$

where

$S$=wall stress in pounds per square inch;
$P$=test pressure prescribed for water jacket test, i. e., at least two times service pressure, in pounds per square inch;
$D$=outside diameter in inches;
$t$=minimum wall thickness in inches;
$E$=0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center line of weld);
$E$=1.0 (for all other areas).

(c) Calculation for a *cylinder* must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$=wall stress in pounds per square inch;
$P$=test pressure prescribed for water jacket test, i.e., at least two times service pressure, in pounds per square inch;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.53–10 Heat treatment.**

(a) The completed cylinders must be uniformly and properly heat-treated prior to tests.

**§ 78.53–11 Openings in container.**

(a) Each opening in container, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to container by brazing or by welding or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.53–12 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(f) of this chapter).

**§ 78.53–13 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Containers must be tested as follows:

(1) Each container to at least 2 times service pressure, or

(2) One container out of each lot of 200 or less to at least 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defects.

**§ 78.53–14 Flattening test for spheres and cylinders.**

(a) *Flattening test for spheres.* Between parallel steel plates on a press with welded seam at right angles to the plates; test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) *Flattening test for cylinders.* Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test one cylinder[1] taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.53–15 Physical test and specimens for spheres and cylinders.**

(a) *Physical test for spheres.* Required on 2 specimens cut from flat representative sample plate of the same heat taken at random from the steel used to produce the sphere. This flat steel from which the 2 specimens are to be cut must receive the same heat-treatment as the spheres themselves. Sample plates to be taken for each lot of 200 or less spheres.

(b) *Specimens for spheres.* Specimens must be gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when wall of sphere is not over 3/16 inch thick.

(c) *Physical test for cylinders.* Required on 2 specimens cut from 1[1] cylinder taken at random out of each lot of 200 or less.

(d) *Specimens for cylinders.* Specimens must be gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. Heating of specimen for any purpose is not authorized.

(e) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.53–16 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

(b) Elongation at least 20 percent for 2 inch gauge length or 10 percent in other cases; flattening required to 50 percent of the original outside diameter without cracking.

**§ 78.53–17 Rejected cylinders.**

(a) Reheat-treatment authorized; subsequent thereto, acceptable containers must pass all prescribed tests. Repair of welded seams by welding prior to reheat-treatment authorized.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to the same heat-treatment as the finished cylinder.

**§ 78.53–18 Marking.**

(a) Marking on each container by stamping plainly and permanently only where the metal is at least 0.09 inch thick, or on a metal nameplate permanently secured to the container by means other than soft solder, or by means that would not reduce the wall thickness, as follows:

(1) ICC–4D followed by the service pressure (for example, ICC–4D300, etc.).

(2) A serial[1] number and an identifying symbol (letters); location of number to be just below the ICC mark; location[2] of symbol to be just below the number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark, near serial number; date of test (such as 8–50 for August 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.53–19 Size of marks.**

(a) Of sufficient size to be legible.

**§ 78.53–20 Inspector's report.**

(a) Required to be clear, legible, and in the following form:

(Place) _____
(Date) _____

Gas _____
(spheres-cylinders)
Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size ____ inches outside diameter by ____ inches long.
Marks stamped into the _____
_____
(Shoulder-metal plate, § 78.53–18)
Specification ICC–_____
Serial numbers ____ to ____, inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These containers were made by process of _____
_____
The material used was identified by the following _____ numbers
(heat-purchase order)
_____

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each container was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the container. The processes of manufacture and heat treatment of containers were supervised and found to be efficient and satisfactory.

The container walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4D were made in the presence of the inspector and all material and containers accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these containers proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4D except as follows:

Exceptions: _____
_____
_____

(Signed) _____
Inspector.

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

*Example:*

ICC–4D600
1234

**§ 78.54 Specification 4B240–FLW; welded or welded and brazed cylinders with fusion-welded longitudinal seam.**

**§ 78.54–1 Compliance.**

(a) Required in all details.

**§ 78.54–2 Type, size, and service pressure.**

(a) *Type and size.* Must be welded or brazed type with longitudinal fusion-welded seam. 240 pounds nominal water capacity. Cylinders closed in by spinning process not authorized.

(b) *Service pressure.*[1] 240 pounds per square inch.

**§ 78.54–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within limits of the United States.

**§ 78.54–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.54–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.54–5 Steel.**

(a) Steel shall be plain carbon steel of American Society for Testing Materials firebox quality with carbon content not in excess of 0.25 percent.

**§ 78.54–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.54–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.54–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18" long must be protected by footrings. Seams must be made as follows:

(1) Circumferential seams by welding or by brazing: Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) Longitudinal fusion-welded seam shall be of the double-welded butt type. Filler metal may be added from one side when and if means are provided for accomplishing complete penetration and reinforcement on both sides of the joint. For welding the cylinder, procedure and operators must be qualified in accordance with the sections that apply in the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

**§ 78.54–9 Welding or brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

**§ 78.54–10 Wall thickness.**

(a) For outside diameters over 5 inches the minimum wall thickness shall be 0.090 inch. In any case the minimum wall thickness shall be such that calculated wall stress at 480 pounds per square inch shall not exceed 18,000 pounds per square inch.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$=wall stress in pounds per square inch;
$P$=480 pounds per square inch;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.54–11 Heat treatment.**

(a) Each cylinder shall be thermally stress-relieved after all initial welding and seam repair welding operations have been completed and prior to the hydrostatic test.

**§ 78.54–12 Openings in cylinders.**

(a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. Fitting, boss, or pad must be of steel suitable for the method of attachment employed, and which need not be identified or verified as to analysis, except that if attachment is by welding, carbon content must not exceed 0.25 percent. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.54–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.54–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each cylinder shall be subjected to the hydrostatic test and test pressure shall be at least two and two thirds times the service pressure. Following this test, each cylinder shall be subjected to a dry air-pressure test of two times the service pressure. The cylinder shall be thoroughly dry before air test is applied, and during test welded seams shall be examined for leaks, either by submerging the cylinders in liquid, or by painting all welded seams with a solution suitable for the detection of leaks.

(e) One finished cylinder out of each lot, which appears to the inspector to be the least likely to meet the test, shall be selected by the inspector from each lot of 200 or less successively produced and shall be hydrostatically tested to destruction and shall not burst at a pressure less than six times the service pressure.

**§ 78.54–15 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1[1] cylinder, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed 1/8 inch per minute during yield strength determination.

**§ 78.54–16 Acceptable results for physical tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test not required.

**§ 78.54–17 Weld tests.**

(a) *Guided bend test.* A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in § 78.54–15(a). Specimens shall be taken across the major seam and shall be prepared and tested in accordance with and shall meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[3]

(b) In addition to the guided bend test, a reduced section tension test shall be made transverse to the weld. The tensile strength shall be not less than 100 percent of the minimum of the specified tensile range of the base material used. Should this specimen fail to meet the requirements two additional specimens from the same cylinder shall be tested and if either of these fail to meet the requirements, the entire lot represented shall be rejected.

**§ 78.54–18 Radiographic examination.**

(a) The techniques and acceptability of radiographic inspection shall conform to the standards set forth in the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

(b) Cylinders must be examined as follows:

(1) One finished longitudinal seam shall be selected at random from each lot of 100 or less successively produced and be radiographed throughout its entire length. Should the radiographic examination fail to meet the requirements of paragraph (a) of this section, two additional seams of the same lot shall be examined, and if either of these fail to meet the requirements, each cylinder may be examined as outlined above; only those passing are acceptable.

**§ 78.54–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of brazed seams by brazing and welded seams by welding is authorized.

**§ 78.54–20 Marking.**

(a) Marking required on each cylinder by stamping plainly and permanently on shoulder, top head, or neck as follows:

(1) ICC–4B240–FLW.

(2) A serial number and an identifying symbol (letters); location[1] of number to be just below the ICC mark; location[1] of symbol to be just below the number. The symbol and numbers must be those of the purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark near serial number, date of test (such as 12–50 for December 1950), so placed that dates of subsequent test can be easily added.

**§ 78.54–21 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.54–22 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____
*Gas cylinders*
Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____

(Signed) .....

**§ 78.55 Specification 4B240ET; welded and brazed cylinders made from electric resistance welded tubing.**

**§ 78.55–1 Compliance.**

(a) Required in all details.

**§ 78.55–2 Type, spinning process, size and service pressure.**

(a) *Type.* Cylinders must be of brazed type made from electric resistance welded tubing which has been certified to have pressure tested to a fiber stress of 24,000 pounds per square inch, as calculated by the formula:

$$P=\frac{24{,}000(D^2-d^2)}{(1.3D^2+0.4d^2)}$$

where $P$ is the pressure required for pressure testing of tubing. Pressure shall be maintained for not less than 30 seconds. Lengths of tubing that leak must be rejected. No repairs permitted.

(b) *Spinning process.* Cylinders closed in by spinning process authorized.

(c) *Size.* The maximum water capacity of this type shall not exceed 12 pounds or 333 cubic inches. The maximum outside diameter of the shell shall be five inches and maximum length of shell 21 inches.

(d) *Service pressure.*[1] Must be 240 pounds per square inch.

**§ 78.55–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.55–4 Duties of inspector.**

Inspector shall: (a) Inspect all material and reject any not complying with requirements; for cylinders made by billet-piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.55–22) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.55–5 Steel.**

(a) Open hearth or electric steel of uniform quality. Plain carbon steel content percent for the following not over: carbon, 0.25; phosphorus, 0.045; sulfur, 0.050. The addition of other elements for alloying effect is prohibited.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinder; for example, ICC–4B240ET indicates the service pressure as 240 pounds per square inch.

**§ 78.55–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.55–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.55–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Heads may be attached to shells by lap brazing or may be formed integrally. The thickness of the bottom of cylinders welded or formed by spinning is, under no condition, to be less than two times the minimum wall thickness of the cylindrical shell; such bottom thicknesses to be measured within an area bounded by a line representing the points of contact between the cylinder and floor when the cylinder is in a vertical position. Seams must be made as follows:

(b) Circumferential seams: By brazing only. Heads attached to shells by the lap brazing method shall overlap not less than four times wall thickness. Brazing material shall have a melting point of not less than 1000° F. Heads must have a driving fit with the shell unless the shell is crimped, swedged, or curled over the skirt or flange of the head and be thoroughly brazed until complete penetration of the joint by the brazing material is secured. Brazed joints may be repaired by brazing.

(c) Longitudinal seams in shell: Electric resistance welded joints only. No repairs to longitudinal joints permitted.

**§ 78.55–9 Welding or brazing.**

(a) The attachment to the tops and bottoms only of cylinders by welding or brazing of neckrings, footrings, handles, bosses, pads, and valve protection rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

**§ 78.55–10 Wall thickness.**

(a) The wall stress at two times service pressure shall not exceed 18,000 pounds per square inch. Minimum thickness shall be 0.044 inch.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=2 times service pressure;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

**§ 78.55–11 Heat treatment.**

(a) Heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

(b) Cylinders with integral formed heads or bases must be subjected to a normalizing operation. Normalizing and brazing operations may be combined, provided the operation is carried out at a temperature in excess of the upper critical temperature of the steel.

**§ 78.55–12 Openings in cylinders.**

(a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. Fitting, boss, or pad must be of steel suitable for the method of attachment employed, and which need not be identified or verified as to analysis, except that if attachment is by welding, carbon content must not exceed 0.25 percent. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.55–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply (see §§ 73.34(f) and 73.301(i) of this chapter).

**§ 78.55–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) At least one cylinder selected at random out of each lot of 200 or less shall be tested as outlined in paragraphs (a), (b), and (c) of this section to at least two times service pressure.

(2) All cylinders not tested as outlined in subparagraph (1) of this paragraph must be examined under pressure of at least two times service pressure and show no defect.

(e) Each 1000 cylinders or less successively produced each day shall constitute a lot. One cylinder shall be selected from each lot and hydrostatically tested to destruction. If this cylinder bursts below five times the service pressure, then two additional cylinders must be selected and subjected to this test. If either of these cylinders fails by bursting below five times the service pressure, then the entire lot must be rejected. All cylinders constituting a lot shall be of identical size, construction, heat-treatment, finish, and quality.

**§ 78.55–15 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½" radius; test 1 cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.55–16 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from 1 cylinder, or part thereof heat-treated as required, taken at random out of each lot of 200 or less in the case of cylinders of capacity greater than 86 cubic inches and out of each lot of 500 or less for cylinders having a capacity of 86 cubic inches or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.55–17 Acceptable results for physical and flattening tests.**

(a) Elongation at least 40 percent for 2 inch gauge length or at least 20 percent in other cases; yield strength not over 73 percent of tensile strength; flattening test required, without cracking, to six times wall thickness with weld 90° from direction of applied load. Two rings cut from the ends of length of pipe used in production of a lot may be used for flattening test provided the rings accompany the lot which they represent in all thermal processing operations. At least one of the rings must pass the flattening test.

**§ 78.55–18 Leakage test.**

(a) All spun cylinders and plugged cylinders (see Notes 1 and 2) must be tested for leakage by gas or air pressure after the bottom has been cleaned and is free from all moisture. Pressure, approximately the same as but no less than service pressure, must be applied to one side of the finished bottom over an area of at least 1/16 of the total area of the bottom but not less than ¾" in diameter, including the closure, for at least 1 minute, during which time the other side of the bottom exposed to pressure must be covered with water and closely examined for indications of leakage. Leakers must be rejected. (See § 78.55–19 (a) (1).)

NOTE 1: A spun cylinder is one in which an end closure in the finished cylinder has been welded by the spinning process.

NOTE 2: A plugged cylinder is one in which a permanent closure in the bottom of a finished cylinder has been effected by a plug.

NOTE 3: As a safety precaution, if the manufacturer elects to make this test before the hydrostatic test, he should design his apparatus so that the pressure is applied to the smallest area practicable, around the point of closure, and so as to use the smallest possible volume of air or gas.

**§ 78.55–19 Rejected cylinders.**

(a) *Repairs authorized.* Leakers must be rejected, except that:

(1) Spun cylinders rejected under the provisions of § 78.55–18 may be removed from the spun cylinder category by drilling to remove defective material, tapping, and plugging.

(2) Brazed joints may be rebrazed.

(3) Subsequent to the operations noted above in subparagraphs (1) and (2) of this paragraph, acceptable cylinders must pass all prescribed tests.

**§ 78.55–20 Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, neck or valve protection collar which is permanently attached to the cylinders and forming an integral part thereof, provided that cylinders not less than 0.090 inch thick may be stamped on the side wall adjacent to top head, as follows:

(1) ICC–4B240ET.

(2) A serial[1] number and an identifying symbol (letters); location[2] of number to be just below the ICC mark; location[2] of symbol to be just below the serial number. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark, near serial number; date of test (such as 5–50 for May 1950), so placed that date of subsequent test can be easily added; and word "SPUN" or "PLUG" near ICC mark when an end closure in the finished cylinder has been welded by the spinning process or effected by plugging.

**§ 78.55–21 Size of marks.**

(a) At least ¼" high if space permits.

**§ 78.55–22 Inspector's report.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC– _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____
_____
_____
The _____ permitted in
(necklings, footrings, etc.)
§ 78.55–9 were attached by process of _____
_____
(welding—brazing)
The material used was identified by the following _____ numbers _____
(heat-purchase order)
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(were—were not)
marked on the material.

All material such as plates, billets and electric resistance welded tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4B–ET were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

A certificate of test on the electric resistance tubing has been obtained from the tubing manufacturer. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. ICC–4B–ET except as follows:

Exceptions _____
_____
_____
(Signed) _____
Inspector.

*Example:*

ICC–4B240ET
1234
XY

[1] Lot numbers, not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 170 cubic inches.

[2] Symbol in front of or following the number with ample space between or symbol and serial number stamped into welded or brazed-on valve spud directly above the ICC specification mark located on head of cylinder are also authorized. Other variations in location authorized only when necessitated by lack of space.

(Place) _____
(Date) _____

RECORD OF CHEMICAL ANALYSIS OF MATERIAL FOR CYLINDERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long
Made by _____ Company
For _____ Company

NOTE: Any omission of analyses by heats, if authorized, must be accounted for by notation hereon reading "The prescribed certificate of the manufacturer of material has been secured, found satisfactory, and placed on file," or by attaching a copy of the certificate.

| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of _____ pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) _____

**§ 78.56 Specification 4AA480; welded steel cylinders made of definitely prescribed steels.**

**§ 78.56–1 Compliance.**

(a) Required in all details.

**§ 78.56–2 Type, size, and service pressure.**

(a) Must be welded type, having not over 1,000 pounds water capacity (nominal). Closures welded by spinning process not permitted.

(b) Service pressure 480 pounds per square inch.

**§ 78.56–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.56–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements of this specification. For cylinders made by the billet piercing process, billets to be inspected after nick and cold break.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided*, That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with specification requirements including markings, condition of inside, tests, threads, heat treatment. Obtain samples for all tests; check chemical analyses; witness all tests; report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Render complete report (§ 78.56–21) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.56–5 Steel.**

(a) The limiting chemical composition of steel authorized by this specification shall be as shown in § 78.56–20, table I.

**§ 78.56–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with the heat number.

**§ 78.56–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.56–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Exposed bottom welds on cylinders over 18 inches long must be protected by footrings. Minimum thickness of heads and bottoms shall be not less than 90 percent of the required thickness of the side wall. Seams must be made as follows:

(b) Circumferential seams: By welding. Brazing is not authorized.

(c) Longitudinal seams: Not permitted.

**§ 78.56–9 Welding.**

(a) The attachment to the tops and bottoms only of cylinders by welding of neckrings, footrings, bosses, pads, and valve protection rings is authorized provided that such attachments are made of weldable steel, the carbon content of which does not exceed 0.25 percent.

**§ 78.56–10 Wall thickness.**

(a) For outside diameters over 5 inches the minimum wall thickness shall be 0.078 inch. In any case the minimum wall thickness shall be such that the calculated wall stress at minimum test pressure (§ 78.56–14) shall not exceed the lesser value of either of the following:

(1) One-half of the minimum tensile strength of the material determined as required in § 78.56–15, or,

(2) 35,000 pounds per square inch.

(b) Calculation must be made by the formula:

$$S=\frac{P\ (1.3D^2+0.4d^2)}{D^2-d^2}$$

where:

$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

(c) Cylinders with wall thickness less than 0.100 inch, the ratio of tangential length to outside diameter shall not exceed 4.0.

**§ 78.56–11 Heat treatment.**

(a) Each cylinder must be uniformly and properly heat treated prior to test. Any suitable heat treatment in excess of 1100° F., is authorized, except that liquid quenching is not permitted. Heat treatment must be accomplished after all forming and welding operations.

(b) Heat treatment is not required after welding weldable low carbon parts to attachments of similar material which have been previously welded to the top or bottom of cylinders and properly heat treated, provided such subsequent welding does not produce a temperature in excess of 400° F., in any part of the top or bottom material.

**§ 78.56–12 Openings in cylinders.**

(a) All openings must be in the heads or bases.

(b) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by welding or by threads. If threads are used they must comply with the following:

(1) Threads must be clean-cut, even, without checks and cut to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads having at least 6 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(c) Closure of fitting, boss or pad must be adequate to prevent leakage.

**§ 78.56–13 Safety devices and protection for valves, safety devices, and other connections, if applied.**

(a) Must be as required by the Interstate Commerce Commission's Regulations that apply (see §§ 73.34(f), 73.124 (a), and 73.301(i) of this chapter).

**§ 78.56–14 Hydrostatic test.**

(a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy of either 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of the total volumetric expansion at test pressure.

(d) Cylinders must be tested as follows:

(1) Each cylinder, to at least 2 times service pressure.

(2) Or, 1 cylinder out of each lot of 200 or less; to at least 3 times service pressure. Others must be examined under pressure of 2 times service pressure and show no defect.

**§ 78.56–15 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder having passed the hydrostatic test, or part thereof heat-treated as required, taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches, provided, that gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.56–16 Elongation.**

(a) Physical test specimens must show at least 40 percent for 2-inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2-inch specimens and by 1 in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of four such increments.

**§ 78.56–17 Tests of welds.**

(a) *Tensile test.* A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen shall be taken across the major seam and shall be prepared and tested in accordance with and must meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(b) *Guided bend test.* A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in paragraph (a) of this section. Specimens shall be taken across the major seam and shall be prepared and tested in accordance with and shall meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

(c) *Alternate guided-bend test.* This test may be used and shall be as required by Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines—a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in § 78.56–16(a).

**§ 78.56–18 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair of welded seams by welding is authorized.

**§ 78.56–19 Marking.**

(a) Marking on each cylinder stamped as follows:

(1) ICC-4AA480.

(2) A serial number and an identifying symbol, both to be of the purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives. Duplications unauthorized.

(3) Inspector's official mark.

(4) Date of test (such as 1-54 for January 1954).

(5) Additional markings are permitted.

(b) Sequence of marks. Number shall be just below the ICC marking; identifying symbol shall be just below the number; inspector's official mark shall be near the serial number. Date of test shall be so placed that dates of subsequent test can easily be added. Symbol in front of or following the number with space between, or symbol and serial number stamped into welded valve spud directly above the ICC mark located on head of cylinder are also authorized. Other variations in sequence of marks authorized only when necessitated by lack of space.

(c) Location of markings. Markings may be stamped plainly and permanently in the following locations on the cylinder:

(1) On shoulders and top heads not less than 0.087 inch thick.

(2) On neck, valve boss, valve protection sleeve, or similar part permanently attached to top end of cylinder.

(3) On a plate attached to the top of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must be at least 1/16 inch thick and must be attached by welding, or by brazing at a temperature of at least 1,100° F., throughout all edges of the plate.

(4) Variations in location of markings authorized only when necessitated by lack of space.

(d) Size of marks. Space permitting, at least ¼ inch high.

**§ 78.56–20 Authorized steel.**

(a) Open hearth or electric steel of uniform quality and of the following chemical analyses is authorized (see footnote 1 of table):

TABLE I—AUTHORIZED MATERIALS

| Designation | Chemical analysis—limits in percent | | | |
|---|---|---|---|---|
| | 1315[1] | NAX[1] | 8CX[1] | 4017[1] |
| Carbon | 0.10/0.20 | 0.20 max | 0.20 max | 0.13/0.20. |
| Manganese | 1.10/1.65 | 0.40/0.70 | 0.70/1.00 | 0.70/1.10. |
| Phosphorus | 0.045 max | 0.045 max | 0.045 max | 0.045 max. |
| Sulfur | 0.05 max | 0.05 max | 0.045 max | 0.04 max. |
| Silicon | 0.15/0.35 | 0.50/0.90 | 0.15/0.35 | 0.25/0.35. |
| Chromium | | 0.45/0.70 | 0.15/0.50 | |
| Molybdenum | | | 0.15/0.35 | 0.26/0.35. |
| Zirconium | | | | |
| Copper | 0.40 max | 0.05/0.25 | 0.20/0.50 | |

[1] A heat of steel made under any of the above specifications, check chemical analysis of which is slightly out of the specified limits is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in "Steel Products Manual" Information July 1956, Alloy Steel: Semifinished; Hot Rolled and Cold Finished Bars, July 1955," are not exceeded; or provided the variation in chemical analysis is approved by the Bureau of Explosives.

[1] Addition of other elements to obtain alloying effect is not authorized.

[1] This designation shall not be restrictive and the commercial steel is limited in analysis shown in the table.

§ 78.56–21 Inspector's report.

These cylinders were made by process of _____
_____
The material used was type _____ authorized in table I of Spec. No. 4AA480.
The material used was identified by the following _____
(Heat-purchase order) numbers _____
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
_____
(Were—were not) marked on the material.
All material was inspected and all that was accepted was found free from seams, cracks, laminations and other injurious defects.

[1] The welded test plate shall be of one of the heats in the lot of 200 or less which it represents, in the same condition and approximately the same thickness as the cylinder wall except that in no case shall it be of lesser thickness than that required for a one-quarter size Charpy impact specimen. The weld must be made by the same procedure and subjected to the same heat treatment as the major weld on the cylinder.

[2] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

The compliance of cylinders with specification requirements including markings, condition of inside, threads, etc. All cylinders with defects which might prove injurious were rejected. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, tensile tests of material, and other tests as prescribed in specification ICC 4AA480 were made in the presence of the inspector and all cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

Each cylinder _____ been equipped (Has—has not)
with safety devices as follows: _____
_____

I hereby certify that all of those cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4AA480 except as follows:

RECORD OF HYDROSTATIC TESTS ON CYLINDERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long.
Made by _____ Company.
For _____ Company.

| Serial Nos. of cylinders tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters) [1] | Permanent expansion (cubic centimeters) [1] | Percent ratio of permanent expansion to total expansion [1] | Tare weight (pounds) [2] | Volumetric capacity [3] |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less cylinders, the check on the others must be indicated by a notation hereon reading, "Each cylinder was subjected to a pressure of _____ pounds per square inch and showed no defect."

[1] If the tests are made by a method involving the measurement of the amount of liquid forced into the cylinder by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[2] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

[3] Report approximate maximum and minimum volumetric capacity for the lot.

(Signed) _____

**§ 78.57 Specification 4L; welded cylinders insulated.**

**§ 78.57–1 Compliance.**

(a) Required in all details.

**§ 78.57–2 Type, size, service pressure [1] and service temperature.[2]**

(a) *Type and size.* Must be fusion welded; not over 1,000 pounds water capacity (nominal).

(b) The service pressure shall be more than 40 and not over 500 pounds per square inch.

(c) The service temperature shall be minus 320° F. or colder.

**§ 78.57–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.57–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements of this specification.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one cylinder out of each lot of 200 or less.

(c) Verify compliance with all specification requirements. Obtain samples for all tests. Obtain samples for check chemical analyses, where required. Witness all tests. Report volumetric capacity, tare weight (see report form), and minimum thickness of wall noted.

(d) Render complete report (§ 78.57–22) to purchaser, cylinder maker, and the Bureau of Explosives.

[1] The service pressure limits the use of the cylinder. It is shown by marks on the cylinder; for example: ICC–4L200 indicates the service pressure as 200 pounds per square inch.

[2] The service temperature is the lowest temperature at which the cylinder may be used.

**§ 78.57–5 Material.**

(a) Designations and limiting chemical compositions of steel authorized by this specification shall be as shown in § 78.57–21(a), Table I.

**§ 78.57–6 Identification of material.**

(a) Required; by any suitable method.

**§ 78.57–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.57–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. The shell portion must be a reasonably true cylinder.

(b) The heads must be seamless, concave side to the pressure, hemispherical or ellipsoidal in shape with the major diameter not more than twice the minor diameter. Minimum thickness of heads shall be not less than 90 percent of the required thickness of the sidewall. The heads must be reasonably true to shape, shall have no abrupt shape changes and the skirts must be reasonably true to round.

(c) The surface of the cylinder must be insulated. Any insulating material must be fire resistant. The insulation must be covered with a steel jacket of not less than 0.060 inch thickness so constructed that moisture cannot come in contact with the insulating material. The construction must be such that the total heat transfer from the atmosphere at ambient temperature to the contents of the cylinder shall not exceed 0.0005 B. t. u. per hour per degree F differential in temperature per pound of water capacity of the cylinder.

**§ 78.57–9 Welding.**

(a) All seams of the cylinder must be fusion welded. Means must be provided for accomplishing complete penetration of the joint. Only butt or joggle butt joints for the cylinder seams are authorized. All joints in the cylinder must be in reasonably true alignment.

(b) All attachments to the sidewalls and heads of the cylinder must be by fusion welding and must be of a weldable material complying with the impact requirements of § 78.57–17 (d).

(c) For welding the cylinder, each procedure and operator shall be qualified in accordance with the sections that apply in the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[1] In addition, impact tests of the weld shall be performed in accordance with § 78.57–17(d) as part of the qualification of each welding procedure and operator.

(d) Brazing, soldering and threading are permitted only for joints not made directly to the cylinder body. Threads must comply with § 78.57–12.

**§ 78.57–10 Wall thickness.**

(a) The minimum wall thickness of the cylinder shall be such that the calculated wall stress at minimum required test pressure shall not exceed the least value of the following:

(1) 45,000 pounds per square inch.

(2) One-half of the minimum tensile strength across the welded seam determined as required in § 78.57–17 (a).

(3) One-half of the minimum tensile strength of the base metal determined as required in § 78.57–15.

(4) The yield strength of the base metal determined as required in § 78.57–15.

(5) Further provided that wall for cylinders having longitudinal seams must not exceed 85 percent of the above value, whichever applies.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where:

$S$ = wall stress in pounds per square inch;
$P$ = minimum test pressure prescribed for hydrostatic test;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.57–11 Heat treatment.**

(a) *Permissible.* If heat treatment is used each cyclinder must be uniformly and properly heat treated as required in § 78.57–21(a), Table I, after all forming and prior to test.

**§ 78.57–12 Openings in cylinder.**

(a) Openings permitted in heads only. They must be circular and shall not exceed 3 inches diameter or ⅓ of the cylinder diameter, whichever is the smaller. Each opening in the cylinder must be provided with a fitting, boss or pad securely attached to the cylinder body by fusion welding. Attachments to a fitting, boss or pad may be made by welding, brazing, soldering or threading. Threads must comply with following:

(1) Threads must be clean cut, even, without checks and cut to gauge.

[1] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, N. Y.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads must have at least 4 engaged threads and have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, inert to the commodity and adequate to prevent leakage.

**§ 78.57–13 Safety devices and pressure control valves.**

(a) Must be as required by Interstate Commerce Commission Regulations that apply (§§ 73.34(f), and 73.304(f) of this chapter).

**§ 78.57–14 Hydrostatic test.**

(a) Each cylinder before insulating and jacketing must be examined under a pressure of at least 2 times the service pressure, maintained for at least 30 seconds without evidence of leakage, visible distortion or other defect. Pressure gauge must permit reading to accuracy of 1 percent.

**§ 78.57–15 Physical test.**

(a) Determine yield strength, tensile strength, and elongation on 2 specimens selected from material of each heat and in the same condition as that in the completed cylinder.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or, gauge length 2 inches with width not over 1½ inches; or, gauge length at least 24 times thickness with width not over 6 times thickness (authorized when cylinder wall is not over 3/16 inch thick). The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within one inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical tests detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load"), corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic expansion of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on the elastic modulus of the material used. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain reference shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.57–16 Acceptable results for physical tests.**

(a) Physical properties must meet the limits specified in § 78.57–21(a), Table I, for the particular steel in the annealed condition. If heat treatment is not used, the specimens must show at least 20 percent elongation for 2-inch gauge length except that the percentage may be reduced numerically by 2 for each 75,000 pounds per square inch increment of tensile strength above 100,000 pounds per square inch to a maximum of 5 such increments. Yield strength and tensile strength must meet the requirements of § 78.57–21(a), Table I.

**§ 78.57–17 Tests of welds.**

(a) *Tensile test.* A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen shall be taken across the major seam and shall be prepared and tested in accordance with and must meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954). Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fails to meet the requirements, the entire lot represented shall be rejected.

(b) *Guided bend test.* A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in § 78.57–17(a) and from any other seam or equivalent welded test plate if the seam is welded by a procedure different from that used for the major seam. Specimens shall be taken across the particular seam being tested and shall be prepared and tested in accordance with and shall meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

(c) *Alternate guided-bend test.* This test may be used and shall be as required by Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954). The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines—

[1] The welded test plate shall be in the same condition and approximately the same thickness as the cylinder wall and shall be of material from one of the heats used in the lot of cylinders which it represents, except test plates for impact tests shall comply with § 78.57–17(d)(1). The test plate shall be welded by the same welding procedure as used on the particular cylinder seam being qualified and shall be subjected to the same heat treatment.

[2] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 100,000 pounds per square inch, as provided in § 78.57–16 (a).

(d) *Impact tests.* One set of three impact test specimens (for each test) shall be prepared and tested for determining the impact properties of the deposited weld metal (1) as part of the qualification of the welding procedure, (2) as part of the qualification of the operators, (3) for each "heat" of welding rod or wire used, and (4) for each 1,000 feet of weld made with the same heat of welding rod or wire.

(1) All impact test specimens shall be of the Charpy type, keyhole or milled U-notch, and shall conform in all respects to Figure 3 of ASTM E–23–60T. Each set of impact specimens shall be taken across the weld and have the notch located in the weld metal. When the cylinder material thickness is 2.5 mm or thicker, impact specimens shall be cut from a cylinder or welded test plate used for the tensile or bend test specimens. The dimension along the axis of the notch shall be reduced to the largest possible of 10 mm, 7.5 mm, 5mm or 2.5 mm, depending upon cylinder thickness. When the material in the cylinder or welded test plate is not of sufficient thickness to prepare 2.5 mm impact test specimens, 2.5 mm specimens shall be prepared from a welded test plate made from ⅛ inch thick material meeting the requirements specified in § 78.57–21(a), Table I, and having a carbon analysis of .05 minimum, but not necessarily from one of the heats used in the lot of cylinders. The test piece shall be welded by the same welding procedure as used on the particular cylinder seam being qualified and shall be subjected to the same heat treatment.

(2) Impact test specimens shall be cooled to the design service temperature. The apparatus for testing the specimens must conform to the requirements of ASTM Standard E–23–60T. The test piece, as well as the handling tongs, shall be cooled for a length of time sufficient to reach the service temperature. The temperature of the cooling device shall be maintained within a range of plus or minus 3° F. The specimen shall be quickly transferred from the cooling device to the anvil of the testing machine and broken within a time lapse of not more than six seconds.

(3) The impact properties of each set of impact specimens shall be not less than the values in the following table:

| Size of specimen | Minimum impact value required for average of each set of three specimens (ft-lb) | Minimum impact value permitted on one specimen only of a set of three (ft-lb) |
|---|---|---|
| 10 mm x 10 mm | 15 | 10 |
| 10 mm x 7.5 mm | 12.5 | 8.5 |
| 10 mm x 5 mm | 10 | 7.0 |
| 10 mm x 2.5 mm | 5 | 3.5 |

(4) When the average value of the three specimens equals or exceeds the minimum value permitted for a single specimen and the value for more than

one specimen is below the required average value, or when the value for one specimen is below the minimum value permitted for a single specimen, a retest of three additional specimens shall be made. The value of each of these retest specimens shall equal or exceed the required average value. When an erratic result is caused by a defective specimen, or there is uncertainty in test procedure, a retest is authorized.

**§ 78.57–18 Radiographic examination.**

(a) The techniques and acceptability of radiographic inspection shall conform to the standards set forth in the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).

(b) Cylinders must be examined as follows:

(1) One finished longitudinal seam shall be selected at random from each lot of 100 or less successively produced and be radiographed throughout its entire length. Should the radiographic examination fail to meet the requirements of paragraph (a) of this section, two additional seams of the same lot shall be examined, and if either of these fail to meet the requirements, each cylinder may be examined as outlined above; only those passing are acceptable.

**§ 78.57–19 Rejected cylinders.**

(a) Welds may be repaired by suitable methods of fusion welding; reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests.

**§ 78.57–20 Marking.**

(a) Marking required by stamping plainly and permanently on shoulder or top head of jacket or on a permanently attached plate or head protective ring as follows:

(1) ICC–4L followed by the service pressure (for example, ICC–4L200).

(2) ST followed by service temperature (for example, ST–423 F) on cylinders having a service temperature below minus 320° F. only; location to be just below the ICC mark.

(3) Serial number and identifying symbol; location of number to be just below the service temperature or ICC mark; location of symbol to be just below the number. The symbol and numbers must be those of the purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications not authorized.

(4) Maximum weight of content (Max. Content 00#) on cylinders having a service temperature below minus 320° F. only; location near symbol.

Examples:

| *Service temperature minus 320° F.* | *Service temperature below minus 320° F.* |
|---|---|
| ICC–4L200 | ICC–4L200 |
| 1234 | ST–423F |
| XY | 1234 |
| | XY |
| | MAX. CONTENT 00# |

(5) Inspector's official mark, date of test (such as 10–55 for October 1955), near serial number.

(6) Size of markings at least ¼ inch high if space permits.

(b) Except for serial number, all markings prescribed in paragraph (a) of this section must be duplicated on each cylinder by any suitable means.

**§ 78.57–21 Authorized steels.**

(a) Electric furnace steel of uniform quality. The following chemical analyses and physical properties are authorized.

TABLE I—AUTHORIZED MATERIALS

| Designation | Chemical analysis, limits in percent; stainless steel; type 304 [1] [2] |
|---|---|
| Carbon [3] (maximum) | 0.08 |
| Manganese (maximum) | 2.50 |
| Phosphorus (maximum) | 0.035 |
| Sulphur (maximum) | 0.030 |
| Silicon (maximum) | 0.85 |
| Nickel (minimum) | 8.00 |
| Chromium (minimum) | 18.00 |
| Molybdenum | ------ |
| Titanium | ------ |
| Columbium | ------ |
| | **Physical properties (annealed)** |
| Tensile strength, p. s. i. (minimum) | 75,000 |
| Yield strength, p. s. i. (minimum) | 30,000 |
| Elongation in 2-inch (minimum) (percent) | 30.0 |
| Elongation other permissible gage lengths (percent) | 15.0 |

[1] Identical to ASTM A–240, Grade S, type 304 modified.
[2] The carbon analysis shall be reported to the nearest hundredth of 1 percent.
[3] Heat treatment is authorized, and if used must be suitable and proper.

**§ 78.57–22 Inspector's report.**

(a) Required to be clear, legible and in following form:

(Place) ----------

**§ 78.58 Specification 4DA; inside containers, welded steel for aircraft use.**

**§ 78.58–1 Compliance.**

(a) Required in all details.

**§ 78.58–2 Type, size, and service pressure.**

(a) *Type and size.* Welded steel spheres (two seamless hemispheres) or circumferentially welded cylinders (two seamless drawn shells) not over 100 pounds water capacity.

(b) *Service pressure.*[1] At least 500 to not over 900 pounds per square inch.

**§ 78.58–3 Inspection by whom and where.**

(a) By competent and disinterested inspector acceptable to the Bureau of Explosives; chemical analyses and tests, as specified, to be made within the limits of the United States.

**§ 78.58–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

(b) Verify chemical analysis of each heat of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analyses of samples taken from one container out of each lot of 200 or less.

(c) Verify compliance of containers with all requirements including markings; inspect inside before closing; verify heat treatment and welding procedure as proper; obtain samples for all tests and check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity and tare weight and minimum thickness of wall noted.

(d) Render complete report to purchaser, container maker, and the Bureau of Explosives.

**§ 78.58–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. The following chemical analyses are authorized (see Note 1):

4130

| | *Percent* |
|---|---|
| Carbon | 0.28/0.33. |
| Manganese | 0.40/0.60. |
| Phosphorus | 0.040 max. |
| Sulfur | 0.040 max. |
| Silicon | 0.20/0.35. |
| Chromium | 0.80/1.10. |
| Molybdenum | 0.15/0.25. |

NOTE 1: A heat of steel made under the above specification, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6–4 of "Supplementary Information July 1958, Alloy Steel: Semi-finished; Hot Rolled and Cold Finished Bars, July 1955," are not exceeded; or provided the variation in chemical analysis is approved by the Bureau of Explosives.

**§ 78.58–6 Identification of material.**

(a) Required; any suitable method except that plates and billets for hot-drawn containers shall be marked with heat number.

**§ 78.58–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized. Defects in welded joints shall not exceed the limits specified in § 78.58–17 covering radiographic inspection.

**§ 78.58–8 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished container appreciably, reasonably smooth and uniform surface finish required. No abrupt change in wall thickness permitted. Certification of welders and/or process required in accordance with the sections that apply of Compressed Gas Association Standards for Welding and Brazing on Thin Walled Containers (CGA Pamphlet C–3–1954).[2]

(b) All seams of the sphere or cylinders must be fusion welded. Seams shall be of the butt or joggle butt type and means must be provided for accomplishing complete penetration of the joint.

**§ 78.58–9 Welding.**

(a) Attachments to the container are authorized by fusion welding provided that such attachments are made of weldable steel, the carbon content of which must not exceed 0.25 percent except in the case of 4130 steel.

**§ 78.58–10 Wall thickness.**

(a) The minimum wall thickness shall be such that the wall stress at the minimum specified test pressure shall not exceed 67 percent of the minimum tensile strength of the steel as determined from the physical and burst tests required and shall not be over 70,000 psi. Minimum wall 0.060 inch for any diameter container.

(b) Calculation for a sphere must be made by the formula:

$$S=\frac{PD}{4tE}$$

where:
$S$ = wall stress in pounds per square inch;
$P$ = test pressure prescribed for water jacket test, i. e., at least 2 times service pressure, in pounds per square inch;
$D$ = outside diameter in inches;
$t$ = minimum wall thickness in inches;
$E$ = 0.85 (provides 85 percent weld efficiency factor which must be applied in the girth weld area and heat affected zones which zone shall extend a distance of 6 times wall thickness from center line of weld);
$E$ = 1.0 (for all other areas).

(c) Calculation for a cylinder must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where:
$S$ = wall stress in pounds per square inch;
$P$ = test pressure prescribed for water jacket test, i. e., at least 2 times service pressure, in pounds per square inch;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

**§ 78.58–11 Heat treatment.**

(a) The completed containers must be uniformly and properly heat-treated prior to tests. Heat-treatment of containers of the authorized analysis shall be as follows:

(1) All containers must be oil quenched except as noted in subparagraph (5) of this paragraph.

(2) The steel temperature on quenching shall be that recommended for the steel analysis, but in no case shall exceed 1,750° F.

(3) The steel shall be tempered at the temperature most suitable for the analysis except that in no case shall the tempering temperature be less than 1,000° F.

(4) The steel may be normalized at a temperature of 1,650° F. instead of being quenched, and containers so normalized need not be tempered.

(5) The steel coming under this specification may be quenched in molten salt bath maintained at a temperature not less than 375° F.

[1] The "service pressure" limits the use of the container. It is shown by marks on container; for example ICC–4DA500 indicates the service pressure as 500 pounds per square inch.

[2] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

**§ 78.58–12 Openings in container.**

(a) Each opening in the container must be provided with a fitting, boss, or pad of weldable steel securely attached to the container by fusion welding.

(b) Attachments to a fitting, boss, or pad must be adequate to prevent leakage. Threads must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the container; gaskets required, adequate to prevent leakage.

**§ 78.58–13 Safety devices.**

(a) Safety relief devices must be as required by the Interstate Commerce Commission's Regulations. (See § 73.34 (f) of this chapter.)

**§ 78.58–14 Hydrostatic test.**

(a) By water-jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased by 10 percent or 100 pounds per square inch, whichever is the lower.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) Each container must be tested to at least 2 times service pressure.

**§ 78.58–15 Burst test.**

(a) One container taken at random out of 200 or less shall be hydrostatically tested to destruction. Rupture pressure shall be included as part of the inspector's report.

**§ 78.58–16 Flattening test.**

(a) *Flattening test for spheres.* At the weld between parallel steel plates on a press with welded seam at right angles to the plates, test one sphere taken at random out of each lot of 200 or less after hydrostatic test. Any projecting appurtenances may be cut off (by mechanical means only) prior to crushing.

(b) *Flattening test for cylinders.* Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test one cylinder taken at random out of each lot of 200 or less, after hydrostatic test.

**§ 78.58–17 Radiographic inspection.**

(a) Required on all welded joints which are subjected to internal pressure, except that at the discretion of the disinterested inspector, openings less than 25 percent of the sphere diameter need not be subjected to radiographic inspection. Evidence of any defects likely to seriously weaken the container shall be cause for rejection.

**§ 78.58–18 Physical test and specimens for spheres and cylinders.**

(a) *Physical test for spheres.* Required on 2 specimens cut from flat representative sample plate of the same heat taken at random from the steel used to produce the sphere. This flat steel from which the 2 specimens are to be cut must receive the same heat-treatment as the spheres themselves. Sample plates to be taken for each lot of 200 or less spheres.

(b) *Specimens for spheres.* Specimens must be gauge length 2 inches with width not over 1½ inches: *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when wall of sphere is not over 3/16 inch thick.

(c) *Physical test for cylinders.* Required on 2 specimens cut from 1 cylinder taken at random out of each lot of 200 or less.

(d) *Specimens for cylinders.* Specimens must be gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches: *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16 inch thick. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. Heating of specimen for any purpose is not authorized.

(e) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 percent offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.58–19 Acceptable results for physical, flattening, and burst tests.**

(a) Elongation at least 20 percent for 2-inch gauge length or 10 percent in other cases.

(b) Flattening required to 50 percent of the original outside diameter without cracking.

(c) Burst pressure shall be at least 3 times service pressure.

**§ 78.58–20 Rejected containers.**

(a) Reheat-treatment authorized; subsequent thereto, acceptable containers must pass all prescribed tests. Repair of welded seams by welding prior to reheat-treatment authorized.

**§ 78.58–21 Marking.**

(a) Marking on each container by stamping plainly and permanently only on a permanent attachment or on a metal nameplate permanently secured to the container by means other than soft solder, as follows:

(1) ICC–4DA followed by the service pressure (for example, ICC–4DA900).

(2) A serial[1] number and an identifying symbol (letters); location of number to be just below the ICC mark; location[2] of symbol to be just below the number. The symbols and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Inspector's official mark, near serial number, date of test (such as 8–50 for August 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.58–22 Size of marks.**

(a) Of sufficient size to be legible.

**§ 78.58–23 Inspector's report.**

(a) Required to be clear, legible, and in the following form:

(Place) _____
(Date) _____

Gas _____
(Spheres-cylinders)
Manufactured for _____ Company.
Location at _____
Manufactured by _____ Company.
Location at _____
Consigned to _____ Company.
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks stamped into the _____
(Shoulder-metal plate, § 78.58–21.)
Specification ICC _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____
Tare weights (yes or no) _____
Other marks (if any) _____
These containers were made by process of _____

The material used was identified by the following _____
(Heat-purchase order)
numbers _____

The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____
(Were—were not)
marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each container was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the container. The processes of manufacture and heat treatment of containers were supervised and found to be efficient and satisfactory.

The container walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–4DA were made in the presence of the inspector and all material and containers accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these containers proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4DA except as follows:

RECORD OF HYDROSTATIC TESTS ON CONTAINERS

Numbered _____ to _____ inclusive.
Size _____ inches outside diameter by _____ inches long.
Made by _____ Company.
For _____ Company.

| Serial numbers of containers tested arranged numerically | Actual test pressure (pounds per square inch) | Total expansion (cubic centimeters)[4] | Permanent expansion (cubic centimeters)[4] | Percent ratio of permanent expansion to total expansion [4] | Tare weight (pounds)[5] | Volumetric capacity |
|---|---|---|---|---|---|---|
| | | | | | | |
| | | | | | | |
| | | | | | | |

NOTE: When specifications require test for only 1 out of each lot of 200 or less containers, the check on the others must be indicated by a notation hereon reading "Each container was subjected to a pressure of _____ pounds per square inch and showed no defect."

[4] If the tests are made by a method involving the measurement of the amount of liquid forced into the container by the test pressure, then the basic data, on which the calculations are made, such as the pump factors, temperature of liquid, coefficient of compressibility of liquid, etc., must also be given.

[5] Do not include removable cap but state whether with or without valve. These weights must be accurate to a tolerance of 1 percent.

(Signed) _____

[1] Lot numbers not over 500 cylinders in each lot, authorized for cylinders not over 2 inches outside diameter and for cylinders over 2 inches outside diameter when the volumetric capacity does not exceed 60 cubic inches.

[2] Symbol in front or following the number with ample space between is also authorized. Other variation in location authorized only when necessitated by lack of space.

Example:

ICC–4DA900
1234
XY

**§ 78.59 Specification 8; steel cylinders with approved porous filling for acetylene.**

**§ 78.59–1 Compliance.**

(a) Required in all details.

**§ 78.59–2 Type and service pressure.**

(a) *Type.* Seamless except that the following is authorized: Longitudinal seam if forge lap welded; attachment of heads by welding or by brazing by dipping process; welded circumferential body seam if cylinder has no longitudinal seam.

(b) *Service pressure.*[1] 250 pounds per square inch.

**§ 78.59–3 Inspection by whom and where.**

(a) By competent and disinterested inspectors except that for cylinders made in the United States of America interested inspectors are also authorized; chemical analyses and tests, as specified, to be made within limits of the United States.

(b) Duties of shell inspector:

(1) Inspect all material and reject any not complying with requirements; for cylinders made by billet piercing process, billets to be inspected after nick and cold break.

(2) Require certified chemical analyses of steel used, signed by manufacturer thereof; also verify by check analyses of samples taken from each heat or from 1 out of each lot of 200 or less plates, shells, or tubes used.

(3) Verify compliance of cylinder shells with all shell requirements; inspect inside before closing in both ends; verify heat treatment as proper; obtain all samples for all tests and for check analyses; witness all tests; verify threads by gauge; report volumetric capacity and minimum thickness of wall noted.

(4) Prepare report on manufacture of steel shells in form prescribed in § 78.59–20 (a). Furnish one copy to manufacturer and three copies to the company that is to complete the cylinders.

(c) Duties of inspector of completed cylinders: Determine porosity of filling and tare weights; verify compliance of marking with prescribed requirements; obtain necessary copies of steel shell reports prescribed in paragraph (b) of this section; render complete reports, as prescribed in § 78.59–20 to the purchaser to the Bureau of Explosives, and to the company that has completed the manufacture of the cylinders.

**§ 78.59–4 Steel.**

(a) Open-hearth, electric or basic oxygen process steel of uniform quality. Content percent for the following not over: carbon, 0.25; phosphorus, 0.045; sulphur, 0.050.

**§ 78.59–5 Identification of steel.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

[1] Service pressure limits the use of the cylinder to 250 pounds per square inch at 70° F.

§ 78.59–6 **Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 78.59–7 **Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required.

§ 78.59–8 **Exposed bottom welds.**

(a) Exposed bottom welds on cylinders over 18" long must be protected by footrings.

§ 78.59–9 **Heat treatment.**

(a) Body and heads formed by drawing or pressing must be uniformly and properly heat treated prior to tests.

§ 78.59–10 **Openings.**

(a) Standard taper pipe threads required; length not less than as specified for American Standard pipe threads; tapped to gauge; clean cut, even, and without checks.

§ 78.59–11 **Safety devices and protection for valves, safety devices, and other connections.**

(a) If applied must be as required by the Interstate Commerce Commission's regulations that apply. (See §§ 73.34 (f) and 73.301(i) of this chapter.)

§ 78.59–12 **Hydrostatic test.**

(a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) One cylinder out of each lot of 200 or less must be hydrostatically tested to at least 750 pounds per square inch. Cylinders not so tested must be examined under pressure of between 500 and 600 pounds per square inch and show no defect. If hydrostatically tested cylinder fails, each cylinder in the lot may be hydrostatically tested and those passing are acceptable.

§ 78.59–13 **Leakage test.**

(a) By interior air or gas pressure not less than the service pressure; leakers must be rejected. Required only for cylinders with bottoms closed in by spinning.

§ 78.59–14 **Physical test.**

(a) Required on 2 specimens cut longitudinally from 1 cylinder or part thereof taken at random out of each lot of 200 or less, after heat treatment.

(b) Specimens must be: Gauge length 8" with width not over 1½"; or, gauge length 2" with width not over 1½": *Provided,* That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 3/16" thick.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

(d) Yield strength shall not exceed 73 percent of tensile strength. Elongation must be at least 40 percent in 2 inch or 20 percent in other cases.

§ 78.59–15 **Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

§ 78.59–16 **Porous filling.**

(a) Cylinders must be filled with an approved porous material of such structure that it will not disintegrate or sag when wet with solvent or when subjected to normal service. The porous filling material shall be uniform in quality and free of voids, except that a well drilled into the filling material beneath the valve is authorized: *Provided,* That such a well be filled with a material of such type that the functions of the filling material are not impaired. Overall shrinkage of the filling material is authorized, provided the total clearance between the cylinder shell and filling material, after solvent has been added, does not exceed ½ of 1 percent of the respective diameter or length but in no case to exceed ⅛ inch measured diametrically and longitudinally and that such clearances do not impair the functions of the filling material. In all cases, the filling material as installed in the cylinder must be approved by the Bureau of Explosives.

(b) Porosity of filling to be 80 percent or less except that filling with a porosity in excess of 80 percent but not in excess of 92 percent, may be used when tested with satisfactory results under the supervision of the Bureau of Explosives. When the porous mass has a porosity in excess of 80 percent but not in excess of 83 percent, the pores shall be uniform and shall not be visible at a magnification of 200 diameters. When the porous mass has a porosity in excess of 83 percent but not in excess of 92 percent, the pores shall be uniform and shall not be visible at a magnification of 500 diameters. A cylinder taken at random from a lot of 200 or less must be tested for porosity providing the porosity of each cylinder is not known. Should test cylinders fail, test of each cylinder of the lot is authorized, cylinders passing the test to be acceptable.

(c) For filling that is molded and dried before insertion in cylinders, porosity test may be made on sample block taken at random from material to be used.

(d) The porosity of the filling material shall be determined; the amount of solvent at 70° F. for a cylinder:

(1) Having shell volumetric capacity above 20 pounds water capacity (nominal) shall not exceed the following:

| Percent porosity of filler: | *Maximum acetone solvent percent shell capacity by volume* |
|---|---|
| 90 to 92 | 43.4 |
| 87 to 90 | 42.0 |
| 83 to 87 | 40.0 |
| 80 to 83 | 38.6 |
| 75 to 80 | 36.2 |
| 70 to 75 | 33.8 |
| 65 to 70 | 31.4 |

(2) Having volumetric capacity of 20 pounds or less water capacity (nominal), shall not exceed the following:

| Percent porosity of filler: | *Maximum acetone solvent percent shell capacity by volume* |
|---|---|
| 90 to 92 | 41.8 |
| 83 to 90 | 38.5 |
| 80 to 83 | 37.1 |
| 75 to 80 | 34.8 |
| 70 to 75 | 32.5 |
| 65 to 70 | 30.2 |

§ 78.59–17 **Tare weight.**

(a) Tare weight referred to in §§ 78.59–1 to 78.59–21 shall be the combined weight of cylinder proper, porous filling, valve, and solvent, but without removable cap.

§ 78.59–18 **Marking.**

(a) Marking on each cylinder by stamping plainly and permanently on or near the shoulder, top head, neck or valve protection collar which is permanently attached to the cylinder and forming integral part thereof, as follows:

(1) ICC–8.

(2) A serial number and an identifying symbol (letters) grouped[1] above or below the ICC mark. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

[1] Variation in location authorized only when necessitated by lack of space.
*Example:*

ICC–8
1234
XY

(4) Tare weight of cylinder in pounds and ounces.

(5) Cylinders, not completed, when delivered must each be marked for identification of each lot of 200 or less.

§ 78.59–19 **Size of marks.**

(a) At least ⅛" high for cylinders less than 4" inside diameter and at least ¼" high for larger cylinders.

§ 78.59–20 **Inspector's report.**

(a) Report to cover manufacture of acetylene shells; require to be clear, legible, and in the following form:

Each cylinder has been equipped with safety devices _____

_____

A certified report of manufacture and test of the steel shells is attached hereto.

I hereby certify that, subject to the acceptability of the reports covering the steel shells, all of these cylinders proved satisfactory in every way and comply with the requirements of the Interstate Commerce Commission specification No. 8.

Signed _____
(Inspector)

**§ 78.59–21 Additional type.**

(a) For seamless cylinders, contracted for by the United States Navy or United States Coast Guard, made of steel commercially known as 4130X the prescribed limitations of carbon content, yield point, and elongation of steel are hereby waived provided the cylinders otherwise comply with §§ 78.59–1 to 78.59–20 and the following conditions:

(b) The following chemical analysis is authorized. (See Note 1.)

| Designation: | *4130X (percent)* |
|---|---|
| Carbon | 0.25/0.35 |
| Manganese | 0.40/0.90 |
| Phosphorus | 0.04 max. |
| Sulphur | 0.05 max. |
| Silicon | 0.20/0.35 |
| Chromium | 0.80/1.10 |
| Molybdenum | 0.15/0.25 |
| Zirconium | |
| Nickel | |

NOTE 1: A heat of steel made under the above specification, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6–4 of "Supplementary Information July 1958, Alloy Steel: Semi-finished, Hot Rolled and Cold Finished Bars, July 1955," are not exceeded; or provided the variation in chemical analysis is approved by the Bureau of Explosives.

(c) Minimum wall thickness must be such that the wall stress under interior pressure of 1,000 pounds per square inch will not exceed 18,000 pounds per square inch when calculated by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=1,000 pounds per square inch;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

(d) The elongation of the steel must be at least 20 percent in 2 inches.

(e) The test pressure under § 78.59–12 must be at least 1,000 pounds per square inch.

(f) Flattening test: Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test 1 cylinder [1] taken at random out of each lot of 200 or less, after hydrostatic test. The cylinders must pass test without cracking to 6 times wall thickness.

(g) Reports of manufacture and tests of the cylinder shells must include the following additional information: Chemical analysis data on manganese, chromium, molybdenum, and other alloy materials present, if any; definite statement as to the heat-treatment used.

**§ 78.60 Specification 8AL; steel cylinders with approved porous filling for acetylene.**

**§ 78.60–1 Compliance.**

(a) Required in all details.

**§ 78.60–2 Type and service pressure.**

(a) *Type.* Seamless except that the following is authorized: Attachment of heads by welding or by brazing by dipping process; welded circumferential body seam. Longitudinal seams not authorized.

(b) *Service pressure.* [2] 250 pounds per square inch.

[1] For lots of 30 or less, physical and flattening tests are authorized to be made on a ring at least 8 inches long cut from each cylinder and subjected to same heat treatment as the finished cylinder.

[2] Service pressure limits the use of the cylinder to 250 pounds per square inch at 70° F.

**§ 78.60–3 Inspection by whom and where.**

(a) By competent and disinterested inspectors except that for cylinders made in the United States of America interested inspectors are also authorized; chemical analyses and tests, as specified, to be made within limits of the United States.

(b) Duties of shell inspector. Inspect all material and reject any not complying with requirements; for cylinders made by billet piercing process, billets to be inspected after nick and cold break.

(1) Require certified chemical analyses of steel used, signed by manufacturer thereof; also verify by check analyses of samples taken from each heat or from 1 out of each lot of 200 or less plates, shells, or tubes used.

(2) Verify compliance of cylinder shells with all shell requirements; inspect inside before closing in both ends; verify heat treatment as proper; obtain all samples for all tests and for check analyses; witness all tests; verify threads by gauge; report volumetric capacity and minimum thickness of wall noted.

(3) Report percentage of each specified alloying element in the steel. Prepare report on manufacture of steel shells in form prescribed in § 78.60–24 (a). Furnish one copy to manufacturer and three copies to the company that is to complete the cylinders.

(c) Duties of inspector of completed cylinders. Determine porosity of filling and tare weights; verify compliance of marking with prescribed requirements; obtain necessary copies of steel shell reports prescribed in paragraph (b) of this section; render complete reports, as prescribed in § 78.60–24, to the purchaser, to the Bureau of Explosives, and to the company that has completed the manufacture of the cylinders.

**§ 78.60–4 Authorized steel.**

(a) Open hearth or electric steel of uniform quality. The following chemical analyses are authorized. See footnote 1 of table.

TABLE I—AUTHORIZED MATERIALS

| Designation | Chemical analysis—limits in percent | | | | | |
|---|---|---|---|---|---|---|
| | 1315 [2 6] | HIS [2 6] | MAY [2 6] | NAX [2 6] | COR [2 6] | |
| Carbon | 0.10/0.20 | 0.12 maximum | 0.12 maximum | 0.20 maximum | 0.12 maximum | |
| Manganese | 1.10/1.65 | 0.50/0.90 | 0.50/1.00 | 0.45/0.75 | 0.20/0.50 | |
| Phosphorus | 0.045 maximum | 0.05/0.12 | 0.12 maximum | 0.045 maximum | 0.07/0.15 | |
| Sulfur | 0.05 maximum | 0.05 maximum | 0.05 maximum | 0.05 maximum | 0.05 maximum | |
| Silicon | 0.15/0.35 | 0.15 maximum | 0.10/0.50 | 0.50/0.90 | 0.25/0.75 | |
| Chromium | | | 0.40/1.00 | 0.45/0.70 | 0.50/1.25 | |
| Molybdenum | | 0.05/0.18 | | | | |
| Zirconium | | | | 0.05/0.25 | | |
| Nickel | | 0.45/0.75 | 0.50/1.00 | | 0.65 maximum | |
| Copper | 0.40 maximum | 0.95/1.30 | 0.20/0.50 | | 0.25/0.55 | |
| Aluminum | | 0.12/0.27 | | | | |
| Columbium | | | | | | |
| Heat treatment authorized. | (4) | (4) | (4) | (4) | (4) | |
| Maximum stress | 35,000 | 35,000 | 35,000 | 35,000 | 35,000 | |
| | SCX [2 6] | 4017 [2 6] | OTY [2 6] | RDT [2 4 6 c] | YOL [2 4 6 c] | GLX-50-W [2 6] |
| Carbon | 0.20 maximum | 0.13/0.20 | 0.15 maximum | 0.12 maximum | 0.15 maximum | 0.10/0.20. |
| Manganese | 0.60/1.00 | 0.75/1.10 | 0.90/1.40 | 0.50/1.00 | 0.30/0.60 | 0.50/1.00. |
| Phosphorus | 0.045 maximum | 0.040 maximum | 0.09/0.135 | 0.040 maximum | 0.04 maximum | 0.04 maximum. |
| Sulfur | 0.045 maximum | 0.040 maximum | 0.040 maximum | 0.050 maximum | 0.05 maximum | 0.05 maximum. |
| Silicon | 0.15/0.30 | 0.25/0.35 | 0.10 maximum | | | 0.10 maximum. |
| Chromium | 0.15/0.50 | | | | | |
| Molybdenum | 0.15/0.35 | 0.25/0.35 | | 0.10/0.30 | | |
| Zirconium | | | | | | |
| Nickel | | | | 0.50/1.20 | 1.50/2.00 | |
| Copper | 0.20/0.50 | | 0.30/0.70 | 0.50/1.00 | 0.75/1.25 | |

| Heat treatment authorized. | (4) | (4) | (4) | (4) | (4) | 0.010/0.040. |
| Maximum stress | 35,000 | 35,000 | 35,000 | 35,000 | 35,000 | (3). 35,000. |

[1] A heat of steel made under any of the above specifications, check chemical analysis of which is slightly out of the specified range, is acceptable, if satisfactory in all other respects, provided the tolerances published by the American Iron and Steel Institute in Table 6–4 of "Supplementary Information July 1958, Alloy Steel: Semifinished; Hot Rolled and Cold Finished Bars, July 1955," are not exceeded, or provided the variation in chemical analysis is approved by the Bureau of Explosives.

[2] This designation shall not be restrictive and the commercial steel is limited in analysis shown in the table.

[3] Any suitable heat treatment in excess of 1,100° F., except that liquid quenching is not permitted.

[4] Addition of other elements to obtain alloying effect is not authorized.

[5] Ferritic grain size 6 or finer, according to ASTM E–112–55T.

[6] Only fully killed steel authorized.

**§ 78.60–5 Identification of steel.**

(a) Required; any suitable method except that plates and billets for hot-drawn cylinders shall be marked with heat number.

**§ 78.60–6 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.60–7 Manufacture.**

(a) By best appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required.

**§ 78.60–8 Footrings.**

(a) Exposed bottom welds on cylinders over 18" long must be protected by footrings.

**§ 78.60–9 Welding or brazing.**

(a) The attachment to the tops or bottoms only of cylinders by welding or brazing of neckrings, footrings, handlers, bosses, pads, and valve protecting rings is authorized provided that such attachments and the portion of the container to which they are attached are made of weldable steel, the carbon content of which must not exceed 0.25 percent.

(b) Heat treatment is not required after welding or brazing weldable low carbon parts to attachments, specified in paragraph (a) of this section, of similar material which have been previously welded or brazed to the top or bottom of cylinders and properly heat treated, provided such subsequent welding or brazing does not produce a temperature in excess of 400° F. in any part of the top or bottom material.

**§ 78.60–10 Wall thickness; wall stress.**

(a) The calculated wall stress at 750 pounds per square inch shall not exceed 35,000 pounds per square inch, or one-half of the minimum ultimate strength of the steel as determined in § 78.60–16, whichever value is the smaller. Measured wall thickness shall not include galvanizing or other protective coating.

(1) Calculation of wall stress must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where
$S$=wall stress in pounds per square inch;
$P$=750 pounds per square inch (minimum test pressure);
$D$=outside diameter in inches;
$d$=inside diameter in inches.

Either $D$ or $d$ must be calculated from the relation $D=d+2t$, where $t$=minimum wall thickness.

(2) Cylinders with wall thickness less than 0.100 inch, the ratio of straight side wall length to outside diameter shall not exceed 3.5.

(3) For cylinders having outside diameter over 5 inches, the minimum wall thickness shall be 0.087 inch.

**§ 78.60–11 Heat treatment.**

(a) Each cylinder must be uniformly and properly heat treated, prior to tests, by any suitable method in excess of 1100° F. Heat treatment must be accomplished after all forming and welding operations, except that when brazed joints are used, heat treatment must follow any forming and welding operations but may be done before, during, or after the brazing operations. Liquid quenching not authorized.

**§ 78.60–12 Openings.**

(a) Standard taper pipe threads required; length not less than as specified for American Standard pipe threads; tapped to gauge; clean cut, even, and without checks.

**§ 78.60–13 Safety devices and protection for valves, safety devices, and other connections.**

(a) If applied must be as required by the Interstate Commerce Commission's regulations that apply. (See §§ 73.34(f) and 73.301(i) of this chapter.)

**§ 78.60–14 Hydrostatic test.**

(a) By water jacket, or other suitable method, operated so as to obtain accurate data. Pressure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied after heat-treatment and previous to the official test must not exceed 90 percent of the test pressure.

(c) Permanent volumetric expansion must not exceed 10 percent of total volumetric expansion at test pressure.

(d) One cylinder out of each lot of 200 or less must be hydrostatically tested to at least 750 pounds per square inch. Cylinders not so tested must be examined under pressure of between 500 and 600 pounds per square inch and show no defect. If hydrostatically tested cylinder

fails, each cylinder in the lot may be hydrostatically tested and those passing are acceptable.

**§ 78.60–15 Leakage test.**

(a) By interior air or gas pressure not less than the service pressure; leakers must be rejected. Required only for cylinders with bottoms closed in by spinning.

**§ 78.60–16 Physical test.**

(a) Required on 2 specimens cut longitudinally from 1 cylinder or part thereof taken at random out of each lot of 200 or less, after heat treatment.

(b) Specimens must be: Gauge length 8" with width not over 1½"; or, gauge length 2" with width not over 1½": *Provided*, That gauge length at least 24 times thickness with width not over 6 times thickness is authorized when cylinder wall is not over 5/16" thick.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by either the "offset" method or the "extension under load" method as prescribed in ASTM Standard E8–57T.

(2) In using the "extension under load" method, the total strain (or "extension under load") corresponding to the stress at which the 0.2 percent permanent strain occurs may be determined with sufficient accuracy by calculating the elastic extension of the gauge length under appropriate load and adding thereto 0.2 percent of the gauge length. Elastic extension calculations shall be based on an elastic modulus of 30,000,000. In the event of controversy, the entire stress-strain diagram shall be plotted and the yield strength determined from the 0.2 offset.

(3) For the purpose of strain measurement, the initial strain shall be set while the specimen is under a stress of 12,000 pounds per square inch, the strain indicator reading being set at the calculated corresponding strain.

(4) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.60–17 Elongation.**

(a) Physical test specimens must show at least 40 percent for 2 inch gauge length or at least 20 percent in other cases, except that these elongation percentages may be reduced numerically by 2 for 2 inch specimens and 1 in other cases for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch to a maximum of four such increments.

**§ 78.60–18 Weld tests.**

(a) Specimens taken across the circumferentially welded seam must be cut from one cylinder taken at random from each lot of 200 or less cylinders after heat treatment and must pass satisfactorily the following tests:

(1) *Tensile test.* A specimen shall be cut from one cylinder of each lot of 200 or less, or welded test plate.[1] The specimen shall be taken across the major seam and shall be prepared and tested in accordance with and must meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] Should this specimen fail to meet the requirements, specimens may be taken from two additional cylinders or welded test plates from the same lot and tested. If either of the latter specimens fail to meet the requirements, the entire lot represented shall be rejected.

(2) *Guided bend test.* A "root" bend test specimen shall be cut from the cylinder or welded test plate, used for the tensile test specified in subparagraph (1) of this paragraph. Specimens shall be taken across the major seam and shall be prepared and tested in accordance with and shall meet the requirements of the Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2]

(3) *Alternate guided-bend test.* This test may be used and shall be as required by Compressed Gas Association's "Standards for Welding and Brazing on Thin Walled Containers" (CGA Pamphlet C–3–1954).[2] The specimen shall be bent until the elongation at the outer surface, adjacent to the root of the weld, between the lightly scribed gage lines—a to b, shall be at least 20 percent, except that this percentage may be reduced for steels having a tensile strength in excess of 50,000 pounds per square inch, as provided in § 78.60–17(a).

**§ 78.60–19 Rejected cylinders.**

(a) Reheat treatment authorized; subsequent thereto, acceptable cylinders must pass all prescribed tests. Repair by welding is authorized.

**§ 78.60–20 Porous filling.**

(a) Cylinders must be filled with an approved porous material of such structure that it will not disintegrate or sag when wet with solvent or when subjected to normal service. The porous filling material shall be uniform in quality and free of voids, except that a well drilled into the filling material beneath the valve is authorized: *Provided*, That such a well be filled with a material of such type that the functions of the filling material are not impaired. Overall shrinkage of the filling material is authorized, provided the total clearance between the cylinder shell and filling material, after solvent has been added, does not exceed ½ of 1 percent of the respective diameter or length but in no case to exceed ⅛ inch measured diametrically and longitudinally and that such clearances do not impair the functions of the filling material as installed in the cylinder must be approved by the Bureau of Explosives.

(b) Porosity of filling to be 80 percent or less except that filling with a porosity in excess of 80 percent but not in excess of 92 percent, may be used when tested with satisfactory results under the supervision of the Bureau of Explosives. When the porous mass has a porosity in excess of 80 percent but not in excess of 83 percent, the pores shall be uniform and shall not be visible at a magnification of 200 diameters. When the porous mass has a porosity in excess of 83 percent but not in excess of 92 percent, the pores shall be uniform and shall not be visible at a magnification of 500 diameters. A cylinder taken at random from a lot of 200 or less must be tested for porosity providing the porosity of each cylinder is not known. Should test cylinders fail, test of each cylinder of the lot is authorized, cylinders passing the test to be acceptable.

(c) For filling that is molded and dried before insertion in cylinders, porosity test may be made on sample block taken at random from material to be used.

(d) The porosity of the filling material shall be determined; the amount of solvent at 70° F. for a cylinder:

(1) Having shell volumetric capacity above 20 pounds water capacity (nominal) shall not exceed the following:

| Percent porosity of filler: | *Maximum acetone solvent percent shell capacity by volume* |
|---|---|
| 90 to 92 | 43.4 |
| 87 to 90 | 42.0 |
| 83 to 87 | 40.0 |
| 80 to 83 | 38.6 |
| 75 to 80 | 36.2 |
| 70 to 75 | 33.8 |
| 65 to 70 | 31.4 |

(2) Having volumetric capacity of 20 pounds or less water capacity (nominal), shall not exceed the following:

| Percent porosity of filler: | *Maximum acetone solvent percent shell capacity by volume* |
|---|---|
| 90 to 92 | 41.8 |
| 83 to 90 | 38.5 |
| 80 to 83 | 37.1 |
| 75 to 80 | 34.8 |
| 70 to 75 | 32.5 |
| 65 to 70 | 30.2 |

**§ 78.60–21 Tare weight.**

(a) Tare weight here referred to shall be the combined weight of cylinder proper, porous filling, valve, and solvent, but without removable cap.

**§ 78.60–22 Marking.**

(a) Marking on each cylinder as follows:

(1) ICC–8AL.

[1] The welded test plate shall be of one of the heats in the lot of 200 or less which it represents, in the same condition and approximately the same thickness as the cylinder wall except that in no case shall it be of lesser thickness than that required for a one-quarter size Charpy impact specimen. The weld must be made by the same procedure and subjected to the same heat treatment as the major weld on the cylinder.

[2] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

(2) A serial number and an identifying symbol (letters) grouped[1] above or below the ICC mark. The symbol and numbers must be those of purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives; duplications unauthorized.

(3) Date of test (such as 5–50 for May 1950) so placed that dates of subsequent tests can be easily added.

(4) Tare weight of cylinder in pounds and ounces.

(5) Cylinders, not completed, when delivered must each be marked for identification of each lot of 200 or less.

(b) Markings shall be stamped plainly and permanently in locations in accordance with the following:

(1) On shoulders and top heads not less than 0.087 inch thick, or

(2) On neck, valve boss, valve protection sleeve, or similar part permanently attached to the top end of cylinder, or

(3) On a plate of ferrous material attached to the top of the cylinder or permanent part thereof; the plate must be at least 1/16 inch thick, and must be attached by welding, or by brazing at a temperature of at least 1,100° F. throughout all edges of the plate. Sufficient space must be left on the plate to provide for stamping at least four (4) retest dates.

**§ 78.60–23 Size of marks.**

(a) At least ⅛" high for cylinders less than 4" inside diameter and at least ¼" high for larger cylinders.

**§ 78.60–24 Inspector's report.**

(a) Report to cover manufacture of acetylene shells; required to be clear, legible, and in the following form:

(Place) _____
(Date) _____

*Acetylene shells*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size ____ inches outside diameter by ____ inches long.
Marks stamped into the shoulder of the cylinder are:
Lot number _____
Other marks (if any) _____
These cylinders were made by process of _____
_____
The _____ permitted in (neckrings, footrings, etc.) § 78.60–9 were attached by process of _____
_____ (welding—brazing)
The material used was identified by the following _____ numbers _____ (heat-purchase order)
The material used was verified as to chemical analysis and record thereof is attached hereto. The heat numbers _____ (were—were not) marked on the material.

All material, such as plates, billets and seamless tubing, was inspected and each cylinder was inspected both before and after closing in the ends; all that was accepted was found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment of cylinders were supervised and found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was ____ inch. The outside diameter was determined by a close approximation to be ____ inches. The wall stress was calculated to be ____ pounds per square inch under an internal pressure of ____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material, and other tests, as prescribed in specification No. ICC–8AL were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 8AL except as follows:

(b) Inspector's report to cover completed manufacture of acetylene cylinders; required to be clear and legible and in the following form:

(Place) _____
(Date) _____

Final Report: For completed steel cylinders with approved porous filling for acetylene.

Manufactured for _____
Location at _____
Steel sheets manufactured by _____
Location at _____
Cylinders completed by _____
Location at _____
Consigned to _____
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long.
Marks are stamped into _____ (show location) as follows:
Specification ICC–8AL
Serial numbers _____ to _____ inclusive.
Identifying symbol (registered) _____
Inspector's mark (if applied) _____
Test date _____
Other marks (if any) _____

Application of prescribed marks, as reported above, and location thereof were verified.

Each cylinder was filled with porous filling material consisting of _____ in the form of _____

The porosity of the filling is between _____ and _____ percent as determined by tests made by the _____ company whose report has been found satisfactory and is on file.

The tare weight of each cylinder was determined and a record thereof is attached hereto.

Each cylinder has been equipped with safety devices _____

A certified report of manufacture and test of the steel shells is attached hereto.

I hereby certify that, subject to the acceptability of the reports covering the steel shells, all of these cylinders proved satisfactory in every way and comply with the requirements of the Interstate Commerce Commission specification No. 8AL.

(Inspector)

**§ 78.63 Specification 9; inside containers, seamless or welded or brazed steel cylinders.**

**§ 78.63–1 Compliance.**

(a) Required in all details.

**§ 78.63–2 Type, size, and service pressure.**

(a) *Type and size.* Must be seamless, welded, or brazed (brazing material must have a melting point of not less than 1,000° F.). The maximum water capacity of containers in this class shall not exceed 86 cubic inches. Longitudinal seams are prohibited, except that containers constructed from longitudinally welded steel tubing are authorized: *Provided*, That certification is made by the tubing manufacturer that the tubing has been pressure tested to a fiber stress of 24,000 pounds per square inch as calculated by the formula

$$P=\frac{24000\ (D^2-d^2)}{(1.3D^2+0.4d^2)}$$

where

$P$ is the pressure required for pressure testing of tubing by the tubing manufacturer.

(b) *Service pressure.* Service pressure must be 200 pounds per square inch.

**§ 78.63–3 Inspection by whom and where.**

(a) By competent inspector: chemical analyses and tests, as specified, to be made within limits of the United States. Interested inspectors are authorized.

**§ 78.63–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

(b) Verify compliance with the requirements of § 78.63–5 by submitting copy of certified chemical analysis obtained from the steel manufacturer for each heat of steel (ladle analysis acceptable); or if such evidence is lacking, then a sample from each coil or sheet must be analyzed and results submitted.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; select samples for all tests and for check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity (see report form) and minimum thickness of wall noted.

(d) Render complete report (see § 78.63–19) to purchaser, cylinder maker, and the Bureau of Explosives.

**§ 78.63–5 Steel.**

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.150; phosphorus, 0.045; sulphur, 0.055.

**§ 78.63–6 Identification of material.**

(a) Required; any suitable method.

**§ 78.63–7 Defects.**

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

**§ 78.63–8 Manufacture.**

(a) By proper appliance and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Seams must be made as follows:

(1) Circumferential seams. Except as provided in subparagraph (2) of this paragraph by welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) A container made of two hemispherical heads, each having an integral tangential cylindrical skirt portion assembled so that the two cylindrical skirt portions telescope one within the other is authorized but must meet the following additional requirements for the skirt portions; one be a driving fit within the other; they be of equal length and telescoped for their full length; the length of the overlap be not less than 8 nor more than 10 times the thickness of the thinner of the two skirts; the overlapping joint be brazed (not welded) so as to get complete penetration for the full length of the joint.

**§ 78.63–9 Wall thickness.**

(a) The wall stress at 600 pounds per square inch shall not exceed 24,000 pounds per square inch, except that for longitudinally welded steel tubing the stress shall not exceed 20,400 pounds per square inch. The minimum wall for any cylinder shall be 0.040 inch. For the container authorized in § 78.63–8(a)(2) the wall thickness of the cylinder shall be taken as the sum of the thickness of the two skirts (without allowance for the brazing material between).

(b) Calculation must be made by the formula:

$$S=\frac{600\ (1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$ = wall stress in pounds per square inch;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

(c) Calculation for thickness of hemispherical heads of containers authorized in § 78.63–8 (a) (2) must be made by the formula:

$$S=\frac{600D}{4tC}$$

where

$t$ = thickness in inches;
$C$ = 0.85 (design factor);
$S$ and $D$ have same significance as in paragraph (b) of this section. The minimum thickness of head or skirt shall be 0.040 inch. The thickness of the skirt shall be not less than the thickness of the head.

**§ 78.63–10 Heat treatment.**

(a) Body and heads must be uniformly and properly heat treated prior to tests.

**§ 78.63–11 Openings in cylinders.**

(a) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.63–12 Safety devices.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply. (See §§ 73.34(f) and 73.301(i) of this chapter.)

**§ 78.63–13 Pressure tests.**

(a) Each cylinder produced shall be tested at an internal pressure[1] of at least 400 pounds per square inch and not exceeding 600 pounds per square inch, held for at least 30 seconds, and shall show no leak or other defects when inspected by suitable means.

[1] Warning: Where air or gas pressure is used for testing, means designed to protect personnel is recommended.

(b) One out of each 1,000 cylinders or less successively produced shall be hydrostatically tested to destruction and must not burst below 1,200 pounds per square inch. Each such 1,000 cylinders or less successively produced shall constitute a lot and if the test cylinder shall fail, then the entire lot must be rejected. All cylinders constituting a lot shall be of identical size, design, construction, heat treatment, finish and quality.

**§ 78.63–14 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test 1 cylinder taken at random out of each lot of 1,000 or less, after pressure test. This flattening test is required and the test cylinder shall not have cracked when the outer surfaces of the walls are apart not more than a distance of 6 times the thickness of such walls.

**§ 78.63–15 Rejected cylinders.**

(a) Reheat treatment authorized for lots failing to meet the requirements of § 78.63–14; such lots of cylinders after this treatment must pass all prescribed tests.

**§ 78.63–16 Repair of brazed and welded seams.**

(a) Only repair of brazed seams by brazing and welded seams by welding is authorized, provided such cylinders are retested and pass the tests prescribed in § 78.63–13.

**§ 78.63–17 Marking.**

(a) Marking on each cylinder, by embossing plainly and permanently on valve end of cylinder before heat-treatment the marks ICC–9 and registered symbol of manufacturer.

(1) Other marks as prescribed in subparagraph (3) of this paragraph must be shown on a permanently attached name plate or by printing or decalcomania, provided that such markings are waterproofed and adherent and not easily impaired when subjected to water immersion and weathering under service conditions, or are coated with a water-insoluble transparent lacquer, except that, cylinders having brazed lapped circumferential seam may, after having been tested in accordance with §§ 78.63–13 and 78.63–14 of this specification, have marks permanently stamped into metal of this seam, provided that such marks do not exceed (0.015") fifteen thousandths of an inch in depth.

(2) Such marks must be maintained in a legible condition and if at any time the cylinder is returned for refilling and such marks are illegible, then the cylinder must not be returned to service until it has been retested as prescribed in § 78.63–13 (a) and new test date applied.

(3) Inspector's official mark; lot number; date of test (such as 5–50 for May 1950), so placed that dates of subsequent tests can be easily added.

**§ 78.63–18 Size of embossed marks.**

(a) At least ¼ inch high.

**§ 78.63–19 Inspector's reports.**

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____
*Steel gas cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size _____ inches outside diameter by _____ inches long
Identification marks on cylinder are:
Specification ICC–9.
Lot number _____
Identifying symbols (registered) _____
Test date _____
These cylinders were made by process of _____

The steel used was identified by heat or analysis numbers as shown on the "Record of Chemical Analysis of Steel for Cylinders" attached hereto.

The steel used was verified as to chemical analysis and record thereof is attached hereto.

All material was inspected and each cylinder was inspected both before and after closing; all accepted material and cylinders were found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

A test cylinder of each lot was measured and had a minimum wall thickness and volumetric capacity as shown in table below.

| Date of test | Lot No. | Number in lot | Minimum wall thickness (inches) | Volumetric capacity (cubic inches) |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Each and every cylinder was properly tapped; the threads were inspected and found to be clean cut, of proper length, and correct as to gauge.

One finished cylinder out of each lot was taken at random and burst by interior hydrostatic pressure with the following results:

| Date of test | Lot No. | Pressure at which cylinder ruptured (pounds per square inch) |
|---|---|---|
| | | |
| | | |
| | | |
| | | |

Each and every cylinder was subjected to an interior pressure of ___ pounds per square inch and showed no leak or other defect.

Hydrostatic tests, pressure tests, flattening tests, and other tests, as perscribed in specification No. ICC–9 were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with requirements of Interstate Commerce Commission's specification No. 9 except as follows:

**§ 78.66 Specification 40; inside containers, non-refillable seamless or welded or brazed steel cylinders.**

**§ 78.66–1 Compliance.**

(a) Required in all details.

**§ 78.66–2 Type, size, and service pressure.**

(a) *Type and size.* Must be seamless, welded, or brazed (brazing material must have a melting point of not less than 1000° F.). The maximum water capacity of cylinders in this class shall not exceed 1.44 pounds or 40 cubic inches. Longitudinal seams are prohibited, except that containers constructed from longitudinally welded steel tubing are authorized provided that certification is made by the tubing manufacturer that the tubing has been pressure tested to a fiber stress of 24,000 pounds per square inch as calculated by the formula:

$$P=\frac{24000\ (D^2-d^2)}{(1.3D^2+0.4d^2)}$$

where

$P$ is the pressure required for pressure testing of tubing by the tubing manufacturer.

(b) *Service pressure.* Service pressure must be 200 pounds per square inch.

**§ 78.66–3 Inspection by whom and where.**

(a) By competent inspector of the manufacturer; or a disinterested inspection agency, chemical analysis and tests, as specified, to be made within limits of the United States.

**§ 78.66–4 Duties of inspector.**

(a) Inspect all material and reject any not complying with requirements.

(b) Verify compliance with the requirements of § 78.66–5 of this specification by submitting copy of certified chemical analysis obtained from the steel manufacturer for each heat of steel (ladle analysis acceptable); or if such evidence is lacking, then a sample from each coil or sheet must be analyzed and results submitted.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; select samples for all tests and for check chemical analyses; witness all tests; verify threads by gauge; report

volumetric capacity (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.66–19) to purchaser, cylinder maker, and the Bureau of Explosives.

§ 78.66–5 Steel.

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.150; phosphorus, 0.045; sulphur, 0.055.

§ 78.66–6 Identification of material.

(a) Required; any suitable method.

§ 78.66–7 Defects.

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 78.66–8 Manufacture.

(a) By proper appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Seams must be as follows:

(1) Circumferential seams. Except as provided in subparagraph (2) of this paragraph by welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) A container of two hemispherical heads, each having an integral tangential cylindrical skirt portion assembled so that the two cylindrical skirt portions telescope one within the other is authorized but must meet the following additional requirements for the skirt portions; one be a driving fit within the other; they be of equal length and telescoped for their full length; the length of the overlap be not less than 8 nor more than 10 times the thickness of the thinner of the two skirts; the overlapping joint be brazed (not welded) so as to get complete penetration for the full length of the joint.

§ 78.66–9 Wall thickness.

(a) The wall stress at 600 pounds per square inch shall not exceed 24,000 pounds per square inch, except that for longitudinally welded steel tubing the stress shall not exceed 20,400 pounds per square inch. The minimum wall for any cylinder shall be 0.032 inch. For the container authorized in § 78.66–8 (a) (2) the wall thickness of the cylinder shall be taken as the sum of the thicknesses of the two skirts (without allowance for the brazing material between).

(b) Calculation must be made by the formula:

$$S=\frac{600\ (1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$ = wall stress in pounds per square inch;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

(c) Calculation for thickness of hemispherical heads of containers authorized in § 78.66–8 (a) (2) must be made by the formula:

$$S=\frac{600D}{4tC}$$

where

$t$ = thickness in inches;
$C$ = 0.85 (design factor);
$S$ and $D$ have same significance as in paragraph (b) of this section. The minimum thickness of the head or skirt shall be 0.032 inch. The thickness of the skirt shall not be less than the thickness of the head.

§ 78.66–10 Heat treatment.

(a) Body and heads must be uniformly and properly heat treated prior to tests.

§ 78.66–11 Openings in cylinders.

(a) Each opening in cylinder, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) Closure of fitting, boss, or pad, must be adequate to prevent leakage.

§ 78.66–12 Safety devices.

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply. (See §§ 73.34(f) and 73.301(i) of this chapter.)

§ 78.66–13 Pressure tests.

(a) Each cylinder produced shall be tested at an internal pressure [1] of at least 200 pounds per square inch and not exceeding 600 pounds per square inch, held for at least 30 seconds, and shall show no leak or other defect when inspected by suitable means.

(b) One out of each 3,000 cylinders or less successively produced per day shall be hydrostatically tested to destruction and must not burst below 1,200 pounds per square inch. Each such 3,000 cylinders or less successively produced per day shall constitute a lot and if the test cylinder shall fail, then the entire lot must be rejected. All cylinders constituting a lot shall be of identical size, design, construction, heat treatment, finish and quality.

§ 78.66–14 Flattening test.

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test 1 cylinder taken at random out of each lot of 3,000 or less successively produced per day, after pressure test. This flattening test is required and the test cylinder shall not have cracked when the outer surfaces of the walls are apart not more than a distance of 6 times the thickness of such walls.

[1] Warning: Where air or gas pressure is used for testing, means designed to protect personnel is recommended.

§ 78.66–15 Rejected cylinders.

(a) Reheat treatment authorized for lots failing to meet the requirements of § 78.66–14; such lots of cylinders after this treatment must pass all prescribed tests.

§ 78.66–16 Repair of brazed and welded seams.

(a) Only repair of brazed seams by brazing and welded seams by welding is authorized, provided such cylinders are retested and pass the tests prescribed in § 78.66–13 (a).

§ 78.66–17 Marking.

(a) Marking on each cylinder by embossing plainly and permanently on valve end of cylinder before heat-treatment, the marks ICC–40 and registered symbol of manufacturer.

(1) Other marks as prescribed in subparagraph (2) of this paragraph, must be shown on a permanently attached name plate or by printing or decalcomania, provided that such markings are waterproofed and adherent and not easily impaired when subject to water immersion and weathering under service conditions, or are coated over with a water-insoluble transparent lacquer; except that cylinders having brazed lapped circumferential seam may, after having been tested in accordance with §§ 78.66–13 and 78.66–14 of this specification, have marks permanently stamped into metal of this seam, provided that such marks do not exceed 0.015" in depth.

(2) Inspector's official mark; lot number; date of test (such as 5–50 for May 1950); the words "Illegal to refill and transport".

§ 78.66–18 Size of embossed marks.

(a) At least ¼ inch high.

§ 78.67 Specification 41; inside containers, non-refillable seamless or welded or brazed steel cylinders.

§ 78.67–1 Compliance.

(a) Required in all details.

§ 78.67–2 Type, size, and service pressure.

(a) *Type and size.* Must be seamless, welded, or brazed (brazing material must have a melting point of not less than 1,000° F.). The maximum water capacity of cylinders in this class shall not exceed 2 pounds or 55 cubic inches. Longitudinal seams are prohibited, except that containers constructed from longitudinally welded steel tubing are authorized provided that certification is made by the tubing manufacturer that the tubing has been pressure tested to a fiber stress of 24,000 pounds per square inch as calculated by the formula:

$$P=\frac{24{,}000(D^2-d^2)}{(1.3D^2+0.4d^2)}$$

where

$P$ is the pressure required for pressure testing of tubing by the tubing manufacturer.

(b) *Service pressure.* Service pressure must be 240 pounds per square inch.

§ 78.67–3 Inspection by whom and where.

(a) By competent inspector of the manufacturer; or a disinterested inspection agency, chemical analysis and tests, as specified, to be made within limits of the United States.

§ 78.67–4 Duties of inspector.

(a) Inspect all material and reject any not complying with requirements.

(b) Verify compliance with the requirements of § 78.67–5 of the specification by submitting copy of certified chemical analysis obtained from the steel manufacturer for each heat of steel (ladle analysis acceptable); or if such evidence is lacking, then a sample from each coil or sheet must be analyzed and results submitted.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify heat treatment as proper; select samples for all tests and for check chemical analyses; witness all tests; verify threads by gauge; report volumetric capacity (see report form) and minimum thickness of wall noted.

(d) Render complete report (§ 78.67–19) to purchaser, cylinder maker, and the Bureau of Explosives.

§ 78.67–5 Steel.

(a) Open-hearth or electric steel of uniform quality. Content percent for the following not over: Carbon, 0.150; phosphorus, 0.045; sulphur, 0.055.

§ 78.67–6 Identification of material.

(a) Required; any suitable method.

§ 78.67–7 Defects.

(a) Material with seams, cracks, laminations, or other injurious defects, not authorized.

§ 78.67–8 Manufacture.

(a) By proper appliances and methods; dirt and scale to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required. Seams must be as follows:

(1) Circumferential seams: Except as provided in subparagraph (2) of this paragraph by welding or by brazing. Heads attached by brazing must have a driving fit with the shell, unless the shell is crimped, swedged, or curled over the skirt or flange of the head, and be thoroughly brazed until complete penetration by the brazing material of the brazed joint is secured. Depth of brazing from end of shell must be at least four times the thickness of shell metal.

(2) A container of two hemispherical heads, each having an integral tangential cylindrical skirt portion assembled so that the two cylindrical skirt portions telescope one within the other is authorized but must meet the following additional requirements for the skirt portions; one be a driving fit within the other; they be of equal length and telescoped for their full length; the length of the overlap be not less than 8 nor more than 10 times the thickness of the thinner of the two skirts; the overlapping joint be brazed (not welded) so as to get complete penetration for the full length of the joint.

§ 78.67–9 Wall thickness.

(a) The wall stress at 720 pounds per square inch shall not exceed 24,000 pounds per square inch, except that for longitudinally welded steel tubing the stress shall not exceed 20,400 pounds per square inch. The minimum wall for any cylinder not exceeding 40 cubic inches capacity shall be 0.032 inch and for any cylinder exceeding 40 cubic inches capacity shall be 0.042 inch. For the container authorized in § 78.67–8 (a) (2) the wall thickness of the cylinder shall be taken as the sum of the thicknesses of the two skirts (without allowance for the brazing material between).

(b) Calculation must be made by the formula:

$$S=\frac{720(1.3D^2+0.4d^2)}{D^2-d^2}$$

where:

$S$ = wall stress in pounds per square inch;
$D$ = outside diameter in inches;
$d$ = inside diameter in inches.

(c) Calculation for thickness of hemispherical heads of containers authorized in § 78.67–8 (a) (2) must be made by the formula:

$$S=\frac{720D}{4tC}$$

where:

$t$ = thickness in inches;
$C$ = 0.85 (design factor).

$S$ and $D$ have same significance as in paragraph (b) of this section. The minimum thickness of the head or skirt shall be 0.032 inch. The thickness of the skirt shall not be less than the thickness of the head.

§ 78.67–10 Heat treatment.

(a) Body and heads must be uniformly and properly heat treated prior to tests.

§ 78.67–11 Openings in cylinders.

(a) Each opening in cylinder, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by brazing or by welding or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean cut, even, without checks, and tapped to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and

calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(b) **Closure of fitting, boss, or pad,** must be adequate to prevent leakage.

**§ 78.67–12 Safety devices.**

(a) Devices must be as required by the Interstate Commerce Commission's regulations that apply. (See §§ 73.34 (f) and 73.301 (f) of this chapter.)

**§ 78.67–13 Pressure tests.**

(a) Each cylinder produced shall be tested at an internal pressure[1] of at least 240 pounds per square inch and not exceeding 720 pounds per square inch, held for at least 30 seconds, and shall show no leak or other defect when inspected by suitable means.

(b) Or, each completed container filled for shipment must be heated until content reaches a minimum temperature of 130° F.; without evidence of leakage, distortion or other defect.

(c) One out of each 3,000 cylinders or less successively produced per day shall be hydrostatically tested to destruction and must not burst below 1,440 pounds per square inch. Each such 3,000 cylinders or less successively produced per day shall constitute a lot and if the test cylinder shall fail, then the entire lot must be rejected. All cylinders constituting a lot shall be of identical size, design, construction, heat treatment, finish and quality.

**§ 78.67–14 Flattening test.**

(a) Between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; test 1 cylinder taken at random out of each lot of 3,000 or less successively produced per day, after pressure test. This flattening test is required and the test cylinder shall not have cracked when the outer surfaces of the walls are apart not more than a distance of 6 times the thickness of such walls.

**§ 78.67–15 Rejected cylinders.**

(a) Reheat treatment authorized for lots failing to meet the requirements of § 78.67–14; such lots of cylinders after this treatment must pass all prescribed tests.

**§ 78.67–16 Repair of brazed and welded seams.**

(a) Only repair of brazed seams by brazing and welded seams by welding is authorized, provided such cylinders are retested and pass the tests prescribed in § 78.67–13 (a).

**§ 78.67–17 Marking.**

(a) Marking on each cylinder by embossing plainly and permanently on the valve end or footring of cylinder before heat-treatment, the marks ICC–41 and registered symbol of the manufacturer, except that stamping of all prescribed marks on the valve end of all cylinders having wall thickness of 0.042 inch or greater is authorized providing no stamping shall exceed 0.015 inch in depth.

(1) On cylinders having wall thickness less than 0.042 inch, other marks as prescribed in subparagraph (2) of this paragraph must be shown on a permanently attached name plate or by printing or decalcomania, provided that such markings are waterproofed and adherent and not easily impaired when subject to water immersion and weathering under service conditions, or are coated over with a water-insoluble transparent lacquer; except that cylinders having brazed lapped circumferential seam may, after having been tested in accordance with §§ 78.67–13 and 78.67–14 of this specification, have marks permanently stamped into metal of this seam, provided that such marks do not exceed 0.015 inch in depth.

(2) Inspector's official mark; lot number; date of test (such as 5–50 for May 1950); the words "Illegal to refill and transport".

**§ 78.67–18 Size of embossed marks.**

(a) At least ¼ inch high.

**§ 78.67–19 Inspector's reports.**

These cylinders were made by process of _____

The steel used was identified by heat or analysis numbers as shown on the "Record of Chemical Analysis of Steel for Cylinders" attached hereto.

The steel used was verified as to chemical analysis and record thereof is attached hereto.

All material was inspected and each cylinder was inspected both before and after closing; all accepted material and cylinders were found free from seams, cracks, laminations, and other defects which might prove injurious to the strength of the cylinder. The processes of manufacture and heat treatment were supervised and found to be efficient and satisfactory.

A test cylinder of each lot was measured and had a minimum wall thickness and volumetric capacity as shown in table below:

| Date of test | Lot No. | Number in lot | Minimum wall thickness (inches) | Volumetric capacity (cubic inches or pounds of water) |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Such threads as were used were inspected and found to be clean cut, of proper length, and correct as to gauge.

One finished cylinder out of each lot was taken at random and burst by interior hydrostatic pressure with the following results:

| Date of test | Lot No. | Pressure at which cylinder ruptured (pounds per square inch) |
|---|---|---|
| | | |
| | | |
| | | |
| | | |

Each and every cylinder was subjected to an interior pressure of 240-pounds per square inch or was heated until contents reached a minimum temperature of 130° F. and showed no leak or other defect.

Hydrostatic tests, pressure tests, flattening tests, and other tests, as prescribed in Specification No. ICC–41 were made in the presence of the inspector and all material and cylinders were found to be in compliance with the requirements of that specification.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission's Specification No. 41 except as follows:

The analyses were made by _____
(Signed) _____
Inspector.

**§ 78.68 Specification 4E; welded aluminum cylinders.**

**§ 78.68–1 Compliance.**

(a) Required in all details.

**§ 78.68–2 Type, size and service pressure.**

(a) *Type and size.* Must be welded seamless drawn shells, not more than two shells, with center circumferential weld; not over 1,000 pounds water capacity (nominal); longitudinal welded seam not authorized. Cylinders or shells closed in by spinning process not authorized.

(b) *Service pressure.*[1] At least 225 to not over 500 pounds per square inch.

**§ 78.68–3 Inspection by whom and where.**

(a) By competent inspector; chemical analyses and tests as specified to be made within limits of the United States. Interested inspectors are authorized.

[1] Warning: Where air or gas pressure is used for testing, means designed to protect personnel is recommended.

[1] The "service pressure" limits the use of the cylinder. It is shown by marks on cylinders; for example ICC–4E240 indicates the service pressure as 240 pounds per square inch.

**§ 78.68–4 Duties of inspector.**

(a) Inspect all material and reject any material not complying with requirements.

(b) Verify chemical analysis of each lot of material by analysis or by obtaining certified analysis: *Provided,* That a certificate from the manufacturer thereof, giving sufficient data to indicate compliance with requirements, is acceptable when verified by check analysis of samples taken from one aluminum cylinder out of each lot of 200 or less.

(c) Verify compliance of cylinders with all requirements including markings; inspect inside before closing in both ends; verify properties as proper; obtain samples for all tests and check chemical analysis; witness all tests; verify threads by gauge; report volumetric capacity, tare weight (see report form) and wall thickness as approved.

(d) Render complete report (§ 78.68–20) to purchaser; cylinder manufacturer; and the Bureau of Explosives.

**§ 78.68–5 Aluminum.**

(a) Shall be of uniform quality. The following chemical analyses are authorized.

TABLE I—AUTHORIZED MATERIALS

| Designation | Chemical analysis—limits in percent 5154[1] |
|---|---|
| Iron plus silicon | 0.45 maximum. |
| Copper | 0.10 maximum. |
| Manganese | 0.10 maximum. |
| Magnesium | 3.1/3.9. |
| Chromium | 0.15/0.35. |
| Zinc | 0.20 maximum. |
| Titanium | 0.20 maximum. |
| Others, each | 0.05 maximum. |
| Others, total | 0.15 maximum. |
| Aluminum | Remainder. |

[1] Analysis shall regularly be made only for the elements specifically mentioned above. If, however, the presence of other elements is indicated in the course of routine analysis, further analysis should be made to determine conformance with the limits specified for other elements.

**§ 78.68–6 Identification of material.**

(a) Required; any suitable method that will identify the alloy and manufacturer's lot number.

**§ 78.68–7 Defects.**

(a) Material with seams, cracks, laminations or other injurious defects not authorized.

**§ 78.68–8 Manufacture.**

(a) By best processes and methods; dirt and foreign particles to be removed as necessary to afford proper inspection; no defect acceptable that is likely to weaken the finished cylinder appreciably; reasonably smooth and uniform surface finish required; all welding must be by the gas shielded arc process.

**§ 78.68–9 Welding.**

(a) The attachment to the tops and bottoms only of cylinders by welding of neckrings or flanges, footrings, handles, bosses and pads and valve protection rings is authorized: *Provided,* That such attachments and the portion of the cylinder to which it is attached are made of weldable aluminum alloys.

**§ 78.68–10 Wall thickness.**

(a) The minimum wall thickness of the cylinder shall be 0.140 inch. In any case, the minimum wall thickness shall be such that calculated wall stress at twice service pressure shall not exceed the lesser value of either of the following:

(1) 20,000 pounds per square inch.

(2) One-half of the minimum tensile strength of the material as required in § 78.68–15.

(b) Calculation must be made by the formula:

$$S=\frac{P(1.3D^2+0.4d^2)}{D^2-d^2}$$

where

$S$=wall stress in pounds per square inch;
$P$=minimum test pressure prescribed for water jacket test;
$D$=outside diameter in inches;
$d$=inside diameter in inches.

(c) Minimum thickness of heads and bottoms shall not be less than the minimum required thickness of the side wall.

**§ 78.68–11 Opening in cylinder.**

(a) All openings must be in the heads or bases.

(b) Each opening in cylinders, except those for safety devices, must be provided with a fitting, boss, or pad, securely attached to cylinder by welding by inert gas shielded arc process or by threads. If threads are used, they must comply with the following:

(1) Threads must be clean-cut, even, without checks and cut to gauge.

(2) Taper threads to be of length not less than as specified for American Standard taper pipe threads.

(3) Straight threads, having at least 4 engaged threads, to have tight fit and calculated shear strength at least 10 times the test pressure of the cylinder; gaskets required, adequate to prevent leakage.

(c) Closure of fitting, boss, or pad must be adequate to prevent leakage.

**§ 78.68–12 Safety devices and protection for valves, safety devices, and other connections if applied.**

(a) Must be as required by the Interstate Commerce Commission regulations that apply (see §§ 73.34(f), 73.124(a), and 73.301(f) of this chapter).

**§ 78.68–13 Hydrostatic test.**

(a) Each cylinder by water-jacket, or other suitable method, operated so as to obtain accurate data. Presure gauge must permit reading to accuracy of 1 percent. Expansion gauge must permit reading of total expansion to accuracy either of 1 percent or 0.1 cubic centimeter.

(b) Pressure of 2 times service pressure must be maintained for 30 seconds and sufficiently longer to insure complete expansion. Any internal pressure applied previous to the official test must not exceed 90 percent of the test pressure. If, due to failure of the test apparatus, the test pressure cannot be maintained, the test may be repeated at a pressure increased to 10 percent.

(c) Permanent volumetric expansion must not exceed 12 percent of total volumetric expansion at test pressure.

(d) One finished cylinder selected at random out of each lot of 1,000 shall be hydrostatically tested to destruction. Failure shall occur in the side wall and shall not occur at a pressure less than 4 times the service pressure. Inability to meet these requirements shall result in rejection of the lot.

**§ 78.68–14 Flattening test.**

(a) Flattening test required between knife edges, wedge shaped, 60° angle, rounded to ½ inch radius; on one section of a cyclinder taken at random out of each lot of 200 or less, after hydrostatic test. Sample must show no evidence of cracking when flattened to 6 times wall thickness.

**§ 78.68–15 Physical test.**

(a) To determine yield strength, tensile strength, elongation, and reduction of area of material. Required on 2 specimens cut from one cylinder or part thereof taken at random out of each lot of 200 or less.

(b) Specimens must be: Gauge length 8 inches with width not over 1½ inches; or gauge length 2 inches with width not over 1½ inches. The specimen, exclusive of grip ends, must not be flattened. Grip ends may be flattened to within 1 inch of each end of the reduced section. When size of cylinder does not permit securing straight specimens, the specimens may be taken in any location or direction and may be straightened or flattened cold, by pressure only, not by blows; when specimens are so taken and prepared, the inspector's report must show in connection with record of physical test detailed information in regard to such specimens. Heating of specimen for any purpose is not authorized.

(c) The yield strength in tension shall be the stress corresponding to a permanent strain of 0.2 percent of the gauge length.

(1) The yield strength shall be determined by the "offset" method as prescribed in ASTM Standard E8–57T.

(2) Cross-head speed of the testing machine shall not exceed ⅛ inch per minute during yield strength determination.

**§ 78.68–16 Acceptable results for physical tests.**

(a) Elongation at least 7 percent for 2 inch gauge length; yield strength not over 80 percent of tensile strength.

**§ 78.68–17 Weld tests.**

(a) Reduced section tensile test. A specimen shall be cut from the cylinder used for the physical tests specified in § 78.68–15. Specimen shall be taken across the seam, edges shall be parallel for a distance of approximately 2 inches on either side of the weld. The specimen must be fractured in tension. The apparent breaking stress calculated on the minimum wall thickness must be at least equal to 2 times the stress calculated under § 78.68–10(b), and in addition must have an actual breaking stress of at least 30,000 pounds per square inch. Should this specimen fail to meet the requirements, specimens may be taken from 2 additional cylinders from the same lot and tested. If either of the latter specimens fails to meet re-

quirements, the entire lot represented shall be rejected.

(b) *Guided bend test.* A bend test specimen shall be cut from the cylinder used for the physical tests specified in § 78.68–15. Specimen shall be taken across the seam, shall be 1½ inches wide, edges shall be parallel and rounded with a file, and back-up strip, if used, shall be removed by machining. The specimen shall be bent to refusal in the guided bend test jig illustrated in paragraph 6.10 of CGA Pamphlet C–3–1954, "Standards for Welding and Brazing on Thin Walled Containers."[1] The root of the weld (inside surface of the cylinder) shall be located away from the ram of the jig. No specimen shall show a crack or other open defect exceeding ⅛ inch in any direction upon completion of the test. Should this specimen fail to meet the requirements, specimens may be taken from each of 2 additional cylinders from the same lot and tested. If either of the latter specimens fail to meet requirements, the entire lot represented shall be rejected.

§ 78.68–18 Rejected cylinders.

(a) Repair of welded seams is authorized. Acceptable cylinders must pass all prescribed tests.

§ 78.68–19 Marking.

(a) Marking on each cylinder by stamping plainly and permanently on shoulder, top head, neck or valve protection collar which may be permanently attached to the cylinder and forming an integral part thereof, as follows:

(1) ICC–4E followed by the service pressure (for example, ICC–4E240).

(2) A serial number and an identifying symbol (letters); location of symbol to be just below the serial number. The symbol and numbers must be those of the purchaser, user, or maker. The symbol must be registered with the Bureau of Explosives.

(3) Inspector's official mark, near serial number: date of test (such as 5–50 for May 1950), so placed that date of subsequent test can be easily added.

(4) Size of marks. Shall be at least ¼ inch high.

§ 78.68–20 Inspector's reports.

(a) Required to be clear, legible, and in following form:

(Place) _____
(Date) _____

*Gas cylinders*

Manufactured for _____ Company
Location at _____
Manufactured by _____ Company
Location at _____
Consigned to _____ Company
Location at _____
Quantity _____
Size ____ inches outside diameter by ____ inches long.
Marks stamped into the shoulder of the cylinder are:
Specification ICC _____
Serial numbers _____ to _____ inclusive.
Inspector's mark _____
Identifying symbol (registered) _____
Test date _____

[1] Available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York 36, New York.

Tare weights (yes or no) _____
Other marks (if any) _____
These cylinders were made by process of _____

The _____ permitted in
(Neckrings, footrings, etc.)
§ 78.68–9 were attached by process of _____

The material used was identified by the following _____ numbers _____

The material used was verified as to chemical analysis and record thereof is attached hereto.

All material, such as aluminum plate, was inspected before manufacture and the drawn cylinder shells were inspected before final fabrication and found free from seams, cracks, laminations and other defects which might prove injurious to the strength of the cylinder; the processes of manufacture were found to be efficient and satisfactory.

The cylinder walls were measured and the minimum thickness noted was _____ inch. The outside diameter was determined by a close approximation to be _____ inches. The wall stress was calculated to be _____ pounds per square inch under an internal pressure of _____ pounds per square inch.

Hydrostatic tests, flattening tests, tensile tests of material and other tests as prescribed in Specification ICC–4E were made in the presence of the inspector and all material and cylinders accepted were found to be in compliance with the requirements of that specification. Records thereof are attached hereto.

I hereby certify that all of these cylinders proved satisfactory in every way and comply with the requirements of Interstate Commerce Commission specification No. 4E except as follows:

APPENDIX A—SPECIAL ORDERS (USE OF EXISTING CONTAINERS AUTHORIZED, BUT NEW CONSTRUCTION NOT AUTHORIZED)

Order approved December 28, 1939, in No. 3666, authorizing trial transportation of commercial butane (liquefied petroleum gas) on freight vessels in portable fusion-welded tanks of special design, between ports of the United States and points located in Puerto Rico and Virgin Islands, amended by order August 16, 1940, also order March 29, 1940, authorizing trial transportation of commercial butane (liquefied petroleum gas) in such tanks to Cristobal and Balboa, Canal Zone, and Colon and Panama City, Republic of Panama. Pertinent sections of regulations amended accordingly. Stowage canceled by regulations of Secretary of Commerce effective April 9, 1941. Authority noted in § 73.32 (d) of this chapter, covers tanks as follows:

Specification for design, construction, and use of portable tank container for trial service in the transportation of butane on deck in the open freight vessels of common carriers by water engaged in interstate or foreign commerce.

1. *Application.* (a) This specification applies to containers for transportation of butane on freight vessels only.

(b) When reference is made to "gas" in this specification it refers to "butane" in either liquid or gaseous state. The terms "tanks" and "containers" are used interchangeably.

2. *Design, working pressure, and classification of containers.* (a) Containers shall be designed and classified as follows:

| Container type | For gases with vapor pressure not to exceed lbs. per sq. in., gauge, at 100° F. | Minimum design pressure of containers by— | |
|---|---|---|---|
| | | A. S. M. E. Code, safety factor 5 | A.P.I.-A.S.M.E. Code, safety factor 4 |
| | | *Lb.* *gauge* | *Lb.* *gauge* |
| No. 125 | *125 | 125 | 156 |
| No. 150 | *150 | 150 | 187 |
| No. 175 | *175 | 175 | 219 |
| No. 200 | *200 | 200 | 250 |

*In no event may vapor pressure of butane filled into any tank exceed 80 pounds per square inch at 100° F.

(b) The shell or head thickness of any container shall not be less than 5/16 inch.

3. *Construction and tests of all containers and markings on containers* (a) Containers shall be constructed in accordance with the Unfired Pressure Vessel Code of the American Society of Mechanical Engineers, or in accordance with the API-ASME Code; except that compliance with the following shall not be required; paragraphs U-2 to U-10, inclusive, and U-19 of the aforesaid ASME Code; paragraphs W–601 to W–606 in section (1) of the aforesaid API-ASME Code.

(1) All fusion-welding under this specification shall be equal in quality, strength and continuing efficiency, and the method used in certifying fabricators shall insure equally efficient welding to that prescribed by the Commission in order dated November 13, 1935 (213 ICC 207), and exhibit containing specifications presented in that proceeding, for tank-car tanks to be used in the transportation of liquefied petroleum gas.

(b) All containers shall be tested at the time of manufacture in accordance with the requirements of the rules or code under which the vessels are manufactured.

(c) The water capacity shall be such that the total weight of any container, including contents and accessories, shall not exceed 8,000 pounds.

(d) A name plate shall be securely attached to each container, located adjacent to filling connections and in such manner as to be readily visible, and bearing the following information:

(1) Name and address of the assembler of the container and container accessories.

(2) The wording "This container shall not contain butane having a vapor pressure in excess of 80 pounds per square inch at 100 degrees F."

(3) Markings in increments of 20° F., indicating the maximum levels beyond which the container shall not be filled with liquid at temperatures between 20° F. and 130° F., except on containers provided with fixed maximum-level indicators, or replaceable containers which are gauged by weighing. This marking may be on the gauging device.

(e) Each container shall be permanently marked in accordance with the requirements of the code under which it was constructed, or with the stamp of the National Board of Boiler and Pressure Vessel Inspectors, and in addition shall have the following markings:

(1) The water capacity of the container in pounds or gallons, U. S. Standard.

(2) The working pressure in pounds per square inch for which the container is designed.

(3) The wall thickness of the shell and heads.

(f) All container inlets and outlets, except safety relief valves and gauging devices, shall be labeled to designate whether they communicate with vapor or liquid space.

(g) Each container must be subjected, at least once every five years, to the original hydrostatic and hammer test required by the code under which it was manufactured. A container must be condemned if it fails to pass such test. Each tank passing the test must be marked with the date (month and year) plainly and permanently stamped on the tank or name plate. For example: 1–29 for January 1929. Dates of previous tests must not be obliterated.

(h) All prescribed markings on tanks must be kept legible.

(i) Containers exposed to action of fire must not again be placed in service until they have been subjected to proper heat treatment, and retest as provided in section 3 (g).

4. *Filling pipe and discharge pipes.* (a) The discharge outlet shall be provided with a suitable automatic excess flow valve.

(b) Filling connections shall be provided with approved automatic valves to prevent back flow in case the filling connection is broken.

(c) All other connections to containers, except safety relief connections, shall be equipped with approved automatic excess flow valves. All excess flow and back pressure check valves shall be located inside of the container, or at a point outside where the line enters the container. In the latter case, installation shall be made in such manner that any undue strain beyond the excess flow or back pressure check valve will cause breakage on the discharge end of the excess flow or back pressure check valve, and not between container and such valve. Gauging devices which do not involve the flow of liquid, or which are so constructed that outward flow of container contents shall not exceed that passed by a No. 54 drill size, need not be equipped with excess flow valves.

NOTE 1: An excess flow valve is a valve so designed that it will automatically close and shut off the gas or liquid flow in case:

(1) The flow through the valve exceeds predetermined flow, which flow must be less than the pipe line capacity to and from such excess flow valve.

(2) The pressure on the inlet side of excess flow valve exceeds by a certain designed number of pounds per square inch the pressure in pounds on the outlet of such valve.

(d) All connections to containers except gauging device connections (see sec. 6 (a) hereof) and safety relief connections shall be provided with shut-off valves located as close to the container as practicable.

5. *Safety devices.* (a) Every container shall be provided with one or more safety relief valves of spring loaded or equivalent type arranged to afford free vent to the outer air and with discharge area sufficient to prevent the building up of pressure in excess of 120 percent of the maximum permitted setting of the relief valve on the container, and in accordance with the provisions of Appendix "A–1".

(b) Safety relief valves shall be set to start to discharge, with relation to the design working pressure of the container, as follows:

| Container | Minimum | Maximum |
|---|---|---|
| | *Percent* | *Percent* |
| A. S. M. E. | 100 | 125 |
| A. P. I.—A. S. M. E. | 80 | 100 |

(c) Safety relief valves shall be so arranged that tampering will be minimized and, if pressure setting or adjustment is external, the relief valves shall be provided with suitable means for sealing the adjustment mechanism. No shut-off valve shall be installed between the safety relief valve and the container.

(d) Each safety valve shall be plainly and permanently marked as follows:

(1) With the pressure in pounds per square inch, gauge, at which the valve is set to start to discharge and the actual free discharge area in square inches of the valve at its full open position; for example, 200–24.

6. *Gauging devices.* (a) Each container may be loaded by the weighing method, or by accurately determining liquid levels, with compensation for temperature and for vapor above the liquid in which case it shall be equipped with an accurate liquid level gauging device of approved design, for example, a rotary tube, slip tube, automatic outage tank, magnetic, or fixed tube device, the latter consisting of a dip pipe of small size equipped with a valve at the outer end, and so arranged that the maximum liquid level to which the container may be filled is not in excess of the maximum permitted under the filling density table in Sec. 10 (a), but based on an initial liquid temperature of not to exceed 40° F.

(1) Gauging devices of the rotary tube, fixed tube, slip tube, and magnetic type may be used without installation of an excess flow valve, provided the bleed valve opening is not larger than a #54 drill size. If tanks are to be filled according to liquid level, each tank should have a thermometer well so that the internal liquid temperature can be easily determined and the amount of liquid and vapor in the tank corrected to a 60° F. basis.

(b) Gauging devices shall have a design working pressure of at least 250 lbs. per sq. in., gauge.

(c) Gauge glasses of the column type are prohibited.

7. *Fittings and accessories.* (a) All valves and connections shall be of a type approved as herein provided, suitable for use with liquefied petroleum gas and designed for not less than the maximum pressure to which they may be subjected.

(b) Valve seat material, packing gaskets, etc., shall be of such quality as not to be adversely affected by liquefied petroleum gases.

8. *Protection of valves, fittings, and accessories.* (a) Each container shall have all valves, fittings, accessories, safety devices, gauging devices, and the like suitably protected against mechanical damage by rings, covers, boxes, or hoods, rigidly attached to the containers. Such attachments shall comply with the provisions of the Code of rules under which the containers are constructed, and shall be designed (with a mini-

mum factor of safety of four) to withstand loading in any direction equal to two times the weight of the container and attachments when filled to the maximum permissible loaded weight.

9. *Mountings for containers.* (a) Horizontal containers shall be designed and built with supports attached. The type of support popularly known as "skids" will be deemed to comply with this requirement.

(b) Containers may be permanently attached to the supports or may be removable, provided proper anchorage is assured to prevent jarring loose, slipping, or rotating of containers.

(c) Containers shall be secured in place on the supports by fastenings, designed (with a factor of safety of four) to withstand loadings in any direction equal to four times the filled weight of the container. Brackets, cradles, lifting lugs, or other attachments intended to carry loadings shall be in accordance with the Code under which the containers are constructed and shall be attached by the container manufacturer before testing.

(d) Lifting lugs, designed (with a safety factor of four) to withstand loadings in any direction equal to four times the filled weight of the container, shall be provided on the container or container support in a manner suitable for attaching lifting gear and hold-down devices.

10. *Filling densities.* (a) The "filling density" is defined as the percent ratio of the weight of the gas in a container to the weight of water the container will hold at 60° F. The filling density of containers shall not exceed the ratios following:

| Specific gravity at 60° F.: | Maximum permitted percent filling density |
|---|---|
| 0.360–0.398 | 32 |
| 0.399–0.425 | 33 |
| 0.426–0.440 | 34 |
| 0.441–0.452 | 35 |
| 0.453–0.462 | 36 |
| 0.463–0.472 | 37 |
| 0.473–0.480 | 38 |
| 0.481–0.488 | 39 |
| 0.489–0.495 | 40 |
| 0.496–0.503 | 41 |
| 0.504–0.510 | 42 |
| 0.511–0.519 | 43 |
| 0.520–0.527 | 44 |
| 0.528–0.536 | 45 |
| 0.537–0.544 | 46 |
| 0.545–0.552 | 47 |
| 0.553–0.560 | 48 |
| 0.561–0.568 | 49 |
| 0.569–0.576 | 50 |
| 0.577–0.584 | 51 |
| 0.585–0.592 | 52 |
| 0.593–0.600 | 53 |
| 0.601–0.608 | 54 |
| 0.609–0.617 | 55 |
| 0.618–0.626 | 56 |
| 0.627–0.634 | 57 |

(b) The liquid portion of the gas in a container shall not completely fill the container at 130° F.

11. *Odorizing the gas.* (a) In order that the danger of escaping combustible gas may be minimized and to facilitate the quick detection of gas leaks, butane transported in these containers shall be effectively odorized by an approved agent of such character as to positively indicate the presence of gas, down to concentrations in air of not over one-fifth the lower limit of combustibility, by a distinctive odor.

NOTE 1: The lower limit of combustibility of butane is 1.55. This figure represents volumetric percentage of a gas-air mixture.

12. *Painting and marking.* (a) Containers shall be painted a light heat-reflecting color and the paint shall be renewed as often as necessary to thoroughly protect all metal surfaces.

(b) Each container shall be plainly and conspicuously marked in red letters not less than four inches high with the words "FLAMMABLE GAS—KEEP FIRE AND LIGHTS AWAY."

(c) Each container shall be plainly and conspicuously marked "This Side Up" or "This End Up," as required.

APPENDIX A–1—REQUIRED SIZES OF SAFETY VALVES FOR BUTANE GAS TANKS AS CLASSIFIED UNDER SECTION 2

NOTE: $D$=outside diameter of tank in feet and fractions thereof; $U$=over-all length of tank in feet and fractions thereof.

| | Type 80-lb. min. | Type 100-lb. min. | Minimum required safety valve actual free discharge area (sq. ins.)* | | | |
|---|---|---|---|---|---|---|
| | | | Type 125-lb. min. | Type 150-lb. min. | Type 175-lb. min. | Type 200-lb. min. |
| Where ($D \times U$) does not exceed 10 | 0.32 | 0.27 | 0.22 | 0.19 | 0.18 | 0.16 |
| Is greater than 10 but not more than 15 | .46 | .38 | .30 | .25 | .24 | .21 |
| Is greater than 15 but not more than 20 | .60 | .50 | .42 | .36 | .33 | .29 |
| Is greater than 20 but not more than 40 | 1.25 | 1.03 | .84 | .71 | .64 | .57 |
| Is greater than 40 but not more than 60 | 1.90 | 1.57 | 1.25 | 1.06 | .94 | .83 |
| Is greater than 60 but not more than 80 | 2.50 | 2.06 | 1.68 | 1.43 | 1.25 | 1.10 |

*In no event may vapor pressure of butane filled into any tank exceed 80 pounds per square inch at 100° F.

Order approved March 29, 1940, in No. 3666, authorizing trial transportation of commercial butane (liquefied petroleum gas) on freight vessels in portable fusion-welded tanks of special design to Cristobal and Balboa, Canal Zone, and Colon and Panama City, Republic of Panama, amending order December 26, 1939, for trial transportation of commercial butane between ports of the United States and points located in Puerto Rico and Virgin Islands. Pertinent sections of regulations amended accordingly. Authority noted in § 73.32 (d) of this chapter. Stowage canceled by regulations of Secretary of Commerce effective April 9, 1941.

Order approved December 18, 1941, in No. 3666, authorizing trial transportation of liquefied petroleum gas in 5,000 cylinders of additional-type alloy steel construction. Pertinent sections of regulations amended accordingly. Authority noted in § 73.312 (a) (1) of this chapter covering specification 4B–240X cylinders, as follows:

SPECIFICATION 4B ALLOY STEEL CYLINDERS

22. *Additional type.* Cylinders without longitudinal welded seam when made for service pressure at least 150 pounds to not over 500 pounds per square inch are authorized when complying with this specification with exceptions and additional requirements as follows:

(a) Exceptions. (1) Yield point not over 75 percent of tensile strength is acceptable.

(2) Wall thickness is acceptable, subject to the additional requirement specified in par. 22 (b) (1), as follows:

| Inside diameter of cylinders (ins.) | Minimum thickness* (in.) | Inside diameter of cylinders (ins.) | Minimum thickness* (in.) |
|---|---|---|---|
| 13 or less | 0.078 | Over 14½ to 15 | 0.087 |
| Over 13 to 14 | .081 | Over 15 to 16 | .092 |
| Over 14 to 14½ | .084 | Over 16 | .100 |

*Excluding galvanizing or other protective coating.

(3) Elongation percentages as prescribed in § 78.50–17 (a) may be reduced by 2 percent for 2-inch specimens, and 1 percent in other cases, for each 7,500 pounds per square inch increment of tensile strength above 50,000 pounds per square inch up to the maximum of 80,000 pounds per square inch.

(b) *Additional requirements.* (1) Wall stress at test pressure, as calculated under § 78.50–10 (b), must not exceed 50 percent of the minimum tensile strength of the steel.

(2) Ratio of length of cylinder to its diameter must not exceed 3.5 when wall thickness is less than 0.10 inch.

(3) Each cylinder, except when brazed throughout, must be thermally stress relieved after all welding operations have been completed and prior to the hydrostatic test.

(4) Weld test specimens must be cut from one cylinder taken at random from each lot of 200 or less cylinders after stress relieving as prescribed and must pass satisfactorily the following tests:

(a) *Tensile test.* Without preparation other than finishing the edges parallel for a distance of approximately 2 inches on each side of the weld, the specimen must be fractured in a tensile test; the unit breaking load must be at least equal to the minimum unit breaking load in the tensile tests made under the requirements of § 78.50–16.

(b) *Guided bend test.* A specimen 1½ inches wide, on which the edges have been machined parallel and rounded with a file, but without other preparation, shall be bent to refusal in the guided bend test jig illustrated in paragraph 6.10 of CGA Pamphlet C–3–1954, "Standards for Welding and Brazing on Thin Walled Containers."[1] The root of the weld (inside surface of cylinder) shall be located away from the ram of the jig. Any specimen which shows a crack exceeding ⅛ inch in any direction upon completion of the test shall be considered unsatisfactory.

(5) All markings must be applied on a plate of ferrous material attached to the top end of the cylinder or permanent part thereof; sufficient space must be left on the plate to provide for stamping at least six retest dates; the plate must not be attached to the side wall of the cylinders; the plate must be at least 1/16 inch thick and it must be attached by welding, or by brazing at a temperature of at least 1400° F., throughout all edges of the plate; provided, that marks may be stamped into the metal of the valve boss or valve protecting sleeve or similar part permanently attached to the top end of the cylinder; provided further, that marks other than those prescribed in par. 19 may be stamped into the foot ring. Stamping of letters, figures or other marks into the metal of the cylinder for any purpose whatever, except as above authorized, is expressly prohibited.

(6) Reports of manufacture shall include percentage of each alloying element in the steel and shall state that the cylinders are made under the provisions of par. 22 of this specification.

(7) Carbon content of steel must not exceed 0.20 percent.

(c) Marking requirements of § 78.50–19 (a) (2) of specification No. 4 must be complied with. The marking of cylinders must be as follows:

I. C. C.—4 B—240 X

## Subpart D—Specifications for Metal Barrels, Drums, Kegs, Cases, Trunks, and Boxes

### § 78.80 Specification 5; steel barrels or drums.

Removable head containers which will pass all required tests are authorized.

### § 78.80–1 Compliance.

(a) Required in all details.

### § 78.80–2 Rated capacity.

(a) Rated capacity as marked, see § 78.80–11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

### § 78.80–3 Composition.

(a) Sheets for body and heads to be low carbon, open hearth or electric steel. Stainless steel, when used, must be, except for rolling hoops and chime reinforcement, an austenitic 18 and 8 chrome nickel alloy with carbon content not over 0.08 percent, or other equivalent grades.

### § 78.80–5 Seams.

(a) Body seams welded.

### § 78.80–6 Chime reinforcement.

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

### § 78.80–7 Parts and dimensions.

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 5 | Straight side | 22 | 22 | None | | |
| 10 | do | 20 | 20 | do | | |
| 33 | do | 14 | 14 | do | | |
| 33 | do | 18 | 18 | U | 16 | |
| 55 | do | 16 | 16 | U [2] | 14 | |
| 110 | do | 14 | 14 | U [2] | 12 | |
| 33 | do | 18 | 18 | I-bar | ¾ x 1¼ | 1.25 |
| 55 | do | 16 | 16 | I-bar [3] | ¾ x 1¼ | 1.25 |
| 110 | do | 14 | 14 | I-bar [3] | ¾ x 1¼ | 1.25 |
| 33 | do | 16 | 16 | (4) | | |
| 55 | do | 14 | 14 | (4) | | |
| 33 | Bilge | 14 | 16 | None | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

[2] Rolled or swedged in hoops.

[3] In addition to the normal rolling hoops, the body of each removable head drum must have a rolled or swedged in hoop the center-line of which shall be not more than 3 inches from the top curl.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 13 | 0.0897 | 0.0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |
| 22 | .0299 | .0269 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

### § 78.80–8 Rolling hoops.

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I-bar type directly to body of drum in any manner not permitted.

### § 78.80–9 Closures.

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 5/16-inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ⅝ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives.

### § 78.80–10 Defective containers.

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

### § 78.80–11 Marking.

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–5. In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–5–304 or ICC–5–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

### § 78.80–12 Size of markings.

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

### § 78.80–13 Type tests.

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test

on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

(3) Periodic drop and hydrostatic tests are not required when containers fabricated of stainless steel have satisfactorily withstood prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. In instances where manufacturers have suspended production for an interval of 12 months or more, drop and hydrostatic tests must be again conducted as prescribed in subparagraphs (1) and (2) of this paragraph as for original start of production.

**§ 78.80–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.81 Specification 5A; steel barrels or drums.**

Removable head containers not authorized.

**§ 78.81–1 Compliance.**

(a) Required in all details.

**§ 78.81–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.81–11 (a) (3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.81–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.81–5 Seams.**

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanges for closures welded in place.

**§ 78.81–6 Chime reinforcement.**

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

**§ 78.81–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum size (gauge or inch) | Minimum weight (pounds per foot) |
| 10 | Straight side | 16 | 16 | None | | |
| 30 | do | 16 | 16 | I-bar | ¾ x 1¾ | 1.25 |
| 55 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 110 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 30 | Bilge | 14 | 16 | None | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

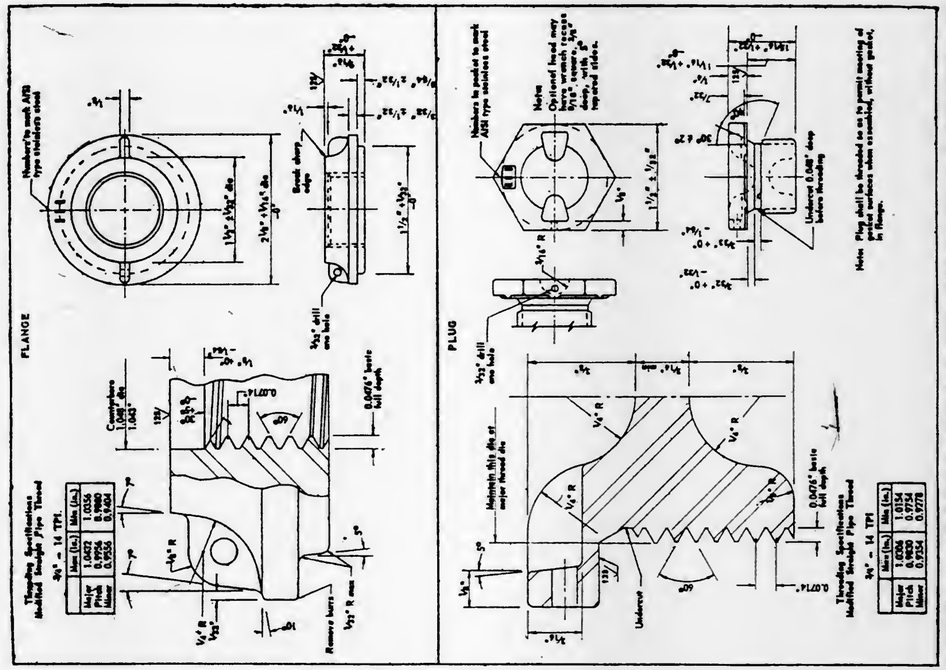
**§ 78.81–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or welding of the rolling hoops directly to the body of the drum in any manner is not permitted.

**§ 78.81–9 Closures.**

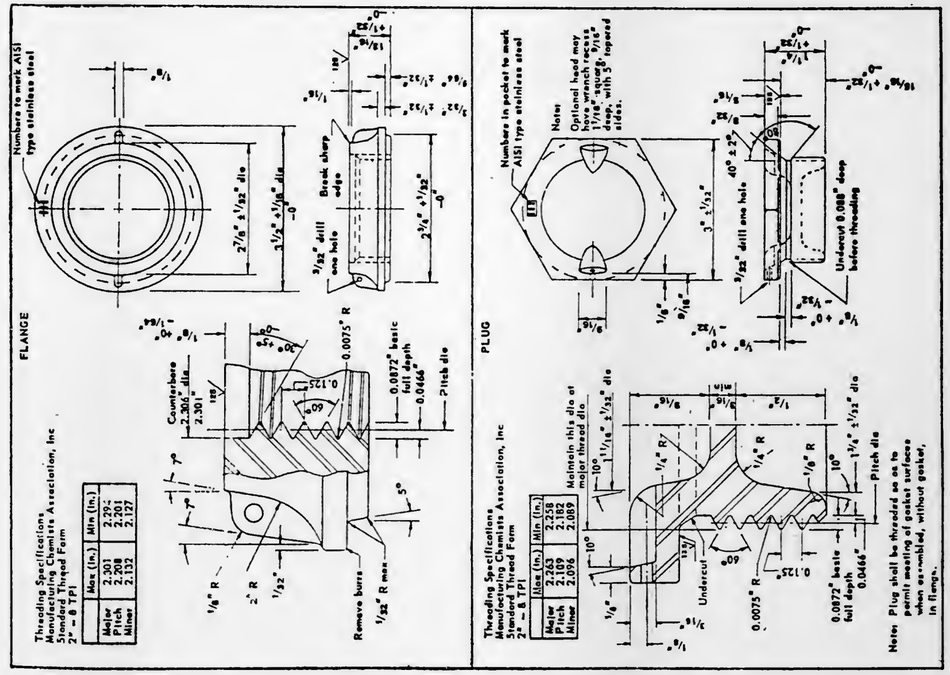
(a) Adequate to prevent leakage; gasket required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.



NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 5/16" diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place.



(d) Openings over 2.3" diameter not permitted. Threads for plug or cap must be 8 or less per inch when over ¾" standard pipe size. Flanges with inside threads and plugs must conform with the thread diameter and thread form shown in the following drawing; other details shown on the drawing are recommended.

(1)

(e) Other threaded closures may be authorized by the Bureau of Explosives upon demonstration of equal efficiency.

**§ 78.81–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.81–11 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5A. In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–5A–304 or ICC–5A–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.81–12 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.81–13 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

**§ 78.81–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.82 Specification 5B; steel barrels or drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.82–1 Compliance.**

(a) Required in all details.

**§ 78.82–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.82–11(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater. Actual capacity of bilge type containers must be not less than rated (marked) capacity, nor greater than rated (marked) capacity plus 2 percent plus 2 quarts.

**§ 78.82–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.82–5 Seams.**

(a) Body seams welded.

**§ 78.82–6 Chime reinforcement.**

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

**§ 78.82–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 5 | Straight side | 24 | 24 | None | | |
| 10 | do | 22 | 22 | do | | |
| 15 | do | 20 | 20 | [2] | | |
| 33 | do | 18 | 18 | [2] | | |
| 55 | do | 16 | 16 | [2] [3] | | |
| 110 | do | 13 | 14 | [2] [3] | | |
| 33 | Bilge | 16 | 16 | None | | |
| 55 | do | 14 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.
[2] Rolled or swedged in hoops.
[3] Each removable head drum body must have three rolled or swedged in hoops with the center-line of one not more than 3 inches from the top curl.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 13 | 0.0897 | 0.0817 |
| 14 | .0747 | .0677 |
| 16 | .059 | .0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |
| 22 | .0299 | .0269 |
| 24 | .0239 | .0209 |

[1] Thickness shall be measured at any point on the sheet not less than 3% inch from an edge.

**§ 78.82–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.82–9 Closures.**

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 5/16" diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place. Threaded bung closures consisting of any type other than welded flanges and plugs, must be of a type approved by the Bureau of Explosives for use, after submission of proof as to efficiency.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having 3/8 inch bolt and nut for drums not over 30 gallons capacity and 5/8 inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives.

**§ 78.82–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.82–11 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–5B. In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture, (for example, ICC–5B–304 or ICC–5B–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in the head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.82–12 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.82–13 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure tests of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

**§ 78.82–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.83 Specification 5C; steel barrels or drums.**

Removable head containers not authorized.

**§ 78.83–1 Compliance.**

(a) Required in all details.

**§ 78.83–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.33–11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.83–3 Composition.**

(a) Steel must be, except for rolling hoops and chime reinforcement, as follows:

(b) All sheet metal, welding rod, closing devices, and samples taken from the welded portion of the finished container must be of Type 304, 18 chrome 8 nickel alloy with 0.08 percent carbon maximum, 18–20 percent chromium, 8–11 percent nickel, or other types of stainless steel of equivalent corrosion resistance and physical properties.

(c) Type 304 or other grades of equivalent corrosion resistant steels in the as-welded condition are permissible for nitric acid concentrations up to and including 78 percent. For all concentrations of nitric acid the following are permissible:

(1) Type 304 heat-treated (quenches from 1900° F.), or

(2) Stabilized Type 347 in the as-welded condition, or

(3) Stabilized Type 347 stress-relieved (1550°–1650° F.), or

(4) Stabilized Type 347 heat-treated (quenches from 1900° F.), or

(5) Other grades of equivalent corrosion resistance.

(d) All parts of any completed container exposed to lading must comply with the standard 65 percent boiling nitric acid test in that the limit of inches per month penetration in accordance with corrosion test as used in American Society of Testing Materials Standard A–262–44–T shall be 0.0015 inch, this figure to be an average of five 48-hour tests.

**§ 78.83–5 Seams.**

(a) Body seams welded.

(b) Chime seams welded or double-seamed and welded.

(c) Flanges for closures welded in place.

**§ 78.83–6 Chime reinforcement.**

(a) Containers of 10 gallons capacity or over, with flanged head secured to body, to have chime reinforcement adequate for its protection.

**§ 78.83–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 15 | Straight side | 20 | 20 | None | | |
| 30 | do | 18 | 18 | I-bar | ¾ x 1¼ | 1.25 |
| 55 | do | 16 | 16 | do [2] | 1 x 1½ | 1.60 |
| 110 | do | 14 | 14 | do [2] | 1 x 1½ | 1.60 |
| 15 | Bilge | 16 | 16 | None | | |
| 30 | do | 14 | 16 | do | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.
[2] Stainless steel I-bar rolling hoops ¾ x 1¼ inches, weighing not less than 1.27 pounds per foot, are authorized.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 13 | 0.0897 | 0.0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |

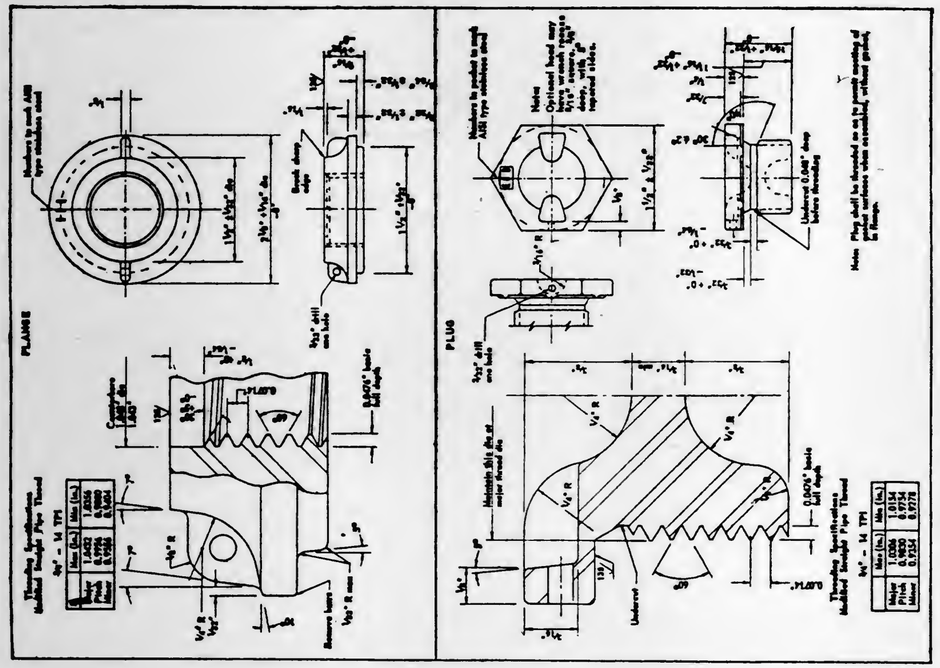
[1] Thickness shall be measured at any point on the sheet not less than 3% inch from an edge.

**§ 78.83–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.83–9 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.



(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 5/16 inch diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place. Except that for containers not over 15 gallons marked capacity the seat (flange, etc.) for plug or cap may have at least 3 complete threads and plug or cap sufficient length of thread to engage 3 threads when securely tightened with gasket in place.

(d) Openings over 2.3 inches are not permitted. Threads for plug or cap must be 8 or less per inch when over ¾ inch standard pipe size.

(1) Flanges with inside threads and plug must conform with the thread diameter and thread form shown in the following drawing (other details shown on the drawing are recommended):

(1) (2) Eleven and one-half (11½) threads per inch, standard pipe size.

(e) Other threaded closures may be authorized by the Bureau of Explosives upon demonstration of equal efficiency.

**§ 78.83–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.83–11 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5C, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and, in addition, the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–5C–304 or ICC–5C–304HT as applicable). These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives. Also, by embossing or stamping, tare weight in pounds (for example, TW121).

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.83–12 Size of marking.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.83–13 Type tests.**

(a) Samples, taken at random and closed as for use, must be capable of withstanding prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 4 months, except as provided in subparagraph (3) of this paragraph. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained.

**§ 78.83–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.84 Specification 5D; steel barrels or drums, lined.**

Removable head containers which will pass all required tests are authorized.

**§ 78.84–1 Compliance.**

(a) Required in all details.

**§ 78.84–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.84–11 (a) (3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.84–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.84–5 Lining.**

(a) To be applied so as to adhere securely to metal throughout; to be tough and pliable. Hard rubber authorized to line closing devices.

**§ 78.84–6 Chime reinforcement.**

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

**§ 78.84–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 10 | Straight side | 16 | 16 | None | | |
| 30 | do | 16 | 16 | I-bar | ¾ x 1¼ | 1.25 |
| 55 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 110 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 30 | Bilge | 14 | 16 | None | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than ¾ inch from an edge.

**§ 78.84–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.84–9 Closures.**

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 5 or more complete threads; two drainage holes of not over 5/16" diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 5 threads when screwed home with gasket in place.

(d) Closure must be of screw-thread type or fastened by screw-thread device.

**§ 78.84–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.84–11 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–5D. In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture

(for example, ICC–5D–304 or ICC–5D–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/22–55–50 for body 14 gauge and head 12 gauge).

**§ 78.84–12 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.84–13 Type tests.**

(a) Sample containers, before lining is applied, taken at random and closed as for use, must be capable of withstanding prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 4 months, except as provided in subparagraph (3) of this paragraph. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained.

**§ 78.84–14 Leakage test.**

(a) Each container, with lining material applied, shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every 4 months. Samples so tested must be retained until further tests are made.

**§ 78.84–15 Additional test.**

(a) On each container by 110-volt electrical circuit between inside and outside of container filled with suitable electrolyte; a milliammeter must show zero reading. The milliammeter test is required when retesting containers which show evidence of damage. A spark coil test is permitted on each container during manufacture in lieu of the milliammeter test described above.

**§ 78.85 Specification 5F; steel drums.**

Removable head containers not authorized.

**§ 78.85–1 Compliance.**

(a) Required in all details.

**§ 78.85–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.85–10 (a) (3): Not over 11 gallons.

**§ 78.85–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.85–5 Seams.**

(a) Body seams welded or brazed.

(b) Head and chime seams welded or brazed.

(c) Flanges for closures welded or brazed in place.

**§ 78.85–6 Chime reinforcement.**

(a) Container to have chime reinforcement adequate for its protection.

**§ 78.85–7 Gauge and thickness of sheets.**

(a) Body and heads shall be of uncoated steel sheets having nominal thickness of 0.0747 inch and minimum thickness of 0.0677 inch, which sheets shall be designated 14 gauge.

**§ 78.85–8 Closures required.**

(a) Of screw-thread type and adequate to prevent leakage in transit. Openings over 2.3" diameter not permitted. Threads for connections (valve, bung, etc.) to be American Standard taper pipe threads, tapped to gauge, and clean cut to insure tight joints.

**§ 78.85–9 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.85–10 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5F. This mark shall be understood to certify that the container complies with all specification requirements. Serial number and name or symbol (letters) of company or person for whose use the containers are made are also required.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example 14–11–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–11–50 for body 14 gauge and head 12 gauge).

**§ 78.85–11 Size of markings.**

(a) Size of markings (minimum): ½" high.

**§ 78.85–12 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 125 pounds per square inch sustained for 5 minutes.

**§ 78.85–13 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 100 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.87 Specification 5H; steel barrels or drums, lead lined.**

Removable head containers not authorized.

**§ 78.87–1 Compliance.**

(a) Required in all details.

**§ 78.87–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.87–11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.87–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.87–5 Seams.**

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanges for closures welded in place.

**§ 78.87–6 Chime reinforcement.**

(a) Containers with flanged head secured to body to have chime reinforcement adequate for its protection.

**§ 78.87–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 10 | Straight side | 16 | 16 | None | | |
| 30 | do | 16 | 16 | I-bar | ¾ x 1¼ | 1.25 |
| 55 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 110 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 30 | Bilge | 14 | 16 | None | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

(c) Lining required: Of lead, at least 1/32" thick, completely bonded to the steel.

**§ 78.87–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.87–9 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 5 or more complete threads; two drainage holes of not over 5/16" diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 5 threads when screwed home with gasket in place.

(d) Openings over 2.3" diameter not permitted. Threads for plug or cap must be 8 or less per inch when over ¾" standard pipe size.

**§ 78.87–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.87–11 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5H. In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture, (for example, ICC–5H–304 or ICC–5H–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.87–12 Size of marking.**

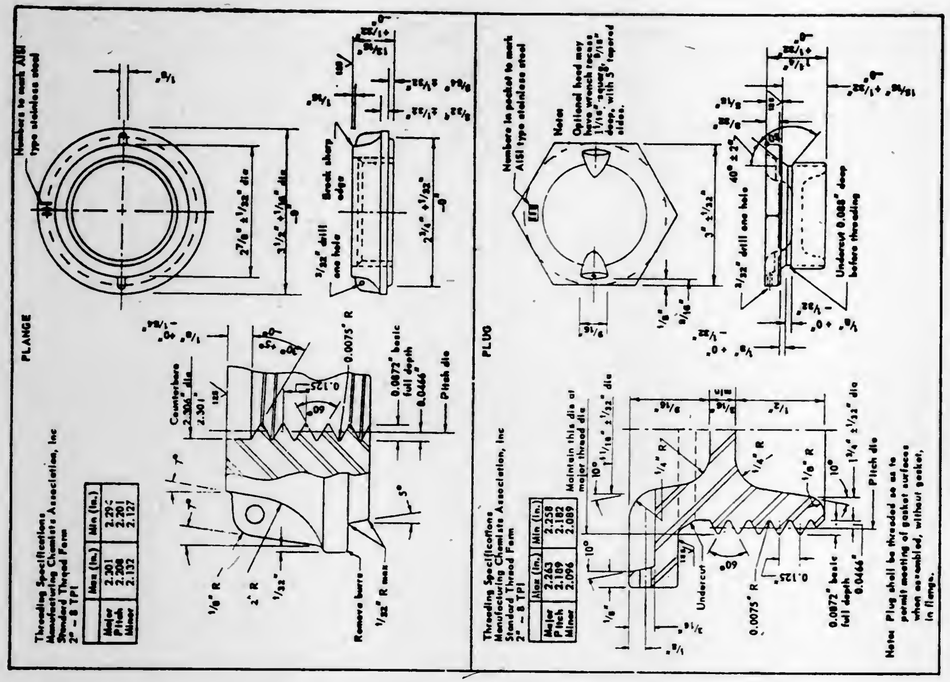
(a) Size of marking (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.87–13 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.



(3) Periodic drop tests will not be required after initial drop tests at start of manufacture, on containers of a construction in excess of minimum specification requirements approved by the Bureau of Explosives. Changes in construction (drum, lining, or closures) must also be approved by the Bureau of Explosives for use, after submission of proof as to efficiency, to continue this exemption.

**§ 78.87–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.88 Specification 5K; nickel barrels or drums.**

Removable head containers not authorized.

§ 78.88–3 Composition.

(a) Material must be, except for rolling hoops and chime reinforcements, nickel at least 99.0 percent pure.

§ 78.88–4 Seams.

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanges for closures welded in place.

§ 78.88–5 Chime reinforcement.

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 78.88–6 Parts and dimensions.

(a) Parts and dimensions as follows:

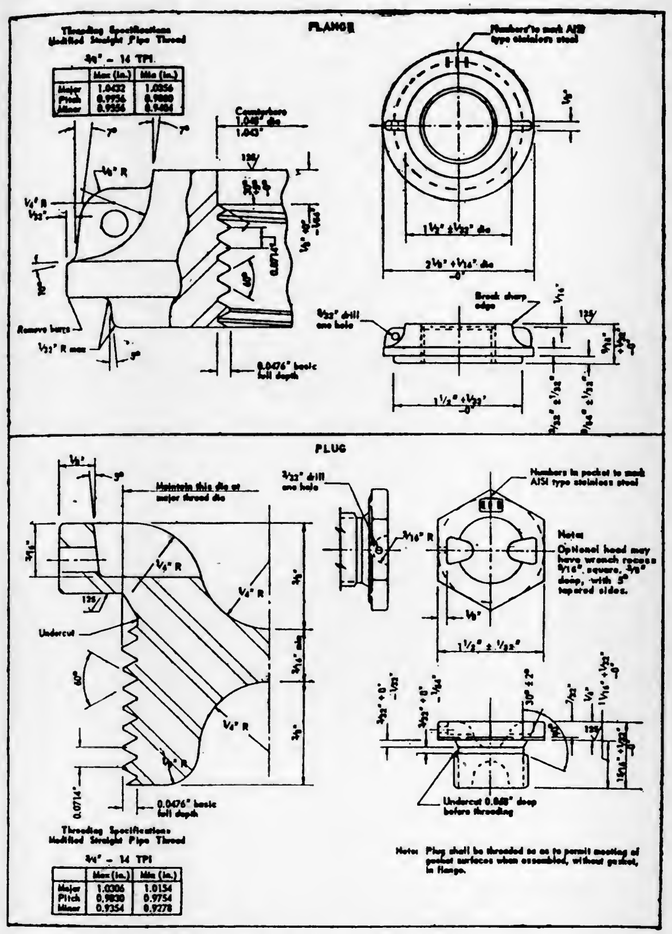
| Marked capacity not over (gallons) | Type of container | Minimum thickness in Black (gauge, United States standard) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 10 | Straight side | 16 | 16 | None | ¾ x 1¼ | 1.25 |
| 20 | do | 16 | 16 | I-bar | 1 x 1½ | 1.60 |
| 55 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 110 | do | 12 | 12 | None | | |
| 20 | Bilge | 16 | 14 | do | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

§ 78.88–7 Rolling hoops.

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

§ 78.88–8 Closures.



(a) Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc. see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

or (2) Eleven and one-half (11½) threads per inch, standard pipe size.

(1)

(e) Other threaded closures may be authorized by the Bureau of Explosives upon demonstration of equal efficiency.

§ 78.88–9 Defective containers.

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 78.88–10 Marking.

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5K. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

§ 78.88–11 Size of markings.

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

§ 78.88–12 Type tests.

(a) Samples, taken at random and closed as for use, must be capable of withstanding prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 12 months, except as provided in subparagraph (3) of this paragraph. Samples last tested to be retained until further tests are made. The types tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained.

§ 78.88–13 Leakage test.

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

§ 78.89 Specification 5L; steel barrels or drums.

Removable head containers not authorized.

§ 78.89–1 Compliance.

(a) Required in all details.

§ 78.89–2 Rated capacity.

(a) Rated capacity as marked, see § 78.89–9(a)(3). Actual capacity shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart.

§ 78.89–3 Composition.

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

§ 78.89–5 Seams.

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanged spout for filling and emptying container welded in place or attached in a manner approved by Bureau of Explosives.

§ 78.89–6 Parts and dimensions.

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type | Minimum Size (gauge or inch) | Minimum Weight (pounds per foot) |
| 5 | Rectangular | 20 | 20 | None | | |

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 20 | 0.0359 | 0.0324 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.89–7 Closures.**

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part must be of sufficient strength to withstand the drop test prescribed in § 78.89–11 (a) (1).

(c) Closure must be of screw-thread type or fastened by screw-thread device.

(d) Openings over 2.5 inches diameter not permitted.

**§ 78.89–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.89–9 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5L. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacturer (for example, 20–5–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 20/18–5–50 for body 20 gauge and head 18 gauge).

**§ 78.89–10 Size of markings.**

(a) Size of markings (minimum): ½" high.

**§ 78.89–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

**§ 78.89–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 5 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.90 Specification 5M; monel drums.**

Removable head containers not authorized.

**§ 78.90–1 Compliance.**

(a) Required in all details.

**§ 78.90–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.90–10(a)(3). Actual capacity of containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.90–3 Composition.**

(a) Material must be, except for rolling hoops and chime reinforcements, monel.

**§ 78.90–4 Seams.**

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanges for closures welded in place.

**§ 78.90–5 Chime reinforcement.**

(a) Containers to have chime reinforcement adequate for its protection.

**§ 78.90–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness in the black (gauge, United States standard) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type [1] | Minimum Size (gauge or inch) | Minimum Weight (pounds per foot) |
| 10 | Straight side | 14 | 14 | None | | |
| 55 | do | 14 | 14 | I-bar | 1 x 1½ | 1.60 |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

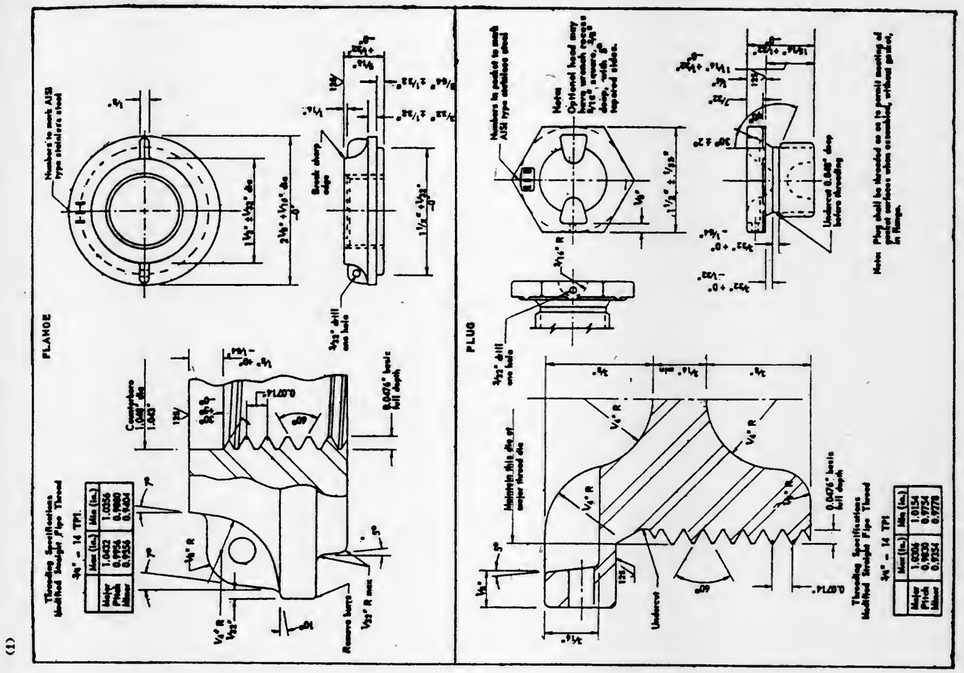
**§ 78.90–7 Rolling hoops.**

(a) Separate hoops if used, to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.90–8 Closures.**

(a) Adequate to prevent leakage. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.



NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug or cap must have 5 or more complete threads; 2 drainage holes of not over 5/16-inch diameter are allowed in that section of flange which extends inside the drum. Plug or cap must have sufficient length of thread to engage 5 threads when securely tightened with gasket in place.

(d) Openings over 2.3 inches diameter are not permitted. Threads for plug or cap must be 8 or less per inch when over ¾ inch standard pipe size.

(1) Flanges with inside threads and plug must conform with the thread diameter and thread form shown in the following drawing (other details shown on the drawing are recommended):

(e) Other threaded closures may be authorized by the Bureau of Explosives upon demonstration of equal efficiency.

or (2) Eleven and one-half (11½) threads per inch, standard pipe size.

**§ 78.90–9 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.90–10 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5M. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50).

**§ 78.90–11 Size of markings.**

(a) Size of marking (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.

**§ 78.90–12 Type tests.**

(a) Samples, taken at random and closed as for use, must be capable of withstanding prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 12 months, except as provided in subparagraph (3) of this paragraph. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

(3) Periodic drop and hydrostatic tests are not required where container has satisfactorily met prescribed tests at the original start of production. Satisfactory test results must be obtained on samples of subsequent containers that have been altered in design or construction. Samples so tested must be retained.

**§ 78.90–13 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.91 Specification 5X; steel drums, aluminum lined.**

Removable head containers not authorized.

**§78.91–1 Compliance.**

(a) Required in all details.

**§ 78.91–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.91–11(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.91–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.91–5 Seams.**

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

(c) Flanges for closures welded in place.

**§ 78.91–6 Chime reinforcement.**

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

**§ 78.91–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | | | Type[1] | Minimum | |
| | | Body sheet | Head sheet | | Size (gauge or inch) | Weight (pounds per foot) |
| 10 | Straight side | 16 | 16 | None | | |
| 30 | do | 16 | 16 | I-bar | ⅝ x 1¼ | 1.25 |
| 55 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 110 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 30 | Bilge | 14 | 16 | None | | |
| 55 | do | 13 | 14 | do | | |

[1] Rolling hoops of pliable solid rubber or other suitable material are also authorized when approved as to type and construction by the Bureau of Explosives.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness[1] (inch) | Minimum thickness[1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

(c) *Lining.* Required; of aluminum 99 percent pure; thickness 0.12"; all seams welded. It shall have reasonably good fit in outside drum and be arranged so that extensive movement therein will be prevented.

**§ 78.91–8 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.91–9 Closures.**

(a) Adequate to prevent leakage; shall be located between rolling hoops; aluminum plate gasket, at least 0.10 inch thick, is required. Closure must be of screw-thread type or fastened by screw-thread device. Unthreaded cap is authorized for containers of 12 gallons or less if cap is provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or or cap, must have 5 or more complete threads; two 5/16" drainage holes are allowed. Plug, or cap, must have sufficient length of thread to engage 5 threads when screwed home without gasket. Threaded cap closures, 3 full threads engaged are also authorized.

(d) Openings over 2.3" diameter not permitted. Threads for plug or cap must be 8 or less per inch when over ¾" standard pipe size.

**§ 78.91–10 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constucting container, not by soldering.

**§ 78.91–11 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–5X. In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–5X–304 or ICC 5X–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.91–12 Size of markings.**

(a) Size of marking (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.91–13 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.

**§ 78.91–14 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.92 Specification 5P; lagged steel drums.**

Removable head containers not authorized.

**§ 78.92–1 Compliance.**

(a) Required in all details.

**§ 78.92–2 Rated capacity.**

(a) Rated capacity not over 61 gallons, see § 78.92–12 (a) (3). Actual capacity shall be not less than rated capacity plus two percent nor greater than rated capacity plus two percent plus one and one-half gallons.

**§ 78.92–3 Composition.**

(a) Sheets for body and heads of inside container to be low carbon or austenitic stainless, open hearth or electric steel. Sheets for body and heads of outside shell may be of any weldable steel suitable for the purpose.

**§ 78.92–5 Construction.**

(a) Container shall consist of a straight sided inside steel drum which must be lagged with a suitable fire-resistant lagging material of such insulating properties and thickness that the drum charged with the commodity to be shipped will not rupture in a fire when it is equipped with safety devices as required by § 78.92–9. The entire insulation must be covered with a metal shell so constructed that moisture cannot come in contact with lagging.

(b) Brazing is not permitted.

(c) All seams of drum and shell must be fusion welded.

(d) Flanges or bosses for closures in the inner container must be fusion welded in place to the inside drum and the metal shell.

(e) Means for testing inside drum for leaks must be provided in outside shell.

**§ 78.92–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

(1) Steel sheets used for body and head sheets for inside drum must have nominal thickness of at least 0.0747 inch and minimum thickness of 0.0677 inch, uncoated sheets, which shall be designated 14 gauge.

(2) Steel sheets used for body sheets for outside shell must have nominal thickness of at least 0.1046 inch and minimum thickness of 0.0946 inch, uncoated sheets, which shall be designated 12 gauge.

(3) Steel sheets used for head sheets for outside shell must have nominal thickness of at least 0.0747 inch and minimum thickness of 0.0677 inch, uncoated sheets, which shall be designated 12 gauge.

**§ 78.92–7 Rolling hoops.**

(a) Rolling hoops are required and these may be rolled or swedged in the outside shell or consist of separate hoops having a tight fit on shell and securely held in place.

**§ 78.92–8 Closures.**

(a) All closures must be of screw-thread type adequate to prevent leakage and be of a material which will not react dangerously in contact with the commodity.

(b) All openings in inside drums must be located in the top head.

(c) Openings over 2.3 inches screw thread size not permitted.

(d) Plugs, caps, or other fittings must have sufficient length of thread to engage 5 threads when screwed home with gasket in place.

(e) Gaskets which are not affected by lading are required for closures having straight threads.

**§ 78.92–9 Safety devices.**

(a) Each container must be provided with safety devices approved as to type and location by the Bureau of Explosives and found to prevent the bursting of the normally charged container when it is placed in a fire. See § 73.124(a)(4) of this chapter.

**§ 78.92–10 Closure protection.**

(a) Construction must be such as to afford adequate protection to valves and safety devices.

**§ 78.92–11 Defective containers.**

(a) Leaks and other defects to be repaired only by processes used in constructing container.

**§ 78.92–12 Marking.**

(a) Marking on each container by embossing with raised marks or by steel stamping on top head of outside shell or on a permanently attached head protective ring, as follows:

(1) ICC–5P. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be recorded with and its use approved by the Bureau of Explosives.

(3) Minimum gauge of metal of inner container, rated capacity in gallons and year of manufacture must be indicated in the order named (for example, 14–61–50).

(4) Size of markings (minimum): ½ inch high for stamping, 1 inch high for embossing.

**§ 78.92–13 Tests.**

(a) Sample drums, taken at random and closed as for use, shall withstand prescribed tests without leakage, one test to be made of each design and size of drum by each company before starting production as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet on to solid concrete so as to strike diagonally on chime (foot ring), or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker.

(2) Hydrostatic pressure test of 100 pounds per square inch sustained for five minutes. This test shall be applied to the finished inner container before lagging material and outer shell are assembled.

(3) Samples last tested to be retained until further tests are made.

**§ 78.92–14 Leakage test.**

(a) Each container shall be subjected to a presure test of at least 125 pounds per square inch sustained for at least 30 seconds. Test shall be applied to inner container before lagging material or outer shell is assembled. Failures shall be rejected or repaired and retested.

NOTE 1: If air or other gas is the pressurizing medium, the test should be conducted in a pit or equivalent means of safeguarding personnel.

(b) Subsequent to the test specified in paragraph (a) of this section each container shall be tested with seams under water or covered with soapsuds or other suitable material by interior air pressure of at least 75 pounds per square inch.

Leakage test shall be applied to finished inner container before lagging or outer shell is assembled. Leakers shall be re-

**§ 78.97–11 Type tests.**

(a) Samples taken at random and

| | | | Minimum thickness, | Rolling hoops | | |

onally on top chime, or when without chime seam, to strike on other circum-

Leakage test shall be applied to finished inner container before lagging or outer shell is assembled. Leakers shall be rejected or repaired and retested.

**§ 78.97 Specification 6A; steel barrels or drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.97–1 Compliance.**

(a) Required in all details.

**§ 78.97–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.97–9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.97–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.97–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity (gallons) | Authorized gross weight (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | | Body sheet | Head sheet | Type | Minimum: Size (gauge or inch) | Minimum: Weight (pounds per foot) |
| 5 to 10 | 160 | Straight side. | 16 | 16 | None | | |
| 5 to 30 | 480 | do | 14 | 14 | I-bar | ¾ x 1¼ | 1.25 |
| 5 to 55 | 880 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 5 to 33 | 480 | Bilge | 13 | 14 | None | | |
| 5 to 55 | 880 | do | 12 | 12 | do | | |

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than 5/16 inch from an edge.

**§ 78.97–6 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.97–7 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.97–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.97–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–6A***; stars to be replaced by the authorized gross weight (for example, ICC–6A880, etc.). In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–6A880–304 or ICC–6A880–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.97–10 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.

**§ 78.97–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

**§ 78.97–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.98 Specification 6B; steel barrels or drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.98–1 Compliance.**

(a) Required in all details.

**§ 78.98–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.98–9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent, plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.98–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.98–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity (gallons) | Authorized gross weight (pounds) | Type of Container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | | Body Sheet | Head Sheet | Type | Minimum: Size (gauge or inch) | Minimum: Weight (pounds per foot) |
| 5 to 10 | 160 | Straight side. | 18 | 18 | None | | |
| 5 to 30 | 480 | do | 16 | 16 | U [1] | 14 | |
| 5 to 55 | 880 | do | 14 | 14 | U | 12 | |
| 5 to 30 | 480 | do | 16 | 16 | I-bar [1] | ¾ x 1¼ | 1.25 |
| 5 to 55 | 880 | do | 14 | 14 | do | ¾ x 1¼ | 1.25 |
| 5 to 110 | 1,760 | do | 12 | 12 | do | 1 x 1½ | 1.60 |
| 5 to 33 | 480 | Bilge | 15 | 16 | None | | |
| 5 to 55 | 880 | do | 13 | 14 | do | | |

[1] Rolled or swedged in hoops permitted.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 13 | .0897 | .0817 |
| 14 | .0747 | .0677 |
| 15 | .0673 | .0603 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |

[1] Thickness shall be measured at any point on the sheet not less than 5/16 inch from an edge.

**§ 78.98–6 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I-bar type directly to body of drum in any manner not permitted.

**§ 78.98–7 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.98–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.98–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–6B***; stars to be replaced by the authorized gross weight (for example, ICC–6B880, etc.). In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–6B880–304 or ICC–6B880–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.98–10 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.98–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

**§ 78.98–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.99 Specification 6C; steel barrels or drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.99–1 Compliance.**

(a) Required in all details.

**§ 78.99–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.99–9 (a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.99–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.99–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity (gallons) | Authorized gross weight (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | | Body sheet | Head sheet | Type | Minimum: Size (gauge or inch) | Minimum: Weight (pounds per foot) |
| 5 | 80 | Straight side | 22 | 22 | None | | |
| 5 to 10 | 160 | do | 20 | 20 | do | | |
| 5 to 30 | 480 | do | 18 | 18 | U | 16 | |
| 5 to 55 | 880 | do | 16 | 16 | U | 14 | |
| 5 to 110 | 1,760 | do | 14 | 14 | U | 12 | |
| 5 to 30 | 480 | do | 18 | 18 | I-bar | ¾ x 1¼ | 1.25 |
| 5 to 55 | 880 | do | 16 | 16 | do | ¾ x 1¼ | 1.25 |
| 5 to 110 | 1,760 | do | 14 | 14 | do | 1 x 1½ | 1.60 |
| 5 to 33 | 480 | Bilge | 16 | 16 | None | | |
| 5 to 55 | 880 | do | 15 | 16 | do | | |

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 14 | 0.0747 | 0.0677 |
| 15 | .0673 | .0603 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |
| 22 | .0299 | .0269 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.99–6 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding except for continuous resistance method, not permitted. Welding of I-bar type directly to body of drum in any manner not permitted.

**§ 78.99–7 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing device which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.99–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.99–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–6C***; stars to be replaced by the authorized gross weight (for example, ICC–6C880, etc.). In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–6C880–304 or ICC–6C880–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.99–10 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 55 gallons, and 1" for over 55 gallons.

**§ 78.99–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

**§ 78.99–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.100 Specification 6J; steel barrels and drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.100–1 Compliance.**

(a) Required in all details.

**§ 78.100–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.100–9(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.100–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.100–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity (gallons) | Authorized gross weight (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | | Body sheet | Head sheet | Type | Minimum | |
| | | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 5 to 30 | 260 | Straight side | 19 | 19 | (1) | | |
| 5 to 55 | 490 | do | 18 | 18 | (1) | | |
| 5 to 55 | 880 | do | 16 | 16 | U | 14 | |
| 5 to 55 | 880 | do | 16 | 16 | I-bar | ¾ x 1¼ | 1.25 |
| 5 to 33 | 490 | Bilge | 16 | 18 | None | | |
| 5 to 55 | 880 | do | 15 | 16 | do | | |

[1] Rolled or swedged in hoops.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 15 | 0.0673 | 0.0603 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |
| 19 | .0418 | .0378 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.100–6 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of I-bar type directly to body of drum in any manner not permitted.

**§ 78.100–7 Closures.**

(a) Adequate to prevent leakage; gaskets, required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used, it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.100–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.100–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–6J***; stars to be replaced by the authorized gross weight (for example, ICC–6J880, etc.). In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–6J880–304 or ICC–6J880–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.100–10 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.

**§ 78.100–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

**§ 78.100–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.101 Specification 6K; steel barrels or drums.**

Removable head containers which will pass all required tests are authorized.

**§ 78.101–1 Compliance.**

(a) Required in all details.

**§ 78.101–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.101–9(a)(3). Actual capacity of containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity, actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.101–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.101–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Authorized gross weight (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | | Body sheet | Head sheet | Type | Minimum | |
| | | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 55 | 480 | Straight side | 18 | 18 | I-bar [1] | ¾ x 1¼ | 1.25 |

[1] Rolled or swedged-in hoops permitted.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 18 | 0.0478 | 0.0428 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.101–6 Rolling hoops.**

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops or spot welding not permitted.

**§ 78.101–7 Closures.**

(a) Adequate to prevent leakage; gaskets required. Closures must be of screw-thread type or secured by positive fastening.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.101–8 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.101–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–6K480. In addition, when the container is of stainless steel, the type of steel used in body and head sheets, as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress relieving or heat treatment during manufacture (for example, ICC–6K480–304 or ICC–6K480–304 HT as applicable), shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 18–55–50).

**§ 78.101–10 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.

**§ 78.101–11 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

**§ 78.101–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with

soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.102 Specification 6D; cylindrical steel overpack, straight sided, for inside plastic container.**

**§ 78.102–1 Material requirements.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.102–2 Construction requirements.**

(a) Construction requirements are as follows:

| Rated capacity of inside plastic container not over (gallons) | Minimum thickness, uncoated sheets (gauge) | | Body seams | Rolling hoops | Top or bottom head | Closures, when full removable head is used (gaskets not required) |
|---|---|---|---|---|---|---|
| | Body sheet | Head sheet | | | | |
| 5 | 24 | 24 | Welded | None required | Double seamed or welded. | Lug or plain ring seal. |
| 15 | 20 | 20 | do | Rolled or swedged | do | Do. |
| 30 | 19 | 19 | do | do | do | Bolted type ring closure, 18 gauge. |
| 55 | 18 | 18 | do | Rolled or swedged, or I-Bars, ¾" x 1¼". | do | Bolted type ring closure, 16 gauge. |

(b) Steel sheets or parts of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness (inch) [1] | Minimum thickness (inch) [1] |
|---|---|---|
| 16 | 0.0598 | 0.0523 |
| 18 | .0478 | .0428 |
| 19 | .0418 | .0378 |
| 20 | .0359 | .0324 |
| 24 | .0239 | .0209 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

(c) Two holes not exceeding ¼ inch each are permitted diametrically opposite each other in the overpack body immediately above the double seam of the bottom chime or three holes not exceeding 3/16 inch in diameter on centers 120 degrees apart in the bottom head.

(1) Overpack interior shall be free of projections, burrs, or any edges that might cause damage to inside plastic container and shall be free of lubricants, oils, or any foreign matter.

(2) Top head may have not more than two holes of suitable size to provide for protruding closures.

(3) Overpack shall be constructed to provide a snug fit for inside plastic container.

**§ 78.102–3 Tests.**

(a) Steel overpack when assembled as for use, shall withstand the tests prescribed in specifications for inside plastic containers as detailed in Part 78 when authorized as combination packages in Part 73 of this chapter. The completed package must withstand these tests without producing a condition of the overpack that could result in potential damage to the inside container.

**§ 78.102–4 Markings.**

(a) Marking on each container by embossing on bottom head with raised marks with letters and figures not less than ½ inch high as follows:

(1) ICC–6D. These marks shall be understood to certify the steel container complies with all construction requirements of this specification.

(2) Name or symbol (letters) of maker; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity of inside container in gallons, and year of manufacture (for example, 18–55–62). When gauge of metal in body differs from that in either head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 18/16–55–62 for body 18 gauge and head 16 gauge).

**§ 78.107 Specification 42B; aluminum drums.**

**§ 78.107–1 Compliance.**

(a) Required in all details.

**§ 78.107–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.107–9(a)(3). Not less than 5 gallons; actual capacity shall be rated capacity plus at least 2 percent.

**§ 78.107–3 Composition.**

(a) Body and heads of aluminum at least 99 percent pure, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

**§ 78.107–4 Outage.**

(a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

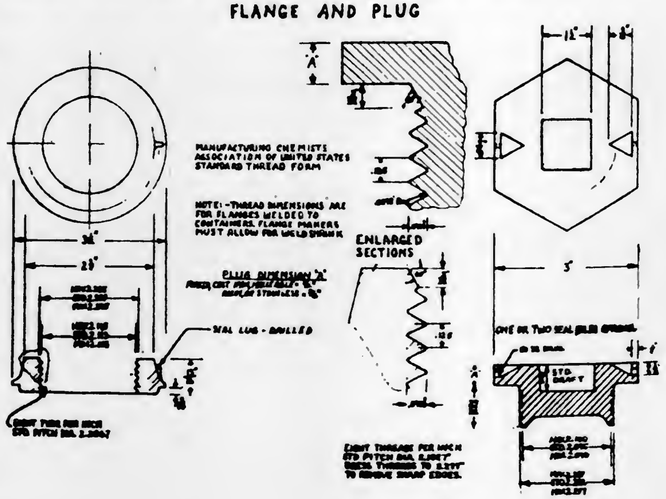
**§ 78.107–5 Seams.**

(a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at least 3" from top of chime; chime seams not permitted.

**§ 78.107–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Minimum thickness of material (inch) | Rolling hoops required, type authorized, and minimum dimensions | |
|---|---|---|---|
| | | I-bar, size (inch) | U-type, aluminum, thickness (inch) |
| 10 | 0.110 | ¾ x 1¼ | 0.139 |
| 30 | .154 | ¾ x 1¼ | .193 |
| 55 | .187 | ¾ x 1¼ | .234 |
| 110 | .230 | 1 x 1½ | |



(b) Rolling hoops must be firmly secured in place and not over 19 inches apart; beading under hoops not permitted. If welding is employed, the welding must be continuous on each edge of hoop.

**§ 78.107–7 Closures.**

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3" not authorized; suitable gaskets required.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged; two 5/16 inch drainage holes are authorized in flange. Thread form must conform to that shown by drawing below or be of a form that shall provide an equally efficient closure.

FLANGE AND PLUG

**§ 78.107–8 Projections.**

(a) Closing devices and other parts must not project beyond chime or rolling hoops.

**§ 78.107–9 Marking.**

(a) Marking on each container on top head by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42B. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in paragraph (a) (1) of this section.

(3) Gauge of metal, Brown and Sharpe or equivalent decimal thickness in inches, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 7–30–50 or 0.1442–30–50).

**§ 78.107–10 Size of marking.**

(a) Size of marking (minimum): ½" high for 30-gallon and smaller containers, ¾" for over 30 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.107–11 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 60 pounds per square inch sustained for 5 minutes.

**§ 78.107–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.107–13 Defective containers.**

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

**§ 78.108 Specification 42C; aluminum barrels or drums.**

**§ 78.108–1 Compliance.**

(a) Required in all details.

**§ 78.108–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.108–9(a)(3). Not less than 5 gallons; actual capacity shall be rated capacity plus at least 2 percent.

**§ 78.108–3 Composition.**

(a) Body and heads of aluminum at least 99 percent pure, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

**§ 78.108–4 Outage.**

(a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

**§ 78.108–5 Seams.**

(a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at least 3" from top of chime; chime seams not permitted.

**§ 78.108–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness of material (inch) | Rolling hoops required, type authorized, and minimum dimensions | |
|---|---|---|---|---|
| | | | I-bar, size (inches) | U-type, aluminum, thickness (inch) |
| 10 | Straight side. | 0.093 | ¾ x 1¼ | 0.116 |
| 30 | do | .129 | ¾ x 1¼ | .161 |
| 55 | do | .155 | ¾ x 1¼ | .194 |
| 110 | do | .192 | 1 x 1½ | |
| 15 | Bilge | .110 | Expanded from shell.[1] | |
| 30 | do | .150 | Do. | |
| 55 | do | .180 | Do. | |

[1] Only required when side openings are used

(b) Rolling hoops must be firmly secured in place and not over 19 inches apart; beading under hoops not permitted. If welding is employed, the welding must be continuous on each edge of hoop.

**§ 78.108–7 Closures.**

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3" not authorized; suitable gaskets required.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged; two 5/16 inch drainage holes are authorized in flange. Thread form must conform to that shown by drawing in paragraph (b) of § 78.107–7 or be of a form that shall provide an equally efficient closure.

**§ 78.108–8 Projections.**

(a) Closing devices and other parts must not project beyond chime or rolling hoops.

**§ 78.108–9 Marking.**

(a) Marking on each container on top head, by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42C. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Gauge of metal, Brown and Sharpe or equivalent decimal thickness in inches, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 7–30–50 or 0.1442–30–50).

**§ 78.108–10 Size of marking.**

(a) Size of marking (minimum): ½" high for 30-gallon and smaller containers, ¾" for over 30 and not over 55 gallons, and 1" for over 55 gallons.

**§ 78.108–11 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 60 pounds per square inch sustained for 5 minutes.

**§ 78.108–12 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.108–13 Defective containers.**

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

**§ 78.109 Specification 42D; aluminum drums.**

**§ 78.109–1 Compliance.**

(a) Required in all details.

**§ 78.109–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.109–9(a)(3). Not less than 5 gallons; actual capacity shall be rated capacity plus at least 2 percent.

**§ 78.109–3 Composition.**

(a) Body and heads of aluminum at least 99 percent pure, or an aluminum

base alloy of equivalent corrosion resistance and physical properties.

§ 78.109–4 Outage.

(a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

§ 78.109–5 Seams.

(a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at least 3" from top of chime; chime seams not permitted.

§ 78.109–6 Parts and dimensions.

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Minimum thickness of material (inch) | Rolling hoops required, type authorized, and minimum dimensions | |
|---|---|---|---|
| | | I-bar, size (inch) | U-type, aluminum, thickness (inch) |
| 10 | 0.093 | ¾ x 1¼ | 0.092 |
| 30 | .102 | ¾ x 1¼ | .128 |
| 55 | .123 | ¾ x 1¼ | .154 |
| 110 | .154 | 1 x 1½ | ---------- |

(b) Rolling hoops must be firmly secured in place and not over 19 inches apart; beading under hoops not permitted. If welding is employed, the welding must be continuous on each edge of hoop.

§ 78.109–7 Closures.

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3" not authorized; suitable gaskets required. Vented closing devices of type approved by the Bureau of Explosives are authorized when specified by the purchaser.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 8 threads per inch, with 5 complete threads engaged when gasket is in place, or not over 4 threads per inch, with 2 complete threads similarly engaged; two 5/16 inch drainage holes are authorized in flange. Thread form must conform to that shown by drawing in paragraph (b) of § 78.107–7 or be of a form that shall provide an equally efficient closure.

§ 78.109–8 Projections.

(a) Closing devices and other parts must not project beyond chime or rolling hoops.

§ 78.109–9 Marking.

(a) Marking on each container on top head, by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42D. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in paragraph (a) (1) of this section.

(3) Gauge of metal, Brown and Sharpe or equivalent decimal thickness in inches, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 7–30–50 or 0.1442–30–50).

§ 78.109–10 Size of marking.

(a) Size of marking (minimum): ½" high for 30-gallon and smaller containers, ¾" for over 30 and not over 55 gallons, and 1" for over 55 gallons.

§ 78.109–11 Type tests.

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes.

§ 78.109–12 Leakage test.

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 10 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

§ 78.109–13 Defective containers.

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 78.110 Specification 42F; aluminum barrels or drums.

Removable heads.

§ 78.110–1 Compliance.

(a) Required in all details.

§ 78.110–2 Rated capacity.

(a) Rated capacity as marked, see § 78.110–8 (a) (3). Actual capacity shall be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 1 gallon.

§ 78.110–3 Composition.

(a) Body and heads of aluminum alloy 6061 or an aluminum base alloy of equivalent corrosion resistance and physical properties.

§ 78.110–4 Seams.

(a) None. Body shall be seamless.

§ 78.110–5 Parts and dimensions.

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Authorized gross weight not over (pounds) | Type of container | Minimum thickness of material (inch) | | Rolling hoops |
|---|---|---|---|---|---|
| | | | Body | Head | |
| 50 | 450 | Bilge | 0.091 | 0.102 | None |

§ 78.110–6 Closures.

(a) Adequate to prevent leakage; gaskets required.

(b) Closures must be of bolted ring type made of not less than 10 gauge carbon steel with drop forged threaded lugs and ⅜" minimum diameter cap screw.

§ 78.110–7 Defective containers.

(a) Leaks and other defects shall be repaired by welding, using welding material of same composition as parts being repaired.

§ 78.110–8 Marking.

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–42F * * *; stars to be replaced by the authorized gross weight (for example, ICC–42F450, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal, Brown and Sharpe or equivalent decimal thickness in inches in thinnest part; rated capacity in gallons; and year of manufacture (for example, 11–50–52 or 0.0907–50–52). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 11/10–50–52 or 0.0907/0.1018–50–52 for body 11-gauge and head 10-gauge).

§ 78.110–9 Size of markings.

(a) Size of markings (minimum): ½" high for 33 gallons or less, ¾" for over 33 gallons.

§ 78.110–10 Type tests.

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 4 months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime, or when without chime seam to strike on other circumferential seam; also an additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 30 pounds per square inch sustained for 5 minutes. Leakage through closure shall not constitute failure.

§ 78.110–11 Leakage test.

(a) Each container shall be tested under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representatives of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Containers not required to be tested with heads in place, except that samples taken at random and closed as for use of each type and size, must be tested at start of production and repeated every 4 months. Samples so tested must be retained until further tests are made.

§ 78.111 Specification 42G; aluminum drums.

§ 78.111–1 Compliance.

(a) Required in all details.

§ 78.111–2 Rated capacity.

(a) Rated capacity as marked, see § 78.111–8(a)(3), 55 gallons; actual capacity shall be rated capacity plus at least 2 percent.

§ 78.111–3 Composition.

(a) Body and heads or drawn shells of aluminum alloy 5052, or an aluminum base alloy of equivalent corrosion resistance and physical properties.

§ 78.111–4 Outage.

(a) Two percent of rated capacity, plus a maximum tolerance of 2 quarts.

§ 78.111–5 Seams.

(a) Welded, including attachment of flanges for closures and other devices. Circumferential seam at least 3 inches from top of chime; chime seams not permitted.

§ 78.111–6 Parts and dimensions.

(a) At start of fabrication, aluminum alloy sheets shall have a minimum thickness of 0.102 inch and completed container shall have no wall thickness less than 0.081 inch.

(b) Rolled or swedged-in rolling hoops required.

(c) Footrings of suitable strength required and must be continuously welded around the outside periphery to the drum shell.

§ 78.111–7 Closures.

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3 inches not authorized; suitable gaskets required.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 12 threads per inch, with at least 3 threads engaged when gasket is in place; two ⅝-inch drainage holes are authorized in flange.

§ 78.111–8 Marking.

(a) Marking on each container on top head, by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42G. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Gauge of metal, Brown and Sharpe or equivalent decimal thickness in inches, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 7–30–50 or 0.1442–30–50).

§ 78.111–9 Size of marking.

(a) Size of marking (minimum): ¾-inch high.

§ 78.111–10 Type tests.

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional tests on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes.

§ 78.111–11 Leakage test.

(a) Each container shall be tested, unsupported, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Leaking or damaged drums shall be rejected or repaired and retested.

§ 78.111–12 Defective containers.

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 78.112 Specification 42H; aluminum drums; removable head containers not authorized.

§ 78.112–1 Compliance.

(a) Required in all details.

§ 78.112–2 Rated capacity.

(a) Rated capacity as marked shall be 55 gallons, see § 78.112–10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent.

§ 78.112–3 Composition.

(a) Body and heads shall be of aluminum alloy 5086–H32 or an aluminum base alloy of equivalent corrosion resistance and physical properties.

§ 78.112–4 Seams.

(a) Body seams welded.

(b) Head and chime seams welded or double-seamed.

§ 78.112–5 Chime reinforcement.

(a) Chime reinforcement required and shall be not less than 12-gauge galvanized steel commercial coating.

§ 78.112–6 Parts and dimensions.

(a) At start of fabrication, aluminum alloy sheets shall have a minimum thickness of 0.063 inch and completed container shall have no wall thickness less than 0.059 inch.

(b) Rolled or swedged-in rolling hoops required.

(c) Drum shall be of straight side type.

§ 78.112–7 Convex heads.

(a) Convex (crowned) heads, not extending beyond level of chime; minimum convexity of three-eighths inch required.

§ 78.112–8 Defective containers.

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 78.112–9 Closures.

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3 inches not authorized; suitable gaskets required.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 12 threads per inch, with at least 3 threads engaged when gasket is in place; two five-sixths inch drainage holes are authorized in flange.

§ 78.112–10 Marking.

(a) Marking on each container on head, by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42H. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Gauge of metal, decimal thickness in inches, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 0.063–55–63).

§ 78.112–11 Size of marking.

(a) Size of marking (minimum): three-fourths inch high.

§ 78.112–12 Type tests.

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to

be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made or for one year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional tests on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes.

**§ 78.112–13 Leakage test.**

(a) Each container shall be tested, unsupported, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Leaking or damaged drums shall be rejected or repaired and retested.

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| [3] | Straight side | [1] 24 | [1] 24 | None | | |
| 10 | do | 20 | 20 | do | | |
| 30 | do | 18 | 18 | (2) | | |
| 55 | do | 16 | 16 | (1 3) | | |

[1] Rolled or swedged in hoops.
[2] Each removable head drum body must have three rolled or swedged-in hoops with the centerline of one not more than 3 inches from the top curl.
[3] A drum of 5¼ gallons marked capacity is authorized for shipment of the commodity specified in §73.353 (d) of this chapter

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 16 | 0.0598 | 0.0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |
| 24 | .0239 | .0209 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.115–7 Convex heads.**

(a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over; minimum convexity of ⅜ inch required.

**§ 78.115–8 Closures.**

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

**§ 78.115 Specification 17C; steel drums.**

Single trip container. Removable head containers which will pass all required tests are authorized.

**§ 78.115–1 Compliance.**

(a) Required in all details.

**§ 78.115–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.115–10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

**§ 78.115–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.115–5 Seams.**

(a) Body seams welded.

**§ 78.115–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over ⅛ inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place. Threaded closures having fewer threads are authorized for containers having a capacity of 12 gallons or less when such closures are approved by the Bureau of Explosives upon proof of satisfactory tests.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ⅝ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives.

**§ 78.115–9 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.115–10 Marking.**

(a) Marking on each container by embossing on head except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–17C. The letters STC; located near the ICC mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, ICC–17C–304 or ICC–17C–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.115–11 Size of markings.**

(a) Size of markings (minimum): ½" high for 33 gallons or less, ¾" for over 33 and not over 55 gallons.

**§ 78.115–12 Type tests.**

(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.

**§ 78.115–13 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representatives of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required

to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.

**§ 78.116 Specification 17E; steel drums.**

Single trip container. Removable head containers not authorized.

**§ 78.116–1 Compliance.**

(a) Required in all details.

**§ 78.116–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.116–10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

**§ 78.116–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.116–5 Seams.**

(a) Body seams welded.

**§ 78.116–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type | Minimum | |
| | | | | | Size (gauge or inch) | Weight (pounds per foot) |
| 5 | Straight side | 24 | 24 | None | | |
| 10 | do | 22 | 22 | do | | |
| 30 | do | [1] 19 | 19 | (1) | | |
| 55 | do | [2] 18 | 18 | (1) | | |

[1] Rolled or swedged in hoops.
[2] 20 gauge authorized.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 18 | 0.0478 | 0.0428 |
| 19 | .0418 | .0378 |
| 20 | .0359 | .0324 |
| 22 | .0299 | .0269 |
| 24 | .0239 | .0209 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.116–7 Convex heads.**

(a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over. Convexity to be minimum of ⅜".

**§ 78.116–8 Closures.**

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container: *Provided*, That thinner metal closures or closures of other material are authorized for containers of 12 gallons capacity or less when opening to be closed is not over 2.7 inches in diameter and closures, except threaded metal closures, are fitted with outside sealing devices which cannot be removed without destroying the closure or sealing device (see paragraph (d) of this section).

NOTE 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more threads; two drainage holes of not over 5/16 inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place: *Provided*, That for containers having a capacity of 12 gallons and less the seat (flange, etc.) for plug, or cap, must have two or more complete threads and plug, or cap, must have sufficient length of thread to engage two threads when screwed home with gasket in place.

(d) Closures of screw-thread type or closed by positive means, of any material or design, may be authorized by the Bureau of Explosives for use, upon satisfactory proof of efficiency.

**§ 78.116–9 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.116–10 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:

(1) ICC–17E. The letters STC; located near the ICC mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, ICC–17E–304 or ICC–17E–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 12–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

**§ 78.116–11 Size of markings.**

(a) Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.

**§ 78.116–12 Type tests.**

(a) Samples taken at random closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

**§ 78.116–13 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch for containers over 12 gallons capacity and at least 5 pounds for others. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.117 Specification 17F; steel drums.**

Single trip container. Removable head containers not authorized.

**§ 78.117–1 Compliance.**

(a) Required in all details.

**§ 78.117–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.117–11(a)(3). Actual capacity of containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 2 quarts.

**§ 78.117–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel. Steel to be as high as practicable in tensile strength, having no loose oxide or scale.

**§ 78.117–5 Seams.**

(a) **Body seams welded.**

(b) **Head and chime seams welded or double-seamed.**

(c) **Flanges for closures welded in place.**

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | Rolling hoops | | |
|---|---|---|---|---|---|---|
| | | Body sheet | Head sheet | Type | Minimum Size | Minimum Weight |
| 55 | Straight side | 16 | 16 | (1) | | |

[1] Rolled or swedged-in hoops. Use of I-bar hoops authorized.

(b) **Steel sheets of specified gauges shall comply with the following:**

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 12 | 0.1046 | 0.0946 |
| 16 | .0598 | .0533 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.117–8 Rolling hoops and convex heads.**

(a) **Rolling hoops to be expanded. Alternate use of I-bar hoops authorized.**

(b) ***Convex heads.*** **Convex (crowned) heads; minimum convexity to be ⅜ inch, with minimum chime height of ⅞ inch.**

**§ 78.117–9 Closures.**

(a) **Adequate to prevent leakage; gaskets required.**

(b) **Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.**

NOTE 1: **This does not apply to cap seal over a closure which complies with all requirements.**

(c) **Closure must be of screw-thread type or fastened by screw-thread device.**

(d) **One opening not over 2.3 inches and one opening not over ¾ inch allowed; both openings to be welded in one head only. Threads to be standard pipe thread of 11 threads per inch for the larger opening and 14 threads per inch for the ¾-inch opening.**

**§ 78.117–10 Defective containers.**

(a) **Leaks and other defects to be repaired by method used in constructing container, not by soldering.**

**§ 78.117–6 Chime reinforcement.**

(a) **Chime reinforcement required to be not less than 12 gauge (see § 78.117–7 (b)).**

**§ 78.117–7 Parts and dimensions.**

(a) **Parts and dimensions as follows:**

| Marked capacity not over (gallons) | Type of container | Minimum thickness, uncoated sheets (gauge) | | | Rolling hoops | | |
|---|---|---|---|---|---|---|---|
| | | Body sheet | Bottom head sheet | Removable head sheet | Type | Minimum Size (gauge or inch) | Minimum Weight (pounds per foot) |
| 5 | Straight side | 24 | 24 | 20 | None | | |
| 30 | do | 18 | 18 | 18 | (1) | | |
| 55 | do | 18 | 18 | [3]14 | (2) | | |

[1] Rolled or swedged in hoops.
[2] Each drum must have three rolled or swedged in hoops, one to be placed in the body near the top curl.
[3] 16 gauge authorized provided there are one or more corrugations in the cover near the periphery.

**§ 78.117–11 Marking.**

(a) **Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter as follows:**

(1) **ICC–17F. The letters STC; located near the ICC mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, ICC–17F–304 or ICC–17F–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.**

(2) **Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.**

(3) **Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 12–55–50).**

**§ 78.117–12 Size of markings.**

(a) **Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.**

**§ 78.117–13 Type tests.**

(a) **Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:**

(1) **Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.**

(2) **Hydrostatic pressure test of 80 pounds per square inch sustained for 5 minutes.**

**§ 78.117–14 Leakage test.**

(a) **Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 15 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.**

**§ 78.118 Specification 17H; steel drums.**

Single-trip container. Removable head required.

**§ 78.118–1 Compliance.**

(a) **Required in all details.**

**§ 78.118–2 Rated capacity.**

(a) **Rated capacity as marked, see § 78.118–10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.**

**§ 78.118–3 Composition.**

(a) **Sheets for body and heads to be low carbon, open hearth or electric steel.**

**§ 78.118–5 Seams.**

(a) **Body seams welded.**

**§ 78.118–6 Parts and dimensions.**

(a) **Parts and dimensions as follows:**

(b) **Steel sheets of specified gauge shall comply with the following:**

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 14 | 0.0747 | 0.0677 |
| 16 | .0598 | .0533 |
| 18 | .0478 | .0428 |
| 20 | .0359 | .0324 |
| 24 | .0239 | .0209 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.118–7 Convex heads.**

(a) **Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over; minimum convexity of ⅜ inch required.**

**§ 78.118–8 Closures.**

(a) **Adequate to prevent leakage; gaskets required.**

(b) **Drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having ⅜ inch bolt and nut for drums not over 30 gallons capacity and ⅝ inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives.**

(c) **For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more threads; two drainage holes of not over 5/16 inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place: *Provided,* That for containers having a capacity of 12 gallons and less the seat (flange, etc.) for plug, or cap, must have two or more complete threads and plug, or cap, must have sufficient length of thread to engage two threads when screwed home with gasket in place.**

**§ 78.118–9 Defective containers.**

(a) **Leaks and other defects to be repaired by method used in constructing container, not by soldering.**

**§ 78.118–10 Marking.**

(a) **Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:**

(1) **ICC–17H. The letters STC; located near the ICC mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, ICC–17H–304 or ICC–17H–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.**

(2) **Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.**

(3) **Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 12–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).**

**§ 78.118–11 Size of markings.**

(a) **Size of markings (minimum): ½" high for 33-gallon or less, ¾" for over 33 and not over 55 gallons.**

**§ 78.118–12 Type tests.**

(a) **Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:**

(1) **Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.**

(2) **Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.**

**§ 78.118–13 Leakage test.**

(a) **Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch for containers over 12 gallons capacity and at least 5 pounds for others. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and repeated every four months. Samples so tested must be retained until further tests are made.**

**§ 78.119 Specification 17X; steel barrels or drums.**

Single trip container. Removable head containers not authorized.

**§ 78.119–1 Compliance.**

(a) **Required in all details.**

**§ 78.119–2 Rated capacity.**

(a) **Rated capacity as marked, see § 78.119–70(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.**

**§ 78.119–3 Composition.**

(a) **Sheets for body and heads to be low carbon, open hearth or electric steel.**

**§ 78.119–5 Seams.**

(a) **Body seams welded.**

(b) **Head and chime seams welded or double-seamed.**

**§ 78.119–6 Parts and dimensions.**

(a) **Parts and dimensions as follows:**

| Marked capacity not over (gallons) | 30 | 55. |
|---|---|---|
| Type of container | Straight side | Straight side. |
| Minimum thickness, uncoated sheets [1] | Body sheet: 19 [2] | Body sheet: 18 [3]. |
| Gauge | Head sheet: 19 [2] | Head sheet: 18 [3]. |
| Type of rolling hoops | Rolled or swedged in hoops | Rolled or swedged in hoops. |

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.
[2] 19 gauge steel shall have nominal thickness of 0.0418 inch and minimum thickness of 0.0378 inch.
[3] 18 gauge steel shall have nominal thickness of 0.0478 inch and minimum thickness of 0.0428 inch.

**§ 78.119–7 Flat or convexed heads.**

(a) **When heads are convexed (crowned) they shall not extend within ¼ inch of the chime level; maximum convexity 18/32 inch for 55-gallon drums.**

**§ 78.119–8 Closures.**

(a) **Adequate to prevent leakage; gaskets required. Closure must be of screw-thread type or fastened by screw-thread device.**

(b) **Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.3" diameter and the closing part is constructed, or fitted with sealing device, so that it cannot be removed without destroying it or the sealing device.**

NOTE 1: **This does not apply to a cap seal over a closure when closure complies with all requirements.**

(c) **For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 5/16" diameter are allowed only in flanges having at least 5 threads. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with gasket in place.**

**§ 78.119–9 Defective containers.**

(a) **Leaks and other defects to be repaired by method used in constructing containers, not to be soldered.**

**§ 78.119–10 Marking.**

(a) **Marking on each container by embossing on head with raised marks as follows:**

(1) ICC–17X. The letters STC; located near the ICC mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, ICC–17X–304 or ICC–17X–304 HT as applicable) shall be shown. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 18–55–50).

(4) Steel barrels or drums manufactured prior to March 31, 1941, which are in compliance with this specification except as to marking may be accepted as permitted by § 73.22 of this chapter without necessity of having the marking embossed on the head in raised letters. This shipping paper shall, however, certify that the drum is in compliance.

**§ 78.119–11 Size of markings.**

(a) Size of markings (minimum): ¾ inch high.

**§ 78.119–12 Type tests.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping filled with water to 98 percent capacity from height of 4 feet onto solid concrete, so as to strike diagonally on chime seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 15 pounds per square inch sustained for 5 minutes.

**§ 78.119–13 Leakage test.**

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 7 pounds per square inch. Equally efficient means of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested.

**§ 78.130 Specification 37K; steel drums.**

Single trip container. Removable head containers which will pass all required tests are authorized.

**§ 78.130–1 Compliance.**

(a) Required in all details.

**§ 78.130–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.130–8(a)(3). Actual capacity not less than rated (marked) capacity plus 2 percent, not greater than rated capacity plus 2 percent plus 1 quart.

**§ 78.130–3 Composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.130–5 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Marked capacity not over (gallons) | Authorized gross weight not over (pounds) | Type of container | Welded side seam required | Minimum thickness uncoated sheets (gauge) | |
|---|---|---|---|---|---|
| | | | | Body sheet | Head sheet |
| 55 | 275 | Straight side | Yes | 22 | 22 |

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 22 | 0.0299 | 0.0269 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.130–6 Closure required.**

(a) Adequate to prevent leakage; to be of bolted ring or lever lock ring types only; sponge rubber gaskets required; flowed-in gaskets not permitted.

**§ 78.130–7 Defective containers.**

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

**§ 78.130–8 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–37K275. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 18–55–50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12–55–50 for body 14 gauge and head 12 gauge).

(4) The letters STC; located near the ICC mark to indicate "single-trip container".

**§ 78.130–9 Size of markings.**

(a) Size of markings (minimum): ½" high for 30-gallon or less, ¾" for over 30 gallons.

**§ 78.130–10 Type test.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed test without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Sample last tested to be retained until further tests are made. The type test is as follows:

(1) Test by dropping, filled with dry, finely powdered material to the authorized gross weight, from height of 4 feet onto solid concrete so as to strike diagonally on top chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

**§ 78.131 Specification 37A; steel drums.**

Single trip container. Removable head required.

**§ 78.131–1 Compliance.**

(a) Required in all details.

**§ 78.131–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.131–9(a)(2). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent for containers not over 12 gallons capacity. Maximum actual capacity of containers not over 12 gallons capacity shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater; for others, minimum actual capacity shall be not less than rated (marked) capacity plus 2 percent and maximum actual capacity shall not be greater than rated (marked) capacity plus 3 percent or rated (marked) capacity plus 2 percent plus 1 quart whichever is the greater.

**§ 78.131–3 Composition.**

(a) Sheets for body and heads to be hot-rolled or cold-rolled, low carbon, open-hearth or electric steel or standard commercial quality.

**§ 78.131–5 Seams.**

(a) Side seams must be welded; or locked and soldered when 28-gauge tin plate is used for containers of 2-gallon capacity or less.

**§ 78.131–6 Capacities, weights, type, and gauges.**

(a) Capacities, weights, type, and gauges must be as follows:

| Marked capacity not over (gallons) | Authorized gross weight not over (pounds) | Type of container | Minimum thickness, uncoated sheets [1] (gauge) | | Minimum ring gauge bolted type [2] |
|---|---|---|---|---|---|
| | | | Body sheet [3] | Head sheet | |
| 2 | 40 | Straight side | 28 | 28 | Lug. |
| 5 | 60 | do | 26 | 26 | |
| 5 | 80 | do | 24 | 24 | Lug or plain ring seal. |
| 10 | 160 | do | 24 | 24 | |
| 55 | 150 | do | 26 | 26 | 18, plain. |
| 55 | 275 | do | 24 | 24 | Do. |
| 55 | 350 | do | 24 | 24 | 16, 2 inch overlap. |
| 55 | [4] 480 | do | 22 | 22 | Do. |

[1] All gauges specified are minimum except as provided by Part 73 of this chapter. Heavier (but not lighter) gauges may be specified if shipper so desires.
[2] Equally efficient closing devices may be authorized by the Bureau of Explosives upon demonstration of their ability to withstand tests prescribed in § 78.131–11.
[3] Containers of 16 gallons capacity and over must have 2 swedged or corrugated rolling hoops of sufficient height to clear the closing device when the drum is rolled.
[4] A gross weight of 490 pounds is authorized when defined by Part 73 of this chapter (see § 73.164 (a)(2) of this chapter).

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 22 | 0.0299 | 0.0269 |
| 24 | .0239 | .0209 |
| 26 | .0179 | .0159 |
| 28 | 0.0149 | 0.0129 |

[1] Thickness shall be measured at any point on the sheet not less than ⅜ inch from an edge.

**§ 78.131–7 Closures.**

(a) Closures of the type specified in the above table adequate to prevent leakage; gaskets required, all closures to be of the full-removable head type. Curl at top of shell for all drums 30 gallons capacity and larger must have a minimum diameter of 7/16 inch, and so made as to form a circular section with the under portion substantially in contact with the vertical shell. The removable head must have a minimum depth of ¾ inch and the cover bib must be large enough to extend to the horizontal center line of the top curl when the drum is sealed with the gasket in place. Drums of less than 30 gallons capacity may be made with an outside curl diameter of ⅜ inch minimum and a head depth of ¾ inch minimum; except that for drums less than 16 gallons capacity the outside curl diameter may be 9/32 inch and the cover depth may be ⅜ inch minimum.

(b) The closing ring must be so constructed that the bottom leg will extend well inside the vertical center line of the shell curl but must not touch the shell (recommended clearance is 1/16 inch minimum, 9/32 inch maximum) when sealed for usage. The top leg of the locking ring must have sufficient length to extend well inside the vertical center line of the curl on the shell. Closing rings must have a 2 inch overlap at joint when gross weight of drum exceeds 275 pounds. Overlap is not required for drums of 275 pounds or less gross weight. The clearance between ends of rings without overlap should be a minimum of ⅛ inch and a maximum of ½ inch.

(c) Closures or fittings in the removable head of any type capable of withstanding test prescribed by § 78.131–11 are authorized.

**§ 78.131–8 Defective containers.**

(a) Defective containers to be repaired by method used in constructing container. Soldering not authorized, except for tin plated steel as authorized by § 78.131–5.

**§ 78.131–9 Marking.**

(a) Marking on each container by embossing on head, except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–37A * * *. Stars to be replaced by the authorized gross weight, or less, at which the container was type tested (for example, ICC–37A150). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 24–55–54). When gauge of metal in body differs from that in either head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 22/24–55–54 for a container having 22 gauge body, 22 gauge bottom head and 24 gauge top head).

(3) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(4) The letters STC; located near the ICC mark to indicate "single-trip container".

**§ 78.131–10 Size of markings.**

(a) Size of markings, not less than ½ inch high for all containers.

**§ 78.131–11 Type test.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed test without leakage. Tests to be made of each type and size by each company starting productions and to be repeated every four months. Samples last tested to be retained until further tests are made. The type test is as follows:

(b) Test by dropping on top chime, or other part considered to be weaker, with drum filled to normal loading depth and to the gross weight at which container is marked with dry powdered material, and topped with at least two inches of a finely divided, dry, free-flowing powder of the following sieve analysis:

% retained on 42 mesh = Trace (max.).
% retained on 50 mesh = 3% (max.).
% retained on 100 mesh = 88% (min.).

A material such as sodium bicarbonate is recommended. Container shall be dropped from a height of 4 feet onto solid concrete so as to strike diagonally on the chime and so positioned when equipped with bolted ring type closure that crush pattern will terminate at closure joint. Closing devices and other parts projecting beyond chime or rolling hoops must be capable of withstanding this test. No disc or material other than regular gaskets in closure part is permitted for test purposes.

**§ 78.132 Specification 37B; steel drums.**

Single trip container. Removable head not authorized.

**§ 78.132–1 Compliance.**

(a) Required in all details.

**§ 78.132–2 Rated capacity.**

(a) Rated capacity as marked, see § 78.132–9(a)(2). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent for containers not over 12 gallons capacity. Maximum actual capacity of containers not over 12 gallons capacity shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater; for others, minimum actual capacity shall be not less than rated (marked) capacity plus 2 percent and maximum actual capacity shall not be greater than rated (marked) capacity plus 3 percent or rated (marked) capacity plus 2 percent plus 1 quart whichever is the greater.

**§ 78.132–3 Composition.**

(a) Sheets or body and heads to be hot-rolled or cold-rolled, low carbon, open hearth, or electric steel of standard commercial quality.

**§ 78.132–5 Seams.**

(a) Side seams may be welded, Gordon lock, or other equally efficient construction.

**§ 78.132–6 Capacities, weights, type and gauges.**

(a) Capacities, weights, type and gauges must be as follows:

| Marked capacity not over (gallons) | Authorized gross weight not over (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | |
|---|---|---|---|---|
| | | | Body sheet [1] | Head sheet |
| 5 | 60 | Straight side | 28 | 28 |
| 55 | 275 | do | 26 | 26 |
| 55 | 450 | do | 24 | 24 |
| 55 | 660 | do | 22 | [2] 22 |

[1] Containers of 16 gallons capacity and over must have small or series corrugations rolled into the shell or 2 swedged or corrugated rolling hoops.
[2] Twenty-four (24) gauge top head and cover authorized.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 22 | 0.0299 | 0.0269 |
| 24 | .0239 | .0209 |
| 26 | .0179 | .0139 |
| 28 | .0149 | .0129 |

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.

**§ 78.132–7 Closures.**

(a) Closures shall be of any type that will withstand prescribed drop tests without leakage, see § 78.132–11. Openings shall not exceed 9 inches in diameter in containers of 16-gallon capacity and larger nor 6½ inches in diameter in containers less than 16-gallon capacity. Larger openings may be authorized upon demonstration and proof of satisfactory closure test to the Bureau of Explosives. Gaskets required when necessary.

**§ 78.132–8 Defective containers.**

(a) To be repaired by method used in constructing container except that Gordon lock, or other similarly constructed seam must be welded. Soldering not authorized.

**§ 78.132–9 Marking.**

(a) Marking on each container by embossing on head with raised marks, or by embossing or die stamping on footring on drums equipped with footrings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) ICC–37B * * *. Stars to be replaced by the authorized gross weight, or less at which container was type tested (for example, ICC–37B450, etc.). This marking shall be understood to certify that the container complies with all specification requirements.

(2) Gauge of metal in thinnest part (except closure cover), rated capacity in gallons, and year of manufacture (for example, 24–55–54). When gauge of metal in body differs from that in either head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 22/24–55–54 for a container having 22-gauge body, 22-gauge bottom head and 24-gauge top head).

(3) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(4) The letters STC; located near the ICC mark to indicate "single-trip container".

**§ 78.132–10 Size of markings.**

(a) Size of markings (minimum), not less than ½ inch high for all containers.

**§ 78.132–11 Type test.**

(a) Samples, taken at random and closed as for use, shall withstand prescribed test without leakage. Test to be made of each type and size by each company starting production and to be repeated every four months. Sample last tested to be retained until further tests are made. The type test is as follows:

(b) Test by dropping on top chime, filled with dry finely powdered material to the gross weight at which container is marked, from a height of 4 feet onto solid concrete so as to strike diagonally on the chime and so positioned as to strike, in the case of offset openings, at the point on the chime nearest the opening. Closing devices and other parts projecting beyond chimes must also be capable of withstanding this test.

**§ 78.133 Specification 37P; steel drums with polyethylene liner.**

Nonreusable containers.

**§ 78.133–1 Compliance.**

(a) Required in all details.

**§ 78.133–2 Rated capacity of assembled composite containers.**

(a) Rated capacity as marked, see § 78.133–9. Minimum actual capacity of containers shall be not less than rated (marked) capacity, plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity, plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

**§ 78.133–3 Steel composition.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.133–4 Seams.**

(a) Side seams welded.

(b) Chime of permanent head, double seamed.

**§ 78.133–5 Parts and dimensions for steel drums.**

(a) Parts and dimensions for steel drums shall be as follows:

| Drums for plastic liner of rated capacity not over (gallons) | Type of container [1] [2] | Body sheet (gauge) | Bottom head sheet (gauge) | Removable head sheet (gauge) | Type of removable head closure |
|---|---|---|---|---|---|
| 5 | Straight side, single bead | 26 | 26 | 24 | Ring seal, bolted ring, lug cover. |
| 6½ | Straight side, single bead | 24 | 24 | 24 | Ring seal, bolted ring, lug cover. |
| 15 | Straight side [3] | 22 | 22 | [4] 19 | Ring seal, bolted ring, lug cover. |

[1] Drum interior shall be free of projections, burrs, or any edges that will cause damage to liners, and shall be free of lubricants, oil or other foreign matter. Drum shall provide a snug fit for the plastic liner.
[2] One hole not over 3/16 inch in diameter permitted in body or a head, or two 3/8 inch holes in bottom head near the chime.
[3] For containers up to 10 gallons capacity, a single rolled or swedged bead in body near top curl required; for containers of 10 gallons and greater capacity, 2 rolled or swedged rolling hoops in drum body required.
[4] Twenty (20) gauge authorized.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 19 | 0.0418 | 0.0378 |
| 20 | .0359 | .0324 |
| 22 | .0299 | .0269 |
| 24 | .0239 | .0209 |
| 26 | .0179 | .0159 |

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from edge.

**§ 78.133–6 Liner.**

(a) Each metal drum shall contain a contour fitting polyethylene liner having heat-sealed seams or a one-piece seamless molded polyethylene unit, attached to the pour opening in the removable head so as to provide a container that is completely resistant to lading when closed as for use.

(b) Polyethylene liner or molded unit shall be fabricated throughout of virgin polyethylene tubing or mold material, which may include a low percentage of elastomeric polymer having minimum thickness of 0.010 inch and having the following physical properties:

(1) Resin should have a maximum melt index value of 1.8 plus 0.4 per 10 minutes, and shall have a minimum average molecular weight of 21,000, as determined in accordance with methods acceptable to the Bureau of Explosives.

**§ 78.133–7 Closure.**

(a) Closure shall be resistant to lading and adequate to prevent leakage. Openings in removable head shall not be over 2.85 inches in diameter. Venting closures are permitted when required by Part 73 of this chapter.

**§ 78.133–8 Defective containers.**

(a) Repaired polyethylene liners are not authorized.

**§ 78.133–9 Marking.**

(a) Marking on the permanent head of each container by embossing with raised marks as follows:

(1) ICC–37P. The letters NRC located just above or below the ICC mark to indicate a nonreusable container. These marks shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity of assembled composite container in gallons, and year of manufacture (for example, 24–5–57). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 26/24–5–57 for body 26-gauge and head 24-gauge).

**§ 78.133–10 Size of markings.**

(a) Size of markings (minimum) ½ inch high.

**§ 78.133–11 Type tests.**

(a) Three samples of each size container manufactured taken at random, filled with water to 98 percent of actual capacity and closed as for use, shall

withstand drop tests from height of 4 feet onto solid concrete as prescribed by subparagraphs (1), (2) and (3) of this paragraph, without leakage or potentially hazardous rupture of outside container. Tests shall be made at start of production and repeated at 4-month intervals thereafter. Samples last tested shall be retained until subsequent tests are conducted. No single container shall be expected to withstand more than one of the following:

(1) Diagonal drop on top chime.
(2) Diagonal drop on bottom chime.
(3) Flat drop on side of drum.

(b) Completely assembled composite containers of each size manufactured, filled to 98 percent of actual capacity with water, shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using an amplitude of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

**§ 78.133–12 Test.**

(a) Each assembled container shall be tested by retaining at least 1½ pounds per square inch air presure at equilibrium without showing pressure drop on a suitable gauge.

**§ 78.134 Specification 37M; cylindrical steel overpack, straight sided for inside plastic container; nonreusable containers.**

**§ 78.134–1 Material requirements.**

(a) Sheets for body and heads to be low carbon, open hearth or electric steel.

**§ 78.134–2 Construction requirements.**

(a) Construction requirements are as follows:

| Rated capacity of inside plastic container not over (gallons) | Minimum thickness, uncoated sheets (gauge) | | Body seams | Rolling hoops | Top or bottom head | Closures, when full removable head is used (gaskets not required) |
|---|---|---|---|---|---|---|
| | Body sheet | Head sheet | | | | |
| 5 | 26 | 26 | Welded | None required | Double seamed | Lug or plain ring seal. |
| 15 | 24 | 24 | do | Rolled or swedged | do | Do. |
| 30 | 24 | 24 | do | do | do | Bolted type ring closure, 18 gauge. |
| 55 | 24 | 24 | do | do | do | Bolted type ring closure, 16 gauge. |

(b) Steel sheets or parts of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness (inch) [1] | Minimum thickness (inch) [1] |
|---|---|---|
| 16 | 0.0598 | 0.0533 |
| 18 | .0478 | .0428 |
| 24 | .0239 | .0209 |
| 26 | .0179 | .0159 |

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.

(c) Two holes not exceeding ¼ inch each are permitted diametrically opposite each other in the overpack body immediately above the double seam of the bottom chime or three holes not exceeding 5/16 inch in diameter on centers 120 degrees apart in the bottom head.

(1) Overpack interior shall be free of projections, burrs, or any edges that might cause damage to inside plastic container and shall be free of lubricants, oils, or any foreign matter.

(2) Top head may have not more than two holes of suitable size to provide for protruding closures.

(3) Overpack shall be constructed to provide snug fit for inside plastic container.

**§ 78.134–3 Tests.**

(a) Steel overpack when assembled as for use, shall withstand the tests prescribed in specifications for inside plastic containers as detailed in Part 78 when authorized as combination packages in Part 73 of this chapter. The completed package must withstand these tests without producing a condition of the overpack that could result in potential damage to the inside container.

**§ 78.134–4 Marking.**

(a) Marking on each container by embossing on bottom head with raised marks with letter and figures not less than ½ inch high as follows:

(1) ICC–37M. The letters NRC located near the ICC mark to indicate "Non-reusable container." These marks shall be understood to certify the steel container complies with all construction requirements of this specification.

(2) Name or symbol (letters) of maker; this must be recorded with the Bureau of Explosives.

(3) Gauge of metal in thinnest part, rated capacity of the inside container in gallons, and year of manufacture (for example, 24–55–62). When gauge of metal in body differs from that in either head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 24/22–55–62 for a container having 24-gauge body and 22-gauge top head).

**§ 78.135 Specification 37C; steel drums.**

Nonreusable container. Removable head required.

**§ 78.135–1 Compliance.**

(a) Required in all details.

**§ 78.135–2 Rated capacity.**

(a) Rated capacity as marked (see § 78.135–8). Maximum actual capacity of containers shall be not greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

**§ 78.135–3 Composition.**

(a) Sheets for body and heads to be hot-rolled or cold-rolled, low carbon, open-hearth or electric steel of standard commercial quality.

**§ 78.135–4 Seams.**

(a) Side seams must be welded.

**§ 78.135–5 Capacities, weights, type and gauges.**

(a) Capacities, weights, type and gauges must be as follows:

| Marked capacity not over (gallon) | Authorized gross weight not over (pounds) | Type of container | Minimum thickness, uncoated sheets (gauge) | | |
|---|---|---|---|---|---|
| | | | Body sheet | Bottom head sheet [1] | Removable head sheet [2] [3] |
| 5 | 80 | Straight side. | 28 | 28 | 26 |

[1] Bottom head must have three inwardly-embossed circumferential beads.
[2] Removable head must have two inwardly-embossed circumferential beads.
[3] Removable head must have not less than 16 lugs spaced not more than ¾ inch apart.

(b) Steel sheets of specified gauges shall comply with the following:

| Gauge No. | Nominal thickness [1] (inch) | Minimum thickness [1] (inch) |
|---|---|---|
| 26 | 0.0179 | 0.0159 |
| 28 | 0.0149 | 0.0129 |

[1] Thickness shall be measured at any point on the sheet not less than 3/8 inch from an edge.

**§ 78.135–6 Closures.**

(a) Closures shall be capable of withstanding test prescribed by § 78.135–10. Removable head may be equipped with leakproof fittings for filling.

**§ 78.135–7 Defective containers.**

(a) Defective containers to be repaired by method used in constructing container.

**§ 78.135–8 Marking.**

(a) Marking on each container by embossing on the permanent head as follows:

(1) ICC–37C**. Stars to be replaced by the authorized gross weight, or less, at which container was type tested (for example, ICC–37C80). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Gauge of metal in thinnest part, rated capacity, and year of manufacture (for example, 26–5–64). When gauge of metal in body differs from that in either head, both must be indicated with slanting line between and with gauge of body indicated first (for example, 28/26–5–64) for a container having 28-gauge body, 28-gauge bottom head, and 26-gauge removable head.

(3) Name or symbol (letters) of maker or other party assuming responsibility for compliance with specification requirements; this must be recorded with the Bureau of Explosives.

(4) The letters NRC; located near the ICC mark to indicate "nonreusable container."

**§ 78.135–9 Size of markings.**

(a) Size of markings, not less than ½ inch for all containers.

§ 78.135–10 Type test.

(a) Samples, taken at random and closed as for use, shall withstand prescribed test without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type test is as follows:

(b) Test by dropping on top chime, or other part considered to be weaker, with drum filled to normal loading depth and to the gross weight at which container is marked with dry powdered material, and topped with at least two inches of a finely divided, dry, free-flowing powder of the following sieve analysis:

Percent retained on 42 mesh—Trace (maximum).
Percent retained on 50 mesh—3 percent (maximum).
Percent retained on 100 mesh—88 percent (minimum).

A material such as sodium bicarbonate is recommended. Container shall be dropped from a height of 4 feet onto solid concrete so as to strike diagonally on the chime. Closing devices and other parts projecting beyond chime or rolling hoops must be capable of withstanding this test. No disc or material other than regular gaskets in closure part is permitted for test purposes.

§ 78.136 Specification 42E; aluminum drums.

Single-trip container.

§ 78.136–1 Compliance.

(a) Required in all details.

§ 78.136–2 Rated capacity.

(a) Rated capacity as marked, see § 78.136–9(a)(3), 55 gallons; actual capacity shall be rated capacity plus at least 2 percent.

§ 78.136–3 Composition.

(a) Body and heads of aluminum alloy 5052. Plastic closure plugs authorized if suitably resistant to action of lading.

§ 78.136–4 Outage.

(a) Two percent of rated capacity, plus a maximum tolerance of 1 quart.

§ 78.136–5 Seams.

(a) Welded, including attachment of flanges for closures and other devices. Circumferential seams at last 3" from top of chime; chime seams not permitted.

§ 78.136–6 Parts and dimensions.

(a) To be a minimum of 0.064 inch thick.

(b) Rolled or swedged in rolling hoops required.

§ 78.136–7 Closures.

(a) Of screw-thread type or secured by screw-thread device; openings over 2.3 inches not authorized; suitable gaskets required; head openings only permitted. Vented closing devices of type approved by the Bureau of Explosives are authorized when specified by the purchaser.

(b) Threaded plugs, or caps, and flanges must be close fitting with gasket surfaces which bear squarely on each other when without gasket; they must have not over 12 threads per inch, with at least 3 threads engaged when gasket is in place; two 5/16-inch drainage holes are authorized in flange.

§ 78.136–8 Head rings.

(a) Must be of 14 Brown and Sharpe gauge (0.064") tack-welded to each head.

§ 78.136–9 Marking.

(a) Marking on each container on top head, by stamping with pressure dies, by embossing with raised marks, or plate attached by welding, as follows:

(1) ICC–42E. This mark shall be understood to certify that the container complies with all specification requirements. The letters STC; located just below or above the ICC mark to indicate "single-trip container".

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Gauge of metal, Brown and Sharpe, at start of fabrication; rated capacity in gallons; year of manufacture (for example, 7–30–50).

§ 78.136–10 Size of marking.

(a) Size of marking (minimum): 1 inch high.

§ 78.136–11 Type tests.

(a) Samples, taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every four months. Samples last tested to be retained until further tests are made. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 6 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional test on any other parts which might be considered weaker than the chime.

(2) Hydrostatic pressure test of 60 pounds per square inch sustained for 5 minutes.

§ 78.136–12 Leakage test.

(a) Each container shall be tested, with seams under water or covered with soapsuds or heavy oil, by interior air pressure of at least 10 pounds per square inch. Leakers shall be rejected or repaired and retested.

§ 78.136–13 Defective containers.

(a) Leaks and other defects shall be repaired by welding, using welding material of the same composition as originally used by the manufacturer of the drum or other approved aluminum base alloy of equal corrosion and strength qualities.

§ 78.140 Specification 13; metal kegs.

§ 78.140–1 Compliance.

(a) Required in all details.

§ 78.140–2 Composition.

(a) To be open-hearth or electric steel, box annealed dead soft; carbon not over 0.14 percent.

§ 78.140–3 Parts and dimensions.

(a) Parts and dimensions as follows:

| | Gross weight of kegs and contents | | | |
|---|---|---|---|---|
| | Not over 15 pounds | Not over 30 pounds [1] | Over 30 pounds but not over 75 pounds | Over 75 pounds but not over 150 pounds |
| Thickness of material: | | | | |
| Body | 29 gauge | 28 gauge | 24 gauge | 24 gauge. |
| Head | do | do | 28 gauge | 28 gauge. |
| Width of lap for side seam [2] | 5/16 inch | 7/16 inch | 7/16 inch | ½ inch. |
| Number of corrugations in each end of body | 3 | 3 | 5 | 7. |
| Minimum depths of corrugations | 1/16 inch | 3/32 inch | 3/32 inch | 3/32 inch. |
| Width of laps on body and head seams [2] | 3/16 inch | 3/16 inch | 3/16 inch | 5/16 inch. |
| Width of laps on head for head seams [2] | 5/16 inch | 5/16 inch | 5/16 inch | ¾ inch. |
| Head seams | Double lap | Double lap | Double lap | Single lap. |

[1] Smokeless powder 32 pounds gross.
[2] Dimension requirements do not apply for kegs manufactured with double-seamed, compound-lined chime seams and lapped and soldered side seam.
NOTE: Dimensions of materials specified are minimum requirements. Gauge specified is for commercial plate, United States standard. Corrugations not required in body of kegs for gross weights not over 7 pounds.

§ 78.140–4 Seams.

(a) For gross weight over 75 pounds, all seams welded, brazed, soldered, or riveted; rivets at not over 5" centers.

§ 78.140–5 Closures.

(a) *Slide type.* Metal holder, for slide, securely fastened to head; washer of suitable material 0.025" thick; metal drop with depression to fit into bunghole and hold washer in place; metal slide to cover the foregoing. Positive fastening required between slide and slide holder to prevent leakage in transit; friction fastening not authorized.

(b) *Cap or plug type.* Metal holder, for cap or plug, securely fastened to head; metal cap or plug, with gasket when necessary to prevent sifting. Positive fastening required between cap, or plug, and holder to prevent leakage in transit; friction fastening not authorized.

§ 78.140–6 Marking.

(a) Marking on each container by embossing on head with raised marks as follows:

(1) ICC–13. This mark shall be understood to certify that the container complies with all specification requirements.

§ 78.140–7 Size of markings.

(a) Size of markings (minimum): 5/16" high.

§ 78.140–8 Type test.

(a) Keg filled with fine, dry sand in weight equal to that of shipment must be capable of withstanding, without leakage, 4 successive drops of 4 feet on the head onto solid concrete. Tests to be made of each type and size by each company manufacturing this type of container and to be repeated every six months while in production. If production is discontinued and is resumed, this requirement will also apply if prescribed tests have not been made within the previous six-month period. Samples last tested to be retained until further tests are made.

§ 78.140–9 Filling with contents.

(a) *Lining.* Cloth bag lining required for gross weight over 32 pounds; neck of bag to be securely tied.

§ 78.140–10 Additional keg.

(a) *Stove-pipe keg.* Authorized only for shipments loaded by shipper and to be unloaded by consignee and for gross weight of 30 pounds. Must comply with all requirements, except § 78.140–5, and also with the following:

(1) Length to be about 4 times diameter; cap (slip cover) to have snug fit over body with 3" overlap.

(2) Contents to be enclosed in double paper tubes, with pasted seams, not over 2½" diameter and made of tough manila paper weighing at least 50 pounds per 480 sheets 24" x 36"; outside tube to be waxed. Ends of tubes to be folded and tucked between folds of tube to prevent leakage.

NOTE 1: Because of the present emergency and until further order of the Commission, a ream may consist of 500 sheets.

§ 78.141 Specification 13A; metal drums.

§ 78.141–1 Compliance.

(a) Required in all details.

§ 78.141–2 Type.

(a) Straight sided; authorized only for material cast solid and with filling end head applied after material is loaded and closed in the manner prescribed in § 78.141–6. No other openings permitted.

§ 78.141–3 Composition.

(a) To be low carbon, open-hearth or electric steel.

§ 78.141–4 Heads and body.

(a) *Heads.* To be not less than 28 gauge United States standard.

(b) *Body.* To be not less than 28 gauge United States standard.

§ 78.141–5 Seams.

(a) Must be welded.

§ 78.141–6 Heads.

(a) To be attached by means of double lapped-seam.

§ 78.141–7 Marking.

(a) Marking on each container by embossing on head with raised marks as follows:

(1) ICC–13A. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Size of markings (minimum): 5/16 inch high.

§ 78.141–8 Type tests.

(a) Drum filled and closed as for shipment must be capable of withstanding, without rupture, 4 successive drops of 4 feet on the head onto solid concrete.

(b) Drum must be capable of withstanding hydrostatic pressure test of 30 pounds per square inch, sustained for 5 minutes.

(c) Tests to be made of each type and size by each company manufacturing this type of container and to be repeated every six months while in production. If production is discontinued and is resumed, this requirement will also apply if prescribed tests have not been made within the previous six-month period. Samples last tested to be retained until further tests are made.

§ 78.146 Specification 32A; metal cases, riveted or lock-seamed.

§ 78.146–1 Compliance.

(a) Required in all details.

§ 78.146–2 Gauge standards.

(a) United States standards for sheet metal; American or Brown and Sharpe for wire.

§ 78.146–3 Covers.

(a) To have at least 1" lap on body and to fit with clearance not over 1/32"; lapped corners to be welded.

§ 78.146–4 Edge protection.

(a) Open edges of body must be turned or rolled inward; front open edge of cover must be turned or rolled outward. Not required for material at least 20-gauge thick or for "trailer" cases.

§ 78.146–5 Bottom protection.

(a) Face on which case will ordinarily rest must be reinforced with continuous angle straps, or be fitted with trunk corners, or be double thickness along edges. Not required for cases of at least 20-gauge metal or of not over 1 reel capacity or for "trailer" cases.

§ 78.146–6 Hinges.

(a) To be of continuous loop type with loops of steel wire at least 7-gauge, welded; hinge straps at least 18-gauge securely welded or riveted.

§ 78.146–7 Carrying handles.

(a) Any type of adequate strength.

§ 78.146–8 Closing devices.

(a) To be of sufficient strength and efficiency to prevent injury or unfastening in tests (§ 78.146–14) or in transit.

§ 78.146–9 Rivets.

(a) At least 5/32" diameter; length to furnish efficient heads; split rivets not authorized except for attachment of lining.

§ 78.146–10 Rivet reinforcement.

(a) Hinges, fastening devices, and handles, when riveted in place, must have additional inside reinforcement of steel, at least as thick as in case, through which rivets must pass. Not required when case is made of at least 20-gauge material throughout.

§ 78.146–11 Lining.

(a) Required throughout; to be hard-surfaced fiberboard at least 0.125" thick and with strength of 800 pounds, Mullen or Cady test, or wooden lining at least 0.25" thick.

§ 78.146–12 Metal partitions.

(a) Metal partitions (when used) to be as thick as body of case, permanently fastened to the case, and lined the same as the case.

§ 78.146–13 Protective coating.

(a) Steel cases must be of galvanized material or protected from corrosion by paint, lacquer, or other adequate coating.

§ 78.146–14 Type tests.

(a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 6 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 78.146–15 Marking.

(a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:

(1) ICC—32A. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

§ 78.146–16 Cases with capacity (approx.) not over 9,000 feet of 1⅜" film.

(a) Compliance with §§ 78.146–1 to 78.146–15 required. Seams to be lock-seams or riveted. Material to be steel, at least 20-gauge. 2 hinges, 1 fastening device, and 1 carrying handle required.

§ 78.146–17 Cases with capacity (approx.) not over 8,000 feet of 1⅜" film or 4,500 feet of 2½" film.

(a) Construction as in § 78.146–16, except: 22-gauge material authorized; 1 hinge authorized for single-reel cases.

§ 78.146–18 Cases with capacity not over 1 reel of 10" diameter.

(a) Construction as in § 78.146–16, except: 24-gauge material and 1 hinge authorized.

§ 78.146–19 Cases with capacity not over 500 feet of film, "Trailer Cases".

(a) Construction as in § 78.146–16, except: 26-gauge material and 1 hinge of any type authorized.

§ 78.147 Specification 32B; metal cases, welded or riveted.

§ 78.147–1 Compliance.

(a) Required in all details.

§ 78.147–2 Gauge standards.

(a) United States standard for sheet metal; American or Brown and Sharpe for wire.

§ 78.147–3 Covers.

(a) To have at least 1" lap on body and to fit with clearance not over 1/32"; lapped corners to be welded.

§ 78.147–4 Edge protection.

(a) Open edges of body must be turned or rolled inward; front open edge of cover must be turned or rolled outward. Not required for material at least 20-gauge thick or for "trailer" cases.

§ 78.147–5 Bottom protection.

(a) Face on which case will ordinarily rest must be reinforced with continuous angle straps, or be fitted with trunk corners, or be double thickness along edges. Not required for cases of at least 20-gauge metal or of not over 1 reel capacity or for "trailer" cases.

§ 78.147–6 Hinges.

(a) To be of continuous loop type with loops of steel wire at least 7-gauge, welded; hinge straps at least 18-gauge securely welded or riveted.

§ 78.147–7 Carrying handles.

(a) Any type of adequate strength.

§ 78.147–8 Closing devices.

(a) To be of sufficient strength and efficiency to prevent injury or unfastening in tests (§ 78.147–14) or in transit.

§ 78.147–9 Rivets.

(a) At least 5/32" diameter; length to furnish efficient heads; split rivets not authorized except for attachment of lining.

§ 78.147–10 Rivet reinforcement.

(a) Hinges, fastening devices, and handles, when riveted in place, must have additional inside reinforcement of steel, at least as thick as in case, through which rivets must pass. Not required when case is made of at least 20-gauge material throughout.

§ 78.147–11 Lining.

(a) Required throughout; to be hard-surfaced fiberboard at least 0.125" thick and with strength of 800 pounds, Mullen or Cady test, or wooden lining at least 0.25" thick.

§ 78.147–12 Metal partitions.

(a) Metal partitions (when used) to be as thick as body of case, permanently fastened to the case, and lined the same as the case.

§ 78.147–13 Protective coating.

(a) Steel cases must be of galvanized material or protected from corrosion by paint, lacquer, or other adequate coating.

§ 78.147–14 Type tests.

(a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 6 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 78.147–15 Marking.

(a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:

(1) ICC—32B. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

§ 78.147–16 Cases with capacity (approximate) not over 12,000 feet of 1⅜" film or 6,000 feet of 2½" film.

(a) Compliance with §§ 78.147–1 to 78.147–15 required. Seams to be welded or riveted. Material to be steel, or aluminum-manganese alloy, at least 18-gauge. 2 hinges, 2 fastening devices spaced as for hinges, and 2 carrying handles required.

§ 78.147–17 Cases with capacity (approximate) not over 9,000 feet of 1⅜" film.

(a) Compliance with §§ 78.147–1 to 78.147–16, except: 1 fastening device and 1 carrying handle authorized.

§ 78.147–18 Cases with capacity (approximate) not over 8,000 feet of 1⅜" film or 4,500 feet of 2½" film.

(a) Construction as in § 78.147–16, except: 20-gauge material, 1 fastening device, and 1 carrying handle authorized; 1 hinge authorized for single-reel cases. Detachable covers (no hinges) with ¾" lap on body and efficiency to prevent displacement in tests, are authorized. Trailer cases, capacity not over 500 feet of film, no handle required. Cover lap not less than full one-half inch.

§ 78.148 Specification 32C; metal trunks.

§ 78.148–1 Design.

(a) To be designed to contain film in film-reel cans and projecting apparatus only; other articles not authorized therein.

§ 78.148–2 Strength.

(a) To be of strength and efficiency to carry contents in ordinary handling without damage to trunk or contents.

§ 78.148–3 Compartments.

(a) Separate compartments required for each reel of film and for projecting apparatus; each compartment to be constructed so that, in closing, it will have no cracks or openings.

§ 78.148–4 Compartment linings.

(a) Each film compartment to be made of, or lined throughout with, sheet metal; this metal to be protected against contact with film-reel can by a substantial interlining of fiberboard or equivalent.

§ 78.148–5 Marking.

(a) Marking on each container by the maker with plain and permanent marks at least ½" high applied on 2" by 4" metal plate securely riveted to top of cover of trunk as follows:

(1) ICC—32C. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

§ 78.149 Specification 32D; metal boxes for old and worn-out motion-picture film no longer exhibitable.

§ 78.149–1 Compliance.

(a) Required in all details.

§ 78.149–2 Gauge standards.

(a) United States standard for sheet metal; American or Brown and Sharpe for wire.

§ 78.149–3 Material.

(a) Material to be steel; body and bottom at least 16-gauge; cover at least 18-gauge.

§ 78.149–4 Joints and seams.

(a) All joints and seams to be welded or riveted.

§ 78.149–5 Cover.

(a) Cover must be tight-fitting, to prevent entrance of sparks, with provision for secure fastening to be locked or sealed.

§ 78.149–6 Type tests.

(a) Cases completely filled as for shipment must be capable of withstanding 4 successive drops onto solid concrete from a height of 4 feet without rupture of case or permanent damage to or unfastening of closing device. Tests to be made by dropping on cover, seam, or any corner.

§ 78.149–7 Marking.

(a) Marking on each container by the maker with plain and permanent marks at least ½" high as follows:

(1) ICC–32D. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

§ 78.150 Specification 33A; polystyrene cases. Nonreusable containers.

§ 78.150–1 Material requirements.

(a) Expandable polystyrene, molded to produce a completely fused closed cell composition having a minimum density of 1.25 pounds per cubic foot.

§ 78.150–2 Design.

(a) The case is to consist of two parts, a bottom section with pockets for the inside containers and a top section that covers, and interlocks with, the bottom section. Both the bottom and top sections shall be designed to provide a snug fit for the inside containers.

§ 78.150–3 Construction.

(a) The case shall be constructed in accordance with the following minimum thicknesses:

| | |
|---|---|
| Side walls and bottoms | ¾ inch. |
| Between inside containers | ⅝ inch. |
| Top | ¾ inch (see Note 1). |

NOTE 1: In recesses for closure caps for inside containers ¼ inch thickness is permissible; closure caps shall not be in contact with inside of top section.

§ 78.150–4 Closing for shipment.

(a) The cases shall be closed for shipment with a pressure sensitive paper tape having not less than 1½ inches width and a tensile strength at least 55 pounds per inch of width, or tape of equivalent strength. The tape shall completely encircle the case, with overlap not less than one inch in length, in one direction so as to transverse the top-bottom section joint in vertical manner. If the design of the case is such that the tape is subject to abrasion in transportation and handling, tape shall also be applied similarly on the same axis but at 90°.

§ 78.150–5 Gross weight authorized.

(a) Fifty pounds maximum.

§ 78.150–6 Test for completed package.

(a) Cases, with inside containers filled with water enclosed as for shipment, shall be capable of withstanding 4-foot flap drops onto solid concrete without leakage from or breakage of any inside container, and without producing any condition that would result in potential damage to the inside container. A minimum of four cases shall be tested, each case not being subjected to more than one test. Each test is to consist of six 4-foot drops once each side, bottom and top.

(b) Tests prescribed by paragraph (a) of this section must be conducted by the shipper assembling the completed package prior to initial use, and each 6 months thereafter. The tests must also be repeated on the change of any components or design of the package. Records of tests and results must be maintained.

§ 78.150–7 Marking.

(a) On each container. Symbol as follows:

ICC–33A

These marks shall be understood to certify that the outer container complies with all the construction requirements of the specification.

(1) The letters NRC, located just above or below the ICC mark, to indicate a nonreusable container.

(2) Name or symbol (letters) of manufacturer and plant making the case; these must be registered with the Bureau of Explosives. These marks shall be located on the same face as the marks specified in this paragraph.

(3) Size of markings: Specification markings prescribed in this paragraph must be at least ½ inch high; other markings must be legible.

## Subpart E—Specifications for Wooden Barrels, Kegs, Boxes, Kits, and Drums

§ 78.155 Specification 10A; wooden barrels and kegs (tight).

§ 78.155–1 Compliance.

(a) Required in all details.

§ 78.155–2 Staves and heading.

(a) To be of white oak, chestnut oak, red oak, black cherry, Douglas fir, beech, sweet birch, yellow birch, sugar (hard) maple, or Scandinavian pine; quarter sawed with the grain, from straight-grained timber, so no annual ring shall slope over half the thickness of stave or head; thoroughly kiln dried, moisture content 7 percent to 11 percent; free from rotten sap, checks, pitch pockets, cat faces, seed and worm holes in excess of 15 in one container, and other defects that show through on both sides.

§ 78.155–3 Hoops.

(a) Hoops to be of cooperage-grade hoop steel.

§ 78.155–4 Staves.

(a) Staves to be sawed evenly and circular; croze center to be within 1⅛" of end of stave; stave end to have ⅛" free from bevel.

§ 78.155–5 Heading.

(a) Heading of uniform thickness and properly circled; planed on outside and properly jointed and glued, or doweled and flagged; dowel diameter not over 5/12" thickness of head.

§ 78.155–6 The barrel.

(a) Stave joints reasonably flush on outside. Lathing is forbidden.

(b) Worm and seed holes to be plugged; over 15 not authorized in one container.

§ 78.155–7 Parts required and dimensions.

(a) Parts required and dimensions as follows (10 percent excess capacity authorized):

(1) Staves, when finished on outside:

| Capacity of container, not over | Maximum | | | Minimum | |
|---|---|---|---|---|---|
| | Length | Width | Bilge circle | Staves | Thickness |
| *Gallons* | *Inches* | *Inches* | *Inches* | *Number* | *Inch* |
| 50 | 34 | 6 | 84 | 19 | ¾ |
| 30 | 30 | 5 | 74 | 16 | 5/8 |
| 15 | 24 | 4½ | 54 | 14 | 9/16 |
| 10 | 22 | 4¼ | 50 | 12 | ½ |
| 5 | 18 | 4 | 40 | 10 | ½ |

Foregoing thicknesses are of staves finished on one side. One-sixteenth inch must be added for unfinished staves.

Foregoing maximum lengths are authorized to be increased 6 percent or less, provided the thickness of stave is increased at least one-sixteenth inch for each increase of 1 inch in length or fraction thereof.

(2) Heading, after planing:

| Capacity of container, not over | Maximum | | Minimum | |
|---|---|---|---|---|
| | Pieces | Diameter | Thickness | Width |
| *Gallons* | *Number* | *Inches* | *Inch* | *Inches* |
| 50 | 6 | 21 | 1 | 2¼ |
| 30 | 6 | 18 | 1 1/16 | 2½ |
| 15 | 5 | 14 | 1 1/16 | 2 |
| 10 | 5 | 13 | ¾ | 2 |
| 5 | 4 | 11 | ¾ | 2 |

(3) Hoops, number and size:

| Capacity of container, not over (gallons) | Minimum number of hoops | Minimum size of hoops (inches in width and Birmingham gauge) | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Head | | 1st quarter | | 2d quarter | | Bilge | |
| | | Inch | Gauge | Inch | Gauge | Inch | Gauge | Inch | Gauge |
| 50 | 8 | 1⅝ | [1] 16 | 1½ | 18 | 1½ | 18 | 1¾ | 17 |
| 30 | 6 | 1¼ | 17 | 1½ | 19 | ----- | ----- | 1½ | 18 |
| 15 | 6 | 1¼ | 18 | 1½ | 19 | ----- | ----- | 1¼ | 19 |
| 10 | 6 | 1¼ | 19 | 1 | 19 | ----- | ----- | 1⅛ | 19 |
| 5 | 6 | 1¼ | 19 | 1 | 19 | ----- | ----- | 1 | 19 |

[1] Because of the present emergency and until further order of the Commission, head hoops of 17 gauge are authorized.

§ 78.155–8 Closures.

(a) To be such as to prevent leakage in transit. Bungholes in staves must be be not over 2" diameter.

§ 78.155–9 Lining.

(a) To be as prescribed in Part 73 of this chapter or otherwise appropriate for the contents.

§ 78.155–10 Type test.

(a) Sample container at least 2 days old shall not increase more than 10 percent on diameter of head when all hoops above bilge are removed.

§ 78.155–11 Leakage test.

(a) Required for each lined container; by pressure at time of sizing or air pressure of at least 5 pounds per square inch; leakers to be repaired and retested.

§ 78.155–12 Marking.

(a) Marking on each container by the maker. By hot branding iron on head as follows:

(1) ICC–10A. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Date of manufacture (for example, 7–50 for July 1950) located near the maker's mark.

NOTE 1: Because of the present emergency and until further order of the Commission, date of manufacture may be omitted.

§ 78.155–13 Size of markings.

(a) Size of markings (minimum): ¾" high for over 30-gallon size, ½" for others.

§ 78.156 Specification 10B; wooden barrels and kegs (tight).

§ 78.156–1 Compliance.

(a) Required in all details.

§ 78.156–2 Staves and heading.

(a) To be of white oak, chestnut oak, red oak, black cherry, Douglas fir, beech,

sweet birch, yellow birch, sugar (hard) maple, or Scandinavian pine; quarter sawed with the grain, from straight-grained timber, so no annual ring shall slope over half the thickness of stave or head; thoroughly kiln dried, moisture content 7 percent to 11 percent; free from rotten sap, checks, pitch pockets, cat faces, seed and worm holes in excess of 15 in one container, and other defects that show through on both sides.

**§ 78.156–3 Hoops.**

(a) To be of cooperage-grade hoop steel.

**§ 78.156–4 Staves.**

(a) Staves to be sawed evenly and circular; croze center to be within 1⅛" of end of stave; stave end to have ⅛" free from bevel.

**§ 78.156–5 Heading.**

(a) Heading of uniform thickness and properly circled; planed on outside and properly jointed and glued, or doweled and flagged; dowel diameter not over 5/12" thickness of head.

**§ 78.156–6 The barrel.**

(a) Stave joints reasonably flush on outside. Lathing is forbidden.

(b) Worm and seed holes to be plugged; over 15 not authorized in one container.

**§ 78.156–7 Parts required and dimensions.**

(a) Parts required and dimensions as follows (10 percent excess capacity authorized):

(1) Staves, when finished on outside:

| Capacity of container, not over | Maximum | | | Minimum | |
|---|---|---|---|---|---|
| | Length | Width | Bilge Circle | Staves | Thickness |
| *Gallons* | *Inches* | *Inches* | *Inches* | *Number* | *Inch* |
| 50 | 34 | 6 | 84 | 19 | 1 1/16 |
| 30 | 30 | 5 | 74 | 16 | 5/8 |
| 15 | 24 | 4 1/2 | 54 | 14 | 9/16 |
| 10 | 22 | 4 1/4 | 50 | 12 | 1/2 |
| 5 | 18 | 4 | 40 | 10 | 1/2 |

Foregoing thicknesses are of staves finished on one side. One-sixteenth inch must be added for unfinished staves.
Foregoing maximum lengths are authorized to be increased 6 percent or less, provided the thickness of stave is increased at least one-sixteenth inch for each increase of 1 inch in length or fraction thereof.

(2) Heading, after planing:

| Capacity of container, not over | Maximum | | Minimum | |
|---|---|---|---|---|
| | Pieces | Diameter | Thickness | Width |
| *Gallons* | *Number* | *Inches* | *Inch* | *Inches* |
| 50 | 6 | 21 | 3/4 | 2 1/2 |
| 30 | 6 | 18 | 5/8 | 2 1/2 |
| 15 | 5 | 14 | 9/16 | 2 |
| 10 | 5 | 13 | 1/2 | 2 |
| 5 | 4 | 11 | 1/2 | 2 |

NOTE 1: Because of the present emergency and until further order of the Commission, for barrels of not over 50 gallons capacity, maximum number of pieces may be 7 provided they have a minimum thickness of 5/8 inch.

(3) Hoops, number and size:

| Capacity of container, not over (gallons) | Minimum number of hoops | Minimum size of hoops (inches in width and Birmingham gauge) | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Head | | First quarter | | Second quarter | | Bilge | |
| | | Inch | Gauge | Inch | Gauge | Inch | Gauge | Inch | Gauge |
| 50 | [1] 8 | [2] 1¾ | [2] 17 | 1½ | 18 | 1½ | 18 | [2] 1¾ | [2] 17 |
| 30 | 6 | 1½ | 18 | 1½ | 19 | ----- | ----- | 1½ | 18 |
| 15 | 6 | 1¼ | 19 | 1⅛ | 19 | ----- | ----- | 1¼ | 19 |
| 10 | 6 | 1¼ | 19 | 1 | 19 | ----- | ----- | 1⅛ | 19 |
| 5 | [1] 6 | 1 | 19 | 1 | 19 | ----- | ----- | 1 | 19 |

[1] Because of the present emergency and until further order of the Commission, the minimum number of hoops is authorized to be reduced to 6 by eliminating second quarter hoops.
[2] Because of the present emergency and until further order of the Commission, the minimum number of hoops is authorized to be reduced to 4 by eliminating first quarter hoops if head and bilge hoops of 1¾ inch by 17 gauge are used.
[2] 2 inch by 18 gauge hoops are also authorized.

**§ 78.156–8 Closures.**

(a) To be such as to prevent leakage in transit. Bungholes in staves must be not over 2" diameter.

**§ 78.156–9 Lining.**

(a) To be as prescribed in Part 73 of this chapter or otherwise appropriate for the contents.

**§ 78.156–10 Type test.**

(a) Sample container at least 2 days old shall not increase more than 10 percent on diameter of head when all hoops above bilge are removed.

**§ 78.156–11 Leakage test.**

(a) Required for each lined container; by pressure at time of sizing or air pressure of at least 5 pounds per square inch; leakers to be repaired and retested.

**§ 78.156–12 Marking.**

(a) Marking on each container by the maker. By hot branding iron on head as follows:

(1) ICC–10B. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Date of manufacture (for example, 7—50 for July 1950) located near the maker's mark.

NOTE 1: Because of the present emergency and until further order of the Commission, date of manufacture may be omitted.

**§ 78.156–13 Size of markings.**

(a) Size of markings (minimum): ¾" high for over 30-gallon size, ½" for others.

**§ 78.157 Specification 10C; wooden barrels and kegs (tight).**

**§ 78.157–1 Compliance.**

(a) Required in all details.

**§ 78.157–2 Staves and heading.**

(a) To be of white oak, chestnut oak, red oak, black cherry, Douglas fir, beech, sweet birch, yellow birch, sugar (hard) maple, or Scandinavian pine; quarter sawed with the grain, from straight-grained timber, so no annual ring shall slope over half the thickness of stave or head; thoroughly kiln dried, moisture content 7 percent to 11 percent; free from rotten sap, checks, pitch pockets, cat faces, seed and worm holes in excess of 15 in one container, and other defects that show through on both sides.

**§ 78.157–3 Hoops.**

(a) To be of cooperage-grade hoop steel.

**§ 78.157–4 Staves.**

(a) Staves to be sawed evenly and circular; croze center to be within 1⅛" of end of stave; stave end to have ⅛" free from bevel.

**§ 78.157–5 Heading.**

(a) Heading of uniform thickness and properly circled; planed on outside and properly jointed and glued, or doweled and flagged; dowel diameter not over 5/12" thickness of head.

**§ 78.157–6 The barrel.**

(a) Stave joints reasonably flush on outside. Lathing is forbidden.

(b) Worm and seed holes to be plugged; over 15 not authorized in one container.

**§ 78.157–7 Parts required and dimensions.**

(a) Parts required and dimensions as follows (10 percent excess capacity authorized):

(1) Staves, when finished on outside:

| Capacity of container, not over | Maximum | | | Minimum | |
|---|---|---|---|---|---|
| | Length | Width | Bilge circle | Staves | Thickness |
| *Gallons* | *Inches* | *Inches* | *Inches* | *Number* | *Inch* |
| 50 | 34 | 6 | 84 | 19 | 1 1/16 |
| 30 | 30 | 5 | 74 | 16 | 5/8 |
| 15 | 24 | 4 1/2 | 54 | 14 | 9/16 |
| 10 | 22 | 4 1/4 | 50 | 12 | 1/2 |
| 5 | 18 | 4 | 40 | 10 | 1/2 |

Foregoing thicknesses are of staves finished on one side. One-sixteenth inch must be added for unfinished staves.
Foregoing maximum lengths are authorized to be increased 6 percent or less, provided the thickness of stave is increased at least one-sixteenth inch for each increase of 1 inch in length or fraction thereof.

(2) Heading after planing:

| Capacity of container, not over | Maximum | | Minimum | |
|---|---|---|---|---|
| | Pieces | Diameter | Thickness | Width |
| *Gallons* | *Number* | *Inches* | *Inch* | *Inches* |
| 50 | 6 | 21 | 3/4 | 2 1/2 |
| 30 | 6 | 18 | 5/8 | 2 1/2 |
| 15 | 5 | 14 | 9/16 | 2 |
| 10 | 5 | 13 | 1/2 | 2 |
| 5 | 4 | 11 | 1/2 | 2 |

NOTE 1: Because of the present emergency and until further order of the Commission, for barrels of not over 50 gallons capacity, maximum number of pieces may be 7 provided they have a minimum thickness of 5/8 inch.

(3) Hoops, number and size:

| Capacity of container, not over (gallons) | Minimum number of hoops | Minimum size of hoops (inches in width and Birmingham gauge) | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Head | | 1st quarter | | 2d quarter | | Bilge | |
| | | Inch | Gauge | Inch | Gauge | Inch | Gauge | Inch | Gauge |
| 50 | 6 | 1¾ | 17 | 1½ | 18 | ----- | ----- | 1¾ | 17 |
| 30 | 6 | 1½ | 18 | 1¼ | 19 | ----- | ----- | 1½ | 18 |
| 15 | 6 | 1¼ | 19 | 1⅛ | 19 | ----- | ----- | 1¼ | 19 |
| 10 | 6 | 1⅛ | 19 | 1 | 19 | ----- | ----- | 1⅛ | 19 |
| 5 | 6 | 1 | 19 | 1 | 19 | ----- | ----- | 1 | 19 |

**§ 78.157–8 Closures.**

(a) To be such as to prevent leakage in transit. Bungholes in staves must be not over 2" diameter.

**§ 78.157–9 Lining.**

(a) To be as prescribed in Part 73 of this chapter or otherwise appropriate for the contents.

**§ 78.157–10 Type test.**

(a) Sample container at least 2 days old shall not increase more than 10 percent on diameter of head when all hoops above bilge are removed.

**§ 78.157–11 Leakage test.**

(a) Required for each lined container; by pressure at time of sizing or air pressure of at least 5 pounds per square inch; leakers to be repaired and retested.

**§ 78.157–12 Marking.**

(a) Marking on each container by the maker. By hot branding iron on head as follows:

(1) ICC–10C. This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

(3) Date of manufacture (for example, 7–50 for July, 1950) located near the maker's mark.

NOTE 1: Because of the present emergency and until further order of the Commission, date of manufacture may be omitted.

**§ 78.157–13 Size of markings.**

(a) Size of marking (minimum): ¾" high for over 30-gallon size, ½" for others.

**§ 78.160 Specification 11A; wooden barrels and kegs (slack).**

**§ 78.160–1 Compliance.**

(a) Required in all details.

**§ 78.160–2 Classification of woods.**

(a) As follows:

GROUP A

| | |
|---|---|
| Oak. | Sycamore. |
| Beech. | Hackberry. |
| Maple. | Birch. |
| Elm. | Douglas fir. |
| Red Gum. | White ash. |

GROUP B

| | |
|---|---|
| Cottonwood. | Pine. |
| Basswood. | Chestnut. |
| Tupelo gum. | Willow. |

NOTE 1: Because of the present emergency and until further order of the Commission, cottonwood and poplar are authorized to be included in Group A woods.

**§ 78.160–3 Staves.**

(a) Staves of Group A woods, No. 1 grade, kiln dried; of uniform thickness, well equalized, circled, and jointed; minimum thickness 5 staves to 1⅞"; maximum width 5½".

(b) To be tongued and grooved.

**§ 78.160–4 Heading.**

(a) Heading to be No. 1 grade, kiln dried, uniform thickness, turned true to size, dressed on one side, and jointed and glued.

**§ 78.160–5 Metal hoops.**

(a) Hoops of cooperage-grade hoop steel with one edge beaded or rolled.

**§ 78.160–6 Wooden hoops.**

(a) No. 1 grade coiled elm at least 9/32" x 6/32" x 1⅜"; ends joined by 1 staple and 2 additional nails or staples clinched on the inside or by 4 nails or 3 staples clinched on the inside.

**§ 78.160–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Authorized net weight (pounds) | Heading | | | | Staves | Metal hoops [4] | |
|---|---|---|---|---|---|---|---|
| | Diameter not over [1] (inch) | Thickness at least, Wood group | | Number of pieces not over | Length not over [1] (inch) | Width (inch) by Birmingham wire gauge (minimum) | |
| | | A (inch) | B (inch) | | | Head | Quarter [2] and bilge |
| 350 | 16 | 1/2 | 1/2 | 3 | 28 1/2 | 1¼ x 23 | 1¼ x 23 |
| 450 | 16 | 1/2 | 5/8 | 3 | 28 1/2 | 1¼ x 23 | 1¼ x 23 |
| 600 | 16 | 5/8 | 5/8 | 3 | 28 1/2 | 1¼ x 23 | 1¼ x 23 |
| 350 | 17 | 1/2 | 1/2 | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 450 | 17 | 1/2 | 5/8 | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 600 | 17 | 5/8 | 5/8 | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 350 | 19 | 1/2 | 1/2 | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 450 | 19 | 1/2 | 5/8 | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 600 | 19 | 5/8 | 5/8 | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 350 | 21 | 1/2 | 1/2 | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |
| 450 | [3] 21 | 1/2 | 5/8 | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |
| 600 | [3] 21 | 5/8 | 5/8 | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |

[1] Head battens required; at least ½" x 3½"; ends rounded to fit chime; securely nailed to heads.
[2] Quarter hoops not required for 350 pounds authorized net weight.
[3] Tolerance of 1/16" authorized.
[4] Wooden hoops authorized: 8 for 350 pounds net; 10 for 450 pounds net; 12 for 600 pounds net.

**§ 78.160–8 Head liners.**

(a) Required as provided in § 78.160–13.

**§ 78.160–9 Marking.**

(a) Marking on each container to be applied by the maker on top head as follows:

(1) ICC–11A; followed by the authorized gross weight (authorized net weight plus tare weight; for example, ICC–11A475, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.160–10 Size of marking.**

(a) Size of marking (minimum): ¾" high for head diameter over 17"; ½" high for others.

**§ 78.160–11 Heads.**

(a) To fit well in croze and be secured by nails or staples at 8" spacing through hoops into heads.

**§ 78.160–12 Head battens (when required by § 78.160–7).**

(a) To be fastened at each end by ½" metal strapping nailed over chime and under hoops.

**§ 78.160–13 Head liners.**

(a) To extend across grain, circle at least ½ of circumference, and be nailed or stapled at 5" intervals. Required for containers with wooden hoops when net weight of contents is to exceed 250 pounds.

**§ 78.160–14 Quarter and bilge hoops.**

(a) To be redriven and fastened by 4 fasteners for each hoop; puncture fastening at 8" intervals authorized for metal hoops.

**§ 78.161 Specification 11B; wooden barrels and kegs (slack).**

**§ 78.161–1 Compliance.**

(a) Required in all details.

**§ 78.161–2 Classification of woods.**

(a) As follows:

GROUP A

| | |
|---|---|
| Oak. | Hackberry. |
| Beech. | Birch. |
| Maple. | Douglas fir. |
| Elm. | White ash. |
| Red Gum. | |
| Sycamore. | |

GROUP B

| | |
|---|---|
| Cottonwood. | Pine. |
| Basswood. | Chestnut. |
| Tupelo gum. | Willow. |

NOTE 1: Because of the present emergency and until further order of the Commission, cottonwood and popular are authorized to be included in Group A woods.

**§ 78.161–3 Staves.**

(a) Staves of Group A woods, No. 1 grade, kiln dried; of uniform thickness,

well equalized, circled, and jointed; minimum thickness 5 staves to 1⅞"; maximum width 5½". Group B woods authorized for 24" or shorter staves.

**§ 78.161–4 Heading.**

(a) Heading to be No. 1 grade, kiln dried, uniform thickness, turned true to size, dressed on one side, and jointed.

**§ 78.161–5 Metal hoops.**

(a) Hoops of cooperage-grade hoop steel with one edge beaded or rolled.

**§ 78.161–6 Wooden hoops.**

(a) No. 1 grade coiled elm at least 9/32" x 5/32" x 1⅜"; ends joined by 1 staple and 2 additional nails or staples clinched on the inside or by 4 nails or 3 staples clinched on the inside.

**§ 78.161–7 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Authorized net weight (pounds) | Heading | | | Staves | Metal hoops [4] | |
|---|---|---|---|---|---|---|
| | Diameter not over [2] (inches) | Thickness at least, Wood group A (inch) | Thickness at least, Wood group B (inch) | Number of pieces not over | Length not over [2] (inches) | Width (inch) by Birmingham wire gauge (minimum): Head | Quarter [3] and bilge |
| 350 | 16 | ½ | ½ | 3 | 28½ | 1¼ x 23 | 1¼ x 23 |
| 450 | 16 | ½ | ½ | 3 | 28½ | 1¼ x 23 | 1¼ x 23 |
| 600 | 16 | ⅝ | ⅝ | 3 | 28½ | 1¼ x 23 | 1¼ x 23 |
| 350 | 17 | ½ | ½ | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 450 | 17 | ½ | ⅝ | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 600 | 17 | ⅝ | ⅝ | 4 | 30 | 1¼ x 23 | 1¼ x 23 |
| 350 | 19 | ½ | ½ | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 450 | 19 | ½ | ⅝ | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 600 | 19 | ⅝ | ⅝ | 5 | 34 | 1¼ x 22 | 1¼ x 23 |
| 350 | 21 | ½ | ½ | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |
| 450 | [1] 21 | ½ | ⅝ | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |
| 600 | [1] 21 | ⅝ | ⅝ | 5 | 34 | 1¼ x 21 or 2 x 22 | 1¼ x 23 |

[1] Head battens required; at least ½" x 3½"; ends rounded to fit chime; securely nailed to heads.
[2] Quarter hoops not required for 350 pounds authorized net weight.
[3] Tolerance of ½" authorized.
[4] Wooden hoops authorized: 8 for 350 pounds net; 10 for 450 pounds net; 12 for 600 pounds net.

**§ 78.161–8 Head liners.**

(a) Required as provided in § 78.161–13.

**§ 78.161–9 Marking.**

(a) Marking on each container to be applied by the maker on top head as follows:

(1) ICC–11B; followed by the authorized gross weight (authorized net weight plus tare weight; for example, ICC–11B370, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.161–10 Size of marking.**

(a) Size of marking (minimum): ¾" high for head diameter over 17"; ½" high for others.

**§ 78.161–11 Heads.**

(a) Heads to fit well in croze and be secured by nails or staples at 8" spacing through hoops into heads.

**§ 78.161–12 Head battens (when required by § 78.161–7).**

(a) To be fastened at each end by ½" metal strapping nailed over chime and under hoops.

**§ 78.161–13 Head liners.**

(a) To extend across grain, circle at least ½ of circumference, and be nailed or stapled at 5" intervals. Required for containers with wooden hoops when net weight of contents is to exceed 250 pounds.

**§ 78.161–14 Quarter and bilge hoops.**

(a) To be redriven and fastened by 4 fasteners for each hoop; puncture fastening at 8" intervals authorized for metal hoops.

**§ 78.165 Specification 14; wooden boxes, nailed.**

**§ 78.165–1 Compliance.**

(a) Required in all details.

**§ 78.165–2 Lumber.**

(a) White pine or wood of at least equal strength, well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within one-half its length.

**§ 78.165–3 Nails.**

(a) Cement coated, except as otherwise authorized, or screws of equal efficiency.

**§ 78.165–4 Ends, sides, tops, and bottoms.**

(a) Ends, sides, tops, and bottoms, as follows:

(1) Parts of 1-piece.
(2) Parts Linderman-joint glued.
(3) Parts tongued, grooved, and glued.
(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing so as to assure full contact. After immersion in water for 24 hours at 70° F, the part must not fail at the joint when it is broken.

(b) Tongued, grooved and glued joints in uncleated ends must also be fastened with corrugated fasteners not over 8" apart, within 3" of each end of joint and having penetration 4/5 thickness of end.

**§ 78.165–5 Cleated ends.**

(a) Double cleated, 2 vertical and 2 horizontal. Nails staggered at 2" intervals and clinched; cement coating not required.

**§ 78.165–6 Sides, tops, and bottoms.**

(a) Of size to extend out over cleats, if any.

**§ 78.165–7 Lock and dovetail corners.**

(a) Glued.

**§ 78.165–8 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Authorized gross weight (maximum) (pounds) | Type of box | Thickness of lumber (minimum): Ends | Sides | Tops and bottoms [2] | Cleats | Nails (minimum size) [4]: Into ends or cleats | Into sides |
|---|---|---|---|---|---|---|---|
| | | *Inches* | *Inch* | *Inch* | *Inches* | *Penny* | *Penny* |
| 35 | Lock [1] | 7/16 | 7/16 | 5/16 | | 5d | 5d |
| | Corner | | | | | | |
| 65 | Lock [1] | ½ | ½ | ⅜ | | 5d | 5d |
| | Corner | | | | | | |
| 75 | Plain | ⅞ | ½ | ½ | | 7d | 5d |
| | Nailed | | | | | | |
| 75 | Double | ⅜ | ⅜ | ⅜ | ½ x 1½ | 5d | |
| | Cleat | | | | | | |
| 140 | Plain | 1⅛ | ⅝ | ⅝ | | 8d | 7d |
| | Nail | | | | | | |
| 140 | Lock [1] | ⅝ | ⅝ | ⅝ | | 7d | 7d |
| | Corner | | | | | | |
| 140 | Double | ⅝ | ⅝ | ⅜ | ¾ x 1⅜ | 7d | 7d |
| | Cleat | | | | | | |

[1] Or dovetail.
[2] Tops and bottoms may be made of paper covered veneer board of good quality Douglas fir, or lumber of equal quality, having minimum thickness of ⅛ inch and free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Paper covering shall be at least Kraft untreated liner-board having a basis weight of 42 pounds per 1,000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board. Board ends must be provided with such reinforcement as may be necessary to provide strength for nailing.
[3] As provided by § 73.65 (a) (1), Note 1, of this chapter, boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅝ inches from top edge of end of box.
[4] Coated wire staples are authorized in lieu of nails when used for fastening tops to boxes. Staples must be of such size and spaced and driven as to provide closure efficiency equivalent to that in §§ 78.165–11 and 78.165–12.

**§ 78.165–9 Joints in sides and ends.**

(a) Staggered; except for ends cleated as prescribed.

**§ 78.165–10 Tops and bottoms.**

(a) Must fit evenly on frame of box.

**§ 78.165–11 Cleated boxes.**

(a) Sides, top, and bottom must be secured to ends by nails driven into cleats, not into end boards.

**§ 78.165–12 Nails in each nailing edge (minimum number).**

(a) At least equal to length of edge in inches divided by 2; when number of nails is at least equal to length of edge divided by 1¾, 4d nails are authorized where 5d nails are prescribed.

*Exception:* Eight inch spacing authorized for nailing tops and bottoms to sides.

NOTE 1: Because of the present emergency and until further order of the Commission, the following exception is authorized for nailing tops to boxes: When 7d and 8d nails are required by § 78.165–8, 6d nails are authorized if number of nails used is at least equal to length of end edge divided by 1¾ and length of side edge divided by 6.

**§ 78.165–13 Marking.**

(a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

ICC–14

(1) This mark shall be understood to certify that box complies with all specification requirements.

**§ 78.168 Specification 15A; wooden boxes, nailed.**

**§ 78.168–1 Compliance.**

(a) Required in all details.

**§ 78.168–2 Closed [1] box.**

(a) Parts and pieces to be in close contact.

**§ 78.168–3 Ends.**

(a) One-piece, or equivalent (see § 78.168–5), or cleated as prescribed; joints tongued, grooved, and glued. Style 1 or style 6 boxes may have milled depressions in each end of box for hand-holds, of not more than ⅜ inch in depth and not exceeding one-third of the width of the box, only when ends are of lumber at least ¾ inch in thickness.

(b) As provided by § 73.65 (a) (1), Note 1, of this chapter, wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅝ inches from top edge of end of box.

**§ 78.168–4 Sides, top, and bottom.**

(a) Joints tongued, grooved, and glued, or one-piece equivalent, except that boxes for shipment of high explosives may have tops and bottoms made of paper-covered veneer board of good quality Douglas fir, or lumber of equal quality, having minimum thickness of ⅛ inch and free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Paper covering shall be at least kraft untreated linerboard having a basis weight of 42 pounds per 1,000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board. Board ends must be provided with such reinforcement as may be necessary to provide strength for nailing, and when used lumber thicknesses specified by § 78.168–12 do not apply.

**§ 78.168–5 One-piece equivalents.**

(a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration ⅘ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

**§ 78.168–6 Gluing efficiency.**

(a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

**§ 78.168–7 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

**§ 78.168–8 Nails.**

(a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

**§ 78.168–9 Grouping of principal woods.**

(a) Grouping as follows:

GROUP 1

| | |
|---|---|
| White pine. | Chestnut. |
| Norway pine. | Sugar pine. |
| Aspen (popple). | Cypress. |
| Spruce. | Basswood. |
| Western (yellow) pine. | Willow. |
| Cottonwood. | Noble fir. |
| Balsam fir. | Magnolia. |
| Yellow poplar. | Buckeye. |
| Cedar. | White fir. |
| Redwood. | Alpine fir. |
| Butternut. | Lodgepole pine. |
| Cucumber. | Jack pine. |

GROUP 2

| | |
|---|---|
| Southern yellow pine. | Douglas fir. |
| Hemlock. | Larch (tamarack). |
| North Carolina pine. | |

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Black ash. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | Hickory. |
| Hackberry. | White ash. |

**§ 78.168–10 Width of pieces.**

(a) At least 2½".

**§ 78.168–11 Width of cleats.**

(a) Twice the prescribed thickness plus ¾".

**§ 78.168–12 Thickness of lumber.**

(a) Nailed boxes not cleated (Style 1). Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6). Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; end as in Table 4.

(c) Single-cleated boxes (Style 4 or 5). Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3). Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

NOTE 1: When group 2 woods are used the gross weight may be increased to 110 pounds.
NOTE 2: When group 2 woods are used the gross weight may be increased to 220 pounds.
NOTE 3: When group 2 woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed):

TABLE 1

| Depth of box (inches) | Not over 8" | Not over 9" | Not over 10" | Not over 12" | Not over 14" | Over 14" |

| 150 | 1 | 1 1/16 | 1 1/16 | 7/8 | 1 1/16 | 1 1/16 |

TABLE 5

| Smallest dimension of end | Not over 8" | Not over 9" | Not over 10" | Not over 12" | Not over 14" | Over 14" |
|---|---|---|---|---|---|---|
| Authorized gross weight (pounds) | Minimum thickness of part | | | | | |
| | *Inch* | *Inch* | *Inch* | *Inch* | *Inch* | *Inch* |
| 15 | 1/2 | 1/2 | 1/2 | 1/2 | 1/2 | 1/2 |
| 25 | 1/2 | 1/2 | 1/2 | 1/2 | 1/2 | 1/2 |
| 35 | 5/6 | 5/6 | 1/2 | 1/2 | 1/2 | 1/2 |
| 45 | 1 1/16 | 5/6 | 5/6 | 5/6 | 1/2 | 1/2 |
| 55 | 5/6 | 1 1/16 | 5/6 | 5/6 | 5/6 | 1/2 |
| 65 | 1 1/16 | 5/6 | 1 1/16 | 5/6 | 5/6 | 5/6 |
| 75 | 5/6 | 1 1/16 | 5/6 | 1 1/16 | 5/6 | 5/6 |
| 85 | 1 1/16 | 5/6 | 5/6 | 5/6 | 1 1/16 | 5/6 |
| 100 | 1 | 1 1/16 | 1/6 | 5/6 | 5/6 | 1 1/16 |

§ 78.168–13 Reduced thicknesses.

(a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 5/16" for boxes up to 35 pounds authorized gross weight and 3/8" above that weight.

(2) Ends or cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per § 78.168–19 (b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

| Specified thickness (inches) | Reduced thickness corresponding to percent reduction | | |
|---|---|---|---|
| | 12½ | 20 | 35 |
| 9/32 | 1/4 | 1/4 | 1/4 |
| 5/16 | 9/32 | 1/4 | 1/4 |
| 1 1/32 | 5/16 | 9/32 | 1/4 |
| 3/8 | 5/16 | 5/16 | 1/4 |
| 7/16 | 3/8 | 5/16 | 1/4 |
| 1/2 | 7/16 | 3/8 | 9/32 |
| 9/16 | 1/2 | 7/16 | 5/16 |
| 5/8 | 9/16 | 1/2 | 3/8 |
| 11/16 | 5/8 | 9/16 | 7/16 |
| 3/4 | 5/8 | 9/16 | 1/2 |
| 25/32 | 11/16 | 5/8 | 1/2 |
| 13/16 | 3/4 | 11/16 | 1/2 |
| 7/8 | 3/4 | 11/16 | 9/16 |
| 15/16 | 13/16 | 3/4 | 5/8 |
| 1 | 7/8 | 13/16 | 5/8 |
| 1 1/16 | 15/16 | 7/8 | 11/16 |
| 1 1/8 | 1 | 15/16 | 3/4 |
| 1 3/16 | 1 1/16 | 1 | 13/16 |
| 1 1/4 | 1 1/8 | 1 1/16 | 7/8 |

§ 78.168–14 Assembly.

(a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized; nails should be driven flush.

§ 78.168–15 Nails and nailing.

(a) Cement coated nails of size and with spacing detailed in §§ 78.168–16 and 78.168–17.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch 1/8"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 78.168–16 Nails; kind and dimensions.

(a) Cement[3] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[3] in "penny" as follows:

| Species of wood holding points of nails | Thickness of material holding points of nails (inches) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 3/4 or less | 7/8 | 1 | 1 1/8 | 1 1/4 | 1 3/8 | 1 1/2 | 1 5/8 | 1 3/4 | 1 7/8 or more |
| Group 1 | 4 | 5 | 5 | 6 | 7 | 7 | 8 | 8 | 9 | 10 |
| Group 2 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 8 | 9 |
| Group 3 | 3 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 8 |
| Group 4 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 6 | 7 | 7 |

§ 78.168–17 Nail spacing.[1]

(a) Nail spacing as follows:

| Nails (size) | Maximum spacing when driven into end and cleats | |
|---|---|---|
| | Side grain | End grains |
| | *Inches* | *Inches* |
| Threepenny | 1 1/4 | 1 |
| Fourpenny | 1 1/2 | 1 1/4 |
| Fivepenny | 1 3/4 | 1 1/2 |
| Sixpenny | 2 | 1 3/4 |
| Sevenpenny | 2 1/4 | 2 |
| Eightpenny | 2 1/2 | 2 1/4 |
| Ninepenny | 2 3/4 | 2 1/2 |
| Tenpenny | 3 | 2 3/4 |

§ 78.168–18 Marking.

(a) Marking on each box with letters and figures at least 1/2" high in rectangle as follows:

ICC–15A***

(1) The stars must be replaced by authorized gross weight (for example, ICC–15A100, etc.). This mark shall be understood to certify that box complies with all specification requirements.

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 78.168–13 (d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

ICC–15A

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(1) The "X's" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 78.168–19 Closing for shipment.

(a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 78.168–16 and 78.168–17.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about 1/6 of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

| Authorized gross weight (pounds) | Cross-section size when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| | *Inch* | *Inch* | *Inch* |
| 50 | 1/2 x 0.020 | 5/8 x 0.015 | |
| 100 | 5/8 x 0.020 | 1/2 x 0.018 | |
| 200 | 3/4 x 0.023 | 5/8 x 0.020 | 1/2 x 0.018 |
| 300 | | 5/8 x 0.023 | 1/2 x 0.020 |
| 400 | | 3/4 x 0.020 | 1/2 x 0.023 |
| 500 | | 3/4 x 0.023 | 5/8 x 0.023 |

(5) Wires, Washburn and Moen gauge, authorized as follows:

| Authorized gross weight (pounds) | Gauge of wires when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| 50 | 12 | 14 | |
| 100 | 11 | 12 | |
| 200 | 9 | 11 | 12 |
| 300 | | 10 | 11 |
| 400 | | 10 | 11 |
| 500 | | 9 | 10 |

§ 78.169 Specification 15B; wooden boxes, nailed.

§ 78.169–1 Compliance.

(a) Required in all details.

§ 78.169–2 Closed[1] box.

(a) Parts and pieces to be in close contact.

§ 78.169–3 Ends.

(a) One-piece, or equivalent see (§ 78.169–5); or cleated as prescribed with joints tongued and grooved.

§ 78.169–4 Sides, top, and bottom.

(a) Joints tongued and grooved, or one-piece equivalent.

§ 78.169–5 One-piece equivalents.

(a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least 1/2" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least 1/2" thick, tongued and grooved and fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration 4/5 thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

§ 78.169–6 Gluing efficiency.

(a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

§ 78.169–7 Lumber.

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within 1/2 its length.

§ 78.169–8 Nails.

(a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

§ 78.169–9 Grouping of principal woods.

(a) Grouping as follows:

GROUP 1

| | |
|---|---|
| White pine. | Willow. |
| Norway pine. | Noble fir. |
| Aspen (popple). | Magnolia. |
| Spruce. | Buckeye. |
| Western (yellow) pine. | White fir. |
| | Cedar. |
| Cottonwood. | Redwood. |
| Balsam fir. | Butternut. |
| Yellow poplar. | Cucumber. |
| Chestnut. | Alpine fir. |
| Sugar pine. | Lodgepole pine. |
| Cypress. | Jack pine. |
| Basswood. | |

GROUP 2

| | |
|---|---|
| Southern yellow pine. | Douglas fir. |
| Hemlock. | Larch (tamarack). |
| North Carolina pine. | |

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Black ash. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | Hickory. |
| Hackberry. | White ash. |

§ 78.169–10 Width of pieces.

(a) At least 2½".

§ 78.169–11 Width of cleats.

(a) Twice the prescribed thickness plus 3/4".

§ 78.169–12 Thickness of lumber.

(a) Nailed boxes not cleated (Style 1). Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over

[1] To determine number of nails, divide length of nailing edge by spacing; fractions greater than 1/2 are considered as whole numbers.

[1] Openings for filling device of inside container authorized if device is properly protected.

[3] Uncoated nails authorized wher increased 25 percent in number.

[3] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed 1/2 of thickness of material holding points of nails.

150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

NOTE 1: When group 2 woods are used the gross weight may be increased to 110 pounds.

NOTE 2: When group 2 woods are used the gross weight may be increased to 220 pounds.

NOTE 3: When group 2 woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed).

TABLE 1

| Depth of box (inches) | Not over 8″ | Not over 9″ | Not over 10″ | Not over 12″ | Not over 14″ | Over 14″ |

| 100 | 1 | 15/16 | 7/8 | 13/16 | 3/4 | 11/16 |

§ 78.169–13 Reduced thickness.

(a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 5/16″ for boxes up to 35 pounds authorized gross weight and 3/8″ above that weight.

(2) Ends or cleats: Minimum 7/16″.

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per § 78.169–19(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

| Specified thickness (inches) | Reduced thickness corresponding to percent reduction | | |
|---|---|---|---|
| | 12½ | 20 | 35 |
| 9/32 | 1/4 | 1/4 | 1/4 |
| 5/16 | 9/32 | 1/4 | 1/4 |
| 11/32 | 5/16 | 9/32 | 1/4 |
| 3/8 | 5/16 | 5/16 | 1/4 |
| 7/16 | 3/8 | 11/32 | 9/32 |
| 1/2 | 7/16 | 3/8 | 5/16 |
| 9/16 | 1/2 | 7/16 | 3/8 |
| 5/8 | 9/16 | 1/2 | 7/16 |
| 11/16 | 5/8 | 9/16 | 7/16 |
| 3/4 | 5/8 | 5/8 | 1/2 |
| 23/32 | 11/16 | 5/8 | 1/2 |
| 13/16 | 11/16 | 5/8 | 1/2 |
| 7/8 | 3/4 | 11/16 | 9/16 |
| 15/16 | 13/16 | 3/4 | 5/8 |
| 1 | 7/8 | 13/16 | 5/8 |
| 1 1/16 | 15/16 | 7/8 | 11/16 |
| 1 1/8 | 1 | 15/16 | 3/4 |
| 1 3/16 | 1 1/16 | 1 | 23/32 |
| 1 1/4 | 1 1/16 | 1 | 13/16 |
| 1 5/16 | 1 1/8 | 1 1/16 | 7/8 |
| 1 3/8 | 1 1/4 | 1 1/16 | 7/8 |

§ 78.169–14 Assembly.

(a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized; nails should be driven flush.

§ 78.169–15 Nails and nailing.

(a) Cement coated nails of size and with spacing detailed in §§ 78.169–16 and 78.169–17.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch ⅛″; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

§ 78.169–16 Nails; kind and dimensions.

(a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

| Species of wood holding points of nails | Thickness of material holding points of nails (inches) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 5/8 or less | 11/16 | ½ | 13/16 | ¾ | 15/16 | 1 | 1 1/16 | 1 1/8 | 1 3/16 | 1 5/16 or more |
| Group 1 | 4 | 5 | 5 | 6 | 7 | 7 | 8 | 8 | 8 | 9 | 10 |
| Group 2 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 | 9 |
| Group 3 | 3 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 |
| Group 4 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 |

§ 78.169–17 Nail spacing.[3]

(a) Nail spacing as follows:

| Nails (size) | Maximum spacing when driven into end and cleats | |
|---|---|---|
| | Side grain | End grains |
| | *Inches* | *Inches* |
| Threepenny | 1¼ | 1 |
| Fourpenny | 1½ | 1¼ |
| Fivepenny | 1¾ | 1½ |
| Sixpenny | 2 | 1¾ |
| Sevenpenny | 2¼ | 2 |
| Eightpenny | 2½ | 2¼ |
| Ninepenny | 2¾ | 2½ |
| Tenpenny | 3 | 2½ |

§ 78.169–18 Marking.

(a) Marking on each box with letters and figures at least ½″ high in rectangle as follows:

ICC–15B***

(1) The stars must be replaced by authorized gross weight (for example, ICC–15B125, etc.). This mark shall be understood to certify that box complies with all specification requirements.

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 78.169–13 (d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

ICC–15B

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(1) The "X's" must be replaced by authorized gross weights as authorized for the strapping conditions.

§ 78.169–19 Closing for shipment.

(a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 78.169–16 and 78.169–17.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about ⅛ of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

| Authorized gross weight (pounds) | Cross-section size when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| | *Inch* | *Inch* | *Inch* |
| 50 | ½ x 0.020 | ⅝ x 0.015 | |
| 100 | ⅝ x 0.020 | ⅝ x 0.018 | |
| 200 | ⅝ x 0.023 | ⅝ x 0.020 | ½ x 0.018 |
| 300 | | ⅝ x 0.023 | ⅝ x 0.020 |
| 400 | | ⅝ x 0.020 | ¾ x 0.023 |
| 500 | | ⅝ x 0.023 | ¾ x 0.023 |

(5) Wires, Washburn and Moen gauge, authorized as follows:

| Authorized gross weight (pounds) | Gauge of wires when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| 50 | 12 | 14 | |
| 100 | 11 | 12 | |
| 200 | 9 | 11 | 12 |
| 300 | | 10 | 11 |
| 400 | | 10 | 11 |
| 500 | | 9 | 10 |

§ 78.170 Specification 15C; wooden boxes, nailed.

§ 78.170–1 Compliance.

(a) Required in all details.

§ 78.170–2 Closed[4] box.

(a) Parts and pieces to be in close contact.

§ 78.170–3 Ends.

(a) One-piece, or equivalent (see § 78.170–4); or cleated as prescribed.

§ 78.170–4 One-piece equivalents.

(a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½″ thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least ½″ thick fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ½ of thickness of material holding points of nails.

[3] To determine number of nails, divide length of nailing edge by spacing; fractions greater than ½ are considered as whole numbers.

[4] Openings for filling device of inside container authorized if device is properly protected.

(b) Corrugated fasteners (as prescribed for one-piece equivalents): 1" wide; penetration ⅝ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

**§ 78.170–5 Gluing efficiency.**

(a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

**§ 78.170–6 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

**§ 78.170–7 Nails.**

(a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

**§ 78.170–8 Grouping of principal woods.**

(a) Grouping as follows:

GROUP 1

| | |
|---|---|
| White pine. | Willow. |
| Norway pine. | Noble fir. |
| Aspen (popple). | Magnolia. |
| Spruce | Buckeye. |
| Western (yellow) pine. | White fir. |
| | Cedar. |
| Cottonwood. | Redwood. |
| Balsam fir. | Butternut. |
| Yellow poplar. | Cucumber. |
| Chestnut. | Alpine fir. |
| Sugar pine. | Lodgepole pine. |
| Cypress. | Jack pine. |
| Basswood. | |

GROUP 2

| | |
|---|---|
| Southern yellow pine. | Douglas fir. |
| Hemlock. | Larch (tamarack). |
| North Carolina pine. | |

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Black ash. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | Hickory. |
| Hackberry. | White ash. |

**§ 78.170–9 Width of pieces.**

(a) At least 2½".

**§ 78.170–10 Width of cleats.**

(a) Twice the prescribed thickness plus ¾".

**§ 78.170–11 Thickness of lumber.**

(a) Nailed boxes not cleated (Style 1): Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds, see Note 2. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds, see Note 3. Sides as in Table 1; top and bottom as in Table 1A; end and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A; cleats as in Table 3B; ends not thinner than thickest side or top.

NOTE 1: When group 2 woods are used the gross weight may be increased to 110 pounds.

NOTE 2: When group 2 woods are used the gross weight may be increased to 220 pounds.

NOTE 3: When group 2 woods are used the gross weight may be increased to 550 pounds.

(e) Tables are as follows (dimensions of materials finished or resawed):

TABLE 1

| Depth of box (inches) | Not over 8" | Not over 9" | Not over 10" | Not over 12" | Not over 14" | Over 14" |
|---|---|---|---|---|---|---|
| Authorized gross weight (pounds) | Minimum thickness of part | | | | | |
| | *Inches* | *Inches* | *Inch* | *Inch* | *Inch* | *Inch* |
| 15 | ¼ | ¼ | ¼ | ¼ | ¼ | ¼ |
| 25 | ¼ | ¼ | ¼ | ¼ | ¼ | ¼ |

| 100 | 1 1/16 | 1 | 15/16 | ⅞ | 15/16 | 1 1/16 |

**§ 78.170–12 Reduced thicknesses.**

(a) Reduction in thickness is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum ¼" for boxes up to 150 pounds authorized gross weight and ⅜" above that weight.

(2) Ends or cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per § 78.170–18(b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

| Specified thickness (inches) | Reduced thickness corresponding to percent reduction | | |
|---|---|---|---|
| | 12½ | 20 | 35 |
| 9/32 | ¼ | ¼ | ¼ |
| 5/16 | 9/32 | ¼ | ¼ |
| 11/32 | 5/16 | 9/32 | ¼ |
| 3/8 | 5/16 | 5/16 | 9/32 |
| 7/16 | 3/8 | 11/32 | 9/32 |
| ½ | 7/16 | 3/8 | 5/16 |
| 9/16 | ½ | 7/16 | 5/16 |
| 5/8 | 9/16 | ½ | 7/16 |
| 11/16 | 5/8 | 9/16 | 7/16 |
| ¾ | 5/8 | 5/8 | ½ |
| 25/32 | 11/16 | 5/8 | ½ |
| 13/16 | 11/16 | 5/8 | ½ |
| 7/8 | ¾ | 11/16 | 9/16 |
| 15/16 | 13/16 | ¾ | 5/8 |
| 1 | ⅞ | 13/16 | ¾ |
| 1 1/16 | 15/16 | ⅞ | 11/16 |
| 1 1/8 | 1 | 15/16 | ⅞ |
| 1 3/16 | 1 1/16 | 1 | 15/16 |
| 1 1/4 | 1 1/8 | 1 1/16 | 1 |
| 1 5/16 | 1 1/8 | 1 1/16 | 1 |

**§ 78.170–13 Assembly.**

(a) By nailing; screws, hinges and hasp, or other device of equal efficiency are authorized; nails should be driven flush.

**§ 78.170–14 Nails and nailing.**

(a) Cement coated nails of size and with spacing detailed in §§ 78.170–15 and 78.170–16.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch ⅛"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

**§ 78.170–15 Nails; kind and dimensions.**

(a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

| Species of wood holding points of nails | Thickness of material holding points of nails (inches) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | ⅜ or less | 7/16 | ½ | 9/16 | ⅝ | 1 1/16 | ¾ | 25/32 | 1 1/16 | ⅞ | 1 15/16 or more |
| Group 1 | 4 | 5 | 5 | 6 | 7 | 7 | 8 | 8 | 8 | 9 | 10 |
| Group 2 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 8 | 8 | 9 |
| Group 3 | 3 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 |
| Group 4 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 |

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ½ of thickness of material holding points of nails.

### § 78.170–16 Nail spacing.[1]

(a) Nail spacing as follows:

| Nails (size) | Maximum spacing when driven into end and cleats | |
|---|---|---|
| | Side grain | End grains |
| | *Inches* | *Inches* |
| Threepenny | 1¼ | 1 |
| Fourpenny | 1½ | 1¼ |
| Fivepenny | 1¾ | 1½ |
| Sixpenny | 2 | 1¾ |
| Sevenpenny | 2¼ | 2 |
| Eightpenny | 2½ | 2¼ |
| Ninepenny | 2¾ | 2½ |
| Tenpenny | 3 | 2½ |

### § 78.170–17 Marking.

(a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

ICC–15C***

(1) The stars must be replaced by authorized gross weight (for example, ICC–15C100, etc.). This mark shall be understood to certify that box complies with all specification requirements.

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 78.170–12(d); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

ICC–15C

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(1) The "X's" must be replaced by authorized gross weights as authorized for the strapping conditions.

### § 78.170–18 Closing for shipment.

(a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 78.170–15 and 78.170–16.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about ⅛ of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

| Authorized gross weight (pounds) | Cross-section size when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| | *Inch* | *Inch* | *Inch* |
| 50 | ½ x 0.020 | ½ x 0.015 | |
| 100 | ½ x 0.020 | ½ x 0.018 | |
| 200 | ¾ x 0.023 | ½ x 0.020 | ½ x 0.018 |
| 300 | | ¾ x 0.023 | ½ x 0.020 |
| 400 | | ¾ x 0.020 | ½ x 0.023 |
| 500 | | ¾ x 0.023 | ¾ x 0.023 |

[1] To determine number of nails, divide length of nailing edge by spacing; fractions greater than ½ are considered as whole numbers.

(5) Wires, Washburn and Moen gauge, authorized as follows:

| Authorized gross weight (pounds) | Gauge of wires when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| 80 | 12 | 14 | |
| 100 | 11 | 12 | |
| 200 | 9 | 11 | 12 |
| 300 | | 10 | 11 |
| 400 | | 10 | 11 |
| 500 | | 9 | 10 |

### § 78.171 Specification 15D; wooden boxes, nailed.

### § 78.171–1 Compliance.

(a) Required in all details.

### § 78.171–2 Spaces between boards.

(a) Space 4" wide authorized except that bottom pieces must be in close contact with each other and with sides and ends.

### § 78.171–3 Ends.

(a) One-piece, or equivalent (see § 78.171–5); or cleated as prescribed.

### § 78.171–4 Handles.

(a) Containers may be provided with suitable handles at discretion of shipper. Handles must be of dimensions specified herein, consisting of horizontal strips or cleats extending across top of each side or each end; handles which do not project 3 inches beyond the vertical edges of the container must be mounted to leave at least 7/16 inch open space between handle and box, or be at least ¾ inch thick, or be of cross section at least equal to cleats required for single-cleated boxes of corresponding size and gross weight. Extension of cleats or side boards is acceptable for projecting handles.

| Authorized gross weight, maximum (pounds): | *Handles, minimum cross section (inches)* |
|---|---|
| 100 | ½ x 1¾ |
| 150 | ½ x 2¾ |
| 200 | ⅝ x 2½ |
| 300 | ⅝ x 3½ |
| 400 | ⅝ x 3½ |

### § 78.171–5 One-piece equivalents.

(a) Parts are considered equivalent to one-piece as follows:

(1) Parts Linderman-joint glued.

(2) Parts at least ½" thick, tongued and grooved and glued, with 2 or more corrugated fasteners on each joint.

(3) Parts at least ½" thick fastened with 3 or more corrugated fasteners on each joint.

(4) Parts butt-joint glued, provided the joined surfaces are planed before gluing, so as to assure full contact. After immersion in water for 24 hours at 70° F. the part must not fail at the joint when it is broken.

(b) Corrugated fasteners (as prescribed for one-piece equivalents). 1" wide; penetration ⅝ thickness of part; within 3" of end of joint and not over 8" apart; for 3 or more, drive alternately into opposite sides of part.

### § 78.171–6 Gluing efficiency.

(a) Shall be determined for boxes for gross weight of 150 pounds or less. When filled with sand and sawdust to marked gross weight, the boxes must be able to withstand 8 drops of 12", one on each corner, onto solid concrete without exposure of contents.

### § 78.171–7 Lumber.

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

### § 78.171–8 Nails.

(a) Cement coated, unless otherwise authorized herein, of size specified for "sinkers" and "coolers" as generally known to the trade.

### § 78.171–9 Grouping of principal woods.

(a) Grouping as follows:

**Group 1**

White pine.
Norway pine.
Aspen (popple).
Spruce.
Western (yellow) pine.
Cottonwood.
Balsam fir.
Buckeye.
White fir.
Cedar.
Redwood.
Butternut.
Yellow poplar.
Chestnut.
Sugar pine.
Cypress.
Basswood.
Willow.
Noble fir.
Magnolia.
Cucumber.
Alpine fir.
Lodgepole pine.
Jack pine.

**Group 2**

Southern yellow pine.
Hemlock.
North Carolina pine.
Douglas fir.
Larch (tamarack).

**Group 3**

White elm.
Red gum.
Sycamore.
Pumpkin ash.
Black gum.
Black ash.
Tupelo.
Maple—soft or silver.

**Group 4**

Hard maple.
Beech.
Oak.
Hackberry.
Birch.
Rock elm.
Hickory.
White ash.

### § 78.171–10 Width of pieces.

(a) At least 2½".

### § 78.171–11 Width of cleats.

(a) Twice the prescribed thickness plus ¾".

### § 78.171–12 Thickness of lumber.

(a) Nailed boxes not cleated (Style 1): Authorized gross weight not over 100 pounds, see Note 1. Sides as in Table 1; top and bottom as in Table 1A; ends as in Table 5.

(b) Glued-lock-corner boxes (Style 6): Authorized gross weight not over 150 pounds. Sides as in Table 3; top and bottom as in Table 1A; ends as in Table 3A. Or, sides as in Table 2; top and bottom as in Table 1A; ends as in Table 4.

(c) Single-cleated boxes (Style 4 or 5): Authorized gross weight not over 200 pounds for boxes with vertical cleats nor over 400 pounds for boxes with horizontal cleats. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 3A.

(d) Double-cleated boxes (Style 2, 2½, or 3): Authorized gross weight not over 500 pounds. Sides as in Table 1; top and bottom as in Table 1A; ends and cleats as in Table 2A. Or, sides as in Table 1; top and bottom as in Table 1A, cleats as in Table 3B; ends not thinner than thinnest side or top.

*Exception:* For containers consisting of an inner wooden crate of at least ½" thickness throughout, with or without top, and an outside double cleated box without the openings permitted by § 78.171–2, the thickness of all parts of the outside box may be reduced to not less than ⅝".

(e) Tables are as follows (dimensions of materials finished or resawed):

TABLE 1

| 55 | 3/4 | 11/16 | 1/2 | 5/8 | 9/16 | 1/2 |
| 65 | 13/16 | 3/4 | 11/16 | 3/4 | 5/8 | 9/16 |
| 75 | 7/8 | 13/16 | 3/4 | 11/16 | 5/8 | 9/16 |
| 85 | 13/16 | 7/8 | 13/16 | 3/4 | 11/16 | 5/8 |
| 100 | 1 | 13/16 | 7/8 | 13/16 | 3/4 | 11/16 |

**§ 78.171–13 Reduced thicknesses.**

(a) Reduction in thicknesses is authorized as in paragraphs (a) to (d) of this section except that reduced thicknesses must be not less than:

(1) Sides, top, and bottom: Minimum 5/16" for boxes up to 35 pounds authorized gross weight and 3/8" above that weight.

(2) Ends or cleats: Minimum 7/16".

(b) Sides of one-piece or equivalent: 12½ percent. In battery boxes reinforced with separate pieces in the form of extension handles, not extension of side boards or cleats, having cross section at least equal to cleats required for single-cleated boxes of corresponding size and gross weight, 20 percent in sides or ends so reinforced.

(c) Any part or cleat of Group 3 or 4 wood: 20 percent.

(d) Sides, top, and bottom when to be strapped as per § 78.171–18 (b): 20 percent for 1 strap; 35 percent for 2 straps.

CONVERSION TABLE

| Specified thickness (inches) | Reduced thickness corresponding to percent reduction | | |
|---|---|---|---|
| | 12½ | 20 | 35 |
| 5/32 | 1/4 | 1/4 | 1/4 |
| 3/16 | 5/32 | 1/4 | 1/4 |
| 13/32 | 3/16 | 5/32 | 1/4 |
| 7/16 | 3/16 | 3/16 | 5/32 |
| 1/2 | 7/16 | 3/8 | 3/16 |
| 9/16 | 1/2 | 7/16 | 3/8 |
| 5/8 | 9/16 | 1/2 | 7/16 |
| 11/16 | 5/8 | 9/16 | 7/16 |
| 3/4 | 5/8 | 5/8 | 1/2 |
| 25/32 | 11/16 | 5/8 | 1/2 |
| 13/16 | 11/16 | 5/8 | 1/2 |
| 7/8 | 3/4 | 11/16 | 9/16 |
| 15/16 | 13/16 | 3/4 | 5/8 |
| 1 | 7/8 | 13/16 | 5/8 |
| 1 1/16 | 15/16 | 7/8 | 11/16 |
| 1 1/8 | 1 | 7/8 | 3/4 |
| 1 3/16 | 1 1/16 | 15/16 | 25/32 |
| 1 1/4 | 1 1/8 | 1 | 13/16 |
| 1 5/16 | 1 1/8 | 1 1/16 | 7/8 |

**§ 78.171–14 Nails and nailing.**

(a) Cement coated nails of size and with spacing detailed in §§ 78.171–15 and 78.171–16.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to be staggered and clinch 1/8"; uncoated nails authorized.

(d) Nailing tops and bottoms to sides permitted but not required.

**§ 78.171–15 Nails; kind of dimensions.**

(a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size[2] in "penny" as follows:

| Species of wood holding points of nails | Thickness of material holding points of nails (inches) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 3/4 or less | 25/32 | 13/16 | 7/8 | 15/16 | 1 | 1 1/16 | 1 1/8 | 1 3/16 | 1 1/4 | 1 5/16 or more |
| Group 1 | 4 | 5 | 5 | 6 | 7 | 7 | 8 | 8 | 8 | 9 | 10 |
| Group 2 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 | 9 |
| Group 3 | 3 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 | 7 | 8 |
| Group 4 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 6 | 6 | 7 | 7 |

**§ 78.171–16 Nail spacing.[3]**

(a) Nail spacing as follows:

| Nails (size) | Maximum spacing when driven into end and cleats | |
|---|---|---|
| | Side grain | End grains |
| | Inches | Inches |
| Threepenny | 1 1/4 | 1 |
| Fourpenny | 1 1/2 | 1 1/4 |
| Fivepenny | 1 3/4 | 1 1/2 |
| Sixpenny | 2 | 1 3/4 |
| Sevenpenny | 2 1/4 | 2 |
| Eightpenny | 2 1/2 | 2 1/4 |
| Ninepenny | 2 3/4 | 2 1/2 |
| Tenpenny | 3 | 2 1/2 |

**§ 78.171–17 Marking.**

(a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

ICC–15D •••

(1) The stars must be replaced by authorized gross weight (for example, ICC–15D125, etc.) This mark shall be understood to certify that box complies with all specification requirements.

(b) The words "ONE STRAP", or "TWO STRAPS", etc., when straps are required (see § 78.171–13 (d)); this to be placed above or below the rectangle.

(c) Marks may also be applied as follows:

ICC–15D

NO STRAP XXX LBS.
ONE STRAP XXX LBS.
TWO STRAPS XXX LBS.

(1) The "X's" must be replaced by authorized gross weights as authorized for the strapping conditions.

**§ 78.171–18 Closing for shipment.**

(a) Box to be securely closed. Nails, if used, to be as prescribed in §§ 78.171–15 and 78.171–16.

(b) Metal straps, as specified by marks on box, must encircle sides, top, and bottom as follows:

(1) One nailless strap: At center of box.

(2) Two or more nailless straps: Outer two about ⅛ of box length from ends and other equally spaced between.

(3) Nailed straps: At ends of sides, top, and bottom; use same size nails as for closing and space not over twice as far apart.

(4) Size of flat straps must be as follows:

| Authorized gross weight (pounds) | Cross-section size when number of straps is— | | |
|---|---|---|---|
| | | 2 | 3 |
| | Inch | Inch | Inch |
| 50 | 1/4 x 0.020 | 1/4 x 0.018 | |
| 100 | 3/4 x 0.020 | 1/4 x 0.018 | |
| 200 | 3/4 x 0.023 | 1/4 x 0.020 | 1/2 x 0.018 |
| 300 | | 1/4 x 0.023 | 1/2 x 0.020 |
| 400 | | 1/4 x 0.020 | 1/2 x 0.023 |
| 500 | | 1/4 x 0.023 | 5/8 x 0.023 |

(5) Wires, Washburn and Moen gauge, authorized as follows:

| Authorized gross weight (pounds) | Gauge of wires when number of straps is— | | |
|---|---|---|---|
| | 1 | 2 | 3 |
| 50 | 12 | 14 | |
| 100 | 11 | 12 | |
| 200 | 9 | 11 | 12 |
| 300 | | 10 | 11 |
| 400 | | 10 | 11 |
| 500 | | 9 | 10 |

**§ 78.171–19 Boxes for shipment of wet electric storage batteries.**

(a) Boxes over 500 pounds gross weight are authorized for shipments of wet electrict storage batteries when the batteries are contained in a rigid cradle or box, or are securely fastened together so as to form a single unit, and not more than one such cradle, box, or unit is packed in the outside container. Skids required: runners to be at least 2 inches by 4 inches commercial thickness, minimum of three, except that two runners are authorized when width of case does not exceed 24 inches; or two runners may be used, minimum of 4 inches by 4 inches commercial thickness, when case does not exceed 36 inches in width. Runners to be beveled at ends to facilitate use of rollers. Bottom boards, minimum of 1 inch commercial thickness, to be nailed across runners; bracing of parts and thickness of lumber to be sufficient to protect contents in transit.

**§ 78.172 Specification 15E; wooden boxes, fiberboard lined.**

**§ 78.172–1 Compliance.**

(a) Required in all details.

**§ 78.172–2 Closed box.**

(a) Parts and pieces to be in close contact.

**§ 78.172–3 Ends.**

(a) Butt-joint glued to fiberboard. Plywood not authorized.

[1] Uncoated nails authorized when increased 25 percent in number.

[2] Nails 1-penny smaller authorized when spaced as for 2-penny smaller. Nails 2-penny smaller authorized, but not less than 3-penny, when thickness of material nailed through does not exceed ½ of thickness of material holding points of nails.

[3] To determine number of nails, divide length of nailing edge by spacing; fractions greater than ½ are considered as whole numbers.

**§ 78.172–4 Sides, top, and bottom.**

(a) Butt-joint or plywood glued to fiberboard.

**§ 78.172–5 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Grain of wood in cleats must not cross cleat within ½ its length.

(b) Plywood, if used, shall be free of knots, decay, and other visible defects that interfere with the nailing. Plywood used must be of good commercial box or sheathing grade veneer.

**§ 78.172–6 Grouping of principal woods.**

(a) Grouping as follows:

GROUP 1

White pine.
Norway pine.
Aspen (popple).
Spruce.
Western (yellow) pine.
Cottonwood.
Balsam fir.
Yellow poplar.
Chestnut.
Sugar pine.
Cypress.
Basswood.
Willow.

GROUP 1—Continued

Noble fir.
Magnolia.
Buckeye.
White fir.
Cedar.
Redwood.
Butternut.
Cucumber.
Alpine fir.
Lodgepole pine.
Jack pine.

GROUP 2

Southern yellow pine.
Hemlock.
North Carolina pine.
Douglas fir.
Larch (tamarack).

GROUP 3

White elm.
Red gum.
Sycamore.
Pumpkin ash.
Black gum.
Black ash.
Tupelo.
Maple—soft or silver.

GROUP 4

Hard maple.
Beech.
Birch.
Rock elm.
Oak.
Hackberry.
Hickory.
White ash.

**§ 78.172–7 Width of pieces.**

(a) At least 2½ inches.

**§ 78.172–8 Thickness of wood parts.**

(a) Thickness as follows:

| Authorized gross weight of box not over (pounds) | Style of box (see Notes 2 and 3) | Minimum thickness (see Note 1) of sides, top and bottom in inches | | Minimum thickness of ends and cleats in inches | | Minimum width of cleats in inches | Size of nails in ends (penny) | |
|---|---|---|---|---|---|---|---|---|
| | | Groups 1 and 2 | Groups 3 and 4 | Groups 1 and 2 | Groups 3 and 4 | | Groups 1 and 2 | Groups 3 and 4 |
| 150 | 1, 2, 2½, 3 or 4 | 3/16 | 1/8 | 1/2 | 1/2 | 1 3/4 | 4 | 4 |
| 250 | 2½, 3 or 4 | 7/32 | 3/16 | 5/8 | 5/16 | 1 7/8 | 5 | 4 |
| 350 | 2½ or 3 | 1/4 | 7/32 | 3/4 | 11/16 | 2 1/4 | 6 | 5 |
| 450 | 2½ or 3 | 5/16 | 1/4 | 25/32 | 25/32 | 2 1/4 | 6 | 5 |
| 550 | 2½ or 3 | 3/8 | 5/16 | 13/16 | 13/16 | 2 1/2 | 7 | 6 |

NOTE 1: Plywood or paper covered wood veneer board of equal thickness and efficiency is permitted. Paper covered veneer board shall be of good quality Douglas fir core of at least 3/16 inch thickness, or lumber of equal quality, and free of breaks, gaps, holes, or knots. Paper covering shall be at least Kraft untreated linerboard having a basis weight of 42 pounds per 1,000 square feet and shall be secured to veneer core by adhesive in such manner as to form a satisfactorily laminated board.

NOTE 2: Thickness of ends in style 1 boxes shall be not less than 25/32 inch and load limit shall be not more than 100 pounds.

NOTE 3: Style 4 boxes shall have load limit of 200 pounds.

**§ 78.172–9 Assembly.**

(a) By nails, screws, staples or other devices of equal efficiency. Nails, screws, and staples must be driven flush.

**§ 78.172–10 Nails and nailing.**

(a) Cement coated nails of size and with spacing detailed in §§ 78.172–8, 78.172–11 and 78.172–12.

(b) At cleated edges drive at least 40 percent of nails into cleats.

(c) Nails fastening cleats to ends be staggered and clinch ⅛ inch; uncoated nails authorized.

**§ 78.172–11 Nails; kind and dimensions.**

(a) Cement[1] coated of gauge and length as for "sinkers" and "coolers" as generally known to the trade; size in penny as prescribed in § 78.172–8.

**§ 78.172–12 Nail spacing.[3]**

(a) Nail spacing as follows:

| Nails (size) | Maximum spacing when driven into end and cleats | |
|---|---|---|
| | Side grain | End grains |
| | Inches | Inches |
| Fourpenny | 1 1/2 | 1 1/4 |
| Fivepenny | 1 3/4 | 1 1/2 |
| Sixpenny | 2 | 1 3/4 |
| Sevenpenny | 2 1/4 | 2 |

**§ 78.172–13 Classification of board.**

(a) Fiberboard is hereby classified by strength[4] of completed board as in first column of the following table; weights specified in the table are the minimum authorized:

| Authorized gross weight of box not over (pounds) | Classified strength[1] of completed board | Solid fiberboard minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.) | Facings for corrugated fiberboard double-faced minimum combined weight of facings (pounds per 1,000 sq. ft.) |
|---|---|---|---|
| 150 | 200 | 190 | 84 |
| 250 | 275 | 237 | 138 |
| 350 | 325 | 237 | 138 |
| 450 | 350 | 283 | 180 |
| 550 | 375 | 283 | 180 |

[1] Mullen or Cady test (minimum).

**§ 78.172–14 Solid fiberboard.**

(a) To be 3-ply or more; both outer plies water resistant.

**§ 78.172–15 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1,000 square feet; all parts must be securely glued together throughout all contact areas.

**§ 78.172–16 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

**§ 78.172–17 Assembly.**

(a) The sheet of fiberboard to which are glued the boards forming the sides, top and bottom box sections, shall be properly scored to form a tube. The joint shall be on a side, top or bottom, near the center of the face, and located under one of the wood boards of the face.

(1) A water resistant glue shall be used to attach the fiberboard to the wood. The glue shall be applied in ribbons (lines) at right angles to the scores of the tube. The ribbons of glue shall be not less than 1¼" wide and shall be spaced sufficiently close so that glue will cover not less than 25 percent of the surface of the fiberboard. The ribbons of glue shall be equally spaced on the length of the box with the outside ribbons flush with the ends of the tube. Glue shall be applied to the fiberboard on the ends of the box in like amount as on the tube.

[1] Uncoated nails authorized when increased 25 percent in number.

[2] To determine number of nails, divide length of nailing edge by spacing; fractions greater than ½ are considered as whole numbers. Each piece of sides, top and bottom shall be nailed to the ends with at least two nails through each end of the piece.

[3] Mullen or Cady test (minimum).

(2) For styles 2, 2½, and 3, all faces of the tube shall extend over the end boards and cleats. For style 4, all faces shall extend over the end boards, but only the side sections shall extend over the cleats.

(3) The boards between score lines, shall butt against each other when placed on the fiberboard, and the combined widths of the boards shall be approximately equal to the inside dimension of the respective box section so that the boards completely cover the fiberboard between the inside edges of adjacent scores.

(4) A sheet of fiberboard shall be attached to each end as provided in subparagraph (1) of this paragraph and shall completely cover the inside of the end.

**§ 78.172–18 Closing for shipment.**

(a) Box shall be securely closed. Nails, if used, shall be as prescribed in §§ 78.172–8, 78.172–10, 78.172–11, and 78.172–12.

**§ 78.172–19 Marking.**

(a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

ICC–15E***

(1) The stars must be replaced by authorized gross weight (for example, ICC–15E100, etc.). This mark shall be understood to certify that box complies with all specification requirements.

**§ 78.176 Specification 15L; wooden boxes with inside containers for desensitized liquid explosives.**

**§ 78.176–1 Compliance.**

(a) Required in all details.

**§ 78.176–2 Size and capacity.**

(a) Each outside wooden container shall contain not more than one inside metal container having a capacity not to exceed 10 quarts.

**§ 78.176–3 Outside containers.**

(a) Wooden boxes cleated as prescribed. Parts must be in close contact and completely enclose inside containers. Lumber must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with assembly, or other defects that materially lessen the strength.

(b) Assembly: Use brass screws throughout. Assemble sides and ends with grain of wood vertical. Fasten bottom securely with edges flush with sides and ends of box. Cleats must extend around entire perimeter of box. Apply top and bottom cleats horizontally. Bottom cleats must be flush with bottom surface of the box. Top cleats must extend above top of box to provide a ¾-inch recess for cover projections (see § 78.176–5). Cover must be flush with outside surface of top cleats and must be cleated on the outside at all edges. Cleats may be mitered but must butt at all corners.

(c) Parts and dimensions as follows:

| Minimum dimensions | | | |
|---|---|---|---|
| Thickness, sides, top, bottom, and ends | Top cleats | Bottom cleats | Cover cleats |
| ¾"..... | ⅝" x 3½" | ⅝" x 2¾" | ¾" x 2" |

**§ 78.176–4 Inside containers.**

(a) Inside containers must be as follows:

(1) *Metal containers.* Double seamed, of copper weighing not less than 16 ounces per square foot, or other nonsparking material of equivalent strength. All seams must be closed by welding, brazing, or soldering so as to be tight against leakage. Handles must be fastened to top of container and be of copper weighing not less than 48 ounces per square foot, or other nonsparking material of equivalent strength. Each side of the container must be strengthened vertically by at least three equally spaced indented crimps. Each container must have two pouring spouts in the top securely closed by rubber stoppers.

(2) *Rubber liners.* Each inside metal container must be inserted in a two-piece rubber liner or boot, consisting of a cover and body, into which it must fit snugly and which in turn shall fit snugly the outside wooden container. This liner must be watertight and of such size as to fully protect the inside container. Sides of liner must be at least ¼ inch in thickness and bottom at least ½ inch in thickness. Top edge of boot must be flanged to fit the recess provided by the top cleats on the outside wooden container and such flange must be at least ⅜ inch thick exclusive of any channels or indentations necessary to effect satisfactory closure because of projections on cover. Cover must be not less than ½ inch in thickness including projections for securing rubber stoppers in metal containers, and must have a formed molding around its entire perimeter to match and tightly fit channels or indentations in the body flange.

(b) Tests: Each inside metal and rubber container must be adequately tested and inspected during manufacture to insure against leakage.

**§ 78.176–5 Closure.**

(a) Top of rubber liner must be firmly fastened to wooden cover of outside container so as to fit securely into ¾-inch recess provided by top cleats on box. Top of liner must have projections on the inside which bear directly on rubber stoppers of metal containers to secure them in place. When closure is effected the liner must provide a positive seal against interior leakage. Cover of wooden outside container must be securely fastened to body of container by means of trunk clasps affixed to each face of the box. The trunk clasps must be recessed into cover and top cleats to furnish a smooth bearing surface on all faces of the box.

**§ 78.176–6 Marking.**

(a) Marking on each box with letters and figures at least ½-inch high in rectangle as follows:

ICC–15L

(1) This mark shall be understood to certify that box complies with all specification requirements.

**§ 78.177 Specification 15M; wooden boxes, metal lined, with inside containers for desensitized liquid explosives.**

**§ 78.177–1 Compliance.**

(a) Required in all details.

**§ 78.177–2 Size and capacity.**

(a) Each outside wooden container shall contain not more than 6 inside metal containers having nominal capacity of 10 quarts each.

**§ 78.177–3 Outside containers.**

(a) Wooden boxes cleated as prescribed. Parts must be in close contact and completely enclose inside containers. Lumber must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with assembly, or other defects that materially lessen the strength.

(1) The box shall be lined with copper or other nonsparking metal having suitable strength. All seams must be soldered, welded, or brazed to produce a liquid-tight container having no openings in the bottom, sides, or ends.

(b) Assembly: Use brass screws throughout, countersunk and with heads covered with suitable wood filling compound. Any screw used to secure a metal attachment shall be soldered, welded, or brazed thereto. Metal parts used in the construction of or attached to the box or cover must be of nonsparking type. Fasten bottom securely with edges flush with sides and ends of box. Cleats must extend around entire perimeter of box. Apply top and bottom cleats horizontally. Bottom cleats must be flush with bottom surface of the box. Top cleats must extend above top of box to provide a ¾-inch recess for cover projections (§ 78.177–5). Cover must be flush with outside surface of top cleats. Cleats may be mitered but must butt at all corners.

(c) Cellular construction: The interior of the box shall be divided into cells by means of removable, nonmetallic, nonsparking dividers, into which the rubber boots or secondary containers fit snugly. The cells shall be of such size as to extend from the bottom to near the top of the rubber boots or secondary containers.

(d) Parts and dimensions as follows:

[Minimum dimensions in inches]

| Thickness, sides, top, bottom, and ends | Top cleats | Bottom cleats | Cover cleats |
|---|---|---|---|
| ¾..... | ⅝ x 3½ | ⅝ x 2¾ | ¾ x 2 |

**§ 78.177–4 Inside containers.**

(a) Inside containers must be as follows:

(1) *Metal containers.* The individual inside containers shall be made in a workmanship manner, of copper or other nonsparking material of suitable strength, with all seams soldered, welded, or brazed to be liquid tight. The top shall be fitted with a securely attached carrying handle of copper or other nonsparking material of suitable strength. Each inside container must have a filling and pouring spout in the top, which shall be securely closed with rubber stoppers, paraffin, or oil-treated corks or other nonmetallic, nonsparking closures which are resistant to absorption of the contents and which provide a leakproof seal. The closures shall be secured in such manner as to prevent loosening, displacement, and leakage of contents during transit. Each inside container may have sufficient capacity in excess of 10 quarts to provide for outage requirements. Each side of the container must be strengthened vertically by at least 3 equally spaced indented crimps.

(2) *Rubber boots or secondary containers.* Each inside metal container must be contained in a rubber boot or other similar suitable leakproof, nonmetallic, nonabsorbent outer container, which must fit snugly in cellular structure provided in § 78.177–3 (c). The rubber boot or secondary container must be liquid tight and shall be so constructed as to have an inside height approximately that of the inside metal container plus closure and otherwise so constructed that the bottom will provide cushioning for the inner container.

(b) Tests: Each inside metal and rubber or secondary container must be adequately tested and inspected during manufacture to insure against leakage.

**§ 78.177–5 Closure.**

(a) The box cover must be securely fastened to the box in a manner to prevent movement of the insider containers. The inner surface of the box cover must be lined with suitable coating material or sheathed with nonsparking metal to provide a nonabsorbent surface. The cover must be secured to the box by means of nylon, or other suitable straps, and be so positioned to furnish a smooth bearing surface on all faces of the box. There shall be no protruding parts on the box or cover which would result in metal-to-metal contact.

**§ 78.177–6 Marking.**

(a) Marking on each box with letters and figures at least ½ inch high in rectangle as follows:

ICC–15M

(1) This mark shall be understood to certify that box complies with all specification requirements.

**§ 78.181 Specification 15X; wooden boxes for two five-gallon cans.**

**§ 78.181–1 Compliance.**

(a) Required in all details.

**§ 78.181–2 Closed box.**

(a) Parts and pieces to be in close contact.

**§ 78.181–3 Ends.**

(a) To be of group 1, 2, or 3 wood not over 2-piece.

**§ 78.181–4 Sides, top and bottom.**

(a) To be of Group 1, 2, or 3 wood, not over 3-piece.

**§ 78.181–5 Two-piece ends and corrugated fasteners.**

(a) *Two-piece ends.* Joints must be fastened with at least 3 corrugated fasteners.

(b) *Corrugated fasteners.* To be 1" wide and with penetration of ½ inch.

**§ 78.181–6 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

**§ 78.181–7 Groupings of principal woods.**

(a) Grouping as follows:

GROUP 1

| | |
|---|---|
| White pine. | Willow. |
| Norway pine. | Noble fir. |
| Aspen (popple). | Magnolia. |
| Spruce. | Buckeye. |
| Western (yellow) pine. | White fir. |
| | Cedar. |
| Cottonwood. | Redwood. |
| Balsam fir. | Butternut. |
| Yellow poplar. | Cucumber. |
| Chestnut. | Alpine fir. |
| Sugar pine. | Lodgepole pine. |
| Cypress. | Jackpine. |
| Basswood. | |

GROUP 2

| | |
|---|---|
| Southern yellow pine. | North Carolina pine. |
| Larch (tamarack). | Douglas fir. |
| Hemlock. | |

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Black ash. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple, soft or silver. |

**§ 78.181–8 Width of pieces.**

(a) At least 2" for sides, top and bottom if in two pieces, or 2⅜" for tops and bottoms and at least 4" for sides if in three pieces.

**§ 78.181–9 Thickness of lumber.**

(a) Thickness as follows:

(1) Ends: Thickness to be not less than ¾" for Group 1 or 2 lumber and 11/16" for Group 3 lumber.

(2) Sides, top and bottom: Thickness to be not less than ⅜".

**§ 78.181–10 Assembly.**

(a) By nailing with either bright or cement-coated nails, size and spacing as follows:

(1) Top to each end: 5 nails (1½" by 12½ gauge).

(2) Bottom to each end: 6 nails (1¾" by 12 gauge).

(3) Sides to each end: 6 nails (1½" by 12½ gauge).

**§ 78.181–11 Marking.**

(a) Marking on each box in letters and figures at least ½" high in a rectangle as follows:

ICC–15X

(1) This mark shall be understood to certify that box complies with all specification requirements.

**§ 78.181–12 Inside can.**

(a) Size: Approximate dimensions 9⅜ x 9⅜ x 13 15/16 inches.

(b) Approximate capacity: 1,188 cu. in.

(c) Top: Embossed.
Seams: Crimped and soldered.
Closure: Airtight and leakproof.
Handles: Wire.

(d) Bottom: Embossed.
Seams: Crimped and soldered.

(e) Body: Paneled on 4 sides.
Two seams: Clinched and soldered.

(f) Material: IC (107 lb.) tin or terneplate.

(g) Average weight: 2 pounds 8 ounces.

(h) Marking: No specification marking required.

**§ 78.182 Specification 15P; glued plywood, or wooden box for inside containers.**

**§ 78.182–1 Material requirements.**

(a) Lumber or plywood must be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength and in accordance with the following:

(1) Lumber must be of good commercial grade.

(2) Plywood sections shall be firmly glued together with waterproof glue. A section of plywood from any part when immersed in water at room temperature for 48 hours shall show no delamination or separation of plies to qualify glue as waterproof.

**§ 78.182–2 Construction requirements.**

(a) Box shall be constructed of wood or of plywood not less than three-ply fabrication and shall be constructed so as to completely and snugly enclose body of the inside container, and so formed that inside container cannot permanently change position and be of sufficiently strong wood or plywood to withstand prescribed tests without serious rupture of or damage to box that would cause failure or lead to impending failure of inside container.

NOTE 1: Vertical openings not exceeding ⅜ inch in width and extending to within 3 inches of top or bottom on two opposite sides of box are permitted.

(b) Specifications for the outside container must be filed with and approved by the Bureau of Explosives.

**§ 78.182–3 Tests.**

(a) One sample, taken at random and with inner container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage. Tests shall be made of each size by each company starting production. The type tests are as follows:

(1) Complete package must be capable of withstanding two drops from a height of 4 feet onto solid concrete, the first drop to be made diagonally so top corner will strike the concrete, the second drop onto a 2 inch by 4 inch timber resting on the concrete with the 6 inch leg vertical, the drop being made with the box in a horizontal position and at right angles to the timber so that impact is near the center of the box side-wall.

(2) Additional tests as required by inside container specification.

**§ 78.182–4 Marking.**

(a) Each outside container must be plainly marked with letters and figures at least ¾ inch high applied by hot branding iron or dark colored printing ink with pressure dies as follows:

(1) ICC–15P. This mark shall be understood to certify that the complete outer package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with the specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in paragraph (a) (1) of this section.

**§ 78.185 Specification 16A; plywood or wooden boxes, wirebound.**

**§ 78.185–1 Compliance.**

(a) Required in all details. Authorized tolerances. Cleats, battens, and handles, minus 1/32"; single thickness veneer, minus 5 percent; resawn boards, 1/64" below specified thickness for boards up to 7/32" thick and 1/32" below specified thickness for boards ¼" or more thick.

**§ 78.185–2 Lumber or plywood.**

(a) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

(b) Plywood shall be made from veneer which has been rotary cut, sliced, or sawed. Plywood shall be good commercial box or sheathing grade and shall be moisture-resistant; free from decay, objectionable knots that interfere with nailing, splits, gaps, and other defects that materially lessen the strength.

(1) Moisture-resistant plywood shall be fabricated with either synthetic or protein type glue. Specimens for testing shall be not less than 5 in number, measuring 6" x 6", and shall withstand 10 cycles of 4 hours immersion in water at room temperature and drying for 20 hours at a temperature not over 100° F. After 10 cycles, 4 of the 5 samples are to show not more than a sum total of 2-inch delamination on the edges, with depth delamination no greater than ½ inch.

**§ 78.185–3 Wires.**

(a) Of annealed steel, or other metal of equal strength, Washburn and Moen sizes.

**§ 78.185–4 Staples.**

(a) Wire size, Washburn and Moen.

**§ 78.185–5 Grouping of principal woods.**

(a) Grouping as follows:

| Group 1 | |
|---|---|
| White pine. | Yellow poplar. |
| Norway pine. | Balsam fir. |
| Aspen (popple). | Chestnut. |
| Spruce. | Sugar pine. |
| Western yellow pine. | Cypress. |
| Cottonwood. | Basswood. |
| Willow. | Noble fir. |
| Magnolia. | Butternut. |
| Buckeye. | Alpine fir. |
| White fir. | Cucumber. |
| Cedar. | Lodgepole pine. |
| Redwood. | Jack pine. |
| **Group 2** | |
| Southern yellow pine. | Douglas fir. |
| Hemlock. | Larch (tamarack). |
| North Carolina pine. | |
| **Group 3** | |
| White elm. | Black gum. |
| Red gum. | Tupelo. |
| Sycamore. | Maple—soft or silver. |
| Pumpkin ash. | |
| Black ash. | |
| **Group 4** | |
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**§ 78.185–6 Closed box.**

(a) Parts and pieces with edges in close contact to give completely closed box.

**§ 78.185–7 Top, sides, and bottom.**

(a) Each cleated at both ends; intermediate rows of cleats authorized.

**§ 78.185–8 Cleats.**

(a) Ends mitered or with mortise and tenon joints.

(b) Cleats for plywood boxes shall be Group 4 woods.

**§ 78.185–9 Ends.**

(a) Battened when prescribed. Wired ends authorized provided wires run cross grain and terminate in loops with ends of wire driven through end board and clinched. Grain of wood and outside ply of plywood shall be perpendicular to sides except for wired ends.

(b) As provided by § 73.65 (a) (1), Note 1, of this chapter, wooden boxes, having inside metal containers which are tightly and securely closed, may be equipped with hand holes in each end which must be not more than one inch by four inches and centered laterally not nearer than 1⅝ inches from top edge of end of box.

**§ 78.185–10 Wires.**

(a) One wire over each row of cleats; intermediate wires as prescribed.

**§ 78.185–11 Stapling.**

(a) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.

**§ 78.185–12 Thickness of boards or plywood (sides, tops, bottoms, and ends).**

(a) Thickness as follows except that, for thicknesses prescribed as 3/10" or less, resawn boards must be 1/64" thicker for each resawn surface:

| Group of wood | Minimum thickness of boards (inch) | | | | | | |
|---|---|---|---|---|---|---|---|
| | 1/8 (0.125) | 1/7 (0.143) | 1/6 (0.167) | 3/16 (0.188) | 7/32 (0.219) | 1/4 (0.250) | 5/16 (0.313) |
| | Authorized gross weight, box and contents, not over (pounds) | | | | | | |
| 1 | 25 | 35 | 50 | 75 | 100 | 150 | 200 |
| 2 | 35 | 50 | 75 | 100 | 150 | 200 | 315 |
| 3 | 50 | 75 | 100 | 150 | 200 | 315 | 400 |
| 4 | 75 | 100 | 150 | 200 | 315 | 400 | |

(1) For boxes with 3 or more rows of cleats, boards of the next lower thickness prescribed in the table are acceptable.

(b)

| Group of wood | Minimum thickness of plywood (inch)[1] | | |
|---|---|---|---|
| | 1/8 (0.125) | 3/20 (0.150) | 3/16 (0.188) |
| | Authorized gross weight, box and contents, not over (pounds) | | |
| 4 | 150 | 300 | 400 |

[1] Minimum tolerance of 5% permitted for specified thicknesses.

**§ 78.185–13 Size of cleats.**

(a) At least 13/16" by 13/16" when thickness required for boards exceeds 1/7"; otherwise at least 9/16" by 13/16".

**§ 78.185–14 Binding wires (sides, top, and bottom).**

(a) Spacing not over 8".

*Exception:* When each binding wire is stapled to a row of cleats, 11" spacing is authorized.

(b) Number and size of binding wires as follows:

| Number of wires | Minimum gauge of wires, Washburn and Moen | | | | |
|---|---|---|---|---|---|
| | 16 | 15 | 14 | 13 | 12 |
| | Authorized gross weight, box and contents (pounds) | | | | |
| 2 | 35 | 50 | 75 | 100 | 150 |
| 3 | 50 | 75 | 100 | 150 | 200 |
| 4 | 75 | 100 | 150 | 200 | 315 |
| 5 | 100 | 150 | 200 | 315 | 400 |
| 6 | | 200 | 315 | 400 | |
| 7 | | | 400 | | |

**§ 78.185–15 Wires for wired ends.**

(a) At least 2 wires on each end, size not less than as specified for binding wires in § 78.185–14, and spaced as follows:

| Thickness of end (inch) | Maximum spacing | |
|---|---|---|
| | Between wires (inch) | Wires to cleats (inch) |
| 0.125 | 6 | 4 |
| .143 | 6 | 4 |
| .167 | 6½ | 4 |
| .187 | 6½ | 4 |
| .219 | 7 | 4 |
| .250 | 7 | 4 |
| .313 | 7 | 4 |

(b) Ends less than 10 inches deep are authorized with 1 wire provided they are reinforced by 2 strips (liners), at least 1¼" wide and as thick as ends, securely stapled along edges of the end parallel to the wires.

**§ 78.185–16 Staple spacing (approximate) and minimum size.**

(a) Staples into cleats 16 gauge, Washburn and Moen, and:

(1) One and one-fourth inches long with 1½-inch spacing, or 1⅛ inches long with 1-inch spacing, when boards are over ¼-inch thick.

(2) One and one-eighth inches long with 1½" spacing, for boards ¼" thick or less; except that staples ⅞" long with 1½" spacing are authorized when boards are 1/7" thick or less.

(b) Other staples 18 gauge, Washburn and Moen.

**§ 78.185–17 End supporting battens.[1]**

(a) End supporting battens at least 1⅛" wide and same thickness as cleats; fastened securely across ends parallel to side cleats; required so that unsupported distance between cleats, battens, and between cleats and battens will be not greater than as follows.

[1] Not required for wired ends less than 20 inches long.

| Thickness of ends (inch): | Maximum spacing (inches) |
|---|---|
| 0.125 | 10 |
| 0.143 | 11 |
| 0.167 | 12 |
| 0.187 | 13 |
| 0.219 | 14 |
| 0.250 | 15 |
| 0.313 | 16 |

**§ 78.185–18 Side cleat battens and wired end supports.**

(a) *Side cleat battens.* At least 13/16" by 13/16"; fastened securely to ends so as to be adjacent to side cleats when box is set up; required, in addition to any other battens, when authorized gross weight exceeds the following:

| Group of wood in cleats: | Authorized gross weight, box and contents, over (pounds) |
|---|---|
| 1 | 100 |
| 2 | 150 |
| 3 | 200 |
| 4 | 200 |

(b) *Wired end supports.* Wired ends, for boxes for authorized gross weight exceeding the foregoing, must be reinforced by 2 strips (liners), at least 1¼" wide and as thick as ends, securely stapled along edges of the end parallel to the wires; side cleat battens not required.

**§ 78.185–19 Marking.**

(a) Marking on each box with letters and figures at least ½" high in rectangle as follows:

ICC–16A•••

(1) Stars must be replaced by maximum authorized gross weight (for example, ICC–16A150, etc.). This mark shall be understood to certify that box complies with all specification requirements.

(b) Name of maker located just above, below, or following the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.185–20 Setting up and closing.**

(a) Nail or staple unwired ends to side cleats at intervals not over 2½"; fasten wired ends securely by means of loop fasteners.

(b) Twist ends of binding wires or bend loops to give tight closure.

(c) Nail at least 2 nails through side cleats into each side-cleat batten at not over 4" intervals; nail through top and bottom cleats with one 7-penny nail into each end of end-supporting battens.

**§ 78.185–22 Special box authorized only when used in conjunction with inside spec. 2U (§ 78.24 of this chapter) polyethylene 5- and 15-gallon cubical containers.**

(a) The boxes shall comply with spec. 16A requirements using the table for a gross weight of 200 pounds for construction purposes only, except as follows:

(1) The top section of boxes may have a hole not over 4⅛ inches in diameter midway between the cleats, and centered not less than 3 3/16 inches from either the back or front edge of boxes.

(2) Five-gallon capacity—ends. Ends may be made from ⅛ inch or thicker veneer and have only one 14-gauge wire across face. One-eighth inch veneer liners, at least 1¼ inches wide, must be stapled across the top and bottom of the ends.

(i) Fifteen-gallon capacity—ends. Ends must be made with same thickness faceboard material as the sides, top, and bottom and must have two liners of the same thickness, at least 3 inches wide, fastened by two rows of staples. Ends may have one 13-gauge wire across face.

(3) Paper overlaid veneer having veneer core of group 3 or 4 wood and completely covered on each side with 42 pound basis weight kraft paper securely adhered thereto by moisture resistant adhesive, is authorized. Total combined thickness of finished board shall be not less than 0.160 inch.

(4) Wire spacing for 5-gallon capacity containers. Binding wires stapled to a row of cleats may be spaced not more than 13 inches apart.

(b) Wirebound wooden or paper overlaid veneer board boxes must be provided with full size double-faced corrugated liners of at least 125-pound test (Mullen or Cady) for bottom and sides. Full area top pad is required for 5-gallon capacity containers and must be a minimum of 200-pound test (Mullen or Cady). Full area top pad is required for the 15-gallon capacity container and must be a minimum of 275-pound test (Mullen or Cady).

(c) Marking required:

(1) Marking on each box with letters and figures at least ½ inch high in rectangle as follows:

ICC–16A–C

(2) This mark shall be understood to certify that outer container complies with all construction requirements of the specification.

(3) Name of maker shall be located just above, below, or following the mark specified in subparagraph (1) of this paragraph; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.186 Specification 16B; wooden boxes, wirebound.**

**§ 78.186–1 Compliance.**

(a) Required in all details. Authorized tolerances: Cleats, battens, and handles, minus 1/32"; single thickness veneer, minus 5 percent; resawn boards, 1/64" below specified thickness for boards up to 7/32" thick and 1/32" below specified thickness for boards ¼" or more thick.

**§ 78.186–2 Lumber.**

(a) Well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.

**§ 78.186–3 Wires.**

(a) Of annealed steel, or other metal of equal strength, Washburn and Moen sizes.

**§ 78.186–4 Staples.**

**(a) Wire size, Washburn and Moen.**

**§ 78.186–5 Grouping of principal woods.**

**(a) Groupings as follows:**

GROUP 1

| | |
|---|---|
| White pine. | Noble fir. |
| Norway pine. | Willow. |
| Aspen (popple). | Magnolia. |
| Spruce. | Buckeye. |
| Western yellow pine. | White fir. |
| Cottonwood. | Cedar. |
| Yellow poplar. | Redwood. |
| Balsam fir. | Butternut. |
| Chestnut. | Alpine fir. |
| Sugar pine. | Cucumber. |
| Cypress. | Lodgepole pine. |
| Basswood. | Jack pine. |

GROUP 2

| | |
|---|---|
| Southern yellow pine. | North Carolina pine. |
| Hemlock. | Douglas fir. |
| | Larch (tamarack). |

GROUP 3

| | |
|---|---|
| White elm. | Black ash. |
| Red gum. | Black gum. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**§ 78.186–6 Closed box.**

**(a) Parts and pieces with edges in close contact to give completely closed box except that spaces 1½'' are authorized between side boards and between top boards when boards are at least 3½'' wide.**

**(b) Handles: Containers may be provided with suitable handles at discretion of shipper. When used, they must be securely fastened along tops of sides under wires and project 3 inches or be mounted on end cleats; extensions of side boards acceptable; dimensions as follows:**

| Authorized gross weight not over (pounds): | Handles[1] minimum cross section (inches) |
|---|---|
| 150 | ½ x 2½ |
| 200 | ⅝ x 2½ |
| 315 | ⅝ x 3½ |
| 400 | 13/16 x 3½ |

[1] Also ridge reinforcing battens when prescribed.

**§ 78.186–7 Top, sides, and bottom.**

**(a) Each cleated at both ends; intermediate rows of cleats authorized.**

**§ 78.186–8 Cleats.**

**(a) Ends mitered or with mortise and tenon joints.**

**§ 78.186–9 Ends.**

**(a) Battened when prescribed. Wired ends authorized provided wires run cross grain and terminate in loops with ends of wire driven through end board and clinched. Grain of wood perpendicular to sides except for wired ends. Ridge-top containers, authorized as follows:**

**(1) Ends must be at least 2 times as thick as prescribed in § 78.186–12.**

**(2) Unsupported distance as prescribed in § 78.186–17 must not exceed 10'' in any case.**

**(3) Ridge over 30'' long must be reinforced on the outside, from end to end, by 2 battens with abutting edges and of cross section as prescribed for handles.**

**(4) Vertical grain unwired ends are authorized.**

**§ 78.186–10 Wires.**

**(a) One wire over each row of cleats; intermediate wires as prescribed.**

**§ 78.186–11 Stapling.**

**(a) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.**

**§ 78.186–12 Thickness of boards (sides, tops, bottoms, and ends).**

**(a) Thickness as follows except that, for thicknesses prescribed as 3/16'' or less, resawn boards must be 1/64'' thicker for each resawn surface:**

| Group of wood | Minimum thickness of boards (inch) | | | | | | |
|---|---|---|---|---|---|---|---|
| | 1/8 (0.125) | 9/64 (0.143) | 1/6 (0.167) | 3/16 (0.188) | 7/32 (0.219) | 1/4 (0.250) | 5/16 (0.313) |
| | Authorized gross weight, box and contents (pounds) | | | | | | |
| 1 | 25 | 35 | 50 | 75 | 100 | 150 | 200 |
| 2 | 35 | 50 | 75 | 100 | 150 | 200 | 315 |
| 3 | 50 | 75 | 100 | 150 | 200 | 315 | 400 |
| 4 | 75 | 100 | 150 | 200 | 315 | 400 | |

**(b) For boxes with 3 or more rows of cleats, boards of the next lower thickness prescribed in the table are acceptable.**

**§ 78.186–13 Size of cleats.**

**(a) At least 13/16'' by 13/16'' when thickness required for boards exceeds ½''; otherwise at least 9/16'' by 13/16''.**

**78.186–14 Binding wires (sides, top, and bottom).**

**(a) Spacing not over 8''.**

***Exception:* When each binding wire is stapled to a row of cleats, 11'' spacing is authorized.**

**(b) Number and size of binding wires as follows:**

| Number of wires | Minimum gauge of wires, Washburn and Moen | | | | |
|---|---|---|---|---|---|
| | 16 | 15 | 14 | 13 | 12 |
| | Authorized gross weight, box and contents (pounds) | | | | |
| 2 | 35 | 50 | 75 | 100 | 150 |
| 3 | 50 | 75 | 100 | 150 | 200 |
| 4 | 75 | 100 | 150 | 200 | 315 |
| 5 | 100 | 150 | 200 | 315 | 400 |
| 6 | | 200 | 315 | 400 | |
| 7 | | | 400 | | |

**§ 78.186–15 Wires for wired ends.**

**(a) At least 2 wires on each end, size not less than as specified for binding wires in § 78.186–14, and spaced as follows:**

| Thickness of end (inch) | Maximum spacing | |
|---|---|---|
| | Between wires (inch) | Wires to cleats (inch) |
| 0.125 | 6 | 4 |
| .143 | 6 | 4 |
| .167 | 6½ | 4 |
| .187 | 6½ | 4 |
| .219 | 7 | 4 |
| .250 | 7 | 4 |
| .313 | 7 | 4 |

**(b) Ends less than 10 inches deep are authorized with 1 wire provided they are reinforced by 2 strips (liners), at least 1¼'' wide and as thick as ends, securely stapled along edges of the end parallel to the wires.**

**§ 78.186–16 Staple spacing (approximate) and minimum size.**

**(a) Staples into cleats 16 gauge, Washburn and Moen, and:**

**(1) One and one-fourth inches long with 1½'' spacing, or 1⅛'' long with 1'' spacing, when boards are over ¼'' thick.**

**(2) One and one-eighth inches long with 1½'' spacing, for boards ¼'' thick or less; except that staples ⅞'' long with 1½'' spacing are authorized when boards are ½'' thick or less.**

**(b) Other staples 18 gauge, Washburn and Moen.**

**§ 78.186–17 End supporting battens.[1]**

**(a) At least 1⅛'' wide and same thickness as cleats; fastened securely across ends parallel to side cleats; required so that unsupported distance between cleats, battens, and between cleats and battens will be not greater than as follows:**

| Thickness of ends (inch): | *Maximum-spacing (inches)* |
|---|---|
| 0.125 | 10 |
| 0.143 | 11 |
| 0.167 | 12 |
| 0.187 | 13 |
| 0.219 | 14 |
| 0.250 | 15 |
| 0.313 | 16 |

**§ 78.186–18 Side cleat battens and wired end supports.**

**(a)** *Side cleat battens.* **At least 13/16'' by 13/16''; fastened securely to ends so as to be adjacent to side cleats when box is set up; required, in addition to any other battens, when authorized gross weight exceeds the following:**

| Group of wood in cleats: | *Authorized gross weight, box and contents, over (pounds)* |
|---|---|
| 1 | 100 |
| 2 | 150 |
| 3 | 200 |
| 4 | 200 |

**(b)** *Wired end supports.* **Wired ends, for boxes for authorized gross weight exceeding the foregoing, must be reinforced by 2 strips (liners), at least 1¼'' wide and as thick as ends, securely stapled along edges of the end parallel to the wires; side cleat battens not required.**

[1] Not required for wired ends less than 20 inches long.

**§ 78.186–19 Marking.**

**(a) Marking on each box with letters and figures at least ½'' high in rectangle as follows.**

ICC–16B•••

**(1) Stars must be replaced by maximum authorized gross weight (for example, ICC–16B315, etc.). This mark shall be understood to certify that box complies with all specification requirements.**

**(b) Name of maker located just above, below, or following the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.**

**§ 78.186–20 Setting up and closing.**

**(a) Nail or staple unwired ends to side cleats at intervals not over 2½''; fasten wired ends securely by means of loop fasteners.** ***Provided,*** **That ends at least 7/16'' thick may be nailed with cement-coated nails through sides, top, and bottom of box into the ends at 3'' intervals.**

**(b) Twist ends of binding wires or bend loops to give tight closure.**

**(c) Nail at least 2 nails through side cleats into each side-cleat batten at not over 4'' intervals; nail through top and bottom cleats with one 7-penny nail into each end of end-supporting battens.**

**§ 78.186–21 Special box.**

**(a) Gross weight not over 500 pounds. Must comply with this specification except as follows: Sides, top, bottom, and ends, to be of group 2 or 3 wood having minimum thickness of ¼'' for boxes not over 315 pounds gross weight, 5/16'' for boxes not over 400 pounds gross weight, and ⅜'' for boxes not over 500 pounds gross weight. Size of end cleats must be at least 13/16'' x ⅞'' and ends must have horizontal supporting battens at least 1⅜'' x 13/16''. One batten is required for boxes not over 200 pounds gross weight and three battens for others. Ends must be held in place by one metal strap at least ⅝'' x 0.020'' completely around the box stapled to the middle end battens. When size of box will not permit the application of all prescribed binding wires during manufacture, the additional binding wires of prescribed number and size, or metal straps of equal number and strength, must be applied after closing. At least three-binding wires must be applied to boxes not over 200 pounds gross weight and at least four to boxes over 200 pounds gross weight by the box manufacturer. Binding wires for boxes over 400 pounds gross weight must be of size and number prescribed for boxes not over 400 pounds gross weight.**

**§ 78.187 Specification 16D; wooden wirebound overwrap for inside containers.**

**§ 78.187–1 Material requirements.**

**(a) Lumber shall be as follows:**

**(1) Lumber shall be well seasoned and commercially dry; free from decay, objectionable knots, slanting shakes, sharp cross grain, and other defects that materially lessen the strength. Grain of wood in cleats and battens must not cross piece within its length.**

**(2) Authorized tolerances; cleats, battens and handles, minus 1/32 inch; single thickness veneer, minus 5 percent; resawn boards, 1/64 inch below specified thickness for boards up to 7/32 inch thick and 1/32 inch below specified thickness for boards ¼ inch or more thick.**

**(3) Woods authorized are in the following groups:**

GROUP 2

| | |
|---|---|
| Southern yellow pine. | North Carolina pine. |
| Hemlock. | Douglas fir. |
| | Larch (tamarack). |

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Tupelo. |
| Sycamore. | Maple—soft or silver. |
| Pumpkin ash. | |
| Black ash. | |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**(b) Binding wires and staples shall be as follows:**

**(1) Of annealed steel or other material of equal strength, Washburn and Moen sizes.**

**§ 78.187–2 Construction requirements.**

**(a) Wirebound overwrap for drum-type inside container shall be constructed in accordance with the following:**

| Wirebound containers | Marked capacity of inside containers | | | |
|---|---|---|---|---|
| | Not over 5 gallons | Not over 15 gallons | Not over 30 gallons | Not over 55 gallons |
| *Faceboard thickness (sides only)* | | | | |
| Group 2 woods | 1/6'' veneer | ¼'' resawn | 5/16'' resawn | ¾'' resawn. |
| Group 3 or 4 woods | do | do | ¼'' resawn | Do. |
| *Cleats, mitered* | | | | |
| Outside cleats. Group 2, 3, or 4 woods. | 13/16'' x ¾'' | 13/16'' x ¾'' | 13/16'' x ¾'' | 13/16'' x ¾. |
| *Binding wires* | | | | |
| Number and gauge over outside cleats. | 2–14 gauge | 2–12 gauge | 2–11 gauge | 2–11 gauge. |
| Number and gauge intermediate wires. | 1–14 gauge | 3–12 gauge | 4–12 gauge | 3–12 gauge.<br>2–11 gauge. |
| *Staples (length, gauge and spacing)* | | | | |
| In outside cleats | 1⅛''–16 gauge | 1⅛''–16 gauge | 1⅛''–16 gauge | 1⅛''–16 gauge. |
| Over intermediate wires | ⅝''–18 gauge | ¾''–18 gauge | ⅞''–18 gauge | ⅞''–18 gauge. |
| Maximum space between staples | 1¾'' | 1¾'' | 1¾'' | 1¾''. |
| *Tops and bases (group 2, 3, or 4 woods)* | | | | |
| Faceboard thickness | ¼'' resawn | ⅜'' resawn | 5/16'' | 13/16''. |
| Battens (2 required) | 1⅜'' x ¼'' | 13/16'' x ⅜'' | 13/16'' x ⅜'' | 1⅛'' x ⅜''. |
| Staples or cement coated nails | 1 1/16''–18 gauge | 1¼''–16 gauge | 22–4d nails | 1¾''–14 gauge. |

**(1) Staples for wires over cleats driven through boards into cleats and anchored; others through boards and clinched.**

**(2) Container shall be closed with threaded loop fastener with "Z" clinch for all capacities except 5 gallons for which regular clinch is authorized.**

**(3) Where binding wire closure clinches contact inner container, 1½ inches wide water-resistant fabric cloth with plastic coated backing and pressure-sensitive adhesive or other suitable means shall be applied in a single strip across clinches, or other equally efficient methods may be used.**

**(b) Wirebound overwrap for bottle-type inside container shall be constructed in accordance with the following:**

| Wirebound containers | Marked capacity of inside containers | | |
|---|---|---|---|
| | Not over 6½ gallons (rectangular overwrap) | Not over 13 gallons (rectangular overwrap) | Not over 13 gallons (cylindrical overwrap) |
| *Faceboard thickness (sides only)* | | | |
| Group 2 woods | 5/16'' | 5/16'' | 5/16''. |
| Group 3 woods | ¼'' resawn | 5/16'' | 5/16''. |
| Group 4 woods | do | do | Do. |
| *Cleats* | | | |
| Outside and interrupted cleats | 13/16'' x ⅞'' | 13/16'' x ⅞'' | 13/16'' x ⅜''. |
| Intermediate cleats | 6½'' x ⅜'' | 6½'' x ⅜'' | Outside cleats only |
| *Binding wires* | | | |
| Number and gauge over outside cleats | 2–13 gauge | 2–12 gauge | 2–12 gauge. |
| Number and gauge over intermediate cleats or intermediate wires. | 2–14 gauge (not over 5 gallons).<br>4–14 gauge (not over 6½ gallons). | 4–13 gauge | Do. |

| Wirebound containers | Marked capacity of inside containers | | |
|---|---|---|---|
| | Not over 6½ gallons (rectangular overwrap) | Not over 13 gallons (rectangular overwrap) | Not over 13 gallons (cylindrical overwrap) |
| *Staples* | | | |
| In outside and interrupted cleats | 1¼"-16 gauge | 1¼"-16 gauge | 1¼"-16 gauge. |
| In intermediate cleats | ⅞"-16 gauge | ⅞"-16 gauge | None. |
| Over intermediate wires | ⅞"-18 gauge | ⅞"-18 gauge | |
| Note: A 2" gap between staples must be provided in the center of each line of staples over the intermediate cleats. | | | No 2" gap in staples required. |
| *Top* [1] | | | |
| Face material thickness | 9/16" | 13/16" | 9/16". |
| Battens | 1⅛" x 9/16" | 1⅛" x 13/16" | ⅛" x 13/16". |
| *Base* | | | |
| Face material thickness | ⅜" | ⅝" | 9/16". |
| Edge strips | 1⅛" x ⅜" | 3⅛" x ⅜" | ⅛" x 13/16". |
| Center strips | 3⅛" x ⅜" | do | (Battens.) |

[1] A hole of suitable type may be left in top of box to provide for protruding neck of inner container.
[2] Exterior grade plywood ⅛" thick with no battens is authorized.

(1) Containers shall be closed with threaded loop fasteners using a regular clinch.

**§ 78.187–3 Assembly.**

(a) Overwrap shall be constructed to provide a snug fit for the inside container.

(b) Overwrap inside surfaces shall be reasonably smooth and free from projections which would damage inside container.

**§ 78.187–4 Tests.**

(a) Wirebound overwrap; when assembled as for use, shall withstand the tests prescribed for specified inside containers. The completed package must withstand these tests without serious rupture of the overwrap and without producing a condition of the overwrap that could result in potential damage to the inside container.

**§ 78.187–5 Marking authorized.**

(a) Marking on each overwrap with letters and figures at least ½ inch high in rectangle as follows:

ICC–16D

(b) This mark shall be understood to certify that outer container complies with all construction requirements of the specification.

(c) Name of maker shall be located just above, below, or following the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.190 Specification 19A; wooden boxes, glued plywood cleated.**

**§ 78.190–1 Compliance.**

(a) Required in all details.

**§ 78.190–2 Three-way corners.**

(a) Three-way corners (when specified in §§ 78.190–3 to 78.190–13) shall be of type so nailing will be into edge grain of cleats, unless otherwise specified.

**§ 78.190–3 Lumber.**

(a) Well seasoned and commercially dry; free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength. Cleats to be free from knots and grain of wood must not cross cleat in less than one-half its length.

(b) To be at least 3-ply, except for cleats; each ply glued in place with grain at right angles to the one next.

**§ 78.190–4 Nails.**

(a) Cement coated and of size specified for "sinkers", "coolers", and "3-ply-veneer nails" as generally known to the trade.

**§ 78.190–5 Grouping of principal woods.**

(a) Grouping as follows:

Group 1

| | |
|---|---|
| White pine. | Chestnut. |
| Norway pine. | Sugar pine. |
| Aspen (popple). | Cypress. |
| Spruce. | Basswood. |
| Western (yellow) pine. | Willow. |
| | Noble fir. |
| Cottonwood. | Magnolia. |
| Yellow poplar. | Buckeye. |
| Balsam fir. | White fir. |
| Cedar. | Alpine fir. |
| Redwood. | Lodgepole pine. |
| Butternut. | Jack pine. |
| Cucumber. | |

Group 2

| | |
|---|---|
| Southern yellow pine. | Douglas fir. |
| Hemlock. | Larch (tamarack). |
| North Carolina pine. | |

Group 3

| | |
|---|---|
| White elm. | Black ash. |
| Red gum. | Black gum. |
| Sycamore. | Tupelo. |
| Pumpkin ash | Maple—soft or silver. |

Group 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**§ 78.190–6 Three-way corners.**

(a) Three-way corners required; except for authorized gross weight not over 75 pounds.

**§ 78.190–7 Cleats required.**

(a) Two on each face at opposite edges; others as necessary so that cleats are not over 12" apart. These to extend full length of face.

(b) Others, if necessary, to provide nailing surface at each box edge.

**§ 78.190–8 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Authorized gross weight | Plywood minimum thickness [1] | Cleats of group 1 or 2 woods [1] | | Cleats of group 3 or 4 woods [1] | |
|---|---|---|---|---|---|
| | | Minimum thickness | Minimum width | Minimum thickness | Minimum width |
| *Pounds* | *Inch* | *Inch* | *Inches* | *Inch* | *Inches* |
| 50 | 9/16 | ½ | 1½ | ½ | 1½ |
| 75 | 9/16 | 9/16 | 1 11/16 | ½ | 1½ |
| 100 | 9/16 | ⅝ | 1⅝ | ½ | 1½ |
| 150 | ¾ | 13/16 | 2 1/16 | ½ | 1½ |
| 200 | ¾ | ¾ | 2¼ | ¾ | 1 11/16 |
| 300 | ¾ | 13/16 | 2 1/16 | ⅝ | 1⅝ |
| 400 | ¾ | ⅞ | 2⅝ | 13/16 | 2 1/16 |

[1] Variation authorized of ¼ prescribed thickness of any part not to exceed 10 percent of its area. Cleats at least ½" thick, of cross section equivalent to prescribed cleats are authorized.

**§ 78.190–9 Marking.**

(a) Marking on each container with letters and figures at least ½" high in rectangle as follows:

ICC–19A•••

(1) The stars must be replaced by authorized gross weight (for example, ICC–19A200). This mark shall be understood to certify that box complies with all specification requirements.

(2) Name of maker located just above, below, or following the mark specified in this paragraph; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.190–10 Setting up and closing all boxes.**

(a) Each edge of each plywood section secured with 3-ply-veneer cement coated nails, or staples, at 3" intervals as follows:

(1) To face of cleat; clinching required; cement coating optional.

(2) To edge of cleat; except when nailing through a cleat in which case nail as in § 78.190–13.

**§ 78.190–11 Boxes with 3-way corners.**

(a) Each cleat forming 3-way corner to be nailed with 2 nails at each end into edge of adjoining cleat.

**§ 78.190–12 Boxes without 3-way corners.**

(a) Each edge cleat to be nailed to cleat on adjoining face.

**§ 78.190–13 Nails and nailing under §§ 78.190–11 and 78.190–12.**

(a) To be cement coated and as follows:

| Cleats—thickness (inch) | Nails—cement coated | | | |
|---|---|---|---|---|
| | Group 1 or 2 woods | | Group 3 or 4 woods | |
| | Size (penny) | Spacing (inches) | Size (penny) | Spacing (inches) |
| ½ | 5 | 1¾ | 4 | 1½ |
| 9/16 | 6 | 2 | 5 | 1¾ |
| ⅝ | 6 | 2 | 5 | 1¾ |
| 11/16 | 7 | 2¼ | 6 | 2 |
| ¾ | 7 | 2¼ | 6 | 2 |
| 13/16 | 8 | 2½ | 7 | 2¼ |
| ⅞ | 9 | 2¾ | 8 | 2½ |

**§ 78.191 Specification 19B; wooden boxes, glued plywood, nailed.**

**§ 78.191–1 Compliance.**

(a) Required in all details.

**§ 78.191–2 Authorized gross weight.**

(a) Authorized gross weight not to exceed 150 pounds.

**§ 78.191–3 Plywood.**

(a) Plywood shall be made from veneer which has been rotary cut, sliced or sawed. It shall be well seasoned and commercially dry; free from decay, objectionable knots, that interfere with nailing, splits, gaps, and other defects that materially lessen the strength. Plywood shall be of good commercial box or sheathing grade.

(b) Plywood shall be at least 5 ply; each ply alternately glued with the grain at right angles to the one next.

**§ 78.191–4 Nails.**

(a) Cement coated and of size specified for "sinkers" or "coolers" as generally known to the trade.

(b) Nail spacing as follows:

| Nail (size) in penny | Maximum spacing when driven into end and corner posts | |
|---|---|---|
| | Side grain | End grains |
| | *Inches* | *Inches* |
| Threepenny | 1¾ | 1 |
| Fourpenny | 1½ | 1½ |
| Fivepenny | 1¾ | 1½ |
| Sixpenny | 2 | 1¾ |
| Sevenpenny | 2¼ | 2 |
| Eightpenny | 2½ | 2¼ |
| Ninepenny | 2¾ | 2½ |
| Tenpenny | 3 | 2½ |

**§ 78.191–5 Corner construction.**

(a) Boxes exceeding 35 pounds gross weight must have 4 vertical corner posts, or other equally suitable devices or fasteners; nailed lap-joint permitted for others.

**§ 78.191–6 Assembly.**

(a) Assemble with grain of outer plywood face in the direction of the longest faces of the box and securely nail or fasten to corner posts or ends as provided in §§ 78.191–4 and 78.191–5.

**§ 78.191–7 Special tests.**

(a) Samples of each type and size manufactured, taken at random, and filled with dummy contents the shape and size of expected contents, or with sand or sawdust, to the gross weight at which container is marked, closed as for use, must be capable of withstanding the following tests without serious rupture or exposure of contents:

(1) 8 drops from height of 1 foot, one on each corner, onto solid concrete.

**§ 78.191–8 Closing for shipment.**

(a) Box to be securely closed. Nails, if used, must be as prescribed in § 78.191–3; hinges and hasps or other equally efficient device authorized.

**§ 78.191–9 Marking.**

(a) Marking on each container with letters and figures at least ½" high in rectangle as follows:

ICC–19B•••

(1) The stars must be replaced by authorized gross weight (for example ICC–19B150). This mark shall be understood to certify that box complies with all specification requirements.

(2) Name of maker located just above below, or following the mark specified in this section; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.193 Specification 18B; wooden kits.**

**§ 78.193–1 Compliance.**

(a) Required in all details.

**§ 78.193–2 Tops and bottoms.**

(a) Pieces to be glued together.

**§ 78.193–3 Parts required and dimensions.**

(a) Parts required and dimensions as follows:

| Authorized gross weight (pounds) | Thickness (minimum) | | Hoops (minimum) | | |
|---|---|---|---|---|---|
| | Top and bottom (inch) | Staves (inch) | Number | Width (inch) | Gauge [1] |
| 25 | ½ | ⅝ | 3 | 9/16 | 23 |
| 40 | ½ | ½ | 3 | ⅝ | 23 |

[1] Birmingham wire gauge (number).

**§ 78.193–4 Middle hoop.**

(a) Middle hoop of No. 11 gauge wire authorized.

**§ 78.193–5 Type test.**

(a) Sample, filled with dry, finely powdered material to authorized gross weight and closed as for use, shall withstand, without leaking, a drop from height of 4 feet onto solid concrete so as to strike diagonally on top chime.

**§ 78.193–6 Marking.**

(a) Marking on each container plainly as follows:

(1) ICC–18B; followed by the authorized gross weight (for example, ICC–18B25). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.193–7 Size of mark.**

(a) Size of mark (minimum). ½" high.

**§ 78.196 Specification 22A; wooden drums, glued plywood.**

**§ 78.196–1 Compliance.**

(a) Required in all details.

**§ 78.196–2 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

**§ 78.196–3 Woods required for plywood.**

(a) As follows:

Group 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Tupelo. |
| Sycamore. | Maple—soft or silver. |
| Pumpkin ash. | |
| Black ash. | |

Group 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**§ 78.196–4 Plywood.**

(a) At least 2-ply for body and 3-ply for heads; all plies glued together cross grain.

**§ 78.196–5 Hoops and battens.**

(a) Grain of wood must not cross piece within ½ of its length. Hoops to be of elm.

*Exception:* Plywood hoops 0.28" thick are authorized.

**§ 78.196–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Maximum net weights authorized | Thickness (minimum) | | Size of hoops (minimum) | | Head liners (minimum) |
|---|---|---|---|---|---|
| | Body | Heads | Wooden | Metal [2] | |
| *Pounds* | *Inch* | *Inch* | *Inch* | *Inch* | *Inch* |
| 33 | 0.16 | ⅜ | ⅛ x 2 | 0.023 x 1 1/16 | ⅛ x ⅝ |
| | | | | [1] .015 x 2¾ | |
| 55 | .18 | ¾ | ⅛ x 2 | .023 x 1 3/16 | ⅛ x ⅝ |
| | | | | .015 x 2¾ | |
| 115 | .20 | ⅜ | ⅛ x 2¼ | .023 x 1 5/16 | ¼ x ¾ |
| | | | | [1] .015 x 2¾ | |
| 200 | .28 | 0.43 | ¼ x 3 | .028 x 1 5/16 | ¼ x ¾ |

[1] Authorized only when metal hoop is between body of drum and wooden hoop as described in § 78.196–8.
[2] On drums of not over 10½ gallons capacity having authorized maximum net weights not over 115 pounds, additional outside headliners may be used in lieu of metal hoops provided containers will pass prescribed tests. (See § 78.196–14.)

**§ 78.196–7 Body joints.**

(a) To be made by steel strip 0.015" x 1½" secured by staples, clinched, at 1⅛" centers, or by other method giving equivalent strength; also to be made siftproof by 2 thicknesses of 3" paper tape 60-pound strength, Mullen or Cady test, or other equivalent protection.

NOTE 1: Because of the present emergency and until further order of the Commission, tape 2½" may be used.

**§ 78.196–8 Hoops.**

(a) One wooden and 1 metal required at each chime; wooden hoops secured by staples, clinched, at 3" centers; metal

hoops to be outside wooden hoops and secured by punching, or other equivalent method, at 6" centers.

**§ 78.196–9 Head battens.**

(a) Required for heads over 15" diameter; ¾" x 3", minimum; ends rounded to fit chime.

**§ 78.196–10 Head liners.**

(a) Required inside and outside for full circumference of heads. To be securely fastened by staples or nails, clinched.

**§ 78.196–11 Head lining paper.**

(a) Required for each head; 1½" larger than head diameter; of No. 1 Kraft paper 90 pounds per ream (480 sheets 24" x 36") or equivalent.

NOTE 1: Because of the present emergency and until further order of the Commission, a ream may consist of 500 sheets.

**§ 78.196–12 Bung openings.**

(a) Bung and bunghole authorized provided head lining paper is glued around hole.

**§ 78.196–13 Insertion of head.**

(a) As in § 78.196–16.

**§ 78.196–14 Tests.**

(a) Samples of each type and size taken at random, filled with dry, fine powder to the authorized net weight and closed as for use, must be capable of withstanding, without leakage, 2 drops diagonally on either end chime onto solid concrete from height of 4 feet.

**§ 78.196–15 Marking.**

(a) Marking on each container by marks ¾" high, as follows:

(1) **ICC–22A**, followed by authorized gross weight (authorized net weight plus approximate tare weight, for example, ICC–22A115). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.196–16 Closing for shipment.**

(a) *Closing heads.* Insert head lining paper, head, and head liner; nail with 15 gauge nails, clinched, at 2" centers through head liner, body and wooden hoop; equivalent stapling authorized. Nail through steel hoop with two 7-penny nails into each end of head batten, if any.

**§ 78.196–17 Bung closures.**

(a) Bung closures (if any) must be well driven and secured sufficiently to prevent leakage in transit.

**§ 78.197 Specification 22B; wooden drums, glued plywood.**

**§ 78.197–1 Compliance.**

(a) Required in all details.

**§ 78.197–2 Lumber.**

(a) To be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

**§ 78.197–3 Woods required for plywood.**

(a) Woods required as follows:

GROUP 3

| | |
|---|---|
| White elm. | Black ash. |
| Red gum. | Black gum. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | White ash. |
| Hackberry. | Hickory. |

**§ 78.197–4 Plywood.**

(a) At least 2-ply for body and 3-ply for heads; all plies glued together cross grain.

**§ 78.197–5 Hoops and battens.**

(a) Grain of wood must not cross piece within ½ of its length. Hoops to be of elm. Exception: Plywood hoops 0.28" thick are authorized.

**§ 78.197–6 Parts and dimensions.**

(a) Parts and dimensions as follows:

| Maximum net weights authorized | Thickness (minimum) | | Size of hoops (minimum) | | Head liners (minimum) |
|---|---|---|---|---|---|
| | Body | Heads | Wooden | Metal [3] | |
| *Pounds* | *Inch* | *Inch* | *Inch* | *Inch* | *Inch* |
| 55 | 0.16 | ⅜ | ⅛ x 2 | 0.023 x 1 1/16<br>.015 x 2 3/4 | ⅛ x ⅜ |
| 55 | .18 | ⅜ | ⅛ x 2 | .023 x 1 1/16<br>.015 x 2 3/4 | ⅛ x ⅜ |
| 115 | .20 | ⅜ | ⅛ x 2¼ | .023 x 1 9/16<br>.015 x 2 3/4 | ¼ x ⅜ |
| 200 | .28 | 0.43 | ¼ x 3 | .028 x 1 9/16 | ¼ x ⅜ |

[1] Authorized only when metal hoop is between body of drum and wooden hoop as described in § 78.197–8.

[3] On drums of not over 10½ gallons capacity having authorized maximum net weights not over 115 pounds, additional outside headliners may be used in lieu o metal hoops provided containers will pass prescribed tests. (See § 78.197–13.)

**§ 78.197–7 Body joint.**

(a) Joint to be made by steel strip 0.015" x 1½" secured by staples, clinched, at 1⅛" centers, or by other method giving equivalent strength.

**§ 78.197–8 Hoops.**

(a) One wooden and 1 metal required at each chime; wooden hoops secured by staples, clinched, at 3" centers; metal hoops to be outside wooden hoops and secured by punching, or other equivalent method, at 6" centers.

**§ 78.197–9 Head battens.**

(a) Required for heads over 15" diameter, ¾" x 3", minimum; ends rounded to fit chime.

**§ 78.197–10 Head liners.**

(a) Required inside and outside for full circumference of heads. To be securely fastened by staples or nails, clinched. Inside head liners not required when close fitting inside metal drum or strong container is used.

**§ 78.197–11 Bung or other openings in head.**

(a) Bung and bunghole authorized provided head lining paper is glued around hole. Holes are permitted in heads to provide for closing devices of inside metal drums or other strong inside containers when plywood drum is so equipped.

**§ 78.197–12 Insertion of head.**

(a) As in § 78.197–15.

**§ 78.197–13 Tests.**

(a) Samples of each type and size taken at random, filled with dry, fine powder to the authorized net weight and closed as for use, must be capable of withstanding, without leakage, 2 drops diagonally on either end chime onto solid concrete from height of 4 feet.

**§ 78.197–14 Marking.**

(a) Marking on each container by marks ¾" high, as follows:

(1) **ICC–22B**, followed by authorized gross weight (authorized net weight plus approximate tare weight, for example, ICC–22B235). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in subparagraph (1) of this paragraph.

**§ 78.197–15 Closing for shipment.**

(a) *Closing heads.* Insert head lining paper, head, and head liner; nail with 15 gauge nails, clinched, at 2" centers through head liner, body and wooden hoop; equivalent stapling authorized. Nail through steel hoop with two 7-penny nails into each end of head batten, if any.

**§ 78.197–16 Bung closures.**

(a) Bung closures (if any) must be well driven and secured sufficiently to prevent leakage in transit.

**§ 78.198 Specification 22C; plywood drum for plastic inside container.**

**§ 78.198–1 Material requirements.**

(a) Plywood shall be as follows:

(1) Plywood for body and heads shall be of good commercial or sheathing grade hardwood veneer. Veener plies shall be firmly glued together with waterproof glue. A section of plywood from any part when immersed in water at room temperature for 48 hours shall show no delamination or separation of plies to qualify glue as waterproof.

(2) Plywood shall be well seasoned, commercially dry, and free from decay, loose knots that interfere with assembly, and other defects that would materially lessen the strength.

**§ 78.198–2 Construction requirements.**

(a) Plywood drum shall completely and snugly enclose body of inside container, or shall completely and snugly enclose body and neck of inside container. Top head of drum may have a hole of suitable size to provide for protruding neck of plastic container; bottom head may have drainage holes of suitable size. The following are required:

(1) Body shall be constructed of 2 shells, (see Note 1), butt-jointed, telescoped one within the other; outer shell shall be fastened on the outside with wire staples of not less than 17-gauge metal driven through a metal strip not less than 28-gauge by 1½ inches width and each side of body joint. Staples shall be spaced not more than 1½ inches apart and clinched on the inside. The grain of outside ply shall be paralleled and the grain of inner ply shall be vertical to plane of the heads.

NOTE 1: Each shell shall be of two-ply construction having minimum wall thickness of ⅛ inch for inside container not over 6½ gallons marked capacity and 3/11 inch for inside container not over 14 gallons marked capacity.

(2) Body heads shall be of at least three-ply construction with grain of alternate plies at right angles, circled to fit snugly within the body shell. Each head shall have a minimum thickness of ⅜ inch for inside container not over 6½ gallons marked capacity and 7/16 inch for inside container not over 14 gallons marked capacity. As an alternate, ½ inch thick pine bottom heads are authorized.

(3) Hoops shall be of at least three-ply construction with grain of alternate plies at right angles. Hoops shall be fastened to body shel lso that ends butt or slightly gap by driving wire staples of at least 17-gauge metal through hoop and body and be clinched on the inside; staples spaced on not less than 3 inches centers. Each hoop shall be not less than 5/24 inch thickness by 2½ inches width for inside container not over 14 gallons marked capacity, and not less than ¼ inch thickness by 3 inches width for inside container not over 6½ gallons marked capacity.

(4) Head retaining rings shall be of hardwood veneer not less than ⅕ inch thickness by 5/8 inch width for inside container not over 6½ gallons marked capacity, and not less than 3/10 inch thickness by ¾ inch width for inside container not over 14 gallons marked capacity. The head retaining rings shall be fastened to the body shell with wire staples clinched on the inside of not less than 17-gauge metal spaced on 3 inch centers, except that bottom ring may be fastened by 14-gauge wire staples spaced on 4 inch centers.

(b) Plywood drum for plastic inside container not over 5 gallons marked capacity shall comply with requirements of § 78.198–1(a) (1) and (2) and paragraph (a) of this section.

(1) Body shells shall be of two-ply construction having a minimum thickness of 3/11 inch and with grain of outside ply parallel and grain of inner ply vertical to plane of the heads. Body shall be butt-jointed and fastened on the outside with wire staples of not less than 17-gauge metal driven through a metal strip not less than 28-gauge by 1½ inches width and each side of body joint. Staples shall be spaced not more than 1½ inches apart and clinched on the inside.

(2) Body heads shall be of at least three-ply construction with grain of alternate plies at right angles circled to fit snugly within the body shell. Each head shall have a minimum thickness of ⅜ inch.

(3) Hoops shall be of hardwood veneer, not less than 2¼ inches wide by ⅛ inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than three-inch centers and shall be overlapped not less than 3 inches.

(4) Head retaining rings shall be of hardwood veneer of ⅕ inch thickness by ¾ inch width except bottom rings may be two thicknesses, each ⅛ inch thickness by 1¾ inches width. Rings shall be fastened to body shell with wire staples of 17-gauge metal on not less than 3-inch centers and clinched on inner surface.

**§ 78.198–3 Tests.**

(a) Samples taken at random with inner plastic container filled to marked capacity with water and closed as for use, shall be capable of withstanding prescribed tests without leakage from inside container or breakage of outside container that would be of such a nature as to contribute to potential failure of inner container. Tests shall be made of each size by each company starting production. The type test is as follows:

(1) One 4-foot drop onto solid concrete so as to strike diagonally on either chime.

(2) Additional tests as required by inside container specification.

**§ 78.198–4 Marking on outside container.**

(a) Each outside container must be plainly marked with letters and figures at least ¾ inch high applied by hot branding iron or dark colored printing ink with high pressure dies as follows:

(1) **ICC–22C.** This mark shall be understood to certify that the complete package complies with all specification requirements.

(2) Name or symbol (letters) of company setting up the package, or other party assuming responsibility for its compliance with the specification requirements; this must be registered with the Bureau of Explosives and located just above or below the mark specified in subparagraph (1) of this paragraph.

## Subpart F—Specifications for Fiberboard Boxes, Drums, and Mailing Tubes

**§ 78.205 Specification 12B; fiberboard boxes.**

**§ 78.205–1 Compliance.**

(a) Required in all details.

**§ 78.205–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box, except recessed flanged heads, are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.205–3 Classification of board.**

(a) Fiberboard is hereby classified by strength [1] of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

| Classified strength [1] of completed board | Solid fiberboard—Minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.) | Facings for corrugated fiberboard | |
|---|---|---|---|
| | | Double-faced—Minimum combined weight of facings (pounds per 1,000 sq. ft.) | Double-wall—Minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.) |
| 175 | 149 | 75 | ---------- |
| 200 | 190 | 84 | 92 |
| 275 | 237 | 138 | 110 |
| 325 | 237 | 138 | 110 |
| 350 | 283 | 180 | 126 |
| 375 | 283 | 180 | 180 |
| 400 | 283 | 180 | 180 |
| 450 | 283 | 180 | 180 |

[1] Mullen or Cady test (minimum).

**§ 78.205–4 Solid fiberboard.**

(a) To be 3-ply or more; both outer plies water resistant.

**§ 78.205–5 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

**§ 78.205–6 Stitching staples.**

(a) Of steel wire at least 3/32 x 0.019 inch, or equal cross section, formed into staples about 7/16 inch wide. Staples of metal other than steel are authorized provided their efficiency is equal to that of steel wire staples specified in this section.

**§ 78.205–7 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24" x 36"); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape, except as provided in § 78.205–11(d). Other tapes of equal strength and efficiency are authorized.

(b) Tape for closure of slotted containers complying with the following requirements is authorized when applied as prescribed in § 78.205–17 (a) (3):

(1) Tape must be not less than 3 inches wide and shall be made of two sheets of 100 percent sulfate Kraft each not less than 30 pounds basis weight, reinforced with glass, sisal, or rayon fiber, combined with a laminant of asphalt or other material not affected by temperature extremes any more than would standard 180° to 200° softening point asphalt.

(2) Tape must be reinforced by lengthwise fibers spaced not more than an average of ½ inch apart, and by crosswise fibers spaced not less than an average of 2 per inch except that when a diamond pattern is employed for crosswise reinforcement, the spacing between the parallel sides of the diamond measured in the machine direction must be not more than 1 inch.

(3) Glass or sisal reinforced tape must have a minimum tensile strength in the machine direction of 75 pounds per inch of width and a minimum tensile strength in the cross direction of 45 pounds per inch of width; rayon reinforced tape must have a minimum tensile strength in the machine direction of 57 pounds per inch of width and a minimum tensile strength in the cross direction of 27 pounds per inch of width with elongation not exceeding 15 percent. Tensile tests on the finished product shall be made on a 3-inch width sample.

**§ 78.205–8 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

**§ 78.205–9 Types authorized.**

(a) To be of solid or corrugated fiberboard of the following types, or as specifically provided for in § 78.205–19 to § 78.205–37:

(1) Slotted box; three-piece box without recessed ends; three-piece box of solid fiberboard with recessed ends; double-slide box; triple-slide box; telescope box, with sections of equal depth, or with covers, top or bottom or both, with 3 inches overlap. (See § 78.205–14 (d) for boxes with single-flap closures).

**§ 78.205–10 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.205–11 Joints.**

(a) For solid and corrugated fiberboard slotted containers: Lapped 1½ inches from center of scoreline except as in § 78.205–12; stitched at 2½ inch intervals and within 1 inch of each end of joint; body joint must be double-stitched (2 parallel stitches) at each end of joint over 18 inches long.

(b) For corrugated fiberboard slotted containers only: One butt joint taped (See § 78.205–7) is authorized; 3 inch tape required for boxes over 30 pounds authorized gross weight and 2 inch tape for others.

(c) For triple and double slide boxes: Joints of all slides must be taped (see § 78.205–7) or stitched; 3-inch tape required for boxes over 30 pounds authorized gross weight and 2-inch for others.

(d) For corrugated fiberboard only: One butt joint taped inside and outside with strips of one thickness of sulphate paper not less than 2 inches wide extending entire length of joint and firmly glued to box. For boxes not exceeding 65 pounds gross weight, outside strip of sulphate paper to be of basis weight not less than 60 pounds testing not less than 60 pounds and inside strip of sulphate paper to be of basis weight not less than 40 pounds testing not less than 40 pounds. For boxes exceeding 65 pounds gross weight, outside and inside with strips of sulphate paper which must each be of basis weight not less than 90 pounds testing not less than 90 pounds. Basis weight of paper shown is for 500 sheets, 24 x 36 inches.

(1) For glued lap joint, the sides of box forming joint must lap not less than 1¼" and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

**§ 78.205–12 Flanged heads.**

(a) Must have 4 flanges, at least 1" long above fillet, on each head. Recessed flanged heads not authorized for boxes of corrugated fiberboard.

**§ 78.205–13 Seams which are to be stitched.**

(a) Overlap, if any, required to be at least 1½ inches from center of scoreline except as in § 78.205–12.

**§ 78.205–14 Flap closures.**

(a) Fill-in pieces, of the same type fiberboard as used in construction of the container, are required where it is necessary to prevent an opening between the inner flaps, unless otherwise provided by Part 73 of this chapter.

(b) If to be closed by adhesive, each inner flap must cover at least one-third of face; inner flaps must butt or have full overlap, or fill-in pieces must be used, unless otherwise provided by Part 73 of this chapter, except that fill-in pieces are not required when outer flaps have full overlap. Outer flaps must butt or have full overlap.

(c) In lieu of fill-in pieces between inner flaps which do not butt, the following is authorized when linings are not prescribed in § 78.205–16:

(1) Top and bottom pads the same dimensions as interior of container of solid or corrugated fiberboard at least 125 pound test (Mullen or Cady).

(2) Minimum combined weight of facings for corrugated fiberboard pads must be at least 52 pounds per thousand square feet.

(3) Minimum combined weight of component plies for solid fiberboard pads must be at least 114 pounds per thousand square feet, exclusive of adhesives.

(4) Complete inner box or boxes.

(d) Single-flap closures are authorized for boxes with one dimension not over 2"; each flap must be scored and form one of the small faces of the box and lap at least 5" on one of the largest faces.

**§ 78.205–15 Linings (when prescribed).**

(a) Of 1-piece to extend around 4 faces with joint at center of 1 face and with 4 flanges, at least 1½" long, on each end (corners may be mitered) to bend over the other 2 faces; also 2 pads to cover the other 2 faces. Pads may be omitted if closing flaps afford 3 thicknesses throughout face. For boxes with 1 dimension not over 3", one of the widest flanges may be lengthened to cover entire face and lap 6" on the adjoining face and the other flanges and the pads may then be omitted.

**§ 78.205–16 Authorized gross weight and parts required.**

(a) Authorized gross weight (when packed) and parts required as follows:

| Authorized gross weight (pounds) | Strength of fiberboard (minimum) Mullen or Cady test | | | | | | |
|---|---|---|---|---|---|---|---|
| | Solid board | | | Double-faced corrugated | | Double-wall corrugated | |
| | Box | Lining [3] | Heads [1] | Box | Lining [3] | Box | Lining [3] |
| 15 | 175 | ------ | (2) | 175 | ------ | 200 | ------ |
| 30 | 200 | ------ | 275 | 200 | ------ | 200 | ------ |
| 40 | 275 | ------ | 350 | 275 | ------ | 200 | ------ |
| | | | | 200 | 175 | | |
| 55 | 325 | ------ | (2) | 325 | ------ | 275 | ------ |
| 65 [4] | 375 | ------ | (2) | 375 | ------ | 275 | ------ |
| | 275 | 175 | 350 | 275 | 175 | | |
| | | | | 200 | 200 | | |

[1] For recessed heads when used. In other cases same as for box.
[2] As prescribed in § 78.205–15. A complete box is acceptable in place of the lining.
[3] Recessed heads not authorized in any case.
[4] Except as otherwise authorized herein or by Part 73 of this chapter.

(b) Triple slide boxes authorized for gross weights as follows: Of board at least 175-pound test for 40 pounds; of board at least 200-pound test for 65 pounds.

**§ 78.205–17 Closing for shipment.**

(a) Slotted container, by coating with adhesive the entire contact surfaces of closing flaps and fill-in pieces where required or as prescribed in subparagraph (1), (2), or (3) of this paragraph.

(1) By stitching with staples as prescribed by § 78.205–6 at 2½-inch intervals along all seams (one 5-inch space allowed when necessary to permit use of stitching device); or with staples made of flat wire of hardness not less than equivalent of Rockwell B90, and not less than 0.037 inch thick and not less than 0.074 inch wide, with not less than 1¼ inch crown, may be spaced not more than 5 inches apart. Such staples may be used across center seam where outside flaps meet in lieu of on both sides of center seam but need only be used where outside flaps overlay inner flaps; or staples made of arcuate wire of hardness not less than equivalent of Rockwell B90, and not less than 0.027 inch thick and not less than 0.095 inch wide, with not less than 1 inch crown, may be spaced not more than 5 inches apart. Such stitches when spaced not more than 2½ inches apart may be used across center seam where outside flaps meet in lieu of on both sides of center seam but need only be used where outside flaps overlay inner flaps.

(2) For fiberboard boxes containing not more than 1 inside metal can not exceeding 1 gallon nominal capacity, and as otherwise authorized by Part 73 of this chapter, by application of 2 strips of pressure-sensitive tape not less than ½ inch in width, 1 strip to be placed approximately equal distance over the seam of abutting outer flaps, the other at a right angle to the first and spaced approximately equal distance on the closure face; strips must be of sufficient length to extend not less than 1 inch beyond score lines on side and end panels. Tape shall have a minimum tensile strength of 160 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width; and minimum elongation of 12 percent at break, or having a minimum longitudinal tensile strength of not less than 240 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width and a minimum elongation of 3 percent at break.

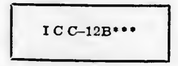
(3) For slotted containers only, reinforced tape complying with the requirements of § 78.205–7 (b) is authorized for application over the center seam only. Tape must extend over the ends of box not less than 2½ inches.

(b) Double slide boxes or triple slide boxes, by coating the inner slides with adhesive, or by closing with reinforced tape capable of withstanding test prescribed by subparagraph (1) of this paragraph; for single-flap closures as authorized for boxes with one dimension not over 2 inches, the flaps must be fastened to the body with adhesive.

(1) Boxes selected at random, containing dummy contents similar to that to be shipped and packed to authorized gross weight, closed with reinforced tape across the ends and onto opposite side panels at least 2 inches, must be capable of withstanding a drop on each end from a height of 4 feet onto solid concrete without closure failure.

(c) Fiberboard boxes with covers extending over sides but not to bottom, covers resting on walls of box, or telescope boxes of equal depth section, covers extending to bottom, must be secured by one of the following methods:

(1) By not less than three metal straps, one lengthwise and others at right angles thereto.



(2) When cover extends not less than 3 inches over the walls of the box, by coating with adhesive the entire contact area of the cover.

(3) Telescope boxes having equal depth sections may be closed by application of reinforced water activated tape or pressure sensitive tape under conditions and for commodities as prescribed in Part 73 of this chapter.

(d) When metal straps are specified, boxes must be strapped with the required number; size at least ⅝ inch x 0.015 inch.

**§ 78.205–18 Marking.**

(a) *On each container.* Symbol in rectangle as follows:

(1) Stars to be replaced by authorized gross weight (for example, ICC—12B40, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in this paragraph.

(3) When metal straps are prescribed, boxes must be marked "_____ (number) METAL STRAPS REQUIRED" just above or below the mark specified in this paragraph.

(4) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.205–19 Special box; authorized only for contents in 1-gallon rectangular metal cans or cylindrical metal cans of 26 gauge material.**

(a) Must comply with this specification except as follows: Must be 1-piece type, of double-wall corrugated fiberboard at least 400-pound test with all three facings at least 135-pound test; to be marked "FOR 1-GAL. CYLINDICAL OR RECTANGULAR CANS ONLY" near the I.C.C. specification mark; authorized gross weight 84 pounds.

**§ 78.205–20 Special box; authorized only for pyroxylin in sheets, rods, or tubes.**

(a) Must comply with this specification except as follows: Must be of board at least 275-pound test with lining at least 200-pound test, all being double-faced corrugated fiberboard; 3 metal straps required (see §§ 78.205–17 and 78.205–18); authorized gross weight 90 pounds.

**§ 78.205–21 Special box; authorized only for pyroxylin in sheets, rods, or tubes.**

(a) Must comply with this specification except as follows: Must be telescope type with wooden frame between the parts that telescope; authorized gross weight 90 pounds.

(b) Frame of group 3 or 4 wood 9/16" thick with lock corners glued.

GROUP 3

| | |
|---|---|
| White elm. | Black gum. |
| Red gum. | Black ash. |
| Sycamore. | Tupelo. |
| Pumpkin ash. | Maple—soft or silver. |

GROUP 4

| | |
|---|---|
| Hard maple. | Birch. |
| Beech. | Rock elm. |
| Oak. | Hickory. |
| Hackberry. | White ash. |

(c) Telescoping parts of double-faced corrugated fiberboard at least 400-pound test with facings at least 180 pounds per thousand square feet; each part of same depth as frame; outer part to have corners overlapped and securely fastened.

(d) Four metal straps required. Glued or stitched closure not required. (See §§ 78.205–17 and 78.205–18.)

**§ 78.205–22 Special box; authorized only for motion-picture film in metal cans or strong cardboard or fiberboard boxes each containing not over 2,000 feet (approx.) of film.**

(a) Must comply with this specification except as follows:

(1) *For one inside container.* Must be of board at least 275-pound test for a 2,000-foot film and of board at least 200-pound test for a 1,000-foot film; lining and pads not required; closure by taping with strong paper tape authorized.

(2) *For more than one inside container.* Must be of 1-piece type; authorized gross weight 55 pounds when made of 325-pound test board, 65 pounds when made of 375-pound test board, and 75 pounds when made of 450-pound test board; interior packing required, of fiberboard at least 175-pound test, adequate to support inside containers in center of outside container; lining and top and bottom pads not required.

**§ 78.205–23 Special box; authorized only for poisonous solids, class B, in 1-gallon metal cans.**

(a) Must comply with this specification except as follows: Must be 1-piece type, of double-wall corrugated fiberboard at least 400-pound test with all three facings at least 135-pound test; authorized gross weight 84 pounds.

**§ 78.205–24 Special box; authorized only for railway fusees.**

(a) Must comply with this specification except as follows: Must be double-faced corrugated fiberboard at least 400-pound test, or solid fiberboard of same strength; lining and pads not required; authorized gross weight 75 pounds. For fusees equipped with spikes, protection as required in § 73.108(b)(2) of this chapter must be provided.

**§ 78.205–25 Special box; authorized only for wet electric storage batteries of the glass cell type or synthetic resin (plastic) type.**

(a) Must comply with this specification except as follows: Must be one-piece type of double wall corrugated fiberboard at least 275-pound test; must have linings to extend around four faces with joint in center of or at end of one face but at no time may joint of box and joint of liner coincide; lining to be of sufficient height to support vertical scorings of box; lining to be made of double wall corrugated board with minimum test of 275 pounds, top of battery or batteries to be protected by trays or scored sheets of corrugated fiberboard having minimum test of 200 pounds; bottom of batteries to be protected by minimum of one excelsior pad or one double wall corrugated fiberboard pad; when one or more batteries are packed in same carton, batteries must be separated by a minimum of one thickness of double wall corrugated fiberboard having minimum test of 275 pounds; authorized gross weight 95 pounds.

**§ 78.205–26 Special box; authorized only for one 5-gallon rectangular metal can, spec. 2F (§ 78.25 of this part); gross weight not to exceed 65 pounds.**

(a) Must comply with this specification except as follows: Must be 1-piece type of double-wall corrugated fiberboard at least 350-pound test; must have top and bottom pads of double-wall corrugated fiberboard at least 350-pound test, pads to be double-flanged with flanges extending down the inside of carton at least four inches.

**§ 78.205–27 Special box; authorized only for not more than two square inside metal cans each containing not over 200 feet (approx.) motion-picture film; gross weight not to exceed 15 pounds.**

(a) Must comply with this specification except as follows: Must be double-slide type, both slides of double-faced corrugated fiberboard at least 200-pound test; closure by taping with strong paper tape authorized.

**§ 78.205–28 Special box; authorized only for wet electric storage batteries of aluminum-case type, asphaltum composition, impregnated rubber, synthetic resin (plastic), or wooden-battery-box type, having a net weight greater than 75 pounds.**

(a) Must comply with this specification except as follows: Must be one-piece type of double wall corrugated fiberboard at least 400-pound test, or solid fiberboard testing at least 400 pounds; boxes may or may not have hand holes provided for in ends of box providing same will not materially weaken box, top of battery to be protected by wood frame, corrugated trays or scored sheets of corrugated fiberboard having minimum test of 200 pounds, top protection must bear evenly on connectors of battery to facilitate stacking of batteries; bottom of batteries to be protected by minimum of one excelsior pad or double wall corrugated fiberboard pad; sides and ends to be cushioned between batteries and walls of box; combined thickness of cushioning material and walls of box must be not less than ½", cushioning to be of excelsior pads, corrugated fiberboard or other suitable cushioning material; no more than one battery to be packed per box, authorized gross weight 190 pounds.

**§ 78.205–29 Special box; authorized only for ship distress signals in inside metal containers of not less than 24 gauge metal.**

(a) Must comply with this specification except as follows: Must be one-piece type of double faced corrugated board at least 350-pound test, with top and bottom pads of the same material. Gross weight not to exceed 95 pounds.

**§ 78.205–30 Special box; authorized only for toy torpedoes.**

(a) Must comply with this specification and the following: Must be one-piece type fabricated of double-wall corrugated fiberboard having minimum strength of 350 pounds per square inch, Mullen or Cady test. Box shall be provided with double-face lining on all sides and top and bottom pads. Gross weight not to exceed 25 pounds.

**§ 78.205–31 Special box; authorized only for commodities where spec. 12B is prescribed in Part 73 of this chapter.**

(a) Box shall have not more than 1 inside glass container having screw cap closure or metal container not exceeding 32 ounces or 2 pounds net weight, which must fit snugly or be adequately cushioned to prevent movement. Box shall comply with this specification and be of one-piece folder type, so designed as to form double thickness of corrugated board on top, bottom, and ends. Fiberboard used in construction of the box shall have a minimum strength of 200 pounds per square inch, but for gross weight exceeding 8 pounds, the box must be constructed of at least 275-pound per square inch test fiberboard (Mullen or Cady). Closure must be equal in efficiency to that prescribed in § 78.205–17.

**§ 78.205–32 Special box; authorized only for electrolyte (acid), corrosive battery fluid, hydrochloric acid mixtures of not over 28 percent strength, or cleaning compounds, liquid, containing not over 28 percent hydrochloric (muriatic) acid.**

(a) Box shall have not more than 12 inside glass bottles, with acid-proof closures, of not over 32 ounces capacity each. Box shall comply with this specification and be constructed of at least 275-pound test (Mullen or Cady) double-wall corrugated fiberboard and be equipped with at least 125-pound test (Mullen or Cady) double-faced corrugated fiberboard scored sheets so designed as to provide two thicknesses of corrugated fiberboard between each bottle and one thickness between bottles and sides and ends of box. Top and bottom pads of the same size as the top and bottom area of the box and of at least 125-pound test (Mullen or Cady) double-faced corrugated board are required or box shall comply with this specification and be constructed of at least 325-pound test (Mullen or Cady) double-faced corrugated board and be equipped with at least 200-pound test (Mullen or Cady) corrugated fiberboard ½ inch extended cell slotted partitions so designed as to provide a void space between the ends and sides of outside box and the inside cell partition and shall be provided with top and bottom pads, of the same area as the box, of at least 200-pound test (Mullen or Cady) double-faced corrugated fiberboard.

**§ 78.205–33 Special box; authorized only for electrolyte (acid) and alkaline corrosive battery fluid packed with storage batteries.**

(a) Box shall be constructed of corrugated fiberboard having strength of not less than 200 pounds per square inch, Mullen or Cady test for maximum authorized gross weight not over 65 pounds. Top and bottom pads and fill-in pieces are not required when inner flaps do not meet. Box must otherwise comply with this specification. (See § 73.258(a) (3) of this chapter.)

**§ 78.205–34 Special box; authorized only for a polyethylene, or other suitable plastic, tight-fitting inside container having a minimum wall thickness of 0.015 inch and so designed as to maintain its configuration when standing empty and open.**

(a) Box shall comply with this specification except that top of box shall be closed by means of slotted flaps so arranged as to provide protection for the neck of the inside container and be fitted with fill-in pieces as necessary; equally efficient closures and container neck protectors are authorized. Complete package, closed as for shipment with inside container filled to rated capacity with water, must be capable of withstanding 2 drops from a height of 4 feet onto solid concrete without leakage or serious rupture of box. Authorized gross weight not over 65 pounds.

**§ 78.205–35 Special box; authorized only for aircraft type wet electric storage batteries.**

(a) Box shall comply with this specification and shall be constructed of at least 275-pound test double-faced corrugated fiberboard. Inside corrugated fiberboard cushioning shall be provided as necessary to prevent short-circuits, breakage under normal conditions of transportation, and superimposed weights on links, covers, or other parts weaker than the battery case. Not more than one wet electric storage battery shall be packed in a box and gross weight shall not exceed 85 pounds.

**§ 78.205–36 Special box; authorized only for an inside polyethylene container, spec. ICC–2U (§ 78.24 of this chapter), not over 5 gallons capacity.**

(a) Box shall comply with this specification except as provided herein, and shall have glued closure flaps only. Inner and outer top closure flaps may have suitably sized holes for access to the closure of the polyethylene container. The diameter of these holes must be less than the diameter of a metal plate inserted between the flaps to which polyethylene closure shall be attached.

**§ 78.205–37 Special box; with inside polyethylene or other suitable plastic bags for packaging of electrolyte (acid) or alkaline corrosive battery fluid only.**

(a) Box shall comply with this specification, except as follows: Box must be of one-piece construction of regular slotted style and be constructed of at least 275-pound test double-faced corrugated fiberboard with complete corrugated fiberboard liner, a scored and flanged bottom pad, and a scored and flanged top tray pad, reinforced, all of same material as box. Box may have die-cut areas of minimum size to provide access to inside closure part.

(b) Box must have 2 polyethylene or other suitable plastic bags, one within the other, with closure adequate to prevent leakage under conditions incident to transportation; maximum volumetric capacity not over 5 gallons. Bags shall be formed of tubing of virgin plastic material not less than 0.004 inch thick, with joints heat sealed.

(c) Representative samples of completely assembled boxes, with all parts closed as for shipment, must be capable of withstanding the following tests without leakage or serious damage to boxes. No one box shall be expected to withstand more than one of the following tests:

(1) Box with inside container filled with 5 gallons of a liquid of the same specific gravity as expected contents for shipment must be dropped twice from a height of 4 feet onto concrete, one drop to be made with the box positioned so as to strike flat on the box bottom, the other drop to be made so box will strike flat on the largest face.

(2) Box with inside container filled with 5 gallons of a solution which is compatible with the plastic bags, and remains liquid at 0° F. or lower shall be dropped once from a height of 4 feet onto concrete, when container and contents are at or below 0° F. Box shall be positioned so as to strike flat on the box bottom.

(3) Box with inside container filled as prescribed in subparagraph (1) of this paragraph shall be capable of withstanding a vibration test by placing the container on the vibration table anchored in such manner that all horizontal motion shall be restricted and only vertical motion allowed. The test shall be performed for one hour using an amplitude of one inch at a frequency that causes the test container to be raised from the floor of the table to such a degree that a piece of paper or flat steel strap or tape can be passed between the table and the container.

(d) Tests to be conducted by or for each plant assembling and filling boxes at the initial start of production and must be repeated at intervals of four months thereafter; initial tests must be witnessed by a representative of the Bureau of Explosives. Samples last tested must be dated with date of test and must be retained until subsequent tests are conducted. Empty boxes with liners may be shipped to a central point for assembling, filling and testing in which case the Bureau of Explosives must be advised of test location.

**§ 78.206 Specification 12C; fiberboard boxes.**

**§ 78.206–1 Compliance.**

(a) Required in all details.

**§ 78.206–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box, except recessed flanged heads, are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.206–3 Classification of board.**

(a) Fiberboard is hereby classified by strength of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

| Classified strength [1] of completed board | Solid fiberboard—Minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.) | Facings for corrugated fiberboard | |
|---|---|---|---|
| | | Double-faced—Minimum combined weight of facings (pounds per 1,000 sq. ft.) | Double-wall—Minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.) |
| 175 | 149 | 75 | ---------- |
| 200 | 190 | 84 | 92 |
| 275 | 237 | 138 | 110 |
| 350 | 283 | 180 | 126 |

[1] Mullen or Cady test (minimum).

**§ 78.206–4 Solid fiberboard.**

(a) To be 3-ply or more; both outer plies water resistant.

**§ 78.206–5 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weight not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

**§ 78.206–6 Stitching staples.**

(a) Of steel wire at least 3/32 x 0.019 inch, or equal cross section, formed into staples about 7/16 inch wide. Staples of metal other than steel are authorized provided their efficiency is equal to that of steel wire staples specified in this section.

**§ 78.206–7 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24 x 36 inches); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape, except as provided in § 78.206–11(d).

(b) Tape for closure of slotted containers complying with the following requirements is authorized when applied as prescribed in § 78.206–17 (a) (3):

(1) Tape must be not less than 3 inches wide and shall be made of two sheets of 100 percent sulfate Kraft each not less than 30 pounds basis weight, reinforced with glass; sisal, or rayon fiber, combined with a laminant of asphalt or other material not affected by temperature extremes any more than would standard 180° to 200° softening point asphalt.

(2) Tape must be reinforced by lengthwise fibers spaced not more than an average of ½ inch apart, and by crosswise fibers spaced not less than an average of 2 per inch except that when a diamond pattern is employed for crosswise reinforcement, the spacing between the parallel sides of the diamond measured in the machine direction must be not more than 1 inch.

(3) Glass or sisal reinforced tape must have a minimum tensile strength in the machine direction of 75 pounds per inch of width and a minimum tensile strength in the cross direction of 45 pounds per inch of width; rayon reinforced tape must have a minimum tensile strength in the machine direction of 57 pounds per inch of width and a minimum tensile strength in the cross direction of 27 pounds per inch of width with elongation not exceeding 15 percent. Tensile tests on the finished product shall be made on a 3-inch width sample.

**§ 78.206–8 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

**§ 78.206–9 Types authorized.**

(a) To be of solid or corrugated fiberboard of the following types:

(1) Slotted box; three-piece box without recessed ends; three-piece box of solid fiberboard with recessed ends; double-slide box; triple-slide box; telescope box, with sections of equal depth, or with covers, top or bottom or both, with 3-inch overlap. (See § 78.206–14 (d) for boxes with single-flap closures.)

**§ 78.206–10 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.206–11 Joints.**

(a) For solid and corrugated fiberboard slotted containers: Lapped 1½ inches from center of scoreline except as in § 78.206–12; stitched at 2½ inch intervals and within 1 inch of each end of joint; body joint must be double-stitched (2 parallel stitches) at each end of joint over 18 inches long.

(b) For corrugated fiberboard slotted containers only: One butt joint taped (See § 78.206–7) is authorized; 3 inch tape required for boxes over 30 pounds authorized gross weight and 2 inch tape for others.

(c) For triple and double slide boxes: Joints of all slides must be taped (See § 78.206–7) or stitched.

(d) For corrugated fiberboard only: One butt joint taped inside and outside with strips of one thickness of sulphate paper not less than 2 inches wide extending entire length of joint and firmly glued to box. For boxes not exceeding 65 pounds gross weight, outside strip of sulphate paper to be of basis weight not less than 60 pounds testing not less than 60 pounds and inside strip of sulphate paper to be of basis weight not less than 40 pounds testing not less than 40 pounds. For boxes exceeding 65 pounds gross weight, outside and inside with strips of sulphate paper which must each be of basis weight not less than 90 pounds testing not less than 90 pounds. Basis weight of paper shown is 500 sheets, 24 x 36 inches.

(1) For glued lap joint, the sides of box forming joint must lap not less than 1¼" and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

**§ 78.206–12 Flanged heads.**

(a) Must have 4 flanges, at least 1" long above fillet, on each head. Recessed flanged heads not authorized for boxes of corrugated fiberboard.

**§ 178.206–13 Seams which are to be stitched.**

(a) Overlap, if any, required to be at least 1½ inches from center of scoreline

| Authorized | Strength of fiberboard (minimum) Mullen or Cady Test | |
|---|---|---|
| | Double-faced | Double-wall |

flaps, the other at a right angle to the first and spaced approximately equal distance on the closure face; strips must be of sufficient length to extend not less

(4) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be

into staples about 7/16" wide. Staples of metal other than steel are authorized provided their efficiency is equal to that of steel wire staples specified

**§ 78.207–8 Types authorized.**

(a) To be of double-wall corrugated fiberboard of the following types:

(1) Slotted box; three piece box with-

**§ 178.206–13 Seams which are to be stitched.**

(a) Overlap, if any, required to be at least 1½ inches from center of scoreline except as in § 78.206–12.

**§ 78.206–14 Flap closures.**

(a) Fill-in pieces, of the same type fiberboard as used in construction of the container, are required where it is necessary to prevent an opening between the inner flaps, unless otherwise provided by Part 73 of this chapter.

(b) If to be closed by adhesive, each inner flap must cover at least one-third of face; inner flaps must butt or have full overlap, or fill-in pieces must be used, unless otherwise provided by Part 73 of this chapter, except that fill-in pieces are not required when outer flaps have full overlap. Outer flaps must be reasonably close together at the center seam or have full overlap.

(c) In lieu of fill-in pieces between inner flaps which do not butt, the following is authorized when linings are not prescribed in § 78.206–15:

(1) Top and bottom pads the same dimensions as interior of container of solid or corrugated fiberboard at least 125 pound test (Mullen or Cady).

(2) Minimum combined weight of facings for corrugated fiberboard pads must be at least 52 pounds per thousand square feet.

(3) Minimum combined weight of component plies for solid fiberboard pads must be at least 114 pounds per thousand square feet, exclusive of adhesives.

(4) Complete inner box or boxes.

(d) Single-flap closures are authorized for boxes with one dimension not over 2''; each flap must be scored and form one of the small faces of the box and lap at least 5'' on one of the largest faces.

**§ 78.206–15 Linings (when prescribed).**

(a) Of 1-piece to extend around 4 faces with joint at center of 1 face and with 4 flanges, at least 1½'' long, on each end (corners may be mitered) to bend over the other 2 faces; also 2 pads to cover the other 2 faces. Pads may be omitted if closing flaps afford 3 thicknesses throughout face. For boxes with 1 dimension not over 3'', one of the widest flanges may be lengthened to cover entire face and lap 6'' on the adjoining face and the other flanges and the pads may then be omitted.

**§ 78.206–16 Authorized gross weight and parts required.**

(a) Authorized gross weight (when packed) and parts required as follows:

| Authorized gross weight (pounds) | Strength of fiberboard (minimum) Mullen or Cady Test | | | | | | |
|---|---|---|---|---|---|---|---|
| | Solid board | | | Double-faced corrugated | | Double-wall corrugated | |
| | Box | Lining [3] | Heads [1] | Box | Lining [3] | Box | Lining [3] |
| 30 | 175 | ------ | 200 | 175 | ------ | 200 | ------ |
| 40 | 200 | ------ | 275 | 200 | ------ | 200 | ------ |
| 65 [4] | 275 | ------ | 350 | 275 [2] / 200 | ------ / 175 | 275 | ------ |

[1] For recessed heads when used. In other cases same as for box.
[2] As prescribed in § 78.206–15 A complete box is acceptable in place of the lining.
[3] Facings at least 138 pounds per thousand square feet or inner facing at least 42 pounds and outer facing at east 90 pounds per thousand square feet.
[4] Except as otherwise authorized by Part 73 of this chapter.

(b) Triple slide boxes of double-faced corrugated fiberboard of at least 175-pound test are also authorized for 65 pounds gross weight.

**§ 78.206–17 Closing for shipment.**

(a) Slotted container, by coating with adhesive the entire contact surfaces of closing flaps and fill-in pieces where required or as prescribed in subparagraph (1), (2), or (3) of this paragraph.

(1) By stitching with staples as prescribed by § 78.206–6 at 2½-inch intervals along all seams (one 5-inch space allowed when necessary to permit use of stitching device); or with staples made of flat wire of hardness not less than equivalent of Rockwell B90, and not less than 0.037 inch thick and not less than 0.074 inch wide, with not less than 1¼-inch crown, may be spaced not more than 5 inches apart. Such staples may be used across center seam where outside flaps meet in lieu of on both sides of center seam but need only be used where outside flaps overlay inner flaps; or staples made of arcuate wire of hardness not less than equivalent of Rockwell B90, and not less than 0.027 inch thick and not less than 0.095 inch wide, with not less than 1 inch crown, may be spaced not more than 5 inches apart. Such stitches when spaced not more than 2½ inches apart may be used across center seam where outside flaps meet in lieu of on both sides of center seam but need only be used where outside flaps overlap inner flaps.

(2) For fiberboard boxes containing not more than 1 inside metal can not exceeding 1 gallon nominal capacity, by application of 2 strips of pressure-sensitive tape not less than ½ inch in width, 1 strip to be placed approximately equal distance over the seam of abutting outer flaps, the other at a right angle to the first and spaced approximately equal distance on the closure face; strips must be of sufficient length to extend not less than 1 inch beyond score lines on side and end panels. Tape shall have a minimum tensile strength of 160 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width; and minimum elongation of 12 percent at break, or having a minimum longitudinal tensile strength of not less than 240 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width and a minimum elongation of 3 percent at break.

(3) For slotted containers only, reinforced tape complying with the requirements of § 78.206–7 (b) is authorized for application over the center seam only. Tape must extend over the ends of box not less than 2½ inches.

(b) Double slide boxes or triple slide boxes, by coating with adhesive the inner slides; for single-flap closures as authorized for boxes with one dimension not over 2 inches, the flaps must be fastened to the body with adhesive.

(c) Fiberboard boxes with covers extending over sides but not to bottom, covers resting on walls of box, or telescope boxes of equal depth section, covers extending to bottom, must be secured by one of the following methods:

(1) By not less than three metal straps, one lengthwise and others at right angles thereto.

(2) When cover extends not less than 3 inches over the walls of the box, by coating with adhesive the entire contact area of the cover.

(d) When metal straps are specified, boxes must be strapped with the required number; size at least ⅝ inch x 0.015 inch.

**§ 78.206–18 Marking.**

(a) On each container. Symbol in rectangle as follows:

| ICC–12C••• |
|---|

(1) Stars to be replaced by authorized gross weight (for example, ICC–12C65, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in this paragraph.

(3) When metal straps are prescribed, boxes must be marked "---------- (number) METAL STRAPS REQUIRED" just above or below the mark specified in this paragraph.

(4) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.206–19 Special box; authorized only for polyethylene, or other suitable plastic, tight-fitting inside containers having minimum wall thickness of 0.015 inch and so designed as to maintain their configuration when standing empty and open.**

(a) Box shall comply with this specification except that top of box shall be closed by means of slotted flaps so arranged as to provide protection for the neck of the inside container and be fitted with fill-in pieces as necessary. Top may have die-cut area of suitable size to provide for easy opening. Complete package, closed as for shipment, with inside container filled to rated capacity with water, must be capable of withstanding 2 drops from a height of 4 feet onto solid concrete without leakage or serious rupture of box. Authorized gross weight not over 65 pounds. (See § 73.257(a) (6) of this chapter.)

**§ 78.207 Specification 12D; fiberboard boxes.**

**§ 78.207–1 Compliance.**

(a) Required in all details.

**§ 78.207–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.207–3 Classification of board.**

(a) Fiberboard is hereby classified by strength of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

| Classified strength [1] of completed board | Facings for double-wall corrugated fiberboard—Minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.) |
|---|---|
| 275 | 110 |
| 350 | 126 |

[1] Mullen or Cady test (minimum).

**§ 78.207–4 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets at least 0.009'' thick and weigh not less than 26 pounds per 1000 square feet; all parts securely glued together throughout all contact areas.

**§ 78.207–5 Stitching staples.**

(a) Of steel wire at least $\frac{9}{32}$'' x 0.019'', or equal cross section, formed into staples about 7/16'' wide. Staples of metal other than steel are authorized provided their efficiency is equal to that of steel wire staples specified in this section.

**§ 78.207–6 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24'' x 36''); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape, except as provided in § 78.207–10(d).

(b) Tape for closure of slotted containers complying with the following requirements is authorized when applied as prescribed in § 78.207–17 (a) (3):

(1) Tape must be not less than 3 inches wide and shall be made of two sheets of 100 percent sulfate Kraft each not less than 30 pounds basis weight, reinforced with glass, sisal, or rayon fiber, combined with a laminant of asphalt or other material not affected by temperature extremes any more than would standard 180° to 200° softening point asphalt.

(2) Tape must be reinforced by lengthwise fibers spaced not more than an average of ½ inch apart, and by crosswise fibers spaced not less than an average of 2 per inch except that when a diamond pattern is employed for crosswise reinforcement, the spacing between the parallel sides of the diamond measured in the machine direction must be not more than 1 inch.

(3) Glass or sisal reinforced tape must have a minimum tensile strength in the machine direction of 75 pounds per inch of width and a minimum tensile strength in the cross direction of 45 pounds per inch of width; rayon reinforced tape must have a minimum tensile strength in the machine direction of 57 pounds per inch of width and a minimum tensile strength in the cross direction of 27 pounds per inch of width with elongation not exceeding 15 percent. Tensile tests on the finished product shall be made on a 3-inch width sample.

**§ 78.207–7 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures. 12 from each side, when all results but 4 show prescribed strength the board is acceptable.

(4) Double-pop tests may be disregarded.

**§ 78.207–8 Types authorized.**

(a) To be of double-wall corrugated fiberboard of the following types:

(1) Slotted box; three piece box without recessed ends; double-slide box; triple-slide box; telescope box, with sections of equal depth, or with covers, top or bottom or both, with 3 inch overlap.

**§ 78.207–9 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.207–10 Joints.**

(a) For slotted containers: Lapped 1½ inches from center of scoreline except as in § 78.207–11; stitched at 2½-inch intervals and within 1 inch of each end of joint; body joint must be double-stitched (2 parallel stitches) at each end of joint over 18 inches long.

(b) For slotted containers only: One butt joint taped (See § 78.207–6) is authorized; 3 inch tape required.

(c) For triple and double slide boxes: Joints of all slides must be taped (See § 78.207–6) or stitched.

(d) One butt joint taped inside and outside with strips of one thickness of sulphate paper not less than 2 inches wide extending entire length of joint and firmly glued to box. For boxes not exceeding 65 pounds gross weight, outside strip of sulphate paper to be of basis weight not less than 60 pounds testing not less than 60 pounds and inside strip of sulphate paper to be of basis weight not less than 40 pounds testing not less than 40 pounds. For boxes exceeding 65 pounds gross weight, outside and inside with strips of sulphate paper which must each be of basis weight not less than 90 pounds testing not less than 90 pounds. Basis weight of paper shown is for 500 sheets, 24 x 36 inches.

(1) For glued lap joint, the sides of box forming joint must lap not less than 1¼'' and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

**§ 78.207–11 Flanged heads.**

(a) Must have 4 flanges, at least 1'' long above fillet, on each head. Recessed flanged heads not authorized.

**§ 78.207–12 Seams which are to be stitched.**

(a) Overlap, if any, required to be at least 1½ inches from center of scoreline except as in § 78.207–11.

**§ 78.207–13 Flap closures.**

(a) Fill-in pieces, of the same type fiberboard as used in construction of the container, are required where it is necessary to prevent an opening between the inner flaps.

(b) If to be closed by adhesive, each inner flap must cover at least ⅓ of face; inner flaps must butt or have full overlap, or fill-in pieces must be used; except that fill-in pieces are not required when outer flaps have full overlap. Outer flaps must butt or have full overlap.

**§ 78.207–14 Linings (when prescribed).**

(a) Of 1 piece to extend around 4 faces with joint at center of 1 face and with 4 flanges, at least 1½" long, on each end (corners may be mitered) to bend over the other 2 faces; also 2 pads to cover the other 2 faces. Pads may be omitted if closing flaps afford 3 thicknesses throughout face. For boxes with 1 dimension not over 3", one of the widest flanges may be lengthened to cover entire face and lap 6" on the adjoining face and the other flanges and the pads may then be omitted.

**§ 78.207–15 Authorized gross weight and parts required.**

(a) Authorized gross weight (when packed) and parts required as follows:

(1) For authorized gross weight not over 25 pounds, box must be constructed of at least 275-pound test double-wall corrugated fiberboard with liners and top and bottom pads, or a complete inner box, of same material.

(2) For authorized gross weight over 25 pounds but not exceeding 75 pounds, inside containers must be packed in boxes of at least 275-pound test double-wall corrugated fiberboard and these packages packed in an outside box of at least 350-pound test double-wall corrugated fiberboard.

**§ 78.207–16 Test for completed package.**

(a) The completed packages closed as for shipment must be capable of withstanding a drop of 4 feet to solid concrete without breakage of the inside containers.

**§ 78.207–17 Closing for shipment.**

(a) Slotted container, by coating with adhesive the entire contact surfaces of closing flaps and fill-in pieces, or as prescribed in subparagraphs (1), (2), or (3) of this paragraph.

(1) By stitching at 2½-inch intervals along all seams (one 5-inch space allowed when necessary to permit use of stitching device).

(2) For fiberboard boxes containing not more than 1 inside metal can not exceeding 1 gallon nominal capacity, by application of 2 strips of pressure-sensitive tape not less than ½ inch in width, 1 strip to be placed approximately equal distance over the seam of abutting outer flaps, the other at a right angle to the first and spaced approximately equal distance on the closure face; strips must be of sufficient length to extend not less than 1 inch beyond score lines on side and end panels. Tape shall have a minimum tensile strength of 160 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width; and minimum elongation of 12 percent at break, or having a minimum longitudinal tensile strength of not less than 240 pounds per inch of width; minimum adhesion value of 18 ounces per inch of width and a minimum elongation of 3 percent at break.

(3) For slotted containers only, reinforced tape complying with the requirements of § 78.207–6 (b) is authorized for application over the center seam only. Tape must extend over the ends of box not less than 2½ inches.

(b) Double slide boxes or triple slide boxes, by coating with adhesive the inner slides; for single-flap closures as authorized for boxes with one dimension not over 2 inches, the flaps must be fastened to the body with adhesive.

(c) Fiberboard boxes with covers extending over sides but not to bottom, covers resting on walls of box, or telescope boxes of equal depth section, covers extending to bottom, must be secured by one of the following methods:

(1) By not less than three metal straps, one lengthwise and others at right angles thereto.

(2) When cover extends not less than 3 inches over the walls of the box, by coating with adhesive the entire contact area of the cover.

(d) When metal straps are specified, boxes must be strapped with the required number; size at least ⅝ inch by 0.015 inch.

**§ 78.207–18 Marking.**

(a) On each container. Symbol in rectangle as follows:

| ICC–12D••• |
|---|

(1) Stars to be replaced by authorized gross weight (for example, ICC–12D65, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in this paragraph.

(3) When metal straps are prescribed, boxes must be marked "_____ (number) METAL STRAPS REQUIRED" just above or below the mark specified in this paragraph.

(4) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.208 Specification 12E; fiberboard boxes.**

**§ 78.208–1 Compliance.**

(a) Required in all details.

**§ 78.208–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box, except recessed flanged heads, are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.208–3 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

**§ 78.208–4 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24 x 36 inches); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape.

**§ 78.208–5 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) Double-pop tests may be disregarded.

**§ 78.208–6 Type authorized.**

(a) Corrugated fiberboard with one-piece body with separate flanged heads. Box is authorized only for 1 or 2 rectangular metal inside containers of not over 5 gallons capacity each.

**§ 78.208–7 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.208–8 Joints.**

(a) *Body.* Each end of body must have four flanges, creased to bend over outside of body, at least 2½" long beyond crease.

(b) *Butt joint.* One butt joint taped is authorized; 3-inch tape required.

**§ 78.208–9 Flanged heads.**

(a) Each head must have four flanges, one on each edge, creased to bend over outside body of the box and then under the body flanges, of length at least 5 inches exclusive of creases.

**§ 78.208–10 Authorized gross weight (when packed) and parts required.**

(a) Board for outside container must be corrugated fiberboard at least 400-poung test; minimum combined weight of component plies, exclusive of adhesives, 180 pounds per 1000 square feet; body must be double-wall board; heads may be double-faced board. Authorized gross weight 110 pounds.

**§ 78.208–11 Closing for shipment.**

(a) Boxes must be closed by applying heads with head-flanges tucked under body-flanges and then fastening each head in place with a flat steel strap, at least ⅜" x 0.015", extending around the 4 sides of the body and securely sealed.

**§ 78.208–12 Marking.**

(a) *On each container.* Symbol in rectangle as follows:

| ICC–12E110 |
|---|

(1) This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in this paragraph.

(3) When metal straps are prescribed, boxes must be marked "_____ (number) METAL STRAPS REQUIRED" just above or below the mark specified in this paragraph.

(4) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.209 Specification 12H; fiberboard boxes.**

**§ 78.209–1 Compliance.**

(a) Required in all details.

**§ 78.209–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.209–3 Classification of board.**

(a) Fiberboard is hereby classified by strength of completed board as in first column of the following table; weights specified in the table are the minimum authorized.

| Classified strength [1] of completed board | Facings for corrugated fiberboard | |
|---|---|---|
| | Double-faced-minimum combined weight of facings (pounds per 1,000 sq. ft.) | Double-wall-minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.) |
| 275 | 138 | 110 |
| 325 | 138 | 110 |
| 350 | 180 | 126 |
| 375 | 180 | 180 |
| 400 | 180 | 180 |
| 450 | 180 | 180 |

[1] Mullen or Cady test (minimum).

**§ 78.209–4 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

**§ 78.209–5 Stitching staples.**

(a) Of steel wire, copper-coated or equivalent in nonsparking quality, at least 3/32" x 0.019", or equal cross section, formed into staples about 7/16" wide.

**§ 78.209–6 Tape.**

(a) Used for manufacturers' joints must be coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24" x 36"); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape.

**§ 78.209–7 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength, the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

**§ 78.209–8 Type authorized.**

(a) Shall be corrugated fiberboard, telescoping type, 1-piece, 2-piece or 3-piece construction without recessed heads, as follows:

(1) Box to consist of top and bottom sections divided equally or unequally and inner lining tube. The lining tube must be staple stitched to the lower section of the box to give in effect a 2-piece box. (See § 78.209–11.)

(2) Box to consist of full depth top and bottom sections completely telescoping. No inner lining tube required. Three variations are authorized: one with bottom slotted on ends and cover on sides; second, with both cover and bottom slotted on sides; and third, with sides and ends (both covers and bottom) not slotted, manufacturer's joint a side lap glued or stapled to end, closing flaps to form top and bottom of box with side closing flaps out and overlapping.

NOTE 1: Hand-holes oval in shape, not more than 1 inch in width by 3 inches in length, and horizontal with top score line, are authorized in ends of top section of boxes.

(3) Box to consist of 1-piece, 2-piece, or 3-piece, without recessed heads, fitted with lining tube as prescribed in § 78.209–11, except that lining tube is not required for boxes used for shipment of electric blasting caps packed in accordance with § 73.66(g)(1) of this chapter. When outer flaps butt, inner flaps must also butt, except 1-piece with tube or 2-piece fully telescoping ½ slotted style may have outer flaps that overlap a minimum of 2 inches to and including full overlap, and inner flaps may be of same length as outer flaps.

(4) Three-piece box without recessed ends. Outer flap may be full lap style with a 3-inch tuck. With the full lap style, the inner end flaps must have a minimum length of 4 inches with or without hand holes.

**§ 78.209–9 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.209–10 Joints.**

(a) Lapped 1½" and stitched at 2½" intervals and within 1" of each end of joint; except for full depth telescope style boxes, body joints must be double-stitched (two parallel rows of stitches).

(b) For glued lap joint, the sides of box forming joint must lap not less than 1¼" and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

(c) For lining tubes only, one butt joint taped (see § 78.209–6) tape not less than 3" wide is authorized.

**§ 78.209–11 Authorized gross weight and parts required.**

(a) Box shall be corrugated fiberboard at least 275 pound test. Tubes, when required, shall be of solid fiberboard at least 200-pound test, or of corrugated fiberboard of at least 275-pound test, with adjoining edges stitched, taped, or glued.

(b) Authorized gross weight: 65 pounds.

**§ 78.209–12 Closing for shipment.**

(a) By any method capable of withstanding tests prescribed by § 78.209–16 without failure.

**§ 78.209–13 Marking.**

(a) On each container. Symbol in rectangle as follows:

| ICC—12H•• |
|---|

(1) Stars to be replaced by authorized gross weight (for example ICC–12H65). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in paragraph (a) of this section.

(3) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.209–14 Special tests.**

(a) *By whom and when.* By or for each plant making the boxes; at beginning of manufacture and at six-month intervals thereafter; on largest size, by weight. Smaller sizes need not be tested if they have the same or equivalent construction. Report of results, with all pertinent data, to be maintained on file for one year; copy to be filed with the Bureau of Explosives.

§ 78.209–15 Material.

(a) Box material must comply with requirements of §§ 78.209–3, 78.209–4, 78.209–7, 78.209–11, and the following:

(b) Box material must also have 275 pound test strength and moisture content not over 30 percent as follows:

(1) Box material must test at least 200 pounds per square inch immediately after exposure for 3 days to 90 percent relative humidity of not less than 70° nor more than 75° F.

(2) Box material must test at least 100 pounds per square inch immediately after it has been in contact with water for 3 hours under 3" head at not less than 70° nor more than 75° F.

NOTE: The test shall be conducted on a sample no greater than 6 inches in diameter when exposed to water. The sample shall be rigidly fastened to a water column device so constructed as to provide at least a 3-inch head of water on the outer surface of the fiberboard sample. The water column device must be suspended in such manner that free circulation of air on the inner surface of fiberboard sample which is not exposed to water is permitted. After contact with water for 3 hours under conditions specified, the water column device shall be emptied, the sample blotted, and immediately subjected to Mullen or Cady test. (A 6-inch diameter pipe having a welded flange to which the sample is secured by a bolted ring flange is acceptable.)

§ 78.209–16 Completed container.

(a) Samples must pass the following immediately after exposure for 2 weeks to 90 percent relative humidity at not less than 70° nor more than 75° F.; loaded containers shall contain dummy contents of shape and weight of the expected contents, and shall be closed in the same manner as for shipment:

(1) Three loaded samples to be tested. Each must withstand 200 drops in standard 7-foot revolving test drum with pointed hazard in place, without spilling any contents.

(2) Three loaded samples to be tested. Each must withstand end to end pressure of at least 500 pounds without deflection of over 1½".

(3) Three empty samples to be tested. Each must withstand top to bottom pressure of at least 500 pounds without deflection of over ½ inch.

(b) As an alternate to the drum test specified in paragraph (a), 3 loaded samples must pass the drop test specified below:

(1) Box shall be dropped from height of 2 feet.

(2) Identification of face, edge, and corners. Facing one end (with the manufacturer's joint on the observer's right), the top of the box is designated as 1, the right side as 2, the bottom as 3, and the left side as 4. The near end is designated as 5 and the far end as 6. The edges are identified by the number of the two faces which make that edge, as for example, 1–2 identifies the edge where the top and right side meet and 2–5 the edge having the manufacturer's joint. The corners are identified by the number of the three faces which meet to form that corner, as for example, 1–2–5 identifies the corner where the top, the right side, and the near end meet.

(c) Drop sequence as follows:

(1) A corner drop on 1–2–5.

(2) An edge drop on the shortest edge radiating from that corner (usually 2–5).

(3) An edge drop on the next shortest edge radiating from that corner (usually 1–5).

(4) An edge drop on the longest edge radiating from that corner (usually 1–2).

(5) A flatwise drop on one of the smallest faces (usually end 5 or 6).

(6) A flatwise drop on the opposite smallest face.

(7) A flatwise drop on one of the medium faces (usually side 2 or 4).

(8) A flatwise drop on the opposite medium face.

(9) A flatwise drop on one of the largest faces (usually top 1 or bottom 3).

(10) A flatwise drop on the opposite large face.

This completes one cycle of ten drops. Commence the next cycle, with a drop on the corner diagonally opposite through the box to the corner on which the first drop was made, on corner 3–4–6. Commence the third cycle of ten drops with corner 1–4–5. Each loaded container must withstand 3 cycles without spilling or sifting of contents.

§ 78.210 Specification 12A; fiberboard boxes.

Nonreuseable containers.

§ 78.210–1 Compliance.

(a) Required in all details.

§ 78.210–2 Definitions.

(a) Terms such as "200-pound test" mean minimum strength. Mullen or Cady test.

(b) "Joints" are where edges of parts of box, except recessed flanged heads, are connected together in setting up the box. Generally done by box maker.

§ 78.210–3 Classification of board.

(a) Fiberboard is hereby classified by strength [1] of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

| Classified strength of completed board | Facings for corrugated fiberboard | |
|---|---|---|
| | Double-faced-minimum combined weight of facings (pounds per 1,000 sq. ft.) | Double-wall-minimum combined weight of facings including center liner (pounds per 1,000 sq. ft.) |
| 200 | 84 | 92 |
| 275 | 138 | 110 |

§ 78.210–4 Corrugated fiberboard.

(a) Both outer facings water resistant; corrugated sheets must be at least 0.009 inch thick and weigh not less than 26 pounds per 1000 square feet; all parts must be securely glued together throughout all contact areas.

§ 78.210–5 Tests.

(a) Acceptable board must have prescribed strength, Mullen or Cady test,

[1] Mullen or Cady test (minimum)

after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity), under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side, when all results but 4 show prescribed strength the board is acceptable.

(4) Double-pop tests may be disregarded.

§ 78.210–6 Boxes authorized.

(a) Corrugated fiberboard boxes having gross weight not over 80 pounds of the following strengths are authorized:

| Gross weight not over (pounds) | Corrugated fiberboard strength (Mullen or Cady test) minimum | |
|---|---|---|
| | Double-faced | Double-wall |
| 20 | 200 | 200 |
| 60 | 275 | 200 |
| 80 | | 275 |

§ 78.210–7 Forming.

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

§ 78.210–8 Joints.

(a) For slotted containers: Lapped 1½ inches from center of scoreline except as in § 78.210–8(b)(2); stitched at 2½-inch intervals and within 1 inch of each end of joint; body joint must be double-stitched (2 parallel stitches) at each end of joint over 18 inches long.

(b) Joints as provided for by the following are authorized provided resulting joint is capable of withstanding the tests prescribed by § 78.210–10:

(1) For slotted containers only; one butt joint, taped, is authorized.

(2) For glued lap joint, the sides of box forming joint must lap not less than 1¼ inches and be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

(3) For triple and double slide boxes; joints of all slides must be taped or stitched.

§ 78.210–9 Inside cushioning.

(a) Sufficient inside cushioning shall be required for protection of inside containers so that completed packages as offered for shipment shall be capable of withstanding test prescribed by § 78.210–10.

§ 78.210–10 Test for completed package.

(a) A minimum of 4 boxes with inside containers filled with water, and box closed as for shipment, shall be capable of withstanding the following drop tests from the prescribed heights onto solid concrete without leakage from or

breakage of any inside container or rupture of the outside fiberboard box; each box shall be subjected to not more than one of the series of tests:

(1) Box No. 1. Flat drop on bottom from height of 4 feet.

(2) Box No. 2. Flat drop on side from height of 4 feet.

(3) Box No. 3. Flat drop on end from height of 4 feet.

(4) Box No. 4. Flat drop on top from height of 2 feet.

(b) Tests prescribed by paragraph (a) of this section must be conducted prior to initial use of the package and shall be repeated on the change of any components of the package.

§ 78.210–11 Closing for shipment.

(a) By any method capable of withstanding tests prescribed by § 78.210–10.

§ 78.210–12 Marking.

(a) On each container. Symbol in rectangle as follows:

ICC–12A**

(1) Stars to be replaced by authorized gross weight (for example, ICC–12A75). The letters NRC, located just above or below the ICC mark, to indicate a nonreusable container. These marks shall be understood to certify that the outer container complies with all the construction requirements of the specification.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in (a) of this section.

(3) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

§ 78.211 Specification 12P; fiberboard boxes. Nonreusable containers for one inside plastic container greater than 1-gallon capacity, as prescribed in Part 73 of this chapter.

§ 78.211–1 Material requirements.

(a) Boxes shall be of corrugated fiberboard, except as otherwise authorized in this specification, having both outer facings water resistant; corrugating medium shall be at least 0.009 inch thick and weigh not less than 26 pounds per 1,000 square feet; all parts shall be securely glued together throughout all contact areas.

(b) Solid fiberboard is authorized when of strength equal to corrugated fiberboard and in conformance with paragraph (c) of this section.

(c) Fiberboard required and tests as follows:

(1) Fiberboard is hereby classified by strength [1] of completed board as in first column of the following table; weights specified in the table are the minimums authorized.

| Classified strength of completed board [1] | Solid fiberboard—minimum combined weight of component plies exclusive of adhesives (pounds per 1,000 sq. ft.) | Single-wall—minimum combined weight of facings (pounds per 1,000 sq. ft.) | Double-wall—minimum combined weight of facings including center facings (pounds per 1,000 sq. ft.) |
|---|---|---|---|
| 175 | 149 | 75 | |
| 200 | 190 | 84 | 92 |
| 275 | 237 | 138 | 110 |
| 325 | 237 | 138 | 110 |
| 350 | 283 | 180 | 126 |
| 375 | 283 | 180 | 180 |
| 400 | 283 | 180 | 180 |
| 450 | 283 | 180 | 180 |
| 500 | 330 | | 222 |

[1] Mullen or Cady Test (minimum).

(2) Tests of acceptable completed board must have prescribed strength, Mullen or Cady test, after exposure for at least 3 hours to normal atmospheric conditions (50 to 70 percent relative humidity) under test, as follows:

(i) Clamp board firmly in machine and turn wheel at constant speed of approximately 2 revolutions per second.

(ii) Six bursts required, 3 from each side; all results but one must show prescribed strength.

(iii) Board failing may be retested by making 24 bursts, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(iv) For corrugated fiberboard, double-pop tests may be disregarded.

§ 78.211–2 Construction requirements.

(a) Corrugated or solid fiberboard boxes of any type capable of withstanding tests prescribed by § 78.211–5 authorized when constructed in accordance with requirements of this section.

(b) Corrugated or solid fiberboard boxes in accordance with the following table are authorized.

| Gross weight not over (pounds) | Strength of fiberboard (minimum) Mullen or Cady test | | |
|---|---|---|---|
| | Solid board | Single-wall corrugated | Double-wall corrugated |
| 20 | 200 | 200 | 200 |
| 60 | 350 | 350 | 275 |
| 80 | 500 | 450 | 350 |

(c) All parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding. Box must provide snug fit for inside plastic container.

(d) Joints (manufacturer's). The joint is defined as that part of the box where the ends of the sheet are joined together by taping, stitching or gluing.

(1) For glued or stitched lap joint, the sides of box forming joint must lap not less than 1¼ inches. Glued joints must be firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after film application has dried.

(2) Butt-joints, taped, are authorized providing resulting joints are capable of withstanding tests prescribed by § 78.211–5.

§ 78.211–3 Design limitations.

(a) Design limitations are as follows:

(1) Permitted when perforated or die-cut areas remain intact following tests prescribed for box by § 78.211–5.

(i) Outer closing flaps may have perforated areas of no greater size than is necessary to provide access to closure of plastic container; inner flaps may have die-cut areas of similar type.

(ii) Die-cut holes in outer and inner closing flaps when closure for plastic container is attached to a metal plate inserted between the inner and outer flaps or when closure area is protected by means of a plug-in or screw cap or similar device. The diameter of these holes shall be less than the diameter of the metal plate.

(iii) Inside facing of fiberboard closure flaps may be cut or perforated for opening. A tear strip may be incorporated in the body wall of fiberboard boxes provided it is above the shoulder area of the plastic container and this may be accompanied by a nominal thumb-notch in the manufacturer's joint or in a side panel of the box.

(iv) Handholes, by perforation or other means, in any part of the box providing the face having the handhole is backed up by a fiberboard sheet of equal strength of box in full height and width of that face or that handholes are above the neck area of the plastic container. No more than one handhole in any face nor more than two per box.

(2) Not permitted:

(i) Stitched manufacturer's joint or stitched closures when any such stitch (staple) is in direct contact with the inside plastic container.

§ 78.211–4 Closure.

(a) Closure of any type is authorized provided representative boxes are capable of withstanding tests prescribed by § 78.211–5.

§ 78.211–5 Tests.

(a) Representative samples of the completed composite container assembled, filled and closed as for use must be capable of withstanding tests prescribed in the specification for the inside plastic container without rupture of the fiberboard boxes that produces a condition of the box that could result in potential damage to the inside container.

§ 78.211–6 Marking.

(a) On each container. Symbol in rectangle as follows:

ICC–12P**

(1) Stars to be replaced by authorized gross weight for which box was constructed (for example, ICC–12P80). The letters NRC, located just above or below the ICC mark, to indicate a nonreuseable container. These marks shall be understood to certify that the outer container complies with all the construction requirements of the specification.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in (a) of this section.

(3) Size of markings: Specification as prescribed in paragraph (a)(1) of this section must be at least ½ inch high; other markings must be legible .

**§ 78.214 Specification 23F; fiberboard boxes.**

**§ 78.214–1 Compliance.**

(a) Required in all details.

**§ 78.214–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box are connected together in setting up the box. Generally done by box maker.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.214–3 Solid fiberboard.**

(a) To be 3-ply or more; both outer plies waterproofed.

**§ 78.214–4 Corrugated fiberboard.**

(a) Both outer facings water resistant; corrugated sheets at least 0.009" thick; all parts securely glued together throughout all contact areas; minimum combined weight of facings not less than 84 pounds per 1,000 square feet, except when only one lining tube is used as provided by § 78.214–15 (b), minimum combined weight of facings must be not less than 138 pounds per 1,000 square feet.

**§ 78.214–5 Stitching staples.**

(a) Of steel wire, copper-coated or equivalent in nonsparking quality, at least $\frac{9}{32}$" x 0.019", or equal cross section, formed into staples about $\frac{7}{16}$" wide.

**§ 78.214–6 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (500 sheets, 24" x 36"); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape.

**§ 78.214–7 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

(4) For corrugated fiberboard, double-pop tests may be disregarded.

**§ 78.214–8 Type authorized.**

(a) Of solid fiberboard; 1-piece, or 3-piece without recessed heads, fitted with lining tube or lining tubes as prescribed in § 78.214–15, except that lining tubes are not required for boxes used for shipments of high explosives packed in accordance with § 73.63(a)(3) of this chapter or electric blasting caps packed in accordance with § 73.66(g)(1) of this chapter, or when box is constructed of 1-piece of not less than 600-pound test board weighing not less than 300 pounds per 1,000 square feet. Boxes having handholes are authorized when approved by the Bureau of Explosives.

**§ 78.214–9 Inside packing and size limits.**

(a) As prescribed in § 78.214–15.

**§ 78.214–10 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.214–11 Joints.**

(a) Lapped 1½ inches from center of scoreline except as in § 78.214–12; stitched at 2½-inch intervals and within 1 inch of each end of joint; double-stitched (2 parallel stitches) at each end of joint over 18 inches long; or lapped not less than 1¼ inches and firmly glued throughout entire area of contact with a glue or adhesive which cannot be dissolved in water after the film application has dried.

**§ 78.214–12 Flanged heads.**

(a) Must have 4 flanges, at least 1" long above fillet, on each head. Recessed flanged heads not authorized.

**§ 78.214–13 Seams which are to be stitched.**

(a) Overlap, if any, required to be at least 1½ inches from center of scoreline except as in § 78.214–12.

**§ 78.214–14 Flap closures.**

(a) Flaps must butt or have full overlap excepting that inner flaps may overlap ½ inch.

**§ 78.214–15 Authorized gross weight (when packed) and parts required.**

(a) Box to be of solid fiberboard, special waterproofed, at least 300-pound test, and weighing at least 250 pounds per thousand square feet. Tubes to be of solid or corrugated fiberboard at least 200-pound test and of 1-piece, or as provided in subparagraph (1) of this paragraph, with adjoining edges stitched, taped, or glued. Glued or stitched lap not less than 1¼". Lap must be firmly glued throughout entire area of contact with glue or adhesive which cannot be dissolved in water after the film application has dried.

(1) Or, box shall have one tube liner of solid fiberboard weighing at least 283 pounds per 1,000 square feet with joint or joints either stitched or glued as prescribed in paragraph (a) of this section. One end of the tube may have a handhole approximately ¾" deep located at the center of the top and a perforation with a minimum of ⅛" cuts and ⅛" webs extending from the handhole to the bottom.

(b) Authorized gross weight; 65 pounds when 2 or more lining tubes are used to divide the box into 2 or more compartments; 65 pounds when 1 or more lining tubes are used and contents will consist of 1 cartridge only or of black powder in bags; 65 pounds when boxes without lining tubes are used for shipments of high explosives packed in accordance with § 73.63(a)(3) of this chapter or electric blasting caps packed in accordance with § 73.66(g)(1) of this chapter; 35 pounds in all other cases except that boxes having a single solid fiberboard lining tube, the fiberboard weighing at least 283 pounds per 1,000 square feet, or corrugated fiberboard lining tube as prescribed in § 78.214–4(a), are authorized for 65 pounds gross weight.

**§ 78.214–16 Closing for shipment.**

(a) By any method capable of withstanding tests prescribed by § 78.214–20 without failure.

**§ 78.214–17 Marking.**

(a) On each container. Symbol in rectangle as follows:

ICC–23F•••

(1) Stars to be replaced by authorized gross weight (for example, ICC–23F35 or ICC–23F65). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in this paragraph.

(3) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.214–18 Special tests.**

(a) *By whom and when.* By or for each plant making the boxes; at beginning of manufacture and at six-month intervals thereafter; on largest size, by weight. Smaller sizes need not be tested if they have the same or equivalent construction. Report of results, with all pertinent data, to be maintained on file for one year; copy to be filed with the Bureau of Explosives.

**§ 78.214–19 Material.**

(a) Box material (special waterproofed board) must be 300-pound test board and weigh at least 250 pounds per thousand square feet when commercially dry.

(b) Box material must also have 200-pound test strength and moisture content not over 30 percent as follows:

(1) Immediately after exposure for 3 days to 90 percent humidity at 75° F.

(2) Immediately after it has been in contact with water for 3 hours under 3" head at 75° F.

NOTE: The test shall be conducted on a sample no greater than 6 inches in diameter when exposed to water. The sample shall be rigidly fastened to a water column device so constructed as to provide at least a 3-inch head of water on the outer surface of the fiberboard sample. The water column device must be suspended in such manner that free circulation of air on the inner surface of fiberboard sample which is not exposed to water is permitted. After contact with water for 3 hours under conditions specified, the water column device shall be emptied, the sample blotted, and immediately subjected to Mullen or Cady test. (A 6-inch diameter pipe having a welded flange to which the sample is secured by a bolted ring flange is acceptable.)

**§ 78.214–20 Completed containers.**

(a) Samples must pass the following immediately after exposure for 2 weeks to 90 percent humidity at 75° F.; loaded containers shall contain dummy contents of shape and weight of the expected contents, and shall be closed in same manner as for shipment:

(1) Three loaded samples to be tested. Each must withstand 200 drops in standard 7-foot revolving test drum with pointed hazard in place, without spilling any contents.

(2) Three loaded samples to be tested. Each must withstand end to end pressure of at least 500 pounds without deflection of over 1½".

(3) Three empty samples to be tested. Each must withstand top to bottom pressure of at least 500 pounds without deflection of over ½ inch.

(b) As an alternate to the drum test specified in paragraph (a), 3 loaded samples must pass the drop test specified below:

(1) Box shall be dropped from height of 2 feet.

(2) Identification of face, edge, and corners. Facing one end (with the manufacturer's joint on the observer's right), the top of the box is designated as 1, the right side as 2, the bottom as 3, and the left side as 4. The near end is designated as 5 and the far end as 6. The edges are identified by the number of the two faces which make that edge, as for example, 1–2 identifies the edge where the top and right side meet and 2–5 the edge having the manufacturer's joint. The corners are identified by the number of the three faces which meet to form that corner, as for example, 1–2–5 identifies the corner where the top, the right side, and the near end meet.

(c) Drop sequence as follows:

(1) A corner drop on 1–2–5.

(2) An edge drop on the shortest edge radiating from that corner (usually 2–5).

(3) An edge drop on the next shortest edge radiating from that corner (usually 1–5).

(4) An edge drop on the longest edge radiating from that corner (usually 1–2).

(5) A flatwise drop on one of the smallest faces (usually end 5 or 6).

(6) A flatwise drop on the opposite smallest face.

(7) A flatwise drop on one of the medium faces (usually side 2 or 4).

(8) A flatwise drop on the opposite medium face.

(9) A flatwise drop on one of the largest faces (usually top 1 or bottom 3).

(10) A flatwise drop on the opposite large face.

This completes one cycle of ten drops. Commence the next cycle with a drop on the corner diagonally opposite through the box to the corner on which the first drop was made, on corner 3–4–6. Commence the third cycle of ten drops with corner 1–4–5. Each loaded container must withstand 3 cycles without spilling or sifting of contents.

**§ 78.218 Specification 23G; special cylindrical fiberboard box for high explosives.**

**§ 78.218–1 Compliance.**

(a) Required in all details.

**§ 78.218–2 Definition.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

**§ 78.218–3 Side walls, ends, and interior.**

(a) Side walls. To be not less than four-ply of continuous fiber sheets convolutely or spirally wound; combined strength to be not less than 300 pounds, dry; combined thickness to be not less than 0.050" for containers not exceeding 10 pounds gross weight and not less than 0.060" for containers over 10 pounds gross weight.

(b) *Ends.* To be of one or more plies of fiberboard sufficiently strong to withstand prescribed tests. Wax or plastic material with fiberboard inserts authorized provided the completed container will withstand the prescribed tests at temperatures from zero to one hundred thirty degrees F.

(c) *Interior.* Interior of the container must be lined or so treated as to prevent penetration by the commodity with which the container is filled for shipping.

**§ 78.218–4 Stitching staples.**

(a) If used, shall be of steel wire, copper-coated or equivalent in nonsparking quality, at least $\frac{9}{32}$" by 0.019" or equivalent cross section formed into staples approximately $\frac{7}{16}$" wide.

**§ 78.218–5 Tape.**

(a) Coated with animal glue at least equal to No. 1¾ Peter Cooper standard or other adhesive equivalent in tensile properties and resistance to deterioration. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 Kraft paper, total weight 80 pounds per ream (480 sheets, 24" x 36"); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape.

**§ 78.218–6 Test of board.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

**§ 78.218–7 Type of container authorized.**

(a) One cylindrical tube or;

(b) Two cylindrical tubes butted together and taped or glued completely around circumference at joints to make positive closure.

(c) Open ends to be closed in such a manner as to give complete closure which will withstand prescribed tests.

**§ 78.218–8 Approval of specification required.**

(a) Specification for each type of container manufactured (under the specification) must be filed with and approved by the Bureau of Explosives. Changes in construction (container and closure) differing from specification thus filed must be approved before authorized for use.

**§ 78.218–9 Authorized size and weight limit.**

(a) Maximum authorized outside diameter of container is 12".

(b) Maximum authorized gross weight of container is 65 pounds.

**§ 78.218–10 Marking.**

(a) On each container by symbol as follows:

ICC–23G • • •

(1) Stars to be replaced by *authorized gross weight* (for example, ICC–23G40, ICC–23G65, etc.). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and located just above, below, or following the mark specified in this paragraph.

(3) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.218–11 Special tests.**

(a) *By whom and when.* By or for each plant making the boxes; at beginning of manufacture and at 6-month intervals thereafter; on largest size, by weight. Smaller sizes need not be tested if they have the same or equivalent construction. Report of results, with all pertinent data, to be maintained on file for one year; copy to be filed with the Bureau of Explosives.

**§ 78.218–12 Material.**

(a) Box material must be not less than 300 pound test board when commercially dry.

(b) Box material must also have 200-pound test strength, moisture content not over 30 percent and puncture strength not less than 200 units, as determined by General Electric Puncture Tester using an average obtained from a series of five tests, as follows:

(c) Immediately after exposure for 3 days under either of the following conditions:

(1) 70 percent humidity at 100° F.

(2) 90 percent humidity at 75° F.

**§ 78.218–13 Completed containers.**

(a) Samples must pass the following tests immediately after exposure for 2 weeks to 90 percent humidity at 75° F. or 70 percent humidity at 100° F.; loaded containers shall contain dummy contents of shape and weight same as expected contents.

(1) Three loaded samples to be tested. Each must withstand end to end pressure of at least 500 pounds without deflection of over 1½''; speed of compression tester to be ½'' per minute plus ¼'' minus ¼'' per minute.

(2) Three loaded samples to be tested. Each must withstand side to side pressure of at least 500 pounds without deflection of over ½''; except that for boxes with fluted crimped ends the deflection shall not exceed ¾''; speed of compression tester to be ½'' per minute plus ¼'' minus ¼'' per minute.

(3) Three loaded samples to be tested. Each must withstand, without rupture, four 4-foot drops diagonally on the end more likely to cause rupture on impact.

(4) Three loaded samples to be tested. Each must be dropped once, flat on its side, across another similar package lying flat upon the ground with its longitudinal axis at right angles to container dropped. Drops must be made from a height four feet above the topmost point of the container on the ground.

(b) As an alternate to compression test requirements of paragraph (a) (1) and (2) of this section, samples must pass the following tests immediately after exposure for 2 weeks to 90 percent humidity at 75° F. or 70 percent humidity at 100° F.; loaded containers shall contain dummy contents of shape and weight same as expected contents. Static loading tests as specified herein must be conducted with the prescribed weight in place for at least 60 minutes, with deflection of container not in excess of the following:

(1) Three loaded samples to be tested. Each container must be capable of withstanding end-to-end pressure of at least 375 pounds without deflection over 1½ inches.

(2) Three loaded samples to be tested. Each container must be capable of withstanding side-to-side pressure of at least 350 pounds without deflection over ½ inch.

**§ 78.219 Specification 23H; fiberboard boxes.**

**§ 78.219–1 Compliance.**

(a) Required in all details.

**§ 78.219–2 Definitions.**

(a) Terms such as "200-pound test" mean minimum strength, Mullen or Cady test.

(b) "Joints" are where edges of parts of box are connected together in setting up box.

(c) "Seams" are where edges of parts of box are visible, except joints, when box is closed.

**§ 78.219–3 Solid fiberboard.**

(a) To be 3-ply or more; both outer plies waterproofed.

**§ 78.219–4 Stitching staples.**

(a) Of steel wire, copper-coated or equivalent in nonsparking quality, at least 3/32'' x 0.019'', or equal cross section, formed into staples about 7/16'' wide.

**§ 78.219–5 Tape.**

(a) Coated with glue at least equal to No. 1¾ Peter Cooper standard. Cloth tape of strength, across the woof, at least 70 units, Elmendorf test. Sisal tape of 2 sheets of No. 1 kraft paper, total weight 80 pounds per ream (500 sheets, 24'' x 36''); sheets to be combined with asphalt and reinforced by unspun sisal fibers completely embedded in the asphalt and extending across the tape.

**§ 78.219–6 Test.**

(a) Acceptable board must have prescribed strength, Mullen or Cady test, under test as follows:

(1) Clamp board firmly in machine and turn wheel thereof at constant speed of approximately 2 revolutions per second.

(2) Six punctures required, 3 from each side; all results but one must show prescribed strength.

(3) Board failing may be retested by making 24 punctures, 12 from each side; when all results but 4 show prescribed strength the board is acceptable.

**§ 78.219–7 Type authorized.**

(a) Of solid fiberboard, telescoping type construction without recessed heads. Box to consist of top and bottom sections, divided equally or unequally, and inner lining tube or full depth cover 2-piece telescope type in which case the lining tube may be omitted. The lining tube, when required, must be staple stitched to the lower section of the box to give in effect a 2-piece box.

(b) Hand-holes oval in shape, not more than 1 inch in width by 3 inches in length and horizontal with top score line, are authorized in ends of top section of full depth cover telescope type boxes.

**§ 78.219–8 Inside packing and size limits.**

(a) As prescribed in § 78.219–11.

**§ 78.219–9 Forming.**

(a) Parts must be cut true to size and so creased and slotted as to fit closely into position without cracking, surface breaks, separation of parts outside of crease, or undue binding.

**§ 78.219–10 Joints.**

(a) Lapped at least 1½ inches from center of scoreline; staple stitched at 2½-inch intervals and within 1 inch of each end of joint; 2 banks of staple stitches in each joint.

**§ 78.219–11 Authorized gross weight (when packed) and parts required.**

(a) Box to be of solid fiberboard, special waterproofed at least 300-pound test, and weighing at least 250 pounds per thousand square feet. Tubes to be of solid fiberboard at least 200-pound test and of 1 piece with adjoining edges staple stitched or taped.

(b) Authorized gross weight: 65 pounds when 2 or more lining tubes are used to divide the box into 2 or more compartments; 65 pounds when 1 or more lining tubes are used and contents will consist of 1 cartridge only or of black powder in bags; 35 pounds in all other cases except that boxes having a single solid fiberboard lining tube, the fiberboard weighing at least 283 pounds per 1,000 square feet, are authorized for 65 pounds gross weight. Boxes of 2-piece telescope type having full depth cover are authorized for 65 pounds gross weight.

**§ 78.219–12 Closing for shipment.**

(a) By any method capable of withstanding tests prescribed by § 78.219–16 without failure.

**§ 78.219–13 Marking.**

(a) On each container. Symbol in rectangle as follows:

ICC—23H•••

(1) Stars to be replaced by authorized gross weight (for example ICC–23H35 or ICC–23H65). This mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of plant making the container; symbol (letters) authorized if recorded with the Bureau of Explosives. This mark to be located just above or below the mark specified in paragraph (a) of this section.

(3) Size of markings: Specification markings prescribed in subparagraph (1) of this paragraph must be at least ½ inch high; other markings must be legible.

**§ 78.219–14 Special tests.**

(a) *By whom and when.* By or for each plant making the boxes; at beginning of manufacture and at six-month intervals thereafter; on largest size, by weight. Smaller sizes need not be tested if they have the same or equivalent construction. Report of results, with all pertinent data, to be maintained on file for one year; copy to be filed with the Bureau of Explosives.

**§ 78.219–15 Material.**

(a) Box material (special waterproofed board) must be 300-pound test board and weigh at least 250 pounds per thousand square feet when commercially dry.

(b) Box material must also have 200-pound test strength and moisture content not over 30 percent as follows:

(1) Immediately after exposure for 3 days to 90 percent humidity at 75° F.

(2) Immediately after it has been in contact with water for 3 hours under 3'' head at 75° F.

NOTE: The test shall be conducted on a sample no greater than 6 inches in diameter when exposed to water. The sample shall be rigidly fastened to a water column device so constructed as to provide at least a 3-inch head of water on the outer surface of the fiberboard sample. The water column device must be suspended in such manner that free circulation of air on the inner surface of fiberboard sample which is not exposed to water is permitted. After contact with water for 3 hours under conditions specified, the water column device shall be emptied, the sample blotted, and immediately subjected to Mullen or Cady test. (A 6-inch diameter pipe having a welded flange to which the sample is secured by a bolted ring flange is acceptable.)

**§ 78.219–16 Completed containers.**

(a) Samples must pass the following immediately after exposure for 2 weeks to 90 percent humidity at 75° F.; loaded containers shall contain dummy contents of shape and weight of the expected contents, and shall be closed in same manner as for shipment:

(1) *Three loaded samples to be tested.* Each must withstand 200 drops in standard 7-foot revolving test drum with pointed hazard in place, without spilling any contents.

(2) *Three loaded samples to be tested.* Each must withstand end to end pressure of at least 500 pounds without deflection of over 1½''.

(3) Three empty samples to be tested. Each must withstand top to bottom pressure of at least 500 pounds without deflection of over ½ inch.

(b) As an alternate to the drum test specified in paragraph (a), 3 loaded samples must pass the drop test specified below:

(1) Box shall be dropped from height of 2 feet.

(2) Identification of face, edge, and corners. Facing one end (with the manufacturer's joint on the observer's right), the top of the box is designated as 1, the right side as 2, the bottom as 3, and the left side as 4. The near end is designated as 5 and the far end as 6. The edges are identified by the number of the two faces which make that edge, as for example, 1–2 identifies the edge where the top and right side meet and 2–5 the edge having the manufacturer's joint. The corners are identified by the number of the three faces which meet to form that corner, as for example, 1–2–5 identifies the corner where the top, the right side, and the near end meet.

(c) Drop sequence as follows:

(1) A corner drop on 1–2–5.

(2) An edge drop on the shortest edge radiating from that corner (usually 2–5).

(3) An edge drop on the next shortest edge radiating from that corner (usually 1–5).

(4) An edge drop on the longest edge radiating from that corner (usually 1–2).

(5) A flatwise drop on one of the smallest faces (usually end 5 or 6).

(6) A flatwise drop on the opposite smallest face.

(7) A flatwise drop on one of the medium faces (usually side 2 or 4).

(8) A flatwise drop on the opposite medium face.

(9) A flatwise drop on one of the largest faces (usually top 1 or bottom 3).

(10) A flatwise drop on the opposite large face.

This completes one cycle of ten drops. Commence the next cycle with a drop on the corner diagonally opposite through the box to the corner on which the first drop was made, on corner 3–4–6. Commence the third cycle of ten drops with corner 1–4–5. Each loaded container must withstand 3 cycles without spilling or sifting of contents.

**§ 78.224 Specification 21C; fiber drum.**

**§ 78.224–1 Construction requirements.**

(a) Parts and dimensions as follows:

(1) Drums for dry products; minimum requirements unless otherwise stated:

| Net weight of contents (pounds) (not over) | Capacity, maximum (gallons) (not over) | Diameter, inside, maximum, (inches) | Sidewall strength (pounds)[1] [2] | Tops and bottoms | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | | Fiber[3] | | Steel | Wood (thickness, inches) | |
| | | | | Thickness (inches) | Strength [1] | (U.S. gauge) | Solid [4] [5] | Plywood, at least 3-ply construction |
| 60 | 5 | 11¼ | 500 | 0.090 | 600 | 28 | 13/16 | 5/11 |
| 80 | 20 | 18½ | 600 | .120 | 800 | 28 | 13/16 | 5/16 |
| 115 | 20 | 18½ | 700 | .120 | 800 | 26 | 13/16 | 3/8 |
| 115 | 55 | 23 | 800 | .160 | 1100 | 26 | 13/16 | 7/16 |
| 250 | 55 | 23 | 900 | .200 | 1200 | 24 | 13/16 | 7/16 |
| 400 | 75 | 23 | 1000 | .220 | 1300 | 24 | 13/16 | 7/16 |

[1] *Mullen or Cady Test.* Either of the following test methods may be used. When more than single ply, test shall be determined from the summation of the tests of individual plies; or, when test is made on a complete drum, the punctures shall be made from the exterior to the interior surface, in which case the values for sidewall shall be not less than 80 percent of the value in the above table and the values for fiber tops and bottoms shall be not less than the value in the above table. There shall be a minimum of six tests and the average shall be not less than the prescribed minimum requirements.

[2] *Sidewalls.* Sidewalls to be convolutely wound of fiberboard at least 0.012 inch thick, the plies being secured together with adhesives; or may consist of an outer shell and an inner tube each convolutely wound with each fiberboard ply not less than 0.012 inch thick and secured together with adhesive. Drums may contain barrier or lining materials.

[3] When made of 2 or more discs, the discs must be fastened together with adhesive.

[4] Joints in head must be Linderman joints, glued, except as specified in footnote 5.

[5] Wooden heads at least one-half inch thick having kraft paper glued on both sides at all contact areas with water-resistant adhesive are authorized provided tests prescribed in § 78.224–2 are successful. Joints of any type are authorized.

[6] Minimum thickness may be reduced to 25/32 inch for lumber dressed two sides.

(2) Drums for liquids contained in inside plastic containers as prescribed in Part 73 of this chapter, specifications for which are detailed in this part, shall comply with the construction requirements for drums for dry products and as follows:

| Marked rated capacity of inside plastic container (gallons) (not over) | Minimum construction requirement for dry products (pounds) | Authorized maximum net weight of liquid contents (pounds) (not over) |
|---|---|---|
| 6¼ | 60 | 105 |
| 15 | 115 | 245 |
| 30 | 225 | 450 |
| 55 | 400 | 550 |

NOTE 1: See § 78.224–2 for test requirements; § 78.224–4 for marking requirements.

NOTE 2: Drums must provide snug fit for inside plastic container.

NOTE 3: Top head of drums may have holes of suitable size to provide for closure parts of inside container; bottom head may have not more than three holes not over 3/16 inch in diameter each for drainage.

**§ 78.224–2 Type tests.**

(a) Conditioning: Prior to testing, drums shall be conditioned at 50 percent relative humidity plus or minus 2 percent and 75° F. plus or minus 3° F. for at least 48 hours.

(b) Drop tests: Samples taken at random filled with dry finely powdered material to authorized net weight and closed as for use must withstand the following four foot drop tests on the part specified without leakage or serious rupture. No single drum shall be subjected to more than one of the following tests. Drums with wood heads shall be dropped with grain of wood in cover parallel to concrete surface.

(1) Top chime, diagonally onto solid concrete.

(2) Bottom chime, diagonally onto solid concrete.

(3) Sidewall, over a 2-inch x 6-inch timber resting on solid concrete with 6-inch leg vertical; drop to be made with drum in horizontal position at right angles to the timber.

(4) The closure or on any other part which may be considered weaker onto solid concrete.

(c) Compression test: An empty drum shall withstand either of the following compression tests, in accordance with the following table, without buckling of the sidewalls sufficient to cause damage to its expected contents; but in no case shall the maximum deflection be more than one inch.

| Maximum net weight | Maximum capacity (gallons) | Maximum inside diameter (inches) | Compression (pounds) | |
|---|---|---|---|---|
| | | | Static [1] | Dynamic [2] |
| 60 | 5 | 11¼ | 1200 | 1600 |
| 80 | 20 | 18½ | 1200 | 1600 |
| 115 | 20 | 18½ | 1200 | 1600 |
| 115 | 55 | 23 | 1500 | 2000 |
| 225 | 55 | 23 | 1800 | 2400 |
| 400 | 75 | 23 | 2100 | 2800 |

[1] *Static Test.* Compression as specified must be applied to full area of top cover of drum for period of 48 hours.

[2] *Dynamic Test.* Compression as specified must be applied end to end. Speed of compression tester to be one-half inch plus or minus one-fourth inch per minute.

(d) Drums for inside plastic containers for liquids shall be constructed and tested as prescribed in § 78.224–1(a) (2) and paragraphs (a), (b), (c), and (e) of this section. When combined with inside plastic container authorized in Part 73 of this chapter, the composite container must be tested in accordance with requirements detailed in specifications for the inside plastic container and shall develop no condition that would be of such nature as to contribute to potential failure of inner container.

(e) The tests described above must be made by any company starting production, for each plant location of manufacture, on samples taken at random of each type and diameter of container and must be repeated every four months or less during production. Samples last tested must be retained until further tests are made. The tests and procedure described may be conducted at one central laboratory when testing facilities are not available at all plants, in which case the Bureau of Explosives shall be advised of the location where the tests are conducted.

**§ 78.224–3 Registration of drum specification.**

(a) Specification for each type of drum manufactured (under this specification) shall be filed with the Bureau of Explosives. Changes in construction (drum and closure) differing from specification thus filed must be approved by the Bureau of Explosives before authorized for use.

**§ 78.224–4 Marking.**

(a) On each container as follows:

(1) Drums for dry products must be marked ICC–21C followed by the authorized net weight to which drum was constructed, for example, ICC–21C115.

(2) Drums for inside plastic containers for liquids must be marked ICC–21CP followed by the authorized net weight for dry products and the authorized net weight for liquid products to which the drum was constructed, for example, ICC–21CP115/245.

(3) Marks specified in paragraph (a) (1) and (2) of this section shall be understood to certify that the fiber drum complies with all specification requirements.

(4) Name or symbol (letters) of maker; this must be registered with the Bureau of Explosives and be located just above, below, or following the mark specified in paragraph (a) (1) or (2) of this section.

**§ 78.226 Specification 29; mailing tubes.**

**§ 78.226–1 Compliance.**

(a) Required in all details.

**§ 78.226–2 Cushioning.**

(a) Inside containers, if any, must fit closely in tube or be properly cushioned.

**§ 78.226–3 Construction.**

(a) Of fiber at least ⅛" thick; metal bottom and metal screw-cap top, or telescope type with fixed metal ends.

**§ 78.226–4 Marking.**

(a) On each container by letters and figures as follows: ICC–29; this mark shall be understood to certify that the container complies with all specification requirements.

## Subpart G—Specifications for Bags, Cloth, Burlap or Paper

**§ 78.230 Specification 36A; lined cloth bags (triplex).**

**§ 78.230–1 Compliance.**

(a) Required in all details.

**§ 78.230–2 Capacity.**

(a) Not over 100 pounds, net.

**§ 78.230–3 Cloth.**

(a) Osnaburg cotton cloth at least 8½ ounces per square yard.

NOTE 1: Because of the present emergency and until further order of the Commission, cloth of 40-inch width, 2.11 yards per pound, may be used, provided creped paper is of two-way stretch construction.

**§ 78.230–4 Paper.**

(a) Shipping sack Kraft, creped. A "ream" as used herein means 500 sheets 24 inches by 36 inches before creping.

**§ 78.230–5 Assembly.**

(a) Either of the following:

(1) *Single bag.* Cloth-lined with 2 sheets of creped paper, each at least 35 pounds per ream, cemented together and to cloth. Combined tensile strength at least 100 pounds, warp and fill.

(2) *Triple bag.* Outer of cloth; intermediate of 2 thicknesses of creped paper, each at least 30 pounds per ream, cemented together with asphalt so as to weigh 90 pounds per ream; inner of creped paper at least 45 pounds per ream.

**§ 78.230–6 Seams.**

(a) To be dust-tight.

**§ 78.230–7 Test.**

(a) The finished container, filled and closed as for shipment, must be capable of withstanding drop test of 4 feet without sifting.

**§ 78.230–8 Marking.**

(a) Marking on each container by marks at least 1" high as follows:

(1) ICC–36A; this mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of maker; located above or below the mark specified in subparagraph (1) of this paragraph; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.230–9 Closing for shipment.**

(a) By double tying with steel wires at least No. 16 Birmingham wire gauge; inner bags, if any, to have edges rolled in before outer bag is tied.

**§ 78.233 Specification 36B; burlap bags, lined.**

**§ 78.233–1 Compliance.**

(a) Required in all details.

**§ 78.233–2 Capacity.**

(a) Not over 100 pounds, net.

**§ 78.233–3 Burlap.**

(a) At least equal in quality and strength to 10-oz., 40" (10/40), Calcutta A and/or B mill grade. Thread count at least 11 per 37/40", porter, and 12 per inch, shot; this to be an average of 6 counts.

**§ 78.233–4 Paper.**

(a) Shipping sack Kraft, creped; at least 25 pounds per ream (500 sheets 24" x 36") before creping.

**§ 78.233–5 Assembly.**

(a) Burlap to be lined with 2 sheets of creped paper cemented together and to burlap.

(b) Adhesive between paper sheets to be asphalt, melting point 150° F., at minimum rate of 110 pounds per ream.

(c) Adhesive between paper and burlap to be either:

(1) Curing rubber latex at minimum rate of 40 pounds, dry weight, per ream.

(2) Asphalt, any desirable type, at minimum rate of 110 pounds per ream.

**§ 78.233–6 Stretch of paper lining.**

(a) At least equal to that of burlap in direction of warp and fill and equal to 10 percent in diagonal direction.

**§ 78.233–7 Seams.**

(a) By cementing or taping to give seam strength at least equal to that of bag material and prevent sifting.

**§ 78.233–8 Test.**

(a) The finished container, filled and closed as for shipment, must be capable of withstanding drop test of 4 feet on the butt without sifting or rupture of burlap or liners.

**§ 78.233–9 Marking.**

(a) Marking on each container by marks at least 1" high as follows:

(1) ICC–36B; this mark shall be understood to certify that the container complies with all specification requirements.

(2 Name and address of maker; located above or below the mark specified in subparagraph (1) of this paragraph; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.233–10 Closing for shipment.**

(a) As specified for seams, § 78.233–7; or, by tying with 2 steel wires of at least No. 16 Birmingham wire gauge.

**§ 78.234 Specification 36C; burlap bags, paper lined.**

**§ 78.234–1 Compliance.**

(a) Required in all details.

**§ 78.234–2 Capacity.**

(a) Not over 100 pounds, net.

**§ 78.234–3 Burlap.**

(a) At least equal in quality and strength to 7½ ounce, 40 inch (7½/40) Calcutta A and/or B mill grade. Thread count at least 9 per 37/40 inch, porter, and 9 per inch, shot; this to be an average of 6 counts.

**§ 78.234–4 Paper.**

(a) Shipping sack Kraft, creped; at least 30 pounds per ream (500 sheets 24" x 36") before creping.

**§ 78.234–5 Assembly.**

(a) Burlap to be lined with 1 sheet of creped paper cemented to burlap.

(b) Adhesive between paper and burlap to be asphalt, any desirable type, at a minimum rate of 110 pounds per ream.

**§ 78.234–6 Stretch of paper lining.**

(a) At least equal to that of burlap in direction of warp and fill and equal to 10 percent in diagonal direction.

**§ 78.234–7 Seams.**

(a) By cementing or taping to give seam strength at least equal to that of bag material and prevent sifting.

**§ 78.234–8 Test.**

(a) The finished container, filled and closed as for shipment, must be capable of withstanding drop test of 4 feet on the butt without sifting or rupture of burlap liners.

**§ 78.234–9 Marking.**

(a) Marking on each container by marks at least 1" high as follows:

(1) ICC–36C; this mark shall be understood to certify that the container complies with all specification requirements.

(2) Name and address of maker; located above or below the mark specified in subparagraph (1) of this paragraph; symbol (letters) authorized if registered with the Bureau of Explosives.

**§ 78.234–10 Closing for shipment.**

(a) As specified for seams, § 78.234–7; or by tying with 2 steel wires of at least No. 16 Birmingham wire gauge, or any other type of equal efficiency that will be sift-proof and insure equal strength to body of bag.

**§ 78.236 Specification 44B; multiwall paper bags.**

**§ 78.236–1 Compliance.**

(a) Required in all details.

**§ 78.236–2 Paper.**

(a) Shipping sack kraft paper, plain, or extensible plain, shall conform to the average requirements specified in paragraph (a) (1) or (2) of this section.

(1) Shipping sack, kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36") [2] | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | |
|---|---|---|---|---|
| | M.D. [3] | Total M.D. plus C.D. [3] | C.D. [3] | Total C.D. plus M.D. [3] |
| Pounds: | *Grams* | *Grams* | *Pounds* | *Pounds* |
| 40 | 88 | 188 | 14 | 41 |
| 50 | 110 | 235 | 19 | 53 |
| 60 | 132 | 282 | 23 | 64 |
| 70 | 154 | 329 | 27 | 74 |

[1] Shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating, or impregnating for special qualities. Paper shall have a degree of water resistance as secured by normal rosin sizing and shall comply with the requirements in paragraph (a)(1) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M.D. means machine direction. C.D. means cross direction.

(2) Shipping sack, extensible kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36") [2] | Minimum dry tearing strength | | Minimum tensile energy absorption ft./lbs. per square foot of paper | |
|---|---|---|---|---|
| | M. D. [3] | Total M. D. plus C. D. [3] | C. D. [3, 4] | Total C. D. plus M. D. [3, 4] |
| Pounds: | *Grams* | *Grams* | | |
| 40 | 88 | 188 | 4.5 | 14.0 |
| 50 | 110 | 235 | 5.6 | 17.0 |
| 60 | 132 | 282 | 7.0 | 20.0 |
| 70 | 154 | 329 | 8.0 | 23.0 |
| 80 | 176 | 376 | 9.0 | 26.0 |

[1] Extensible shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating or impregnating for special qualities. Paper shall have a stretch factor of at least 7 percent in either direction, shall have a degree of water resistance as secured by normal rosin sizing, and shall comply with the requirements in paragraph (a)(2) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] Variations in cross-direction tensile energy absorption of not more than 0.5 units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the machine-direction tearing strength in the ratio of twenty units of tearing strength to one unit of tensile energy absorption, and variations in total tensile energy absorption of not more than one unit below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tearing strength in the same ratio. Similarly, variations in machine-direction tearing strength of not more than ten units below minimum requirements will be permitted, provided variations are compensated by an increase in cross-direction tensile energy absorption in the ratio of one unit of tensile energy absorption to twenty units of tearing strength; and variations in total tearing strength of not more than twenty units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tensile energy absorption in the same ratio. Conformance with the requirements of Table shall be established by comparing the sum of the basis weights and tests for all of the plies specified in the construction of the bag, with the sum of the specified basis weights and tests for the respective papers comprising the different plies. All requirements in this table are for a paper conditioned to a relative humidity of 50 percent at a temperature of 23° C (73° F).

(b) Asphalt laminated or polyethylene coated shipping sack kraft paper when used shall comply with the following requirements:

| Type paper | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | | Heat resistance hours at 150° F. without impairing function of sack | Maximum average water-vapor permeability from both sides at 50 percent R. H. and 73° F. g/m, 2/24 hours | |
|---|---|---|---|---|---|---|---|
| | M. D. | Total M. D. plus C. D. | C. D. | Total C. D. plus M. D. | | Uncreased | Creased [1] |
| | *Grams* | *Grams* | *Pounds* | *Pounds* | | | |
| Asphalt laminated [2, 4] | 110 | 235 | 19 | 53 | 5 | 9.0 | 15.0 |
| 10PE–50 1/50–10PE [3] | 110 | 235 | 19 | 53 | 5 | 7.0 | 12.0 |
| 15PE–50 1/50–15PE [3] | 110 | 235 | 19 | 53 | 5 | 4.5 | 7.5 |

[1] Cressing at 40° F.

[2] Asphalt laminated kraft paper when used as a wall in fabricated sacks, shall conform to the requirements of paragraph (b) of this section and shall consist of two sheets of kraft paper, the total basis weight of the two paper plies not less than 50 pounds per ream (500 sheets, 24" x 36"), continuously and uniformly laminated together with an average of not less than 25 pounds of asphalt per ream (500 sheets, 24" x 36"). Tolerance of minus 5 percent will be allowed on individual components. The total basis weight of the finished combination shall not exceed 100 pounds per ream (500 sheets, 24" x 36"). An asphalt laminated kraft wall meeting these requirements may be substituted for a plain kraft wall of 50 pounds basis or less, provided it meets the specification.

[3] Polyethylene-coated shipping sack kraft paper. The polyethylene-coated kraft paper when used as walls in fabricated sacks shall meet the heat resistance and water-vapor permeability requirements as specified in the table. A tolerance of minus 10 percent will be allowed for the lot sample average coating weight of polyethylene on shipping sack kraft paper. Minimum samples for testing shall comprise not less than 3 specimens 16 square inches each selected representatively from each polyethylene-coated wall of each sack in the lot sample. Where barrier sheets are based on extensible kraft the weight of the barrier material shall be in addition to the basis weight of the paper.

[4] Asphalt laminated extensible kraft paper must consist of two sheets of extensible kraft paper, the total basis weight of the paper in the finished combination being not less than 50 pounds per ream (24 x 36—500) with neither sheet weighing less than 23 pounds continuously and uniformly laminated together, with an average of not less than 25 pounds of asphalt per ream (24 x 36—500). In determining the basis weight and test conformance of bags containing an asphalt laminated extensible kraft wall, the asphalt laminated extensible kraft wall shall be treated as if it were a single extensible kraft wall or combination of walls of 10 pounds lower total paper basis weight than the sum of the nominal basis weight in the asphalt laminated wall, but in no case shall be treated as less than the equivalent of a 50 pounds basis weight wall.

(c) Laminating materials: Any laminant other than asphalt or other water-vapor barrier walls may be used provided they meet the requirements in paragraph (b) of this section.

(d) All values in paragraphs (a) and (b) of this section are for paper having a moisture content in equilibrium with an atmosphere having a relative humidity of 50 percent plus or minus 2 percent at a temperature of 73° F. plus or minus 3.5° F. following preconditioning of the test specimens to a moisture content between 3 and 5.5 percent by exposure to relatively dry air having a temperature no greater than 140° F.

(e) Conformance of sacks with paper strength requirements shall be established by comparing the sums of the test values for all the walls of the new and unused sack with the sums of the respective strength values specified in paragraphs (a) and (b) of this section for the respective papers specified for the different walls of the sack by a method acceptable to the Bureau of Explosives.

(1) Variation in cross direction dry tensile strength of not more than 2 units below the minimum requirement based on paragraphs (a) and (b) of this section will be permitted for each wall of the sack, provided the variation is compensated for by a machine direction tearing strength test value in excess of the minimum requirement obtained from the tables, in the ratio of 5 units of tearing strength for each unit of dry tensile

strength test below the minimum requirement; and variation in combined dry tensile strength of not more than 4 units below the minimum requirement based on paragraphs (a) and (b) of this section will be permitted for each wall used provided the variation is compensated for by a combined tearing strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of combined tearing strength for each unit of dry tensile strength test below the minimum requirement. Similarly, variation in machine direction tearing strength of not more than 10 units below the minimum requirement will be permitted for each wall, provided the variation is compensated for by a cross direction dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 1 unit of dry tensile strength for each 5 units of tearing strength test below the minimum requirement; and variation in combined tearing strength of not more than 20 units below the minimum requirement obtained from the tables will be permitted for each wall provided the variation is compensated for by a combined dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of tearing strength for each unit of dry tensile strength below the minimum requirement.

§ 78.236–3 Construction.

(a) Bags must be at least 4 thicknesses of paper; this must be heavy duty shipping sack kraft paper, conforming to the requirements of § 78.236–2 paragraphs (a) and (b) or equivalent, with a minimum total basis weight of 200 pounds of paper (500 sheets, 24" x 36"). Outer sheet must be of water-resistant stock and at least 60 pounds basis weight, inner sheets not less than 40 pounds basis weight. Bags to be of "satchel bottom" construction; bottoms to be reinforced with a kraft paper patch at least 30 pounds basis weight. Other bottoms of equal efficiency are authorized.

(b) Or, bags must be at least 2 thicknesses of paper; this must be heavy duty shipping sack kraft paper, or equivalent with a minimum total basis weight of 110 pounds (500 sheets, 24" x 36"), fastened together with waterproof composition reinforced with jute, sisal, cotton, or other yarn or cord imbedded in the composition and criss-crossed at intervals of not over ½", approximately, so as to give approximately the same tensile strength for both width and length. Bags to be of "satchel bottom" construction. Other bottoms of equal efficiency are authorized.

(c) Moistureproof barrier sheets of paper, if used, must meet the requirements of § 78.236–2 (b) and shall be considered as one thickness of paper and shall be counted as 50 pounds basis weight (500 sheets, 24" x 36").

§ 78.236–4 Adhesive.

(a) Moisture resistant adhesive must be used on all seams, joints, and bottom patch, if any.

§ 78.236–5 Closure.

(a) For 4-ply bags: Inner (fourth) ply to be diamond folded loose; the third ply to be diamond folded and silicated across all its overlapping folds; the two outer plies to be diamond folded, and cross sealed, front to back and side to side, with gummed tape extending at least 2 inches down sides of bag; sealing tape must be 4" wide, of No. 1 Kraft paper, 90 pounds basis weight (500 sheets, 24" x 36"), or equivalent, and having a Mullen or Cady test, of not less than 90 percent of basis weight. Other closures of equal efficiency are authorized.

(b) For all bags: Any closure for the top which is equal in efficiency to that of the bottom, is authorized.

§ 78.236–6 Tests for shipment.

(a) Bags as prepared for shipment must be able to withstand four 4-foot drops, one on each end and one each on opposite sides, without sifting or rupture.

§ 78.236–7 Marking.

(a) Marking on each bag with letters and figures at least ½ inch high in rectangle as follows:

ICC–44B

(1) This mark shall be understood to certify that bag complies with all specification requirements.

(2) Name and address of maker located just above or below the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.

§ 78.237 Specification 44C; multiwall paper bags.

§ 78.237–1 Compliance.

(a) Required in all details.

§ 78.237 Specification 44C; multiwall paper bags.

§ 78.237–2 Paper.

(a) Shipping sack kraft paper, plain, or extensible plain, shall conform to the average requirements specified in paragraphs (a)(1) or (a)(2) of this section.

(1) Shipping sack, kraft paper, plain.[1]

| Nominal basis weight (500 sheets, 24" x 36")[2] | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | |
|---|---|---|---|---|
| | M.D.[3] | Total M.D. plus C.D.[3] | C.D.[3] | Total C.D. plus M.D.[3] |
| Pounds: | *Grams* | *Grams* | *Pounds* | *Pounds* |
| 40 | 88 | 188 | 14 | 41 |
| 50 | 110 | 235 | 19 | 53 |
| 60 | 132 | 282 | 23 | 64 |
| 70 | 154 | 329 | 27 | 74 |

[1] Shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating, or impregnating for special qualities. Paper shall have a degree of water resistance as secured by normal rosin sizing and shall comply with the requirements in paragraph (a)(1) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M.D. means machine direction. C.D. means cross direction.

(2) Shipping sack, extensible kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36")[2] | Minimum dry tearing strength | | Minimum tensile energy absorption ft./lbs. per square foot of paper | |
|---|---|---|---|---|
| | M.D.[3] | Total M.D. plus C.D.[3] | C.D.[4] | Total C.D. plus M.D.[3] |
| Pounds: | *Grams* | *Grams* | | |
| 40 | 88 | 188 | 4.5 | 14.0 |
| 50 | 110 | 235 | 5.6 | 17.0 |
| 60 | 132 | 282 | 7.0 | 20.0 |
| 70 | 154 | 329 | 8.0 | 23.0 |
| 80 | 176 | 376 | 9.0 | 26.0 |

[1] Extensible shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating or impregnating for special qualities. Paper shall have a stretch factor of at least 7 percent in either direction, shall have a degree of water resistance as secured by normal rosin sizing, and shall comply with the requirements in paragraph (a)(2) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] Variations in cross-direction tensile energy absorption of not more than 0.5 units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the machine-direction tearing strength in the ratio of twenty units of tearing strength to one unit of tensile energy absorption, and variations in total tensile energy absorption of not more than one unit below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tearing strength in the same

ratio. Similarly, variations in machine-direction tearing strength of not more than ten units below minimum requirements will be permitted, provided variations are compensated by an increase in cross-direction tensile energy absorption in the ratio of one unit of tensile energy absorption to twenty units of tearing strength; and variations in total tearing strength of not more than twenty units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tensile energy absorption in the same ratio. Conformance with the requirements of Table shall be established by comparing the sum of the basis weights and tests for all of the plies specified in the construction of the bag, with the sum of the specified basis weights and tests for the respective papers comprising the different plies. All requirements in this table are for a paper conditioned to a relative humidity of 50 percent at a temperature of 23° C (73° F).

(b) Asphalt laminated or polyethylene coated shipping sack kraft paper when used shall comply with the following requirements:

| Type paper | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | | Heat resistance hours at 150° F. without impairing function of sack | Maximum average water-vapor permeability from both sides at 50 percent R. H. and 73° F. g/m 2/24 hours | |
|---|---|---|---|---|---|---|---|
| | M. D. | Total M. D. plus C. D. | C. D. | Total C. D. plus M. D. | | Uncreased | Creased[1] |
| | *Grams* | *Grams* | *Pounds* | *Pounds* | | | |
| Asphalt laminated[2][4] | 110 | 235 | 19 | 53 | 5 | 9.0 | 15.0 |
| 10PE–50 1/50–10PE[3] | 110 | 235 | 19 | 53 | 5 | 7.0 | 12.0 |
| 15PE–50 1/50–15PE[3] | 110 | 235 | 19 | 53 | 5 | 4.5 | 7.5 |

[1] Creasing at 40° F.

[2] Asphalt laminated kraft paper when used as a wall in fabricated sacks, shall conform to the requirements of paragraph (b) of this section and shall consist of two sheets of kraft paper, the total basis weight of the two paper plies not less than 50 pounds per ream (500 sheets, 24" x 36"), continuously and uniformly laminated together with an average of not less than 25 pounds of asphalt per ream (500 sheets, 24" x 36"). Tolerance of minus 5 percent will be allowed on individual components. The total basis weight of the finished combination shall not exceed 100 pounds per ream (500 sheets, 24" x 36"). An asphalt laminated kraft wall meeting these requirements may be substituted for a plain kraft wall of 50 pounds basis or less, provided it meets the specification.

[3] Polyethylene-coated shipping sack kraft paper. The polyethylene-coated kraft paper when used as walls in fabricated sacks shall meet the heat resistance and water-vapor permeability requirements as specified in the table. A tolerance of minus 10 percent will be allowed for the lot sample average coating weight of polyethylene on shipping sack kraft paper. Minimum samples for testing shall comprise not less than 3 specimens 16 square inches each selected representatively from each polyethylene-coated wall of each sack in the lot sample. Where barrier sheets are based on extensible kraft, the weight of the barrier material shall be in addition to the basis weight of the paper.

[4] Asphalt laminated extensible kraft paper must consist of two sheets of extensible kraft paper, the total basis weight of the paper in the finished combination being not less than 60 pounds per ream (24 x 36—500) with neither sheet weighing less than 23 pounds continuously and uniformly laminated together, with an average of not less than 25 pounds of asphalt per ream (24 x 36—500). In determining the basis weight and test conformance of bags containing an asphalt laminated extensible kraft wall, the asphalt laminated extensible kraft wall shall be treated as if it were a single extensible kraft wall or combination of walls of 10 pounds lower total paper basis weight than the sum of the nominal basis weight in the asphalt laminated wall, but in no case shall be treated as less than the equivalent of a 50 pounds basis weight wall.

(c) Laminating materials: Any laminant other than asphalt or other water-vapor barrier walls may be used provided they meet the requirements in paragraph (b) of this section.

(d) All values in paragraphs (a) and (b) of this section are for paper having a moisture content in equilibrium with an atmosphere having a relative humidity of 50 percent plus or minus 2 percent at a temperature of 73° F. plus or minus 3.5° F. following preconditioning of the test specimens to a moisture content between 3 and 5.5 percent by exposure to relatively dry air having a temperature no greater than 140° F.

(e) Conformance of sacks with paper strength requirements shall be established by comparing the sums of the test values for all the walls of the new and unused sack with the sums of the respective strength values specified in paragraphs (a) and (b) of this section for the respective papers specified for the different walls of the sack by a method acceptable to the Bureau of Explosives.

(1) Variation in cross direction dry tensile strength of not more than 2 units below the minimum requirement based on paragraphs (a) and (b) of this section will be permitted for each wall of the sack, provided the variation is compensated for by a machine direction tearing strength test value in excess of the minimum requirement obtained from the tables, in the ratio of 5 units of tearing strength for each unit of dry tensile strength test below the minimum requirement; and variation in combined dry tensile strength of not more than 4 units below the minimum requirement based on paragraphs (a) and (b) of this section will be permitted for each wall used provided the variation is compensated for by a combined tearing strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of combined tearing strength for each unit of dry tensile strength test below the minimum requirement. Similarly, variation in machine direction tearing strength of not more than 10 units below the minimum requirement will be permitted for each wall, provided the variation is compensated for by a cross direction dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 1 unit of dry tensile strength for each 5 units of tearing strength test below the minimum requirement; and variation in combined tearing strength of not more than 20 units below the minimum requirement obtained from the tables will be permitted for each wall provided the variation is compensated for by a combined dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of tearing strength for each unit of dry tensile strength below the minimum requirement.

§ 78.237–3 Construction.

(a) Bags must be at least 4 thicknesses of paper; this must be heavy duty shipping sack kraft paper conforming to the requirements of § 78.237–2 paragraphs (a) and (b), or equivalent, with a minimum total basis weight of 250 pounds of paper (500 sheets, 24" x 36"). Outer sheet must be of water resistant stock and at least 60 pounds basis weight, inner sheets not less than 40 pounds basis weight. Bags to be of sewn, sift-proof bottom construction. Other bottoms of equal efficiency authorized.

(b) Moistureproof barrier sheets of paper, if used, must meet the requirements of § 78.237–2 (b) and shall be considered as one thickness of paper and shall be counted as 50 pounds basis weight (500 sheets, 24" x 36").

§ 78.237–4 Adhesive.

(a) Moisture resistant adhesive must be used on all seams, joints, and bottom patch, if any.

§ 78.237–5 Closure.

(a) For all bags: Any closure for the top which is equal in efficiency to that of the bottom, is authorized.

§ 78.237–6 Tests for shipment.

(a) Bags as prepared for shipment must be able to withstand four 4-foot drops, one on each end and one each on opposite sides, without sifting or rupture.

§ 78.237–7 Marking.

(a) On each bag with letters and figures at least ½ inch high in rectangle as follows:

ICC–44C

(1) This mark shall be understood to certify that bag complies with all specification requirements.

(2) Name and address of maker located just above or below the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.

§ 78.238 Specification 44D; multiwall paper bags.

§ 78.238–1 Compliance.

(a) Required in all details.

§ 78.238–2 Paper.

(a) Shipping sack kraft paper, plain, or extensible plain shall conform to the average requirements specified in subparagraphs (a)(1) and (a)(2) of this paragraph.

(1) Shipping sack, kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36") [2] [4] | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | |
|---|---|---|---|---|
| | M. D. [3] | Total M. D. plus C. D. [3] | C. D. [3] | Total C. D. plus M. D. [3] |
| Pounds: | *Grams* | *Grams* | *Pounds* | *Pounds* |
| 40 | 88 | 188 | 14 | 41 |
| 50 | 110 | 235 | 19 | 53 |
| 60 | 132 | 282 | 23 | 64 |
| 70 | 154 | 329 | 27 | 74 |

[1] Shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating, or impregnating for special qualities. Paper shall have a degree of water resistance as secured by normal rosin sizing and shall comply with the requirements in paragraph (a)(1) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] A bleached sulphate kraft outer wall of 70 pounds basis weight will be permitted provided the combined test values of all of the 5 walls of the completed multiwall sack are in conformance with paragraph (e) of this section and § 78.238-3.

(2) Shipping sack, extensible kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36") [2] | Minimum dry tearing strength | | Minimum tensile energy absorption ft./lbs. per square foot of paper | |
|---|---|---|---|---|
| | M. D. [3] | Total M. D. plus C. D. [3] | C. D. [3] [4] | Total C. D. plus M. D. [3] [4] |
| Pounds: | *Grams* | *Grams* | | |
| 40 | 88 | 188 | 4.5 | 14.0 |
| 50 | 110 | 235 | 5.6 | 17.0 |
| 60 | 132 | 282 | 7.0 | 20.0 |
| 70 | 154 | 329 | 8.0 | 23.0 |
| 80 | 176 | 376 | 9.0 | 26.0 |

[1] Extensible shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching, creping, coating, spraying, laminating or impregnating for special qualities. Paper shall have a stretch factor of at least 7 percent in either direction, shall have a degree of water resistance as secured by normal rosin sizing, and shall comply with the requirements in paragraph (a)(2) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] Variations in cross-direction tensile energy absorption of not more than 0.5 units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the machine-direction tearing strength in the ratio of twenty units of tearing strength to one unit of tensile energy absorption, and variations in total tensile energy absorption of not more than one unit below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tearing strength in the same ratio. Similarly, variations in machine direction tearing strength of not more than ten units below minimum requirements will be permitted, provided variations are compensated by an increase in cross-direction tensile energy absorption in the ratio of one unit of tensile energy absorption to twenty units of tearing strength; and variations in total tearing strength of not more than twenty units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tensile energy absorption in the same ratio. Conformance with the requirements of table shall be established by comparing the sum of the

(b) Asphalt laminated or polyethylene coated shipping sack kraft paper when used shall comply with the following requirements:

| Type paper | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | | Heat resistance hours at 150° F. without impairing function of sack | Maximum average water-vapor permeability from both sides at 50 percent R. H. and 73° F. g/m, 2/24 hours | |
|---|---|---|---|---|---|---|---|
| | M. D. | Total M. D. plus C. D. | C. D. | Total C. D. plus M. D. | | Uncreased | Creased [1] |
| | *Grams* | *Grams* | *Pounds* | *Pounds* | | | |
| Asphalt laminated [3] [4] | 110 | 235 | 19 | 53 | 5 | 9.0 | 15.0 |
| 10PE-50 1/50-10PE [5] | 110 | 235 | 19 | 53 | 5 | 7.0 | 12.0 |
| 15PE-50 1/50-15PE [5] | 110 | 235 | 19 | 53 | 5 | 4.5 | 7.5 |

[1] Creasing at 40° F.

[3] Asphalt laminated kraft paper when used as a wall in fabricated sacks, shall conform to the requirements of paragraph (b) of this section and shall consist of two sheets of kraft paper, the total basis weight of the two paper plies not less than 50 pounds per ream (500 sheets, 24" x 36"), continuously and uniformly laminated together with an average of not less than 25 pounds of asphalt per ream (500 sheets, 24" x 36"). Tolerance of minus 5 percent will be allowed on individual components. The total basis weight of the finished combination shall not exceed 100 pounds per ream (500 sheets, 24" x 36"). An asphalt laminated kraft wall meeting these requirements may be substituted for a plain kraft wall of 50 pounds basis or less, provided it meets the specification.

[5] Polyethylene-coated shipping sack kraft paper. The polyethylene-coated kraft paper when used as walls in fabricated sacks shall meet the heat resistance and water-vapor permeability requirements as specified in the table. A tolerance of minus 10 percent will be allowed for the lot sample average coating weight of polyethylene on shipping sack kraft paper. Minimum samples for testing shall comprise not less than 3 specimens 16 square inches each selected representatively from each polyethylene-coated wall of each sack in the lot sample. Where barrier sheets are based on extensible kraft; the weight of the barrier material shall be in addition to the basis weight of the paper.

[4] Asphalt laminated extensible kraft paper must consist of two sheets of extensible kraft paper, the total basis weight of the paper in the finished combination being not less than 50 pounds per ream (24 x 36—500) with neither sheet weighing less than 23 pounds continuously and uniformly laminated together, with an average of not less than 25 pounds of asphalt per ream (24 x 36—500). In determining the basis weight and test conformance of bags containing an asphalt laminated extensible kraft wall, the asphalt laminated extensible kraft wall shall be treated as if it were a single extensible kraft wall or combination of walls of 10 pounds lower total paper basis weight than the sum of the nominal basis weight in the asphalt laminated wall, but in no case shall be treated as less than the equivalent of a 50 pounds basis weight wall.

(c) Laminating materials: Any laminant other than asphalt or other water-vapor barrier walls may be used provided they meet the requirements in paragraph (b) of this section.

(d) All values in paragraphs (a) and (b) of this section are for paper having a moisture content in equilibrium with an atmosphere having a relative humidity of 50 percent plus or minus 2 percent at a temperature of 73° F. plus or minus 3.5° F. following preconditioning of the test specimens to a moisture content between 3 and 5.5 percent by exposure to relatively dry air having a temperature no greater than 140° F.

(e) Conformance of sacks with paper strength requirements shall be established by comparing the sums of the test values for all the walls of the new and unused sack with the sums of the respective strength values specified in paragraphs (a) and (b) of this section for the respective papers specified for the different walls of the sack by a method acceptable to the Bureau of Explosives.

(1) Variation in cross direction dry tensile strength of not more than 2 units below the minimum requirements based on paragraphs (a) and (b) of this section will be permitted for each wall of the sack, provided the variation is compensated for by a machine direction tearing strength test value in excess of the minimum requirement obtained from the tables, in the ratio of 5 units of tearing strength for each unit of dry tensile strength test below the minimum requirement; and variation in combined dry tensile strength of not more than 4 units below the minimum requirement based on paragraphs (a) and (b) of this section will be permitted for each wall used provided the variation is compensated for by a combined tearing strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of combined tearing strength for each unit of dry tensile strength test below the minimum requirement. Similarly, variation in machine direction tearing strength of not more than 10 units below the minimum requirement will be permitted for each wall, provided the variation is compensated for by a cross direction dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 1 unit of dry tensile strength for each 5 units of tearing strength test below the minimum requirement; and variation in combined tearing strength of not more than 20 units below the minimum requirement obtained from the tables will be permitted for each wall provided the variation is compensated for by a combined dry tensile strength test value in excess of the minimum requirement obtained from the tables in the ratio of 5 units of tearing strength for each unit of dry tensile strength below the minimum requirement.

§ 78.238-3 Construction.

(a) Bags must be at least 5 thicknesses of paper; this must be heavy duty shipping sack kraft paper, conforming to the requirements of § 78.238-2 paragraphs (a) and (b), or equivalent, with a minimum total basis weight of 320 pounds of paper (500 sheets, 24" x 36"). Outer sheet must be of water resistant stock and at least 70 pounds basis weight, inner sheets not less than 50 pounds basis weight. Bags to be of sewn, sift-proof bottom construction. Other bottoms of equal efficiency authorized.

basis weights and tests for all of the plies specified in the construction of the bag, with the sum of the specified basis weights and tests for the respective papers comprising the different plies. All requirements in this table are for a paper conditioned to a relative humidity of 50 percent at a temperature of 23° C (73° F).

(b) Moistureproof barrier sheets of paper, if used, must meet the requirements of § 78.238-2 (b) and shall be considered as one thickness of paper and shall be counted as 50 pounds basis weight (500 sheets, 24" x 36").

§ 78.238-4 Adhesive.

(a) Moisture resistant adhesive must be used on all seams, joints, and bottom patch, if any.

§ 78.238-5 Closure.

(a) For all bags: Any closure for the top which is equal in efficiency to that of the bottom, is authorized.

§ 78.238-6 Tests for shipment.

(a) Bags as prepared for shipment must be able to withstand four 4-foot drops, one on each end and one each on opposite sides, without sifting or rupture.

§ 78.238-7 Marking.

(a) On each bag with letters and figures at least ½ inch high in rectangle as follows:

ICC-44D

(1) This mark shall be understood to certify bag complies with all specification requirements.

(2) Name and address of maker located just above or below the mark specified in paragraph (a) of this section; symbol (letters) authorized if registered with the Bureau of Explosives.

§ 78.239 Specification 44E; multiwall paper bags.

§ 78.239-1 Compliance.

(a) Required in all details.

§ 78.239-2 Paper.

(a) Shipping sack kraft paper, plain, or extensible plain, shall conform to the average requirements specified in paragraphs (a)(1) or (a)(2) of this section.

(1) Shipping sack, kraft paper, plain: [1]

| Nominal basis weight (500 sheets, 24" x 36") [2] [4] | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | |
|---|---|---|---|---|
| | M. D. [3] | Total M. D. plus C. D. [3] | C. D. [3] | Total C. D. plus M. D. [3] |
| Pounds: | *Grams* | *Grams* | *Pounds* | *Pounds* |
| 40 | 88 | 188 | 14 | 41 |
| 50 | 110 | 235 | 19 | 53 |
| 60 | 132 | 282 | 23 | 64 |
| 70 | 154 | 329 | 27 | 74 |

[1] Shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching (except as provided by footnote 4 of this table), creping, coating, spraying, laminating, or impregnating for special qualities. Paper shall have a degree of water resistance as secured by normal rosin sizing and shall comply with the requirements in paragraph (a)(1) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basic weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] A bleached sulphate kraft outer sheet of not less than 50 pounds basis weight is authorized providing the combined test values of all of the sheets of the bag are in conformance with paragraph (e) of this section and §78.239-3.

(2) Shipping sack, extensible kraft paper, plain.[1]

| Nominal basis weight (500 sheets, 24" x 36") [2] [4] | Minimum dry tearing strength | | Minimum tensile energy absorption ft./lbs. per square foot of paper [3] | |
|---|---|---|---|---|
| | M. D. [3] | Total M. D. plus C. D. [3] | C. D. [3] | Total C. D. plus M. D. [3] |
| Pounds: | *Grams* | *Grams* | | |
| 40 | 88 | 188 | 4.5 | 14.0 |
| 50 | 110 | 235 | 5.6 | 17.0 |
| 60 | 132 | 282 | 7.0 | 20.0 |
| 70 | 154 | 329 | 8.0 | 23.0 |
| 80 | 176 | 376 | 9.0 | 26.0 |

[1] Extensible shipping sack kraft paper, plain, is paper that consists of all sulphate pulp and no other fiber, and which has not been treated by coloring, bleaching (except as provided by footnote 4 of this table), creping, coating, spraying, laminating or impregnating for special qualities. Paper shall have a stretch factor of at least 7 percent in either direction, shall have a degree of water resistance as secured by normal rosin sizing, and shall comply with the requirements in paragraph (a)(2) of this section.

[2] A tolerance of minus 10 percent of the basis weight of individual plies of plain shipping sack kraft paper will be permitted; an average tolerance of minus 5 percent will be permitted in the sum total basis weight of all plies in multiwall constructions. Variations in excess of specified basis weights will not be considered a defect or deviation. The basis weight of paper means the basis weight as produced by the paper machine, not including finish subsequently applied, such as coating or printing.

[3] M. D. means machine direction. C. D. means cross direction.

[4] A bleached sulphate extensible kraft outer sheet of not less than 50 pounds basis weight is authorized providing the combined test values of all the sheets of the bag are in conformance with paragraph (e) of this section and § 78.239-3.

[5] Variations in cross-direction tensile energy absorption of not more than 0.5 units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the machine-direction tearing strength in the ratio of twenty units of tearing strength to one unit of tensile energy absorption, and variations in total tensile energy absorption of not more than one unit below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tearing strength in the same ratio. Similarly, variations in machine-direction tearing strength of not more than ten units below minimum requirements will be permitted, provided variations are compensated by an increase in cross-direction tensile energy absorption in the ratio of one unit of tensile energy absorption to twenty units of tearing strength; and variations in total tearing strength of not more than twenty units below the minimum requirements will be permitted, provided the variations are compensated by an increase in the total tensile energy absorption in the same ratio. Conformance with the requirements of Table shall be established by comparing the sum of the basis weights and tests for all of the plies specified in the construction of the bag, with the sum of the specified basis weights and tests for the respective papers comprising the different plies. All requirements in this table are for a paper conditioned to a relative humidity of 50 percent at a temperature of 23° C (73° F).

(b) Asphalt laminated or polyethylene coated shipping sack kraft paper when used shall comply with the following requirements:

| Type paper | Minimum average dry tearing strength | | Minimum average dry tensile strength per inch width | | Heat resistance hours at 150° F. without impairing function of sack | Maximum average water-vapor permeability from both sides at 50 percent R. H. and 73° F. g/m, 2/24 hours | |
|---|---|---|---|---|---|---|---|
| | M. D. | Total M. D. plus C. D. | C. D. | Total C. D. plus M. D. | | Uncreased | Creased [1] |
| | *Grams* | *Grams* | *Pounds* | *Pounds* | | | |
| Asphalt laminated [3] [4] | 110 | 235 | 19 | 53 | 5 | 9.0 | 15.0 |
| 10PE-50 1/50-10PE [5] | 110 | 235 | 19 | 53 | 5 | 7.0 | 12.0 |
| 15PE-50 1/50-15PE [5] | 110 | 235 | 19 | 53 | 5 | 4.5 | 7.5 |

[1] Creasing at 40° F.

[3] Asphalt laminated kraft paper when used as a wall in fabricated sacks, shall conform to the requirements of paragraph (b) of this section and shall consist of two sheets of kraft paper, the total basis weight of the two paper plies not less than 50 pounds per ream (500 sheets, 24" x 36"), continuously and uniformly laminated together with an average of not less than 25 pounds of asphalt per ream (500 sheets, 24" x 36"). Tolerance of minus 5 percent will be allowed on individual components. The total basis weight of the finished combination shall not exceed 100 pounds per ream (500 sheets, 24" x 36"). An asphalt laminated kraft wall meeting these requirements may be substituted for a plain kraft wall of 50 pounds basis or less, provided it meets the specification.

[5] Polyethylene-coated shipping sack kraft paper. The polyethylene-coated kraft paper when used as walls in fabricated sacks shall meet the heat resistance and water-vapor permeability requirements as specified in the table. A tolerance of minus 10 percent will be allowed for the lot sample average coating weight of polyethylene on shipping sack kraft paper. Minimum samples for testing shall comprise not less than 3 specimens 16 square inches each selected representatively from each polyethylene-coated wall of each sack in the lot sample. Where barrier sheets are based on extensible kraft; the weight of the barrier material shall be in addition to the basis weight of the paper.

[4] Asphalt laminated extensible kraft paper must consist of two sheets of extensible kraft paper, the total basis weight of the paper in the finished combination being not less than 50 pounds per ream (24 x 36—500) with neither sheet weighing less than 23 pounds continuously and uniformly laminated together, with an average of not less than 25 pounds of asphalt per ream (24 x 36—500). In determining the basis weight and test conformance of bags containing an asphalt laminated extensible kraft wall, the asphalt laminated extensible kraft wall shall be treated as if it were a single extensible kraft wall or combination of walls of 10 pounds lower total paper basis weight than the sum of the nominal basis weight in the asphalt laminated wall, but in no case shall be treated as less than the equivalent of a 50 pounds basis weight wall.

(c) Laminating materials: Any laminant other than asphalt or other water-vapor barrier walls may be used provided they meet the requirements in paragraph (b) of this section.

(d) All values in paragraphs (a) and (b) of this section are for paper having a moisture content in equilibrium with an atmosphere having a relative humidity of 50 percent plus or minus 2 percent at a temperature of 73° F. plus or minus 3.5° F. following preconditioning of the test specimens to a moisture content between 3 and 5.5 percent by exposure to relatively dry air having a temperature no greater than 140° F.

(e) Conformance of sacks with paper strength requirements shall be established by comparing the sums of the test values for all the walls of the new and unused sack with the sums of the respective strength values specified in paragraphs (a) and (b) of this section for the respective papers specified for the different walls of the sack by a method acceptable to the Bureau of Explosives.
